Klemme High School baseball agregation will go to Kanawha toay, Thursday, April 27, to play a turn game with the Kanawha high hool. This promises to be a good teresting game and we want to see good crowd of Klemme people at is game. We need your help to in, so let's go!

Will Play Corwith Here Friday

The Klemme High School will play e Corwith High School on the local amond tomorrow afternoon, Friday, pril 28th. Corwith has a strong am and this game promises to be od. We want to see a large crowd Klemme people out to this game. ome! We need your help to win!

Athletes Win "K's"

The Klemme High School had K's ade for all students participating six halves of Basket Ball or twenseven innings of baseball. These 's are white set on a green diamond ith a white basket ball or baebsall one corner. The K's for basket all were handed out by Prof. Wilon Thursday morning. Those reeiving the K's among the girls are: enna Gruetzmacher, Pearl Johnon, Marie Blank, Maybelle Johnson, eona Lau, Neota Ridder and Berice Tanner. The boys who receivd the emblem are: Milvern Ell, Aolph Lauritzen, George Bergmann, oward Wiles, Gearald Koerner.

First Year of Basket Ball

This is the first year that Klemme er had a boys' and girls' basket all team. Taking all things into onsideration, the school thinks their eams did very well for the first year, nd with the equipment they had. We hope that we can keep on hav- High School Basket Ball teams Klemme.

K's to be Issued for B. B.

The K's for the Baseball team ave not been handed out yet as they ave not played their full twentyeven innings. We expect to have Prof. Wilson present the base ball eam with their K's the Monday folowing the Hancock County Baseball Tournament at Britt on May 5th at which the Klemme school will compete for honors.

Belong to State Association Now

The Klemme High School is a member of the State High School Association. This is something new for us as we did not belong to the Association until last fall. This association permits the Klemme school to play any High School in the Stakte of Iowa which belongs to the Associaion.

General School News

Thursday afternoon Neota Ridder was teacher in the Grammar Room; the regular teacher, Miss Smith, was coaching the pupils of that room in their play, "Which is which."

A change has been made in the High School Editors for the school news in the Klemme Times since Howard Wiels resigned as Editor-in-Chief. Gearald Koerner will write the Athletic News, Pearl Johnson the Entertainment Department and Andrew Wellemeyer will write the General News for the school.

This week the question to be debated upon in the Community Civics Class is," Resolved: That all people receiving county support should reside at the county home." Those on the affirmative are Harvey Barz, John Baumgartner, and Ewald Josten. On the negative are Albert Preibe, Gearald Koerner and Andrew Wellemeyer.

Grade School Notes

County Examinations will be held here the 4th and 5th of May for the eighth grade. The seventh grade will be excused these two days except when the geography test is taken. They are to take geography this year and have one less study next year.

Last Friday one of the Sandry girls was a welcome visitor to the Second Room. She goes to school west of Klemme in a country school.

School Entertainment

Last Friday morning Florence Behringer and Elvira Stille played a number of duets on the piano. Their music was well rendered and much appreciated by the High School and Grammar rooms who invite them to play again.

The entertainment committee has planned a High School party for Thursday evening.

The program for morning exercises has been arranged as follows:

Monday—Open for any interested person who would like to speak to us.

Tuesday—Singing.
Wednesday—Scripture Reading.
Thursday—Singing.
Friday—Special Entertainment.

NOTICE OF PROBATE OF WILL

STATE OF IOWA
Hancock County, ss.
TO ALL WHOM IT MAY CONCERN:

YOU ARE HEREBY NOTIFIED, That an instrument of writing purporting to be the last Will and Testament of Daniel Webner, Sr. deceased, dated May 30, 1910, having been this day filed, opened and read, Monday, the 22nd day of May, 1922, is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 3:00 o'clock P. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, April 17th, 1922.

B. E. ERWIN,
Clerk of District Court A-20-27-M-4

Prof. Neece, who is superintendent of the Ventura Consolidated this year and who formerly was superintendent of the Klemme schools will return here for next year, it is reported. This action by the board of securing Mr. Neece will meet with universal approvement by the people of this city.

FORD DEALER SELLING LOTS OF CARS NOW

Enclosed Cars Seem Best Sellers

Olaf M. Twedt Co., Ford dealers of this city sold quite a number of cars the past week. Last week they received a shipment of new cars and sold four enclosed jobs in the bunch. Dr. Missman and Louie Katter both purchased new Coupes; while R. W. Elder and W. C. Keraus are both owners of new Sedans from the car load. M. O. Barr purchased a new touring car. In addition to the new cars have they also sold some used cars. They have booked orders for several cars which will arrive in a few weeks.

They report that there is quite a demand for cars this spring and they look for a big business this summer.

LOCAL MERCHANT SHOT THRU HEART BUT STILL LIVES

MYSTERIOUS SHOOTING BAFFLES FRIENDS

Doctors State Surgical Operation Not Necessary in this Case

Residents of Klemme, Garner, Clear Lake and vicinity are very much alarmed and startled over the mysterious shooting accident which befell a prominent young business man of Klemme the past week when Ed. Jacobs, popular hardware dealer of this city was the victim of Dan Cupids darts which pierced his heart.

The wedding took place at Clear Lake Tuesday at high noon and was presided over by the little winged cherub. Ed. will recover.

If Ed. and the wife have the courage to face the music the charivari will be held Monday night, and we will all be there with our little old noise maker.

METHODIST EPISCOPAL CHURCH

Morning worship at 10:00 A. M.
Sunday school at 11:00 A. M.
Evening worship at 7:30 o'clock.

On the first Sunday in May the evening service will commence at 8:-00 o'clock. Please note the change.

Chior practice on Thursday evening at the Wm. Smith home at 8:00 o'clock.

Program of the W. F. M. S. program will be found in this issue.

Boost for a large attendance at Sunday school next Sunday. You come and make one.

You will find a welcome at each and all of our services.

Arthur B. Gedye, Pastor.

W. F. M. S. PROGRAM
Sunday, April 30

—Methodist Episcopal Church
11:00 A. M. MORNING PROGRAM

Song by Congregation
Scripture Reading
Prayer
Song bp choir.
Reading, "The Cost of a Soul."
Song by the King's Heralds and L.L. B.
Recitation, "The Harvest."
Solo, "The Masters Service First."
Delegates Report.
Song by the Standard Bearers.
Delegates Report.
Remarks by Pastor.
Offering and Triumph Song, by the Auxilliary.

7:30 EVENING PROGRAM
Song Congregation.
Prayer
Special song by the choir.
Scripture Reading.
Song, by congregation.
Special Music.
Missionary Lecture
"Remeniscences of my life in the West Indies, with negro stories sayings and proverbs," by the pastor.
Offering.
Closing song.

We have had a couple of complaints reach this office regarding chickens not being locked up. People are now making gardens and it is annoying to have the neighbors hens scratch them all up again.

SURPRISE PARTY

Mrs. C. E. Nissen had a happy time last Friday afternoon when about twenty-five of her relatives and friends, who met at the home of Mrs. Henry Griewe marched over to her house and gave her a complete surprise in honor of her seventieth birthday anniversary. The time was spent in talking over old times, singing and having a general good time. The guests came with well filled baskets and a good feast was had which was enjoyed by everyone present. They also brought with them a number of appropriate presents for which she is very thankful. She also received reminders and presents from her son Charles and family of Rockwell City, and George and family of Iowa Falls.

NORTHERN PEOPLE MAKE VAST IMPROVEMENT HERE

NORTHERN LUMBER CO. BEAUTIFY GROUNDS

Landscape Gardner Laid Out Park In Front of Yards

The Northern Lumber Co., of this city has perhaps the most beautiful building and grounds of any lumber yard in Iowa. They have a beautiful building finished up in gray kragstone and trimmed with red brick that itself alone is a beauty but since having a landscape gardner plot out the grounds in front and at the side of their building and plant shrubbery and flower beds as well as tree, there is no question but what the Northern Lumber Company yards here are among the best in the state.

On either side of the two driveways leading into the building shrubbery has been planted, as well as along the front and at the sides. This blocks the grounds off into rectangular patches which have then been made into flower beds of various sorts. A few low growing and beautiful trees have also been planted.

A person will have to take a look at the place to appreciate the real beaut of it.

FIRST METHODIST CHURCH

The morning and evening services of last Sunday were well attended at both the Liberty and Klemme churches.

Next Sunday services as follows:
Klemme—
Morning sermon at 10:00 o'clock.
Sunday school at 11:00 o'clock A. M.
Evening Sermon at 8:15 o'clock.
Epworth League service at 7:30.

Thursday evening prayer service at the home of Mr. Henry Griewe.

Ladies Missionary Society meets with Mrs. Henry Ludeke next week on Thursday afternoon.

Liberty Township—
Morning sermon at 11:30 o'clock.
Sunday school at 10:00 A. M.
Epworth League at 8:00 P. M.

Prof. H. E. Wilson, Earl Josten and George Bergmann, the delegates from here to the Older Boy's Convention of the Y. M. C. A., held at Mason City last Saturday and Sunday, report very interesting and profitable meetings. We hope to hear a fuller report from them at the Epworth League meeting next Sunday evening.

W. C. Bergmann, Pastor.

Epworth League Notes

In the Epworth League Contest the Purple side still is in the lead, having advanced 60 points Sunday evening against 46 points by their opponents, the Pinks. The Contest now stands with the Purples leading with a total score of 463 and the Pink side with 396 points.

Mrs. P. M. Griesemer will lead the Epworth League services next Sunday evening.

Remeber that next Sunday night is the last night of the Epworth League Contest. Everybody should be there as there is still a chance to turn the tables.

—Earl Josten, League President

J. D. Madison, of Kanawha, and candidate for the office of County Auditor, was in Klemme Saturday evening getting acquainted with the voters here.

Corwith The Scene Of Second Destructive Blaze Early Monday

YOUNG BUSINESS MAN HERE WEDS LAKE GIRL

Was Married at Clear Lake Tuesday

We have noticed that Ed. Jacobs, young hardware merchant of this cit, has acted rather queer for the past month or more and suspected that some young lady was the cause of his "heart trouble," and more recent we suspected Ed. of harboring matrimonial intentions when his frequent trips over Clear Lake way became more frequent and to wind up our suspicions we learned that he had rented a house, had the garden plowed and had sold himself a new kitchen range. That was a sure enough sign that Ed. intended to bid the bachelor life a fond farewell.

At the home of Mr. and Mrs. A. K. Wistey, at Clear Lake occured the marriage of their daughter, Myrtle Gerdie to Mr. Edwin Jacobs on Tuesday noon, April 23rd, 1922. The pastor of the Clear Lake Lutheran church officiating.

Only the immediate relatives of the young couple were present to witness the ceremony, after which all were seated to a grand wedding dinner prepared by the Bride's mother.

The newly weds left on the afternoon Milwaukee train for South Dakota for a few days honeymoon trip and visit with relatives and friends, going from tghere to Minneapolis. They will be gone for about a week and will not return to this city until the fore part of next week.

The Groom needs little or no introduction to our readers, as every bodp in this vicinity knows and likes Ed. He has been in business here for about three years, having purchased the hardware business which he now conducts, from Gruetzmacher Bros. He has built up a splendid buisness and is a hustler. Prior to coming to Klemme he worked in the E. S. Viken hardware store at Garner for three years, and was also manager for the Farmers Elevator at Garner for one year at thei north elevator at Garner. When the United States called for men Ed enlisted in the Motor Transportation Corps and saw service on the Mexican boarder. He has proven himself to be a first class business man and to sum it all up is a "good scout" all around.

Mrs. Ed. Jacobs is not very well known to many of our readers but we can truthfully say that Ed showed mighty good judgement when he chose this lovely young lady as his wife. She is a resident of Clear Lake from whose high school she is a graduate. Later she took the business course offered at Hamilton's University of Commerce at Mason City and graduated with high honors. Since completing her business course she held the position of stenographer for the Reo Sales Company of Mason City for about a year. She is the type of young lady who will make an ideal home builder and help mate and Ed can pat himself on the back and say, "I am a lucky man."

They will go to housekeeping in the house vacated by Mrs. Leo. Wilkins and will be next door neighbors to Ye Editor, but we guess that Ed. can stand for that for awhile.

The Times force joins with our many readers and friends of this newly-wedded couple in wishing them a most pleasant journey through life.

Once in awhile we hear of an editor getting himself "between the devil and the deep blue sea," but the editor of this sheet had a worse experience last Friday afternoon. We got between "the devil, and the preacher." It was this way: we went fishing with our office "devil" Clarence Elder and "Sky-pilot" Gedye. Such a combination of devil, preacher and editor was not appealing to the fish and the only bites we had were those out of sandwiches and pickles furnished by friend wife. Never again will we go fishing with the devil and the preacher.

Mr. and Mrs. E. S. D. Kahrs drove to Nevada, Iowa, Sunday for a visit with relatives. Her father, Henry Ludwig, returned with them for a few days visit.

$50,0000 FIRE BURNS FOUR BUILDINGS IN IN NEIGHBORING VILLAGE

Most of One Half Block in Ashes Fire Originated in Barber Shop

For the second time in four months Corwith was visited by a destructive fire early Monday moring, Apr l 24th, which wiped out four frame buildings on the west side of Main Street and caused a loss estimated at from $50,000 to $75,000. In the winter almost an entire block directly across the stree was destroyed by fire with a loss of $100,000.

Originating in the Damon Barber Shop, the flames spread to and destroyed the Applegate Hardware Store, the Nicholson Clothing Store, the Pfeffer Pool Hall which also houses the American Legion Hall on the second floor, and the postoffice.

Suffers Second Loss

The Quality Store, in temporary quarters following the fire of last winter, escaped the flames but water and smoke caused a heavy damage to the stock.

The fire had obtained such headway when observed at 2:30 Monday morning, that efforts had to be centered on saving other buildings instead of the ones in which the fire was centered. It was feared for a while that the entire business district would be wiped out.

Everybody Turns Out

The entire population of the town—men, women and children—was called out by the fire alarm and heir valient wiork with the limited facilities at hand is all that saved he village. A meat shop, the People's Savings Bank, a grocery store nd a barber shop are all that remain n one half block, but the fire was kept from crossing the alley.

Origin Remains Mystery

No explanation of the origin of the blaze has been furnished up to this time.

With one side of the stree still showing the effects of last winter's conflagation and the other side of he street a mass of fresh ruins, the scene has the appearance of a battle scarred Belgium village after the Germans had swept through it in 1914.

The problem of housing business houses, already acute from the former fire, has already been greatly augmented. Confidence is expressed by Corwith people that the business district will be re-built as rapidly as possible and operations will begin in a short time on the erection of brick buildings.

Lesson for Klemme

With such recent destructive fires such as the one which wiped out the business district of Goodell, the big fire at Corwith last winter and the conflagation there again Monday, besides fires at Belmond this winter, it should be an example for Klemme to be prepared for just such an imergency. The water works system in this city is inadequate and a fire unless put out when first observed would most certainly gain rapid head way as our water supply would soon be exhausted. A chemical apparatus of ample size would give the best of protection should a fire originate. Belmond has had several fires this past winter that had gained good headway but were easily extinguished with their chemical fire-fighting truck. Such an outfit should be installed here before our town has an experience such as Goodell or Corwith has gone through with. Corwith has suffered fire loss to the extent of over $150,000 the past few months; wouldn't two or three thousand dollars invested in a fire fighting apparatus have been a good business investment which might have prevented such an enormous loss?

O. H. Wenck, of Garner, was in Klemme one day last week. Oscar is running for the office of County Recorder and seems to be going strong. He is an ex-soldier and was wounded severely in action and if anybody now days deserves a public office the young men who fought for this country should be given due consideration. We are for you Oscar.

Will Preserve Historic Fort

Daughters of American Revolution Plan Reconstruction of Famous Fort Crawford.

ORIGINAL WAS BUILT IN 1812

Most Famous of Any of the Forts in the Northwest Has Fascinating History—Zachary Taylor Once Commandant.

Prairie du Chien, Wis.—Preservation and eventual reconstruction of historic Fort Crawford is forecast by the action of the Prairie du Chien chapter of the D. A. R. in securing an option on the property from W. R. Graves, its owner, in an effort to preserve it for historical purposes.

Fort Crawford was the most famous of any of the forts in the Northwest. The original post, Fort Shelby, was built during the war of 1812. Hardly had the first American troops taken possession of it, when a detachment of British troops, re-enforced by Indians, came down the Wisconsin river and laid siege to it. The garrison was forced to surrender and for a year the Union Jack floated over the frontier post and southwestern Wisconsin was a part of the British empire.

Buildings Ruined by Fire.

At the close of the War of 1812 the fort was evacuated and shortly afterward most of the buildings were gutted by fire.

The American government then rebuilt the fort on the same site, calling it Fort Crawford. Later a new site was chosen a mile south on higher ground and a larger Fort Crawford was erected.

Zachary Taylor, later President of the United States, was commandant of it at one time. One of his lieutenants was Jefferson Davis, who led the southern Confederacy through the Civil war. Davis fell in love with Taylor's daughter and married her, to the great displeasure of the commandant.

The fort surgeon was Doctor Beaumont, whose assistant, Martin St. Alexis, had a bullet hole in his stomach. Through this hole Doctor Beaumont studied the processes of digestion. The experiments thus conducted still form the major part of the knowledge medical science has of the stomach and its functions. St. Alexis is mentioned in many school physiologies.

Other Notables at Fort.

Others stationed at the fort at various times were the historian, Henry Schoolcraft; the artist, George Calvin; and Gen. William Clark, Lewis Cass and Winfield Scott.

The treaties of 1826 and 1830, wherein the Indians deeded away the last of their lands east of the Mississippi river, were signed at Fort Crawford. The Black Hawk war centered about it, and Abraham Lincoln, then a young lieutenant was stationed at the fort during this conflict. Chief Blackhawk was taken to the post as a prisoner after his capture by the Winnebago chiefs after the rout of the Sacs and Foxes at the Battle of Bad Axe.

Near the site of the fort is Fort Crawford cemetery, where those who died during their term of service were buried. The cemetery is government owned and well cared for.

THIS BEAR IS BULLET-PROOF

Three Slugs From Rifle Fail to Stay Onrush of Bruin in Pennsylvania Wilds.

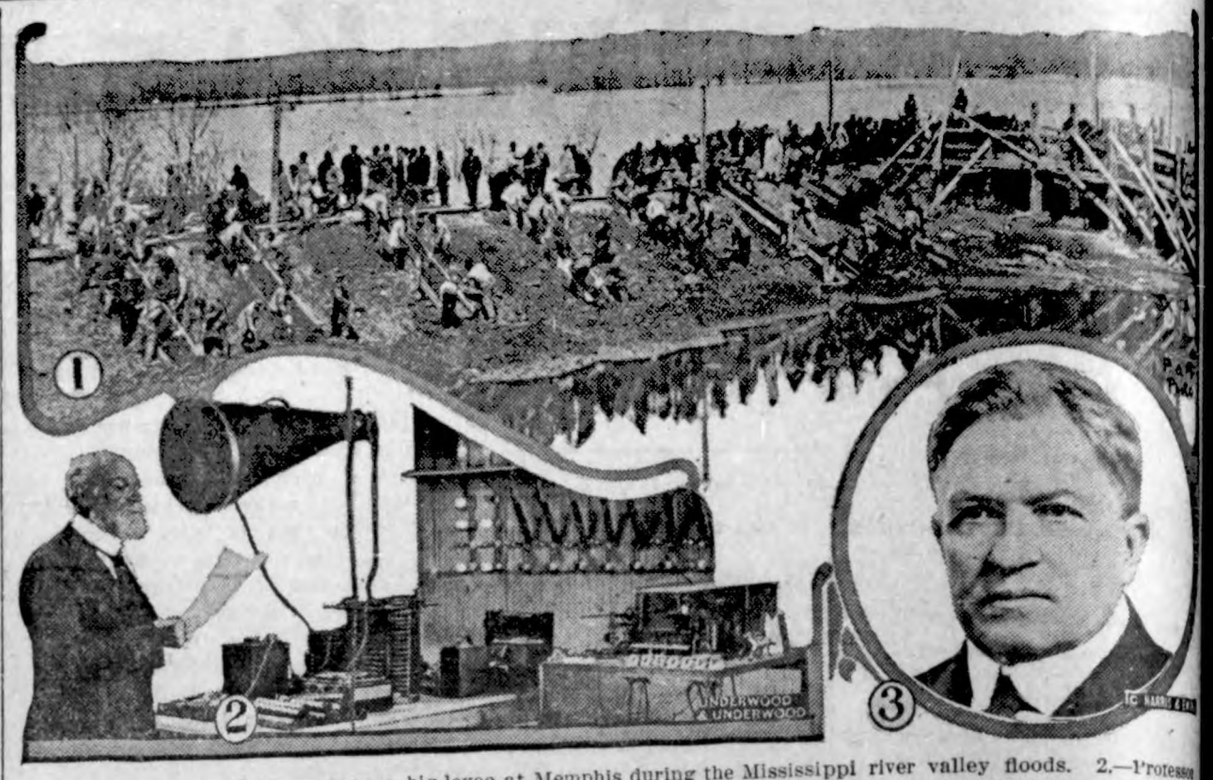
Lewisburg, Pa.—Samuel Crone, a Shamokin butcher, encountered a bear that, weighed about 400 pounds, dropped the animal with a bullet from his rifle, but was startled to see the bear rise and, howling with pain, race toward him on all-fours.

Two more shots were fired and struck the tough hide of the animal, inflicting painful wounds, but each time the bear refused to stay down, and by the time it was ten feet in front of Crone the latter's weapon jammed.

Desperate, the hunter decided to battle with the stock of his rifle as a club and stood his ground as the animal rose on its hind legs as if to rush him. Suddenly the bear changed its mind, turned and ran limping into the woods.

NEW FEATHER MASK

A pair of sparkling eyes beneath an ingenious feather mask. The new summer fan for milady. This is the latest in costume ball apparel.



1.—Desperate efforts to save a big levee at Memphis during the Mississippi river valley floods. 2.—Professor Charles E. Fay, dean of Tufts college, Boston, delivering the first lecture in the college's radio lecture course. 3.—Former U. S. Senator S. H. Piles of Seattle, who has been appointed minister to Colombia.

Raise Standard for Teachers

Federal Bureau Is Studying the Question of How to Accomplish It.

MANY INADEQUATELY TRAINED

Grade School Classes Taught by Persons Who Have Not Even High School Diplomas—Trained Teachers Barred.

Washington, D. C.—Commissioner John J. Tigert of the bureau of education and his assistants are studying the question of how to raise the standard of training for school teachers throughout the United States. Thousands of women and men entrusted with the education of large groups of children in the public schools lack what the federal officials regard as an adequate preparation for their work, Doctor Tigert said.

In the grade schools many persons are teaching classes who have not even high school diplomas, according to a recent investigation by the bureau of education. According to the federal standards a man or woman to be properly equipped for teaching should have at least a normal school education. If the teaching is to be that in high schools a college or university diploma should represent adequate training. In other words the training of the teacher should reach considerably beyond the subject to be taught.

Many Are Barred.

Thousands of men and women who were adequately trained to teach are now barred from the schools, it has been found. This is a result of the war. When living costs increased faster than teachers' salaries large numbers of teachers who were well equipped for their work were compelled to step out of the schools into the other other positions that would pay better. Many were practically forced out by lack of means to remain, although their first interest was with the schools.

There was a national shortage of teachers. Economic depressions followed. Persons with hardly any training stepped into the vacant positions. At the same time the level of salaries paid teachers began to be increased. More and more inadequately trained persons went into the schools as teachers. The shortage of teachers ceased to be a problem. There are now enough, so that few schools need remain closed for lack of men and women to conduct them.

Standard Lowered.

But the teachers who are inadequately trained are holding the positions. And many persons who studied to make teaching their life work are without positions. School boards generally feel that in all fairness those persons who accepted positions when there was a teacher shortage should be retained.

The standard of training for teachers thus has been very largely lowered throughout the schools in all sections of the United States, the reports show. The correction of this situation may take several years, according to Commissioner Tigert.

Freeze Plays Havoc With Oranges

An unexpected freeze which occurred in southern California has not only spoiled millions of oranges and lemons that were about ready to be picked, but has also killed hundreds of the trees themselves, causing many orchard owners to take out their trees and replace them with new stock, which will require several years to come into bearing. Frozen lemons and oranges are poisonous, hence great care is taken to see that none of the frozen fruit is shipped to market. The illustration shows a pile of frozen lemons and oranges which were dumped into a river bed to decay.

HOLD TO THEIR OLD GLORIES

Manchus Retain Ancient Ceremonies of Former Dynasty.

Emperor, Though Virtual Prisoner in Forbidden City, Receives Homage of Attendants According to Ancient Forms.

Pekin.—In spite of the fact that Ching dynasty has been out of power since 1911 and the present emperor of China is a virtual prisoner in the forbidden city of Pekin, all ceremonies connected with the Manchu emperors are still kept up.

At the recent Chinese New Year's celebration the customary honor was paid to the spirits of the emperors in their resting places at the Eastern Tombs. Offerings of food and provisions were placed before the tombs and the old Manchu officials who are still retained in office by the Ching dynasty kowtowed according to the custom prescribed in Manchu house law for the imperial family.

These officials are experiencing considerable difficulty in following out all the old customs because of the lack of funds available for the upkeep of the emperors' tombs. The funds promised to the imperial family by the republican government are usually very tardily paid, with the result that poverty is facing the one-time affluent Manchus.

At the eastern tombs many of the Manchus, deprived of the annual stipend formerly paid by the imperial government, have been forced to become gatherers of wood and charcoal in order to support themselves.

The old towns and villages are falling into ruins, the forests of the huge tract devoted to the burial of the emperors are fast becoming devastated and the monumental tombs are beginning to fall into ruin and decay.

Every effort is being made by the officials of the tombs, however, to maintain the glory of the dead emperors, and the ceremonies at New Year's typified the attitude of these faithful adherents of a departed order who refuse to allow the glory of the Ching dynasty and the Manchu rule to be dimmed.

Wire Relic to Be Preserved.

Portland, Ind.—An oddity is on display in the office of Henry Martin, Jay county auditor. It is a piece of the first barbed wire ever made in this country and was brought to the auditor by L. P. Fennig of New Corydon, northeast of this city. The wire is in links of a length of three or four inches instead of being one twisted piece as the wire is now made. The antique piece of wire will be placed in the museum of the courthouse.

Pig With Elephant Head.

Irvington, Ky. — Forrest Stith brought in a pig from a litter of eight that had an elephant head and snout and only one eye, which was in the center of its head; it had no hair. The mother came from the state fair at Louisville.

NEWS REVIEW OF CURRENT EVENTS

Russians and Germans Almost Break Up the Economic Conference at Genoa.

SIGN TREATY OF THEIR OWN

Allies Bar Germany From Chief Committee but Neutrals Protest—Fighting in Ireland Increases—Little Navy Advocates Are Defeated in the House.

By EDWARD W. PICKARD

FOR several days last week it was thought the Genoa conference was about to break up in a row, but at this writing it appears possible that the trouble will be fixed up and the discussion of plans for the economic regeneration of Europe will continue.

Germany and Russia precipitated the row, and the former got most of the blame, the soviet delegate, Tchitcherin, being credited with a clever move. Following up the negotiations begun in Berlin, he and Doctor Rathenau got together in Rapallo and signed for their respective governments a treaty that anticipates what might be done by the Genoa conference. The two countries agree to cancel all war debts, all claims for war damages, and all claims for damages due to the soviets' nationalizing German property, providing Russia does not repay other foreign nations for this nationalization. In the latter case, Germany maintains the right to claim damages. It is agreed that Germany and Russia recognize each other and resume full diplomatic and trade relations, that they treat each other as most favored nations, and that the treaty of Brest-Litovsk is canceled.

Announcement of this pact brought expressions of indignant protest from Lloyd George and Barthou, who were seconded rather weakly by Facta of Italy, and more earnestly by Theunys of Belgium and Ishii of Japan. These five statesmen then called in the delegates of Czechoslovakia, Poland, Rumania and Jugo-Slavia and all signed a note to the German delegation telling of their pained surprise at its action, which they said violated the conditions Germany accepted when she entered the conference, and their decision that as a result Germany should not be permitted to take part in any future discussions or decisions relating to Russian affairs.

The Germans took this kick rather calmly, and some of them said they would rather leave Genoa than withdraw the treaty—a choice which Lloyd George offered them Wednesday. But the neutral nations—Norway, Sweden, Denmark, Holland, Spain and Switzerland—promptly lined up against the allies and joined Russia in the defiant statement that Germany could not be barred from participation in discussion of Russian affairs except by full vote of the conference. This action was actuated both by resentment against the British premier's attempts to dominate the conference and by the fear that in the private conversations that have been going on in his Genoa villa arrangements would be made with Russia that would prejudice the interests of the smaller powers. The Russians also insisted that Germany must sit in all conferences because there were many questions still at issue between Germany and Russia. On Thursday, however, Lloyd George said the Germans had agreed not to participate in discussions of Russian affairs.

BARTHOU of France held with Lloyd George that the Russo-German pact revealed violations of the treaty of Versailles and that the Germans must be excluded. He was backed up to the limit by his government. Premier Poincare sent to the French ambassadors in the allied countries instructions to insist that energetic measures be taken and penalties applied to Germany if the Rapallo treaty were not abrogated, regardless of what the Genoa conference might decide in the matter. He held that the execution of the treaty of Versailles must be insisted upon now. Both the British and the French feel that the Russo-German pact, while nominally economic, is in reality political and embodies a distinct threat of a complete alliance of the two countries against the entente. It is believed, too, that it would result in the commercial suffocation of Poland and perhaps of the other small nations that lie between Russia and Germany and along the Baltic, and those of the little entente.

One thing is evident: France's fear that the Genoa conference would get into a muddle, and her absolute distrust of Germany's good faith and good intentions are justified. A writer in the Paris L'Eclair says Germany has sent 12,000 "shock troops" into the Ruhr and is ready for resistance in Silesia, while the soviet armies are threatening the Polish and Rumanian frontiers. He adds: "There is no time to lose if we want to avoid war."

The nationalists of Italy are no less alarmed, seeing in the pact preparation for a great alliance between Germany and Russia and probably the entire Islam world and a war in the not distant future between those powers and the allied nations.

PLANS are under way for a financial conference to be called by the European banks of issue to discuss plans for the regulation of currency, in which conference the United States Federal Reserve bank will be asked to take part. Meanwhile, great bankers, including J. Pierpont Morgan, are arranging to meet in Europe to study the question of an international loan to Germany to help in the reconstruction of that country, to improve her exchange and to assist her in paying the reparations. In view of Germany's repeated refusal to pay, the allied reparations commission virtually has turned that problem over to financial experts.

THE long drawn-out peace negotiations at Dairen between Japan and the Far Eastern republic have been broken off, and Japan has decided to send more replacement troops into Siberia. The Chita delegates, according to Tokyo official statements, after gaining some of their points, made what the Japanese considered impossible demands concerning protection of lives and property of foreign residents, and the open door, and threatened to quit the conference if these were not conceded. Tokyo thereupon instructed its delegates to withdraw.

STILL another peace conference—that between the leaders of the Irish factions—does not seem to be accomplishing much, for the fighting in Ireland goes on with increasing bitterness. De Valera's Easter coup did not eventuate, but one of his adherents attempted that day to assassinate Michael Collins, head of the provisional government, and there were bloody clashes between the republican and Free State forces, which were continued all through the week. In Dublin the "rebels" occupied the Four Courts and other buildings and engaged in battles with the Collins troops; and in Belfast the Catholics and Protestants killed and burned and looted to their hearts' content.

STIRRED by President Harding's dismissal of employees of the bureau of engraving and printing and other bureaus, and by rumors of plans to restrict the operation of the merit law generally, the National Civil Service Reform league called a conference of all interested organizations and individuals to meet in Washington April 27. That engraving bureau affair is causing the administration a lot of trouble and the end is not yet. In attempting to explain the President's action the official organ of the Plate Printers' union asserted the country was flooded with millions of counterfeit federal reserve notes and other treasury issues. This was flatly denied by Secretary Mellon.

CHAIRMAN PAT KELLEY of Michigan and his cohort of "little navy" men went down to defeat in the house of representatives last week, and if the senate does as it is expected to do the United States will be able to maintain a navy of respectable proportions. In committee of the whole the house by a vote of 177 to 130 adopted the amendment to the committee bill which provided for an enlisted personnel of 86,000 instead of 67,000 men. A few days later this was confirmed by a record vote of 221 to 148, and then the bill was passed and handed on to the senate. Ninety Republicans voted against the personnel increase and 48 Democrats supported it. The measure carries a total appropriation of $251,200,000, which is $18,000,000 more than was fixed by the appropriations committee. Further increases are expected in the senate.

THE fight of those who believe adequate national defense is not centered on the army bill. In this the American Legion is taking active part, National Commander MacNider appearing before the senate appropriations committee to denounce the house bill which provides for only 115,000 enlisted men. He said:

"The American Legion unqualifiedly backs up the President, the secretary of war, and General Pershing in their support of necessary appropriations for the National Guard, organized reserves, reserve officers' training corps, and civilian military training camps as recommended by the War department, and also supports the position that approximately 150,000 men is the minimum number needed for the regular establishment to perform its proper mission in the plan of national defense."

SOMETIME during the present session the senate will pass soldiers' bonus legislation. So much was determined by the Republican senators in caucus by a 3 to 1 vote, and they asked the finance committee to report a bill "within a reasonable time." But they reached no decision as to the form the bill will take. The right of the senate to add any revenue provisions to the bill passed by the house is questioned, since the Constitution requires that revenue measures must originate in the house. Republican leaders of both senate and house are again discussing the plan of financing the bonus by the sale of British bonds, and it is understood that if these are found available through the work of the foreign debt commission, President Harding will not object to the method of raising the funds. With this in view efforts are being made to postpone senate consideration of the bonus measure until after the British bill has been passed, by which time it is expected the work of the commission will be far enough advanced to give assurance that the long-term British securities will be available.

FLOODS and tornadoes have been playing havoc in the Middle West. Through much of the Mississippi river valley the rivers and streams have broken their levees and overflowed their banks, doing vast damage in many towns and inundating millions of acres of land. Unseasonably cold weather added to the distress of the people who were driven from their homes. The windstorms were also severe in southern Illinois and southern Indiana. Several towns were badly wrecked and about fifty persons were lost.

THE two Portuguese aviators who started from Lisbon to fly across the Atlantic to Brazil in several "jumps" got as far as St. Paul's rocks, about a thousand miles from the Cape Verde islands, but smashed their plane in making the difficult landing there. A new plane will be sent to them and the Portuguese government to encourage them to complete their journey.

WOMEN from all parts of the Western Hemisphere assembled in Baltimore, Md., at the call of the National League of Women Voters to confer on such subjects as education, child welfare, women in industry, prevention of the traffic in women, legal and political status of women and international friendliness. It is hoped the conference will lead to closer cooperation among the women of the entire world.

REPRESENTATIVE BLAND of Indiana has drafted a bill which authorizes the President to appoint a "coal investigation agency," composed of the director of the geological survey, director of the bureau of mines, director of the census and commissioner of labor statistics and assistants to be confirmed by the senate. They would be given sweeping powers to obtain information.

The SANDMAN STORY

COON GETS EVEN

COON was feeling pretty cross with Mr. Fox, though Mr. Fox not know this, and Mr. Coon t going to tell him, but his mind made up the very next time he chance Mr. Fox should be paid eating him in such an unfriendly er.

happened that Mr. Fox had been g the poultry up at the farm, he farmer did not think he was right sort of a caller to have d, so he set Mr. Dog to watch, e also set a trap, hoping to catch ox the next time he called.

t Mr. Fox was too clever to be t in a trap. He wasn't certain,

Mr. Dog Watching the Door

he thought there was a trap under hay by the poultry house window. e wanted to make sure for he had mind set upon having a turkey er some night.

r. Fox did not think it wise to his feet in finding out about the so he trotted over to Mr. Coon's tell him about some fine young kens which he was sure his dear nd, Mr. Coon, would like.

I am waiting for the turkeys to be right size," he explained to Mr. n, "and as I am tired of chicken ners I thought I would give you a nce."

r. Coon thanked Mr. Fox for being thoughtful, and that very night he ted up to the farm and caught his in the trap, but he managed to away and ran home to nurse his foot for a week or more without ing any food to speak of.

f course, Mr. Fox was watching not far off, and learned just what he had suspected, and now he would be careful of straw when he was again ready to visit that farm.

While Mr. Coon was home sick he had plenty of time to think, and as he thought he came to the conclusion that Mr. Fox was to blame for all his trouble and suffering, so that was the reason he was so cross at Mr. Fox, and no one could blame him, for one tender toe is bad enough and more than one must be very bad indeed.

One day after Mr. Coon was well he happened to notice Mr. Dog watching the doorway of the home of Johnny Woodchuck and an idea came to him right away.

Mr. Coon waited for Mr. Dog to give up watching and go home for his dinner; then off he ran to tell Mr. Fox that Johnny Woodchuck had a very wide doorway to his home because he was so fat.

Mr. Fox bounded right off for Johnny's home, for he had no idea that Mr. Coon knew the part he played in his being caught in the trap, so he was not at all suspicious.

Mr. Coon knew that Johnny had several openings to his home, that he would be out of the way by the time Mr. Fox got inside, but that was not what he intended for the joke on Mr. Fox.

The doorway was wide just as Mr. Coon had said, for Mr. Dog had helped to make it so, and half of Mr. Fox's body was inside Johnny's house when Mr. Coon, who was watching from a tree, saw Mr. Dog coming on the run, but he was not barking, so Mr. Fox did not hear him.

Mr. Coon smiled. He knew it would not matter at all to Mr. Dog whether it was Mr. Fox he caught or Johnny Woodchuck, and he would give Mr. Fox the worst shaking he ever had in his life, if nothing more.

Mr. Dog came up to Johnny's home. He recognized Mr. Fox at once and grabbed him by a hind leg, which brought him out of the doorway so quickly that Mr. Coon could never be sure how Mr. Fox looked when he saw who had him.

They got so mixed up that Mr. Coon couldn't tell them apart, but Mr. Fox managed to free himself and off he ran with Mr. Dog chasing him.

Mr. Coon called out from his safe place in the tree, "Look out you do not step on a trap, Mr. Fox. Sorry Mr. Woodchuck was not at home."

A LINE O' CHEER

By John Kendrick Bangs.

WORRY

IF BY a bit of worry I could cure
A portion of the care man must endure
I'd gladly stand the gaff of it,
And worry night and day, asleep, awake,
And even do my level best to make
My daily staff of it.

But since 'tis but an added woe with not
Of remedy a tittle or a jot.
Let's make the merest chaff of it,
And meet our care with drafts of constant cheer,
And when a cloud of worry cometh near
Just make a laugh of it.

Madge Bellamy

Dainty Madge Bellamy, the diminutive "movie" star, had no worries concerning Easter togs, for on that day she donned her mother's finery of another day. Miss Bellamy is well known among the many other screen stars.

"What's in a Name?"

By MILDRED MARSHALL

FACTS about your name; it's history; meaning; whence it was derived; significance; your lucky day and lucky jewel

JOSEPHINE

THE origin of Josephine lies in Scriptural history. When, after long waiting and hoping, a son was born to Rachel, she named him Joseph, the name coming from a word meaning an addition, because she hoped that there would be still another child added to her family.

The beautiful character of Joseph assured him namesakes beyond number and in 1621 a festival day was fixed by the pope in honor of St. Joseph, the husband of the Blessed Virgin. This spread the use of his name afar. Spain adopted it, calling him Jose Maria, or Pepito for the concentraction. In this way Pepita, or Josefa, the feminine form, arose.

The daughter of Maria Theresa was called Maria Josepha, and these names were seldom separated in France, Italy and Germany. The famous Empress Josephine really bore the name of Marie Josepha Rose. Her unfortunate career as the wife of Napoleon made her such a dramatic figure in French history that Josephine became the favorite name of French damsels, who sometimes contracted it to Fifine or Finette. In Switzerland the name became, through some curi- Jose Maria, or Pepito for the con- used as such among the peasants.

Josephine was introduced into England straight from France, and no effort was made to change it or place the stamp of the Anglo-Saxon upon it. America, taking it over, straightway contracted it to Josie, but Josephine is always given in baptism. Josephina is popular in all Latin countries, except Spain, which retains Josefa. Sweden has a musical Josefina.

Jet, signifying sorrow, is Josephine's talismanic stone. If worn by her it will drive away the causes of sorrows, disease and suffering. Thursday is her lucky day and 2 her lucky number. Her flower is the snowdrop of purity.

The Right Thing at the Right Time

By MARY MARSHALL DUFFEE

WHEN VISITING

WHEN you are the visitor, you might think all your responsibilities would end, so far as the financial end of things is concerned. For it is without doubt the duty or privilege of the host and hostess—it depends on them which they consider it—to pay your expenses while you are their guest. That is to say, besides providing you with board and lodging they plan and pay for your entertainment.

However, there is nobody so offensive as a stingy or a selfish guest. The attitude of taking all and giving nothing is one that everybody, and perhaps guests more than anybody else, should avoid. Though, of course, you accept the gift of hospitality from your host and hostess in accepting their invitation, don't be greedy about it.

For one thing, if you make a long visit, by all means suggest some sort of "treat" of your own. You may invite your hostess, if you are a woman, or your host and hostess, if you are a man, to the theater. Don't be officious about it. Don't upset their plans. And be careful not to do it in such a way that you will seem to be planning diversion because you are bored with their plans. But in a tactful way invite them to be your guests for one afternoon or evening.

Then there is the matter of candy. It is always a thoughful thing of the guest to keep the family supplied in candy—that is to say, to keep them supplied in a limited way. If there are children who are allowed to eat candy, as there are even in this enlightened day, give them a box of candy. Get a box of your hostess' favorite chocolates. And if there are young girls in the family remember that they, too, will be delighted to receive some sweetmeats from you.

Genius finds its own road.

MY FRIEN'S leetle keed, Tony, gotta hard time stay een da school. Every day seema like he and da teach gotta da fight. He been een da school fiva, seexa mont now and he maka more trouble dan de senate for da League of Nation.

You know when he go een da school he gotta trouble first ting maka too moocha talk. Every time Tony maka da conversash he say da teach maka heem stick round for da lesson.

But Tony ees so smarta keed as hees fadda longa time ago. Da olda man learn speaka da Engleesh so queeck he reacha deesa country. Een tree, four mont he can talk lika devil and swear worse as dat.

Da olda man finda job worka on da railroad. And when da railroad finda out Tony's papa can speaka da Engleesh he gotta job be da foreman righta queeck. He say eef he no can speaka dat way he no be da foreman.

So Tony's papa tella heem talka so moocha he can alla time and learn speaka plenta Engleesh. And when Tony talk een da school he gotta stay een and maka da lesson. Da teach say she gonna keepa heem late every night so she can learna heem keepa da mouth shut.

Between hees fadda and da teach Tony sure no getta moocha educash. Mebbe da teach maka Tony keepa da mouth shut because she no wanta heem be da foreman somaday, I dunno.

But Tony usa da head een da school other day alla right. Da teach aska heem for da lesson wot's deefrence between da congress and da senate en Uniteda State. Tony he dunno, but he no letta da teach know dat. He say he jusa keepa da mouth shut and eef he keepa da mouth shut he no gotta stay een da school after da wheestle blow. I tink Tony ees smarta guy so moocha as da teach.

Wot you tink?

LATE PARIS HATS

Headgear for New Season Must Be Large, Makers Say.

For Younger Girls There Are Many Models Trimmed With Strings of Flowers.

The Parisian insists that the hat of the new season shall be large. Then, even if it is a small hat, it is still large, which sounds like a paradox, but which is so, nevertheless. The small hats have larger contours. They are more ample—not held so closely to the head.

Of course, observes an authority, the French hat is not an easy matter to describe. It is an illusive thing without so very much that is conspicuously notable about it, but with so much subtlety and so much charm that its description becomes something to elude one completely. At each of the Parisian hat shops something new is seen to charm one's sight and to lure one into the spending of much money for these head fixings which are so delightful to contemplate, let alone to wear.

Some of the hats have large bows of malines tied so that their loops reach far beyond the confines of the brim. This trick is again repeated with lace either in black or in some of the dyed shades that are so fashionable for the afternoon and evening dresses.

Rose is the color that is most favored in Paris for daytime hats—especially for those which are called sport hats. It is a deep tone of rose that verges upon the cerise and for a certain type of young person there could be nothing better. One of these, in a soft and pliable felt, was worn with a blue-gray tweed suit and a gray fox fur, and the effect was something that might be desired by any woman who could possibly afford to wear the combination.

The period of 1840-1860 has been reverted to by one maker, and on most

Showing New Application of Ostrich Plumes and Tailored Hat of Black Faille Straw.

of his hats there will be found cascades of lace falling down at either side of the face to touch the shoulder and even to fall below that point.

Another has chosen to accompany many of his suits with little soft and pliable hats made of the same material as the suit. Often they are embroidered by way of trimming, and again they are supplied with the faintest note of trimming applied at one side or directly in the front.

CAPES FOR DRESS OCCASIONS

Bright Color and Pastel Taffetas Are Popular for Garments for Evening Wear.

In the cape models for evening wear bright color and pastel taffetas are popular. These are usually quite full and wrap about the figure almost

DRESSES FOR LITTLE GIRLS

Tan-Colored Cotton Crepe and Pink Crepe de Chine Fashioned Into Chic Models.

An unusually pretty little dress for a child of four, seen recently, was made of tan-colored heavy cotton crepe. The yoke and sleeves were attached to the dress proper by means of crocheting done in brown wool. The hem was cut apart from the skirt and then fastened back with the crocheting. A simple stitch was used so that the general effect was that of hemstitching done with wool floss.

A clever party dress for a small girl, shown by the same designer, was of pale pink crepe de chine, made on simple lines. The sleeves were ruffled almost to the shoulder with half-inch dainty white lace and the same trimming was used about the skirt and bloomers. With this dress was worn a pink taffeta hat with a flower streamer at one side. The crown and upper brim were covered entirely with narrow taffeta or scalloped, so that a flower petal effect was suggested.

Spring Lingerie.

If you are making spring lingerie there are several new touches that are daintily charming. On crepe de chine underwear satin ribbon an inch wide is cut diamond shape, so that there are two finished and two raw edges. The tip of one "diamond" is lightly tacked to such wearables as gowns and negligees. Half a dozen sewed across the front flutter like flowers. Ribbon, either to match or contrast, is effective, while lavender or pale blue is particularly pretty. On dainty wash lingerie, made of sheer striped material, plain bands of lavender organdie are seen to shape the top and form shoulder straps.

Vagaries of the Spring Handbag.

The flat shape stamps one's handbag as 1922. Newer than the leather ones and more unique, are some envelope-shaped bags of canton crepe, faille and moire silk. Some are plain with only fancy clasps or handles, while some very lovely ones are embroidered in steel beads. On others nail heads used sparingly with steel beads distinguish. Needlepoint embroidery on flat purses of satin striped faille is novel as well as beautiful.

Paisley Fashions Negligees.

The fancy for Paisley prints has extended to the negligee field. A very lovely boudoir garment of black crepe was cut on straight lines, with a round neck, and finished with very wide sleeves made of Paisley print chiffon. Another showed the garment proper, straight and rather panel-like in the back and front, made of Paisley flowered silk with wide sleeves of a deep red chiffon blending with one of the reds in the print.

Sleeves.

The sleeve situation is more than diverting. Some of the new frocks have sleeves which sheathe the arm from shoulder to wrist, and others swing clear of the arm, being attached at an unbelievably large arm hole. Afternoon frocks which are quite correct for outdoor wear, have their sleeves chopped off just a bit below the shoulder and call for the constant use of long gloves.

LITTLE FROCK OF BABY BLUE

A dainty offering is this little frock of baby blue habita, worn with a georgette bonnet in the same ever-pleasing shade.

shawl fashion. The collar may be of ostrich in matching shade or a full, self-fringed ruche of the taffeta may form a collar.

Black satin or silk evening wraps, lined with bright color silk, are also popular. A number of these dark colored models have deep, wide vests of self fabric, sometimes stitched or braided.

Daytime wraps run to both flared and straight-line models. The widely circular cape, made of round material hollowed out for the neck and slit down the front or side, is among the striking models, these often appearing in sport fabric.

A Hat for a Tweed.

To wear a suitable hat with a tweed or homespun costume is to make or utterly mar that costume. Straws with tweeds are not considered the thing, for the one-color tout ensemble must be preserved. The matching tweed hat serves its purpose, but must be abandoned with the approach of warm weather and sunshine.

The hat made of wools or wool braids is the appropriate thing. Woven two-tone and three-tone effects combining wool and straw braids cleverly imitate the tweed effect and may be had to match almost any tweed mixture.

The Stand-Up Collar.

Many spring tunic dresses have little stick-up collars set round shallow oval necks. These do not meet in the front and are often finished with a narrow black watered ribbon cravat in a stiff Victorian loop-and-end knot. A rather striking arrangement is to make the collar of an entirely different material or the same material as the dress, but vertically striped with braid or ribbon or black or a contrasting color. But this striping must not be used elsewhere on the dress or the effect is lost.

Seasonable Smartness.

To be smart this season you must be demurely smart and have your frock cut high up in the neck in the new, straight-across line. One of the new ideas in trimming is to finish the hem and sleeves of the frock with three rows of piping cord.

SECRET OF CHARM

By SYLVIA L. BERKMAN

© 1922, by McClure Newspaper Syndicate.

Daphne Joselyn ran upstairs, threw herself on a bed and buried her face in a pillow. She wanted to cry, but didn't because crying made her nose red and her eyes look washed out, and for her husband's sake she wanted to look pretty. That was the whole trouble—she wanted to look pretty and retain her husband's love, but, instead, she grew larger and less attractive every day, while Reggie's love seemed to diminish accordingly.

She had tried many ways to get thin. She had fasted, dieted, exercised—everything, but each new experiment only increased her weight. With her light hair, blue eyes, and fair skin, she wasn't homely, but she was large, and Reggie had said, when she was younger and more slender, that he disliked fat women. Now he seldom stayed at home in the evening, and people said he was interested in a cute little brunette at his office.

That morning she had received a pamphlet which said that the only way to keep a husband's love was to cultivate charm. By practicing before the mirror, she had attained what she thought was a perfectly irresistible smile. Then she had added a glide to her walk to make her seem graceful, and prepared to conquer her husband by charm. As she glided through the doorway with the irresistible smile on her face, Reggie had stared at her in silence. She thought it was the silence of admiration, but finally he gained his voice and exploded: "Are you playing you're a fairy, Daphne, or shall I call a doctor?" Rushing from the room, she had thrown herself on the bed in a fit of despair.

It was of no use. She was undeniably fat, and Reggie thought that she was crazy when she tried to please him. When she had followed the advice of an "adviser to the lovelorn," and tried sitting on his lap and putting her arms around his neck, he had thrust her from him and laughed. "Do you want to break my knees, Daph? That was all right when you were slim, but you're far from that now, girlie."

She remembered the day he had caught her "getting thin to music." How he had laughed and teased her! But if he would only love her as he used to, she wouldn't mind anything. He was unkind to her, but she still loved him with all her heart.

The next morning she did not get up in time to see Reggie, because she didn't want him to be annoyed by her presence. She would keep away from him if that was what he wanted.

During the afternoon as she was reading an article on the "art of keeping thin," her mother, Mrs. Price, came into the room.

"Hello, Daphne, child," she greeted her, "how are you and Reggie getting along? I just saw him at the office, and he said to tell you to expect him for dinner."

"It's a wonder," Daphne sighed, "he isn't at home much now."

"Well, you'll have one more tonight. I'll stay. It's raining, and I don't want to get wet. What are you going to have for dinner?"

"Oh, I have some cold meat and a fruit salad, and I'll get something to drink, and we'll have a light dessert."

"Daphne Joselyn, do you mean to tell me that you feed your husband in that way? Why, after a man has worked all day, he wants something substantial, not salads and drinks and light desserts. No wonder the poor man eats away from home."

"But I have to, mother, to keep from growing fat."

"Well, there's no need in starving a man just because you want to get thin. Daphne, I'm ashamed of you. Instead of brooding over your size, come down to the kitchen and we'll prepare a dinner that's fit for a hungry man, and not one that would satisfy a bird."

Two hours later the table was set in readiness for a meal that would warm the heart of any man. Daphne had become interested in the work, and surveyed the dining room with a smile. Outside a violent storm was raging, and within all looked cosy and comfortable.

Suddenly the telephone rang, and an agitated voice asked for Daphne's mother. When Mrs. Brice returned she said: "I must go at once, Daphne. Mrs. Thompson's twins are very sick, and she wants me to come over, I hate to leave this cosy place for the storm, but it must be done. Take the pie out of the oven in five minutes, and beat your sauce now. Good-by, dear."

Thirty minutes later Reggie came in, dripping and worn out from the battle with the storm, when he had changed his clothes he entered the dining room, stopping with surprise as he noticed the daintily set table, with its load of good things. Daphne herself looked charming with her face flushed prettily.

After Reggie had eaten as much as possible he leaned back in his chair and gazed at his wife with complete satisfaction.

"Gee, Daph," he said, "I'm glad you had this supper ready tonight. I expected one of those cold meat affairs, and this is a pleasant surprise. I was almost tempted to go to a restaurant, but I'll say that I'm glad I didn't. Home's the best place for a man, after all, especially when he has a pretty wife to look at."

Daphne blossomed into the picture of happiness incarnate. And this time the smile she gave needed no practicing to make it lovely.

AUNTIE'S ROMANCE

By LYNDA W. BOLES.

© 1921, by McClure Newspaper Syndicate.

What a wonderful field for the machinations of fate is the old canvas mail bag, unesthetic and unromantic to look upon, but containing the gladness and sorrow, disappointments and surprises which so often make the turning point in the lives of its many slaves.

None of the many elements of the seasons is too fearsome to struggle with on our road to the village post office, wherefrom the unrelenting hand of fate, reaches forth and lays its mark upon all who wait upon it.

In a small town general store and post office I stood one day watching the strange mixture of human emotions depicted upon the face of the village people as they gathered to await Fate's shuffling of the cards. How quickly can the eagerness be wiped from a face by that unfeeling, "Nothing tonight, Mrs. S."

A little old woman in rusty black timidly approached the window, her tremulous, "Did my letter come tonight, Mr. Morse?" revealing the anxiety of her mind.

Breathlessly she waited, as did I, the result of his search through a pile of letters and when at last one was handed to her I experienced a sense of satisfaction in fate's kindness to this tiny bit of humanity.

With a smile of gratitude she clasped the precious bit of paper close to her old black shawl and hurried through the door.

"There, I do declare. Aunt Lizzy has got her letter!" exclaimed someone behind me, and, turning, I recognized the speaker from whom I very easily drew a pathetic little story.

It seemed that the letter was from "Faithy," a niece whom the old lady had mothered from babyhood—a trust which had demanded many sacrifices, but in return had brought a great deal of happiness to the lonely old woman.

Then, through a strange twist of fate, again masquerading in the old canvis mail bag, Faithy had gone to the far West to meet and marry the man with whom she had become acquainted through the exchange of a few letters while he was in service in France.

They had been married now almost a year, a year full of happiness and complete contentment, but very few luxuries, and oftimes, I gathered, not enough necessaries.

As each letter was received the little old lady would breathe in the atmosphere of young love and unshattered ideals, her old cheeks flushing and eyes glowing as she read the young girl's praises of the man who had come to fulfill all the hopes and dreams of her girlhood.

And so the little old lady with the youthful eyes lived her "second hand" romance.

Two weeks later as I was waiting for my train to be bulletined in the terminal of one of our large Eastern railroads, I felt a light touch on my arm. Looking down, I gazed into the uplifted face of the youthful old lady of the post office episode.

"Will you tell me," she asked in a confidential tone, "if that train goes to Chicago?"

"That's the train, sure enough," I answered, pointing to the track.

"I suppose you are on your way to see Faithy?" I questioned with a smile, for I know she did not recognize me and had no reason to believe that I knew anything of her affairs. But my little joke was lost. Aunt Lizzy seemed to take it for granted that the realization of her dreams should be an established fact.

"Yes, I am on my way now. She really needs me. It's not just that she wants to take care of me. Up to now she had only her husband to look after. But a baby is a different thing. There's a knack to raising them."

"It will be a lucky baby to have you to care for it," I answered, as I found her chair in the car she was to ride in. "Now I will see you again before the train leaves, but I have an errand to do now."

"Land sakes, you don't dare to go away now, do you, with the train all here? I wouldn't leave this seat for anything," she said, with a happy laugh.

With the aid of a taxicab I made a dash for the nearest department store and there I turned my case over to a floor walker, telling him I wanted an outfit for a very young man. On being questioned more fully I admitted that measurements hadn't been delivered yet, but I wanted everything that couldn't be bought in a small western town for a baby.

I reached the station with ten minutes to spare, found my little lady and dropped the package in her lap, whispering, "For him."

About dinner time I decided to stroll back to her car and see what Aunt Lizzy was going to do about dinner. I found her asleep and in her lap lay a tiny cashmere garment, its dainty pink silk lining matching the flush upon the sleeper's cheeks.

His Top Floor.

"I noticed young Dobson standing on a street corner just now apparently lost in thought," said Mr. Gadspur.

"It could not have been that," said Mr. Dubwaite.

"No?"

"However, an idea may have been struggling to enter an otherwise unfurnished apartment."—Birmingham Age-Herald.

Store News

May 1922

Plant Sale--

Lets forget the cold and damp of April showers, and look ahead to the sunshine of May and the flowers.

When the earth is warm and moist, and every little thing is so anxious to grow, that's the time that Wellemeyer's have a Plant Sale each year, and that's the time for you to get busy in your garden.

The first shipment of Cabbage and Tomato Plants will arrive May 1st; and a week later we will have Cauliflower, Celery, Ground Cherries, Peppers and everything in the Garden Plant line.

Potted Plants will arrive May 13th and from that time until May 27th th big rush for Plants and Flowers will be on. We will also have Window Boxes, Hanging Baskets and Ferns.

It will be a pleasure "To Watch Your Garden Grow" if you invest in strong, healthy plants from Our Sale.

CUT FLOWERS—

Mothers' Day, May 14th—wear a flower for Mothers' sake; a bright one for Mother living and a white one for Mother dead

Memorial Day, Tuesday, May 30th.

We are connected with several of the most active Green houses and can take care of your wants promptly. Order early for Mothers' Day.

DRESSMAKING SCHOOL—

From May 8th until June 10th, five weeks, Mrs. Ava Hak will conduct a school of Dressmaking in the Hat "Shop" of Wellemeyer's Store.

The system of conducting the work and the schedule of prices is somewhat unusual Women are allowed to bring their own material, have their own gown cut and fitted, and do their own sewing to the amount of ten days work, all under the guidance of Mrs. Ava Hake, for the sum of five dollas. If one wishes to sew at the shop and receive help for one day only, the charge is 75 cents. The course need not all be taken at one time, but the work can be done at your leisure.

MILLINERY—

Our Hat Stock is not big, but it is well selected and nicely assorted. Every Hat is new and up-to-the-minute in Style, and moderately priced.

New Hats have been received every week since we opened this Hat Shop March 1st, and we are now showing fresh and snappy Mid-Summer Styles.

We still have a number of Early Spring Hats; these are closing out at $4.95 each. Come see this Bargain Hat Table. If you like our Hat Shop, tell your friends, and between us all will build up a wonderful place.

CLEANING AND PRESSING—

We do everything in the Cleaning and Pressing line right here in Klemme. Our Hat Shop is equipped to handle this work. Come now, bring in your Suit or Coat, we will fix it up as good as new, and you can wear it Mothers' Day. The charge for Cleaning and Pressing a mens suit is $1.50, other work in proportion.

YOUR OLD FUR COAT—

If your old fur coat is any good at all it will pay you to have it repaired and relined; bring it to the Store during May, we pack a box of Fur Coats June 1st, and can send yours along with the rest, all will be back here in the early fall, looking almost as good as new.

SHOE REPAIR SHOP—

Our Shoe Repair Shop will be closed for 30 days, while we remodel this department and make extensive improvements; we will reopen about June 1st and will then serve you better than ever.

CASH FOR EGGS—

The Stores of Klemme are all glad to pay Cash for your Eggs. If you ar loyal to the best interests of your community you will sell your eggs to the Stores. You may have cash or trade as you prefere.

SHOE SALE—

We are going out of the Shoe Business; we are sacrificing the Shoes in order to make room for the Millinery Department. Every pair of Shoes and footwear in this store must be sold at once, and we have thrown our entire shoe stock into the Bargain Bins at an avera e of exactly half price. We have every size as yet. Come and buy for th needs of your household while this, our last Big Shoe Sale is in progress. We have your size, and it will be a long time before you have a real chance like this again.

MATTRESSES—

When you get to cleaning house you may find that you could use a new Bed, Mattress and Spring. In iron beds we have Specials at $5.00, $9.00 and $12.00.

We have Cotton felt Mattresses from $11.00 to $25.00. Other Mattresses from $5.00 up.

And say, you ought to see our line of Kapok Mattresses, (sometimes called silk floss) at from $20.00 to $35.00. They are lighter in weight and more elastic than cotton.

We have a very good Bed Spring for $4.50.

OPEN NIGHTS—

Two nights each week this town is alive for business and pleasure, viz.: WEDNESDAY NIGHT AND SATURDAY NIGHT.

Get the habit of coming to Klemme on these nights, meet our neighbors and all your friends, do your trading and have a good time.

Our Store is equipped with Nitrogen Dalight bulbs, which give light of the exact quality of Daylight and makes it possible for you to match colors as well by night as in the daytime. This system of lighting is just one of the conveniences which makes Wellemeyer's Store a Pleasant and Profitable Place to Trade.

Henry Wille was a passenger to Garner Saturday morning.

Mr. and Mrs. Harold Gruetzmacher of Belmond, were Klemme visitors Sunday.

FOR SALE—9 calves, 6 to 8 mo. old. H. Beek, Goodell, Ia. A20-29p

Mrs. Clarissa Abel, of Garner, and candidate for County Recorder, was in Klemme the fore part of the week meeting the voters.

The high school ball team will ride over to Kanawha in Wellemeyers furniture truck next Thursday. It will take a whole truck to bring back all the scores the boys are going to gather in.

Absolute merit and merit alone is responsible for Tanlac's phenomenal and unprecedented success. E. S. D. Kahrs. adv

NOTICE TO CONTRACTORS

Sealed bids will be received at the Office of the County Auditor, Garner, Iowa, until 1:30 o'clock P. M. on May 2, 1922, for paving and incidental work on Primary Road No. 19 from the end of the paving in Hutchins to the Kossuth County line and from Britt to Garner.

Bids will be opened at the above Office promptly after the time for receiving same has closed.

A certified check, unregistered Liberty Bonds, or bidder's Bond, amounting to five (5%) per cent of bid, made payable to the County Auditor, shall be filed with each bid, which in case of bidder receiving the award, should he fail to execute a contract and file a bond within ten (10) days after the acceptance of his bid, shall be retained by the County as liquidated damages.

The proposed work consists of building to established grade and paving approximately 15.14 miles, requiring approximately 60800 cu. yd. of excavation, 160235 sq. yd. of paving, 5840 lin. ft. of 6 inch tile, 50 ft. of 8 inch tile, and two Type A tile intakes.

Plans and specifications for the work may be seen and may be secured at the above Office or at the Office of the County Engineer, Garner, Iowa, or at the Office of the State Highway Commission, at Ames, Iowa. The County reserves the right to waive all technicalities and to reject any or all bids. All contracts awarded for this work are subject to the approval of the State Highway Commission before becoming effective as contracts.

CHRIS JACOBS,
County Auditor. 1w

NOTICE TO CONTRACTORS

Sealed bids will be received at the Office of the County Auditor, Garner, Iowa, until 10:30 o'clock A. M. on May 2, 1922, for grading, draining, and incidental work on the Wilson Highway North and South of Garner, as shown on the plans for the Federal Aid Project No. 139.

Bids will be opened at the above Office promptly after the time for receiving same has closed.

A certified check, unregistered Liberty Bonds, or Bidder's Bonds, amounts to five (5%) per cent of bid, made payable to the County Auditor, shall be filed with each bid, which in case of bidder receiving the award, should he fail to execute a contract and file a Bond within ten (10) days after the acceptance of his bid, shall be retained by the County as liquidated damages.

The work consists of tile draining all of the project, being 23.862 miles requiring 113871 lin. ft. of 6 inch tile, 39228 lin. ft. of 8 inch tile, 3500 lin. ft. of 10 inch tile, 60 lin. ft. of 12 inch tile, 29 Type A intakes, and 39 Type B intakes. Also excavation work on 9.202 miles from the North Iowa Pike North involving 101000 cu. yd. of excavation; also excavation work on 7.017 miles from Klemme South to the County line involving 91751 cu. yd. excavation.

Plans and specifications for the work may be seen and may be secured at the above Office or at the Office of the County Engineer, Garner, Iowa, or at the Office of the State Highway Commission, at Ames, Iowa. The County reserves the right to waive all technicalities and to reject any or all bids. All contracts awarded for this work are subject to the approval of the State Highway Commission before becoming effective as contracts.

Everything Else She Tried and Failed—But Her Last Trick Won Success.

By ELEANOR PORTER

Author of "Pollyanna," "Just David," Etc.

Copyright by Eleanor H. Porter.

MRS. THADDEUS CLAYTON came softly into the room and looked with apprehensive eyes upon the little old man in the rocking chair.

"How be ye, dearie? Yer hain't wanted fer nothin', now, have ye?" she asked.

"Not a thing, Harriet," he returned cheerily. "I'm feelin' real pert, too. Was there lots there? An' did Parson Drew say a heap o' fine things?"

Mrs. Clayton dropped into a chair and pulled listlessly at the black strings of her bonnet.

"'Twas a beautiful fun'ral, Thaddeus—a beautiful fun'ral. I—I 'most wished it was mine."

"Harriet!"

She gave a shamed-faced laugh.

"Well, I did—then Jehiel and Hannah Jane would 'a' come, an' I could 'a' seen 'em."

The horrified look on the old man's face gave way to a broad smile.

"Oh! Harriet—Harriet!" he chuckled, "how could ye seen 'em if you was dead?"

"Huh? Well, I—Thaddeus"—her voice rose sharply in the silent room—"every single one of them Perkins boys was there, and Annabel, too. Only think what poor Mis' Perkins would 'a' given ter seen 'em 'fore she went! But they waited—waited, Thaddeus, jest as everybody does, till their folks is dead."

"But, Harriet," demurred the old man, "surely you'd 'a' had them boys come ter their own mother's fun'ral!"

"Come! I'd 'a' feasted her eyes on 'em. Thaddeus"—Mrs. Clayton rose to her feet and stretched out two gaunt hands longingly—"Thaddeus, I get so hungry sometimes for Jehiel and Hannah Jane, seems as though I jest couldn't stand it!"

"I know—I know, dearie," quavered the old man, vigorously polishing his glasses.

"Fifty years ago my first baby came," resumed the woman in tremulous tones; "then another came, and another, till I'd six. I loved 'em an' tended 'em, an' cared for 'em, an' didn't have a thought but was fer them babies. Four died"—her voice broke, then went on with renewed strength—"but I've got Jehiel and Hannah Jane left; at least, I've got two bits of paper that comes mebbe once a month, an' one of 'em's signed 'your dutiful son, Jehiel, an' the other, 'from your loving daughter, Hannah Jane.'"

"Well, Harriet, they—they're pretty good ter write letters," ventured Mr. Clayton.

"Letters!" wailed his wife. "I can't hug an' kiss letters, though I try to, sometimes.

"Well, well, wife, mebbe they'll come—mebbe they'll come this summer; who knows?"

She shook her head dismally.

"You've said that ev'ry year for the last fifteen summers, an' they hain't come yet. Jehiel went West more than twenty years ago, an' he's never been home since. Why, Thaddeus, we've got a grandson 'most eighteen, that we hain't even seen! Hannah Jane's been home jest once since she was married, but that was nigh on ter sixteen years ago. She's always writin' of her Tommy and Nellie, but—I want ter see 'em, Thaddeus; I want ter see 'em!"

"Yes, yes; well, we'll ask 'em, Harriet, again—we'll ask 'em real urgent-like, an' mebbe that'll fetch 'em," comforted the old man. "We'll ask 'em ter be here the Fourth; that's eight weeks off yet, an' I shall be real smart by then."

Two letters that were certainly "urgent-like" left the New England farmhouse the next morning. One was addressed to a thriving western city, the other to Chattanooga, Tennessee.

In course of time the answers came. Hannah Jane's appeared first, and was opened with shaking fingers.

Dear Mother (read Mrs. Clayton aloud): Your letter came two or three days ago, and I have hurried round to answer it, for you seemed to be so anxious to hear. I'm real sorry, but I don't see how we can get away this summer. Nathan is real busy at the store; and, some way, I can't seem to get up energy enough to even think of fixing up the children to take them so far. Thank you for the invitation, though, and we should enjoy the visit very much; but I guess we can't go just yet. Of course, if anything serious should come up that made it necessary—why, that would be different; but I know you are sensible, and will understand how it is with us.

Nathan is well, but business has been pretty brisk, and he is in the store early and late. As long as he's making money, he don't mind; but I tell him I think he might rest a little sometimes, and let some one else do the things he does.

Tom is a big boy now, smart in his studies and with a good head for figures. Nellie loves her books, too; and, for a little girl of eleven, does pretty well, we think.

I must close now. We all send love, and hope you are getting along all right. Was glad to hear father was gaining so fast.

Your loving daughter,
HANNAH JANE.

The letter dropped from Mrs. Clayton's fingers and lay unheeded on the floor. The woman covered her face with her hands and rocked her body back and forth.

"There, there, dearie," soothed the old man huskily; "mebbe Jehiel's will be diff'rent. There, there! Don't take on so, Harriet! Don't! I just know Jehiel'll come."

A week later Mrs. Clayton found another letter in the rural delivery box. Yes, it was from Jehiel.

She drew a long breath. Her eager thumb was almost under the flap of the envelope when she hesitated, eyed the letter uncertainly, and thrust it into the pocket of her calico gown. All day it lay there, save at times—which, indeed, were of frequent occurrence—when she took it from its hiding place, pressed it to her cheek, or gloried in every curve of the boldly written address.

At night, after the lamp was lighted, she said to her husband in tones so low he could scarcely hear:

"Thaddeus, I—I had a letter from Jehiel today."

"You did—and never told me? Why, Harriet, what—" He paused helplessly.

"I—I haven't read it, Thaddeus," she stammered. "I couldn't bear to, someway. I don't know why, but I couldn't. You read it!" She held out the letter with shaking hands.

He took it, giving her a sharp glance from anxious eyes. As he began to read aloud she checked him.

"No; ter yerself, Thaddeus—ter yerself! Then—tell me."

As he read she watched his face. The light died from her eyes and her chin quivered as she saw the stern lines deepen around his mouth. A minute more, and he had finished the letter and laid it down without a word.

"A Fun'ral—It's Murder!" He Gasped.

"Thaddeus, ye don't mean—he didn't say—"

"Read it—I—I can't," choked the old man.

She reached slowly for the sheet of paper and spread it on the table before her.

Dear Mother (Jehiel had written): Just a word to tell you we are all O. K. and doing finely. Your letter reminded me that it was about time I was writing home to the folks. I don't mean to let so many weeks go by without a letter from me, but somehow the time just gets away from me before I know it.

Minnie is well and deep in spring sewing and house-cleaning. I know—because dressmaker's bills are beginning to come in, and every time I go home I find a carpet up in a new place!

Our boy Fred is eighteen tomorrow. You'd be proud of him, I know, if you could see him. Business is rushing. Glad to hear you're all right and that father's rheumatism is on the gain.

As ever, your affectionate and dutiful son, JEHIEL.

Oh, by the way—about that visit East. I reckon we'll have to call it off this year. Too bad; but can't seem to see my way clear.

Bye-bye,
J.

Harriet Clayton did not cry this time. She stared at the letter long minutes with wide-open, tearless eyes, then she slowly folded it and put it back in its envelope.

"Harriet, mebbe—" began the old man timidly.

'Don't, Thaddeus—please don't!" she interrupted. "I—I don't want ter talk." And she rose unsteadily to her feet and moved toward the kitchen door.

For a time Mrs. Clayton went about her work in a silence quite unusual, while her husband watched her with troubled eyes. His heart grieved over the bowed head and drooping shoulders, and over the blurred eyes that were so often surreptitiously wiped on a corner of the gingham apron. But at the end of a week the little old woman accosted him with a face full of aggressive, yet anxious, determination.

"Thaddeus, I want ter speak ter you about somethin'. I've been thinkin' it all out, an' I've decided that I've got ter kill one of us off."

"Harriet!"

"Well, I have. A fun'ral is the only thing that will fetch Jehiel and—"

"Harriet, are ye gone crazy? Have ye gone clean mad?"

She looked at him appealingly.

"Now, Thaddeus, don't try ter hender me, please. You see, it's the only way. A fun'ral is the—"

"A fun'ral—it's murder!" he shuddered.

"Oh, not ter make believe, as I shall," she protested eagerly. "It's—"

"Make believe!"

"Why, yes, of course. You'll have ter be the one ter do it, 'cause I'm goin' ter be the dead one, an'—"

"Harriet!"

"There, there, please, Thaddeus! I've got ter see Jehiel and Hannah Jane 'fore I die!"

"But—they—they'll come if—"

"No, they won't come. We've tried it over an' over again; you know we have. Hannah Jane herself said that if anythin' 'serious' came up it would be diff'rent. Well, I'm goin' ter have somethin' 'serious' come up!"

"But, Harriet—"

"Now, Thaddeus," begged the woman, almost crying, "you must help me, dear. I've thought it all out, an' it's easy as can be. I shan't tell any lies, of course. I cut my finger today, didn't I?"

"Why—yes—I believe so," he acknowleged dazedly; "but what has that to do—"

"That's the 'accident,' Thaddeus. You're ter send two telegrams at once—one ter Jehiel, an' one ter Hannah Jane. The telegrams will say: 'Accident to your mother. Funeral Saturday afternoon. Come at once.' That's jest ten words."

"Now, that's all true, ain't it?" she asked anxiously. "The 'accident' is this cut. The 'fun'ral' is old Mis' Wentworth's. I heard terday that they couldn't have it until Saturday, so that'll give us plenty of time ter get the folks here. I needn't say whose fun'ral it is that's goin' ter be on Saturday, Thaddeus! I want yer ter hitch up an' drive over ter Hopkinsville ter send the telegrams. The man's new over there, an' won't know yer. You couldn't send 'em from here, of course."

Thaddeus Clayton never knew just how he allowed himself to be persuaded to take his part in this "crazy scheme," as he termed it, but persuaded he certainly was.

It was a miserable time for Thaddeus, then. First, there was that hurried drive to Hopkinsville. Though the day was warm he fairly shivered as he handed those two fateful telegrams to the man behind the counter. Then there was the homeward trip, during which, like the guilty thing he was, he cast furtive glances from side to side.

Even home itself came to be a misery, for the sweeping and the dusting and the baking and the brewing which he encountered there left him no place to call his own, so that he lost his patience at last and moaned:

"Seems ter me, Harriet, you're a pretty lively corpse!"

His wife smiled, and flushed a little.

"There, there, dear! Don't fret. Jest think how glad we'll be ter see 'em!" she exclaimed.

Harriet was blissfully happy. Both the children had promptly responded to the telegrams, and were now on their way. Hannah Jane, with her husband and two children, were expected on Friday evening; but Jehiel and his wife and boy could not possibly get in until early on the following morning.

All this brought scant joy to Thaddeus. There was always hanging over him the dread horror of what he had done, and the fearful questioning as to how it was all going to end.

Friday came, but a telegram at the last moment told of trains delayed and connections missed. Hannah would not reach home until 9:40 the next morning. So it was with a four-seated carryall that Thaddeus Clayton started for the station on Saturday morning to meet both of his children and their families.

The ride home was a silent one; but once inside the house, Jehiel and Hannah Jane, amid a storm of sobs and cries, besieged their father with questions.

The family were all in the darkened sitting room—all, indeed, save Harriet, who sat in solitary state in the chamber above, her face pale and her heart beating almost to suffocation. It had been arranged that she was not to be seen until some sort of explanation had been given.

"Father, what was it?" sobbed Hannah Jane. "How did it happen?"

"It must have been so sudden," faltered Jehiel. "It cut me up completely."

"I can't ever forgive myself," moaned Hannah Jane hysterically. "She wanted us to come East, and I wouldn't. 'Twas my selfishness—'twas easier to stay where I was; and now—now—"

"We'be been brutes, father," cut in Jehiel, with a shake in his voice; "all of us. I never thought—I never dreamed—father, can—can we see—her?"

In the chamber above, a woman sprang to her feet. Harriet had quite forgotten the stove-pipe hole to the room below, and every sob and moan and wailing cry had been woefully distinct to her ears. With streaming eyes and quivering lips she hurried down the stairs and threw open the sitting-room door.

"Jehiel! Hannah Jane! I'm here, right here—alive!" she cried. "An' I've been a wicked, wicked woman! I never thought how bad 't was goin' ter make you feel. I truly never, never did. 'Twas only myself—I wanted yer so. Oh, children, children, I've been so wicked—so awful wicked!"

Jehiel and Hannah Jane were steady of head and strong of heart, and joy, it is said, never kills; otherwise, the results of that sudden apparition in the sitting-room doorway might have been disastrous.

As it was, a wonderfully happy family party gathered around the table an hour later; and as Jehiel led a tremulous, gray-haired woman to the seat of honor, he looked into her shining eyes and whispered:

"Dear old mumsey, now that we've found the way home again, I reckon we'll be coming every year—don't you?"

Something to Think About

By F. A. WALKER

THE ROYAL MARRIAGE

OF COURSE you have read about the royal bride and groom of England, and whether married or single yourself, have doubtless wished them joy.

To some people the thought of marriage is terrifying, but when all things are considered, it is not half so alarming as the prospect of a solitary and forlorn old age.

A few words, the slipping of a ring upon the finger, a piece of engrossed paper, and the happy twain are united for life.

• • •

There are other unions in this world a thousand times more portentious than the betrothal of ardent lovers, which the young should do their utmost to avoid.

The pairing off with bad habits is one, sure in the end to lead to sorrow and remorse, from which there is no divorcement or no possible avenue of escape.

It is when the youthful first misally themselves with evil things that they begin to undo themselves.

They are not comfortable or happy on their wedding day, when without constraint or the golden ring, they promise loyalty to the Prince of Darkness.

They miss the fine salutations and good wishes of stanch old friends, for they have deliberately turned their backs upon them.

They are married now to principles against which their fathers and mothers, and their own conscience as well, had warned them.

There is no sunshine in their hearts, no smile on their faces, no pouring out of praise for blessings falling everywhere about them and of which they cannot partake.

They go to pieces on the rock of fear, and when their days are drawing to a close, they let go their hold on life and drift out to sea unnoticed even by their wicked associates.

• • •

Whatever may be the opinion of the helpless souls of the underworld with regard to commendable ambition, spiritual pride and sweet humility, they are too cowardly to express themselves openly.

"For better" is not in their ritual; "for worse" smudges every line and mocks everything good, noble and inspiring.

Heart-emotions are taken at a wrong valuation by the habitual doers of evil, who began their careers by wedding the sons and daughters of darkness.

To wed High Resolve, ought to be the chief purpose in life of every young man and woman, for it is only by high resolve that humans can attain their rightful heritage.

Uncommon Sense

By JOHN BLAKE

MOST MEN LABELED

EXECUTIVES who make a serious study of choosing men for positions have little difficulty in doing so.

Most men are labeled. Whether they know it or not, their ability will usually come out in a short conversation about the job they have applied for.

Inability shows itself in the same way.

The applicant may make every effort to prove that he can hold a job, but if he can't hold it an able chooser of men will find it out before he is hired.

The competent man may be shy; he may lack the instinct of putting his best foot forward; he may be a poor self-booster, awkward in expression. Yet the label is there, and the executive who has studied men can read it.

In the same way the competent business man can tell the nature of the man he is about to do business with. He may judge by a trick of facial expression, by a careless word or a hasty opinion, by a tendency to boast, or a refusal to boast, but he can tell.

Mistakes happen, of course. But they do not happen so often when the direct method of judging men is employed, as when the method is indirect.

Many men of only average ability can answer questionnaires. Few can talk with a shrewd prospective employer without disclosing to a very large degree their unfitness for the job.

Don't be afraid to wear your label. It is there anyway. It will be more than you can manage to conceal it.

If it is a poor label, you can make it better. But you cannot make it better by any conversational flights that are not backed up by solid ability.

It may be that the American people like to be humbugged, but the American employer cannot afford to be humbugged, and he seldom is.

If he is a bad judge of men, he is able to hire a good judge, and he abides by that judge's decisions.

You must stand or fall by the label you wear. All you can do about it is to make that label as good as possible, and by hard work to exchange it for a better one just as soon as possible.

And the very best label is the way you do your work, not the way that you talk about it.

KIDDIES SIX

By Will M. Maupin

A LULLABY

THERE'S a queer little house in Lullaby Town,
Hush-o, my baby, by-o!
Just over the hill on the lane winding down,
And a queer little room with lights burning low,
And shadows that flicker and dance to and fro—
O, haste, little comrade; together we'll go—
Hush-o, my baby, by-o!

Hush-o, my baby; hush-o, my sweet,
Come to the cottage on Slumberland street,
Clasped to my heart together we'll go,
Hush-o, my baby, by-o!

On Slumberland street in Fairyland square,
Hush-o, my baby, by-o!
Haste, little comrade, we soon will be there;
Hush-o, my baby, by-o!
Soft, downy couch that the angels have spread;
Slumber, my darling, and God guard thy bed;
Sleep till the sun paints the morn a rich red—
Hush-o, my baby, by-o!

SCHOOL DAYS

WHY?

DO THINGS APPEAR TO WHIRL AROUND WHEN WE ARE DIZZY

INASMUCH as things appear to be going around in a circle when we are dizzy but our common sense tells us that they must be stationary, as always, it would seem that the fault lies in our eyes. But it really lies in, or near, the ear—an organ which apparently has nothing to do with the sight or feeling.

Close to the ear, however, is located the little organ which gives us our power of balance, permits us to walk upright without tottering and, when properly trained, to assume postures which are distinctly outside the regular routine of our daily lives. Eccentric dancers, acrobats, athletes and others have unconsciously trained this "balance wheel" until they can do strange things without, as we say, "losing their balance." When we spin around rapidly, this delicate mechanism is disturbed or thrown just a little out of gear, causing the eyes to move independently of each other and to send different impressions to the brain. This causes the spinning effect which we know as "dizziness," persisting for a longer or shorter period of time, dependent upon the rapidity and length of time for which one has revolved.

Mother's Cook Book

"Be good, fair maid, and let who will be clever."

EVERYDAY GOOD THINGS

THE cooky jar is an institution which should be kept up in every family. The following will be good cakes to fill it:

Sour Cream Cookies.

Cream one-fourth of a cupful of butter, add one cupful of sugar, add two well beaten eggs, a little salt and soda, one-half of a nutmeg grated, one-half cupful of sour cream, flour to make a dough to roll, adding two teaspoonfuls of baking powder. Roll, cut and sprinkle with sugar. Bake in a hot oven.

Oatmeal Cookies.

Brown and grind two cupfuls of oatmeal, add one cupful of sugar, two well beaten eggs, one cupful of shortening, seven tablespoonfuls of sour milk, one teaspoonful of soda, one teaspoonful of cinnamon, raisins and nuts if desired. Mix as usual and bake on buttered sheet, dropping by teaspoonfuls.

Rolled Oats Sweetbits.

Cream a tablespoonful of butter, add one cupful of sugar, a teaspoonful of vanilla, two and one-half cupfuls of rolled oats browned and ground, one-half cupful of ground nuts and two teaspoonfuls of baking powder. Beat the egg yolks and fold in the whites at the last. Drop by teaspoonfuls on a baking sheet.

Coconut Macaroons.

Take one cupful each of coconut, corn flakes and sugar. Beat two egg whites until stiff, then add the sugar, two tablespoonfuls of flour, a teaspoonful of vanilla and the rest of the ingredients. Drop by spoonfuls on a baking sheet. Add a bit of salt to the white of egg when beating it.

Almond Macaroons.

Blanch and pound one pound of sweet almonds to a paste, adding a bit of rose water from time to time while making the paste; add two pounds of powdered sugar to the well beaten whites of seven eggs. Drop by spoonfuls on buttered paper and bake in a slow oven.

THE CHEERFUL CHERUB

In all the restless, surging streets
A murmur sounds apart,
And through the din I always hear
The City's throbbing heart

Girl a "Miss" When Under Ten. In England "Miss" was formerly applied only to females under ten years of age.

POULTRY

EED YOUNG GUINEA CHICKS

wls Are Natural Rangers and Do Not Require as Much as Ordinary Chickens.

epared by the United States Department of Agriculture.)

Guinea chicks are fed in much the me way as chickens, but they re- re less feed as they are natural ngers and can be trusted to find ough seeds of weeds and grasses, gs, insects and green vegetation in fields to supply much of their liv- . For the first 36 hours after hatch- no feed is required, as the sus- nance from the egg is sufficient to urish them for this period. The first al may consist of a little hard-boiled mixed with bread crumbs, or bread y be soaked in milk, squeezed part- dry, and fed in small bits. Clab- red milk also is very good.

Three times a day is as often as ey need to be fed, one feed consist- of clabbered milk or the bread and or bread and milk mixture, and other two of chick feed. If the op is placed in a field or pasture ere green feed is available, the inea chicks can secure this for them- ves; otherwise, sprouted oats, dan- lion leaves, lettuce, or onion tops cut e should be furnished, say poultry cialists of United States Depart- nt of Agriculture. Water, grit and e oyster shell should be before them ways.

By the end of the first week the ung guineas will be finding enough

ineas Pick Up Much of Their Food in the Shape of Bugs and Weeds.

rms and insects to take the place of e egg or milk feed, so this may be minated and chick feed given morn- and night. If clabbered milk is ailable, however, it can be continued th excellent success, since guineas e very fond of variety in their ration d it is conducive to quick growth. the birds grow older, whole wheat, ts and cracked corn can be sub- tuted gradually for the chick feed.

ARING FOR BREEDING FLOCK

Fowls Are Overrun With Lice or Mites, Fertility Will Be Seriously Affected.

The breeding flock should be tched to see that the fowls keep condition. If they are overrun with e or mites the fertility will be af- ted seriously or destroyed. Care to be used, too, to see that the male esn't get his comb or wattles frost- If the rooster's comb or wattles e frozen to any extent, his ability a breeder will be impaired, and y not be recovered for several eeks. When the weather is very d the males intended for breeding ould be placed at night in a box crate partly covered with a bag or th. It is a good idea, too, to ex- ine his majesty occasionally at ht to see that his crop is full, and at he is not going thin—if he runs large. Roosters sometimes are so llant that they allow the hens to t all the food, with the result that ey get out of condition. If this hap- ns the rooster should be caught at st once a day and fed separately m the hens.

PROUTED OATS IN SUMMER

ccculent Properties Do Much to Maintain Egg Production During Whole Year.

It will pay to continue the feeding sprouted oats to the laying hens roughout most of the summer. ere is only a short time in the ring when full advantage can be ken of natural green feed. It soon es its succulent properties, how- er, and it will be an advantage to turn to sprouted oats. It will do much to maintain the egg produc- n during the summer as silage does maintain milk flow in the fall and nter.

CREASED PROFIT ON EGGS

here Graded Properly and Quality Maintained Higher Price Is Always Obtained.

f market eggs were graded and ality maintained on the way to mar- t, the value would be increased at st five cents a dozen. This would t a large additional sum in the kets of producers, while greatly in- asing the reputation of shippers in markets of the nation.

DAIRY

COW-TESTING ASSOCIATIONS

Small Group of Michigan Farmers First Entered Upon Experiment Considered Doubtful.

(Prepared by the United States Department of Agriculture.)

Fifteen years ago a small group of farmers in Michigan entered upon what many of them probably considered a very doubtful experiment. It was the organization of an association for testing their cows, in respect to how much feed they ate and how much milk they gave; an association such as the farmers of Denmark had originat-

Cow-Testing Associations Have Proved Big Success.

ed about ten years before, and which various other European countries had copied.

The experiment, as studied by the United States Department of Agriculture, proved a success, however, and now the number of such associations has grown from 1 to 452. It is notable that some states which took up the idea at an early date have stuck to the movement and organized more and more associations, while others continue with only a few. Most states increase the number of their cow-testing associations as time goes on and the Department of Agriculture is fostering the work.

The lack of testers during the war caused a setback to the movement, but recovery from this has taken place, and the number of associations in the country is now much larger than it was before the war.

AMOUNTS OF FEED FOR COWS

Upon Capacity of Animal Depends Quantity of Daily Portion of Grain and Roughage.

The quantity of silage to feed a cow depends upon the capacity of the animal. She should have as much as she will clean up without waste when consumed with the grain and hay, is the advice given farmers by the United States Department of Agriculture. A good cow should be fed just short of the limit of her appetite. The smaller cows usually eat from 20 to 30 pounds of silage a day, and the larger animals 40 pounds or more.

The hay needed ordinarily ranges between 5 and 12 pounds per cow a day, or 0.8 pound per 100 pounds of live weight when fed in connection with silage. Silage should be fed in the proportion of about 2.5 to 3 pounds per 100 pounds of live weight. Concentrates should be fed according to size of animals and richness of milk. One pound is required for each 2½ to 4 pounds of milk produced.

Although corn silage is one of the best feeds, particularly for dairy cows, there are some milk producers who use it too freely. It is not a complete feed; neither is it a food that will give best results with only leguminous hays as alfalfa or cowpeas.

Since cows cannot consume enough of these rough feeds to produce the best results under ordinary conditions, it is necessary to feed concentrates in addition, particularly when the price is not high, as is the case this year. Farmers' Bulletin 578, "The Making and Feeding of Silage," contains much helpful information on feeding when silage is the basis of the ration.

WARM WATER FOR MILK COWS

Animals Will Not Drink Necessary Amount From Icy Tank—Heaters Can Be Provided.

Cold drinking water given to dairy cows will result in reduced quantity of milk. A cow which yields a large quantity of milk must drink lots of water; she won't drink much from an icy tank. Water tanks can be provided with heaters, or hot water can be poured into the tank.

Winter Dairying Held Back.

Winter dairying has been held back for many years, largely through the failure of cow-keepers to provide comfortable barns properly equipped.

Give Much More Butterfat.

Cows sired by purebred bulls give much more butterfat than those sired by scrubs.

Ice Water Is Expensive.

Feed can never get cheap enough to make it profitable to give the cows ice water to drink.

SOME HABITS OF BARBERRY SHRUB

Bureau of Plant Industry Making Study of Plant for Purpose of Eradicating It.

SCATTERS BLACK STEM RUST

Plant Is Most Persistent and to Make Destruction Complete Digging Must Be Thorough—Root System Extensive.

(Prepared by the United States Department of Agriculture.)

The office of cereal investigations of bureau of plant industry of the United States Department of Agriculture, is making a study of the habits of the common barberry with a view of improving the methods of eradicating the shrub. As is well known, the common barberry spreads black stem rust of wheat, oats, barley and rye. In the past four years, during which a systematic program of eradicating the common barberry has been in progress in the 13 North-Central states, digging has been practically the only method employed. The experience of these years has shown that the shrub is a most persistent plant, and that, to be effective, digging must be most thorough.

Extensive Root System.

The root system of the common barberry is extensive. The roots of a bush four or five feet tall may penetrate the soil to a depth of three to five feet and spread laterally an equal distance. In larger bushes the root spread is considerably greater. The root system of the plant varies somewhat with the kind of soil. In woodlands where a layer of rich humus soil caps a more compact and less rich stratum of soil, the roots are chiefly confined to the humus layer, but extend laterally considerable distances. On the other hand, in a type of soil which is fairly uniform at its various levels the root system is more deep-rooted, and frequently less extensive in its lateral spread. A rather constant character of the barberry root system, however, is the occurrence of at least a few relatively superficial lateral roots running a few inches beneath the soil surface. This holds true even in those bushes which have deeply penetrating roots. It is chiefly from such laterals that sprouts originate following digging. Hence, precautions need to be taken in digging to follow out along these surface roots and to remove all of them from the soil.

Reserve Food Material.

The roots of the barberry store within them large quantities of reserve food material. This enables them to send up sprouts readily when the tops are cut at the ground line. Moreover, a portion of a root left in the ground may have sufficient re-

Barberry Tree Just Pulled From Ground.

serve strength to give rise to one or more leafy shoots. Those who have dug barberries realize that in the case of a large bush it is extremely difficult to find and remove all roots capable of sending forth sprouts. This means of course that a close watch must be kept for the appearance of sprouts and their removal effected. In the eradication of the barberry it is necessary to make, later, one or more inspections of the place where a bush was dug to locate and destroy sprouts if they appear.

SUDAN GRASS IN DRY AREAS

Crop Requires Hot Weather for Best Results—Makes Hay Which Is Low in Protein.

Sudan grass is one of the nonsaccharine sorghums and resembles the others in many ways. It makes a hay which is low in protein and hence is not a very good hay for milk cows or growing animals, though it is a good hay for idle horses. It requires hot and dry weather conditions for best results and hence does well in the dry and hot areas.

PALATABLE FEED FOR STOCK

Peanut Hay Is Particularly Suitable for Dairy Cows and Other Kinds of Animals.

Peanut hay is palatable for all kinds of farm stock, particularly dairy cows and young animals, but it should be fed to hard-worked animals with caution. It is highly recommended as a substitute for alfalfa meal in poultry rations. Its use will reduce the feed bill, particularly when the poultry is confined.

BEET IS CONSIDERED OBLIGING VEGETABLE

Does Not Require as Rich Soil as Some Others.

It Will Also Flourish In Light and Sandy Soils—To Do Its Best Crop Should Not Have Any Fresh Manure Applied.

The beet is a most obliging vegetable in that it does not require as rich soil to yield generously as some others. It will also flourish in lighter and sandier soils than some of the root crops. The beet should not have any fresh manure in the soil to do its best but only well-decayed manure or compost.

Early beets are most valued as greens, the roots being more esteemed later in the season or even in the fall and winter. If it is desired to get an early crop of beets for greens they may be started in the house as easily as lettuce, but care must be taken in

Young Beets.

transplanting not to break the tap root if some of them are wanted for the root. Breaking the tap root in transplanting leads to branching or knotty roots when they mature.

Each beet "seed" is really a fruit containing several seeds, which is the reason why beets, no matter how thinly the seed seems to be sown, come up thickly. The beet crop sometimes does not flourish as it should to produce a luxuriant crop of greens. Shallow planting usually is the main trouble. They should be planted an inch deep and even an inch an a half if the soil is very light and sandy.

Beets may be planted between rows of corn and yield successfully as they will do better for the shade in midsummer and do not take enough food from the soil to interfere with the corn.

The combination of a slow-growing and a fast-growing crop in the garden is a good one to keep in mind, because they can usually be companion crops without harm to either, the slow growers taking the nourishment from the soil slowly and in such small quantity the fast growers are not injured.

DRAIN MUCK AND PEAT LAND

Area Should First Be Drained by System of Open Ditches to Permit Land to Settle.

When muck and peat land is to be drained by tile the area should first be drained by a system of open ditches, according to the bureau of public roads, United States Department of Agriculture. Such soils settle or subside considerably after drainage and tend to disturb the grade or slope of the tile line. After such soils have been drained for a year or so they become compact enough to permit the installation of tile drains. Usually the best method, says the bureau, is to dig the ditches where the tile is to be laid later, and after the tile is laid and the ditch back-filled there will be nothing to interfere with cultivation.

NUMBER OF CATTLE TESTED

More Than 2,000,000 Animals Now Under Supervision in Tuberculosis Eradication Work.

The total number of cattle now under supervision in the tuberculosis eradication work being carried on by the United States Department of Agriculture in co-operation with the states has passed the 2,000,000 mark, the total for February being 2,027,000. During that month 200,334 cattle were tested, bringing the total of cattle once tested up to 1,181,516, and the total of those in fully accredited herds to 292,716. There are now 361,826 cattle on the waiting list. On March 1, more than 12,000 farmers and breeders had accredited herds.

BED OF MUSHROOMS WILL PAY

Necessary That Precautions Be Taken in Planting Spawn Bricks in Proper Manner.

Mushroom growing will pay anyone who takes the necessary precautions in planting the spawn bricks in the proper manner, say the vegetable crop experts at Iowa State college. In order to do the best the bricks should be planted in a cave or cellar where a temperature of 50 degrees F. can be maintained. Make a bed of fermented horse manure and plant the bricks containing the spawn about a foot apart. Be sure that the spawn bricks were obtained from a reputable seedsman or trouble may result.

LIVE STOCK

SYSTEM OF HOG SANITATION

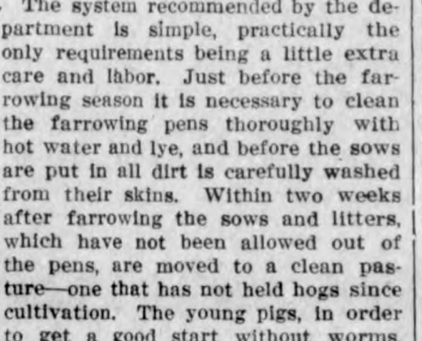
Methods Developed by Department of Agriculture Require Little Extra Attention.

(Prepared by the United States Department of Agriculture.)

Methods developed by the United States Department of Agriculture for raising hogs free of worms have proved so successful wherever they have been given a trial, as in McLean county, Ill., that the department feels no hesitancy in recommending them to all hog raisers in the great corn-producing areas of the Middle West.

The system recommended by the department is simple, practically the only requirements being a little extra care and labor. Just before the farrowing season it is necessary to clean the farrowing pens thoroughly with hot water and lye, and before the sows are put in all dirt is carefully washed from their skins. Within two weeks after farrowing the sows and litters, which have not been allowed out of the pens, are moved to a clean pasture—one that has not held hogs since cultivation. The young pigs, in order to get a good start without worms, must be kept on clean pasture away from wormy hog yards without contact with other hogs, except the mothers, for at least four months, after which they are past the greatest danger from worms. To be sure, it is necessary to provide proper feed, water, and shelter, but that is what any pig should have.

Experience has shown that there are four good reasons why this swine-sanitation plan means money to the farmer. In the first place, pigs without worms grow to greater size and make more gain for the same quantity of feed than those that must use a part of their feed to grow an army of worms. It has been shown also that when those parasites are kept under control fewer young pigs are lost from thumps. Pigs that are not weakened by the inroads of worms are, as a rule, less susceptible to the various diseases that are common to them. And,



Young Pigs, Particularly, Should Have Clean Pens.

finally, the quality of the pork produced by clean, healthy pigs is better than that from wormy, unthrifty ones.

Veterinarians in the department say that pigs infested with worms seem noticeably more susceptible to mange, necrobacillosis, and possibly other diseases, also, than those that are free of them. Both lots of pigs in the government exhibit at the recent International Live Stock exposition were infested with mange mites, but the worm-free pigs seemed to be highly resistant to their attacks, and in contrast with the wormy pigs showed little evidence of worry by the mites.

All swine raisers in the corn belt should find it profitable to adopt this system of swine sanitation, but breeders of purebred hogs should find it particularly advantageous, for a little gain in size and appearance makes a big difference in the show ring and in the sale ring.

HORSES ARE SOFT IN SPRING

Muscles About Neck and Shoulders Are Full and Plump—Collars Will Need Adjusting.

Most farm horses are at least moderately fat in the spring. In this condition the muscles about the neck and shoulders will be full and plump and it will take a rather large collar to fit. The soft condition of the horses, however, coupled with the long days of hard work, causes them to shrink in flesh rapidly, and a collar that was a good fit at the beginning of the season may be entirely unsatisfactory three or four weeks later. In some cases the collar can be made to fit by using a sweat pad, while in others a new or different collar will be required. It is better, however, to have collars that fit than to use sweat pads.

Make Sows Exercise.

Whole oats scattered on a close floor are fine to feed sows and keep them up and exercising a portion of the day which gives them vigor and more strength to withstand the ordeal of farrowing.

No Cure for Scours.

There is no sure cure for scours in calves. It is another case of the old saying that "An ounce of prevention is worth a pound of cure." The main thing is to so handle the calves that scours will not appear.

Home Town Helps

PEOPLE ARE BUILDING HOMES

That There Is a Steady Gain in That Direction Is Shown by Recently Published Figures.

It is a matter of importance that the scope of home-building operations in this country is attaining large proportions. Statistics show a steady gain in this department of the building industry and indications are at present that, as the spring and summer advance, there will be still greater activities of this nature.

Home ownership not only encourages saving but it has a pronounced stabilizing effect on the character, habits and mental processes of the owner. To him particularly might be applied the words of Theodore Roosevelt, who said: "The habit of saving money while it stiffens the will also brightens the energies. If you would be sure that you are beginning right, begin to save."

Much has been said and written about the housing shortage in this country and the menace which has thus been fostered. Many evils both economic and social are resulting from the overcrowded conditions, particularly in the larger cities of the country. Many people are compelled to find existence in quarters which represent a step backward in their standard of living. This is contrary to the fundamentals of human nature, for mankind has always insisted upon progressing toward better living standards.

STATE IS RETRIEVING ERROR

Towns and Villages Throughout Pennsylvania Busily at Work Replacing Destroyed Trees.

"In the past 22 years the state of Pennsylvania has planted 34,000,000 trees throughout the commonwealth and has 16,000,000 in nurseries awaiting the opportune moment for planting," said a prominent Philadelphia official. "Pennsylvania is hard at work trying to bring back the state to its original condition of forestry, in so far as forests can be maintained in the present-day scale of living. It is true that Pennsylvania will never have the luxurious growth existing when William Penn first arrived. It perhaps does not need so many trees as once flourished throughout the state, but it does need trees, and it is out to get them.

"What Pennsylvania is now doing, other states will do. Also, what is being done in Pennsylvania shows the foolishness of destroying trees merely for the sake of cutting them down. There was never need for stripping the towns and villages of the state of their foliage, but that was done, and today the people are paying the penalty for the sins of some of our pioneers. Even at the rate of planting which is now going on, it would take 200 years or more to get Pennsylvania back to the condition of only half a century ago."

Earth and Trees Contrast.

Look out of your window and view your own and your neighbor's lawns. They are so nice and level, and you like them that way. But nature doesn't, for look at your trees. Your lawn is horizontal, yet your trees rise in the opposite direction, vertically straight up into the air. Doesn't it seem that nature insists upon contrast? It does and, in fact, contrast is one of her principles in landscape building. And with that we have learned another principle the master landscape architect follows in his work.

Coolies Are Odd Thieves.

Odd cases of offense by Chinese found in the records of the international settlement of Shanghai, including the theft of a steamroller, and in another case that of a sawmill, have been surpassed by three coolies recently charged with stealing 15 tons of sand and 30 tons of gravel, 30 tons of granite blocks and 25,000 tiles.

It was alleged that all the material had been removed surreptitiously from a contractor's yard, but the court held that there was not sufficient evidence to convict and the defendants were discharged.

Building.

If you are thinking of building a home, here's a tip:

Experts estimate that the average usable life of a frame building is twenty-five years. A brick building lasts thirty-five years. A stone or concrete building is good for 50 or 100 years.

Divide the cost of the kind of home you are going to build by the number of years it'll last as shown above, and you know how much the value shrinks yearly.

Speed of Train Limited.

A high-grade passenger locomotive can be run at the rate of 112 miles an hour on a heavy rail, straight track, if ballasted by a train behind it to keep it from jumping the track. The heavier the engine and train, the more smoothly they ride. In actual practice, on account of curves and switches, the big coal consumption at high speed and the frictional wear on the equipment, a speed of 50 miles an hour is not often exceeded over any considerable distance. Expense and danger forbid a greater speed.

Jefferson Bell spent Sunday at the home of his parents, Mr. and Mrs. Wm. Bell.

Gerald Chase, who has been attending barber school in Des Moines returned home Friday, having finished his course there.

Kenneth Bell and Harry Nelson attended school at Avery No. 2. every day last year without being absent or tardy.

"Riley" Clark visited with his sister, Mrs. Brogan and family in Meservey Sunday.

Ed. Hemingway and Mrs. Mike Kearney returned from Mason City Tuesday where they had been to attend the funeral of a brother-in-law there on Monday.

Nettie Roths closed her school last Friday for the summer vacation. A picnic and program were held. All enjoyed a good time and looking forward to another one. About forty-six were present.

Klemme Locals

A number of married people held a dance at the Idle Hour last week Thursday evening. All had a good time.

Peck Hanson was in town last Thursday on official business. Don't forget that Peck is candidate for the office of Sheriff for another term.

Mr. and Mrs. Henry Lewis were at Mason City last week from Friday until Monday. "Stub" counted the eggs during Henry's absence.

Mrs. A. Kirkwood, who was on the sick list last week was able to be about again the fore part of this week.

Mr. and Mrs. Koerner drove to Goodell last Thursday evening for a visit with Mr. and Mrs. Will Kirkwood.

Paul Grange's sister came from Ruthven, Iowa, Saturday moring to help care for Dorris, who is seriously ill with pneumonia.

mmuniiy Saddened By Death Of Doris Grange Last Week

TLE DAUGHTER OF MR. AND MRS. PAUL GRANGE PASSED AWAY THURSDAY

Ill With Pneumonia Only a Short Time

e saddest news that we have kcalled on to chronicle for some is that of the death of little Dor- range, two and a half year old hter of Mr. and Mrs. Paul ge, who passed away last week Thursday evening following a fought battle trying to ward he tenacles of pneumonia which gripped her system; she put up ve struggle for life but finally ered the Lord's summons to take lace in the Heavenly Home.

e community was saddly shock- hen the news of Doris' death be- known, for she apparently was g a little better last Thursday ing and when the paper went ess we reported that her condi- was hopeful.

e little girl was known and lov- all and her passing from this ly life is like that of crushing a rose bud about to bloom forth er the world.

e funeral services were held at irst Methodist church following rt service at the home and were arge of Rev. W. C. Bergmann, ed by Rev. Gedye. Friends and ves came from far and near to ribute to the little child. Those ame from out of town weer, Mr. Grange, of Ruthven, Iowa, who e father of Paul Grange; his ers Fred Grange and wife, Walt d also of Ruthven; Mr. and Mrs. Simon of St. Paul; his sisters R. J. Hughes and Mrs. G. L. es and their husbands, also of ven; two aunts Mrs. Wm. Yeag- Siuox Falls, S. Dak., and Mrs. Kothe of Parkersburg, Iowa; s the following friends from points: Mr. and Mrs. G. H. Mr. and Mrs. Holt, and Mr. and Martin, all of Webster City, Ia.; F. J. White, President of the ern Lumber Co., of Estherville; r. and Mrs. Dewey Rice of Clar- nd many friends from the sur- ing community.

artfelt sympathies of the entire unity go out to Mr. and Mrs. e and the relatives in their of deepest sorrow.

Obituary

is Emily Grange, infant daugh- Paul and Julia Grange, born 3rd, 1919, at Klemme, Iowa, aken, after two weeks of severe , from her little bed of pain and great suffereing, into the eternal realm of bliss and happiness where she now is safe in the arms of Jesus —safe on His gentle breast. Like the little dewdrops glistening in its beauty in the morning light, is kissed away by the sunbeams into the higher realms; there to appear in the beautiful colors of the rainbow; so little Doris was lifted by the hand of sympathy and love out of this vale of tears and dissapointments and placed as a bright jewel in His diadem to shine in her beauty, a bright gem for His crown. Our loss is her gain—our sorrow her joy.

For her sake we will quietly and submissively whisper: "Father, thy will be done."

She leaves to mourn her so very early departure, her parents; two grandfathers; 13 uncles, 12 aunts, and many more distant relatives and friends.

For little Doris the following verses are very fitting:—

The golden gates were opened
And heavenly Angels smiled
And with their tuneful harpstrings
Welcomed the little child.

They shouted high and holy,
A child hath entered in,
And safe from all temptation
A soul is sealed from sin.

They led her through the golden streets,
On to the King of Kings,
And a glory fell upon her
From the rustlings of their wings.

The Saviour smiled upon her
As none on earth could smile,
And heaven's great glory shone around
The little earth-born child.

On earth we miss the littl eone,
We sigh and weep and sigh again,
And wonder if another such
As ours has ever died.

Oh! had we seen through those high gates
The welcome to her given,
We never would wish our little child
Back from her home in Heaven.

Card of Thanks

We wish to express our thanks to the many friends who so kindly assisted us during the illness and death of our little daughter, Doris. We also wish to thank all who contributed floral offerings in her memory and for the kind expressions and words of sympathy.

Mr. and Mrs. Paul Grange.

FIRST METHODIST EPISCOPAL CHURCH

Had splendid audiences last Sunday both morning and evening. Let us aim to do as well next Sunday.

Morning services: Sermon at 10 o'clock, Sunday school at 11 o'clock, Epworth League meeting at 7:30 P. M.

Beginning at 8 o'clock P. M. there will be a Cantata given, entitled, The Good Shepherd."

This cantata will be givn by the young people of the First Methodist Church of Garner. When given in Garner a few weeks ago, it was reported to have been the greatest musical production ever listened to in Garner.

About thirty people take part in this Cantata. A silver offering will be taken at the close of the evening's program to help pay expenses in putting this on. Let us all be present to hear this musical production.

Mid-week prayer service at the home of Mr. Ernest Schuldt. Let us have a goodly number present at this service.

Ladies Foreign Missionary Society meets at 2:00 P. M. Thursday. Mrs. Henry Ludeke, hostess.

W. C. Bergmann, Pastor.

PAVING CONTRACT LET TUESDAY ON NORTH IOWA PIKE

MASON CITY FIRM LAND CONTRACT ON PAVING

Wilson Highway Grading and Tiling Also Let

Tuesday, May 2nd was the date set for the letting of the paving between Garner and Britt and Britt and Hutchins and also for grading and tiling the Wilson Highway across the county.

The Board of Supervisors found that the bids submitted by the Henkel Construction Co. of Mason City was the lowest and the contract on the entire stretch was let to them. Their bid was $1.28½ a square yard. This is he same company that put in the paving east of Garner on the North Iowa Pike last year.

Mr. Henkel stated that he intended to put two outfits at work and would have the whole stretch competed this year.

Paving runs approximately $23,000 per mile, about $15,000 per mile cheaper than formerly.

The grading of the Wilson Highway north from Garner was let to Kughn & Sons, of Dows at 19c a yd.; the grading south was let to Wisely & Sons, of Sheffield, Ill. at 23.4 cents a yard. Tile contracts for material were let to the Northern Iowa Brick & Tile Co., and Nels Paulson was the successful bidder on the labor.

When the paving is completed the North Iowa Pike will be a solid ribbon of concrete from Charles City to Algona, as Kossuth county are paving to our county line this year.

JURY LIST DRAWN

Petit Jurors drawn for the May term of Court which convenes at Garner, Iowa, on May 15th, 1922.

Jurors will report on May 16th at 10:00 A. M.

METHODIST EPISCOPAL CHURCH

Morning worship at 10:00 o'clock.
Sunday school at 11:00 A. M.
Evening worship at 8:00 o'clock.

The evening service will be held at 8:00 o'clock on Sundays until further notice.

The program by the Womens Foreign Missionary Society and Young People's Auxilliary was much enjoyed and created an atmosphere of inspiration.

The Ladies Aid Society will be enteretained by Mrs. Gimer next week Thursday, May 11th, and on the following Saturday, May 13th, the ladies will hold an apron sale.

Sunday, May 14th is Mother's Day and will be fittingly recognized during the hour of morning worship, by a program rendered by the young folks of the "Class in the Corner."

Many of our people are becoming interested in paying their current subscriptions to the Centenary Fund. These may be paid at any time and will be gladly received, by the Centenary treasurer, Mr. Clarence Waterman at the First National Bank.

"Be not faithless but beleiving."
Stand fast in the Faith."
"Beleive on the Lord Jesus Christ and ye shall be saved."

LEAGUE CONTEST CAME TO CLOSE LAST SUNDAY EVE

Doings of the Epworth League

No doubt you are all anxious to know the final score of the Purple & Pink Contest, as the closing night was April 30. So without delay, we will announce that the total score for the entire contest showed an 80-point victory for the Purples (516 to 436.) The members of both sides, and the captains especially, are to be complimented for the great amount of work they accomplished in an endeavor to come out ahead. No matter which side you were working for, you were boosting the E. L., primarily and that is a very worthy cause. However, it is evident that in any contest, both of the competing sides cannot win; someone has to be the loser—except in case of a tie—and it is much harder, as well as a great deal more commendable to play the part of a good loser than it is to be a "good winner." In fact, almost anyone can do the latter. We know this from experience.

The fact that the contest proved to be a success certainly gives us a great amount of pleasure. Our meetings have been very well attended and we hope that the attendance will even continue to increase. Just because the contest is over is no sign that the Epworth League has gone out of business. On the contrary, we are still very much in the business and intend to remain so. Also, we promise to make our meetings in the future exceedingly worth your while, as we have tried to do in the past. Come, and take an active part, for in that way one gets the most benefit. Someone has said that "we get out of a thing just as much as we put into it." There's a lot of sense to that.

There will be a Board Meeting on Tuesday evening, May 9th, at 7:30 o'clock, in the side room of the church for the purpose of discussing plans for the League Social which is to celebrate the result of the recent contest, besides other important topics. All he officers of the League, as well as the captains of the sides in the contest are urgently requested to "be on deck."

In our metting last Sunday evening, the topic was "Growing a Character—the Soil," and was ably discussed by Mr. P. M. Griesemer. Next Sunday the topic will really be a continuation of the above one, it being called "Growing a Character—the Seed." This meeting will be conduct ed by Mr. Earl Josten.

An amazing amount of energy was displayed during the contest which is now over. That shows what we really can do. Now let's put forth all possible efforts toward making our meetings a success and interesting to all, as well as continuing to extend the "glad hand" to efveryone. All together now—three cheers for the Epworth League!

Klemme High School Ball Team To Enter County Meet

Report of the County Nursing Service for the past Year

Sept. 1st to May 1st

Number of schools visited, 115; Pupils examined, 2755; Found Defective, 1782! Total number weighed and measured, 5147; Number 7 % or more under-weight 1418.

Total Number of Defects Found

Defective vision 225; defective teeth 966; defective nasal breathing 595; enlarged or diseased tonsils 869; defective hearing 52; skin infection 27 defective speech 11; swollen glands 4; number excluded 40; pediculosis 11; talks to pupils in class 169; homes visited 128; social welfare work, visits 25; bedside visit to 30 patients; (several visits made to a number of these cases).

County Tuberculosis Clinic Held At Garner March 10th

61 parents attended this clinic. Some follow up work being done on some of these cases.

The per cent of under-weight children was considerable less this year, where the children have been weighed each month, the improvement has been very good. The children are interested in their weight and physical condition and in most cases will do their part in an effort to gain.

Nutrition work might be carried on in the school through the Parent-Teachers Association, and an effort should be made wherever possible, to have the hot school lunch.

A great many children have been interested in forming better Health Habits, either through talks in the class or personal alks.

There have been a large number of dental corrections.

Surgical corrections 108 (assisted with and cared for 28 of these tonsil cases.) Corrections of vision 70 .

Six patients have been sent to Iowa City under the "Perkins Law," and papers are being prepared for several other cases to go.

The County Nursing Work has been financed by the Red Cross, but will be discontinued because of lack of funds. It is hoped that this work may be taken up again at some future time.

—Mae Ferleman, former Co-Nurse.

Finding Buried Shells.

An old problem which is being encountered all through the territory in which fighting occurred during the war, is that of guarding against the exploding of shells which buried themselves in the ground without having exploded. In the section of France along the Marne, where the fighting was particularly fierce, the peasant farmers have found this danger to be very real. A plowman may at any moment strike a shell that will explode with sufficient force to kill him and his team.

Various solutions have been suggested, but the most promising is one worked out by a French scientist and considered by the Academy of Science. The plan is to go all over the farms with an electrical instrument that will give warning when a mass of metal is near. Such an instrument is an old American invention frequently used in laboratory work. Some modifications of it were adopted by the French scientist to fit it for field use, and his apparatus requires the services of two men.

In practical tests on the old battlefields it has been found possible for two men to explore an acre thoroughly in about one hour, and to locate every buried shell near enough to the surface to do any harm.

"Dust" Pistols and Science.

Equipped with "dust" shooting pistols to bring down high-flying insects that cannot be netted, Jesse H. Williamson and John W. Strohm, a retired army captain, sailed from New York on the steamship Polycarp for the jungles of Brazil. They plan to penetrate beyond the river of doubt, the Rio Tadoro, in their hunt for hitherto uncaptured zoological specimens for the University of Michigan and other colleges.

The expedition is expected to last six months up the Amazon to Porto Velho, thence along the Madeira-Mamore railroad 200 miles into the Serra Dos Parecis mountains.

The "dust" shot to be used in gathering winged denizens of the fever-infested jungle is so fine that the most delicate specimens would not be irreparably injured, the explorers said.

LOCALS WILL TRY TO THE COUNTY HONORS

Other School Notes

The Klemme High School will enter the Hancock County Tournament at Britt, May 5th. The Klemme High School base-ball team will enter the County Meet to win honors. They are expecting to win the cup for the Hancock County Championship High School base-ball team.

We sure hope that the Klemme High will do some good playing Friday at Britt and capture the Gold Cup for the baseball. We would like to see a large crowd of Klemme people at Britt Friday to help us win.

Kanawha Defeats Klemme High

Thursday, April 27, the Klemme High school base ball team journeyed to Kanawha to play their team. The game started in favor of the local high school but in the second inning Kanawha made nine scores which set the Klemme boys way behind. When the game ended the score was Kanawha 18, Klemme 9. The Klemme boys got two home runs and three two base hits off the Kanawha pitcher. The Klemme fielders expected the pitcher to play the game alone and the game was lost by the fielders not backing the pitcher.

General News

The negative side was defeated 2 to 1 in last Friday's debate. The question appeared in last week's issue of the School Notes. This week the Freshmen write papers which pertain to "The Exchange of Goods or Communication and Transportation."

In the Biology Class, Tuesday, some fruit was cut up so as to explain the different parts to the young biologists. During class Prof. Wilson was presuaded to save the fruit so fruit salad could be made for the class. Gelatine was furnished by Prof. Wilson, fruit and wafers by several class members; and Neota Ridder and Adella Schroeder then made the salad, which they are very good at. The fruit salad was eaten during algebra and when the salad was being served the wafers disappeared. A reward of an extra dish of salad was offered for its return. Then Harvey Barz jumped to the cupboard and pulled out a heaping dish of wafers. From now on Harvey will be called, "Harvey the Detective." It is still a mystery how that Harvey found the missing wafers and if anyone can let us know who the thief is we will be much obliged.

Everybody come to Britt Friday May the 5th to see Klemme carry off the prizes.

Frank Gruetzmacher visited the Schol Board Meeting Tuesday, April 18th.

Cleanest School in County

The County Nurse, Miss Ferleman, told the people of Klemme that they had the cleanest school in the county. Thanks to Fred Yahnke, the janitor. Miss Ferleman examines the children of our school about once a month. Under her supervision the under-weight children have gained their proper health.

GARNER'S CANTATA TO BE GIVEN HERE

The Cantata entitled the "Good Shepherd," written by Ira B. Wilson, will be presented to the people of Klemme, on April 7th at 8:00 o'clock P. M. at the First Methodist Church, by the M. E. Choir of Garner consisting of 24 well balanced voices. This chorus will be under the directorship of Miss Irene Z. Peshak, assisted by C. C. Tessier on the violin and Miss Mabel Schuldt pianist. The program will be given under the auspices of the Klemme Epworth League. There will be a silver offering taken.

The Garner Leader of April 13th has this to say of the Cantata entitled "The Good Shepherd." "Upon sober second thought the candid judgment of all who heard it was that the "Good Shepherd" was the greatest musical production ever listened to in Garner."

The olfelw who says he has nothing to do until tomorrow usually does it tomorrow.

Exported Booze May Flow Back

Liquor Sent Abroad Before Volstead Act Went Into Effect Has Chance to Return.

JOKER IS SEEN IN THE LAW

Permits Reimportation of Whisky Shipped Before Law Became Effective—Billion Dollars' Worth May Come Back.

New York.—Liquors having a value in the legitimate market of more than $300,000,000 and worth in bootleg channels more than $1,000,000,000, shipped from the United States to foreign countries just before the Volstead act went into effect on January 16, 1922, eventually will find their way back to this country, under the provisions of the Willis-Campbell act passed by congress last November to supplement the national prohibition law, according to John D. Appleby, general prohibition agent in charge of New York and New Jersey.

Big Shipment Enters.

Already one big shipment has been made to this country under the provisions of the supplemental law. Gin valued in bootleg circles at $3,000,000 was reimported from Cuba about two weeks ago. The distillery which made the shipment had gone out of business, a fact that apparently was not discovered by the government agents until the gin had arrived here. A special permit had to be obtained from Washington before it could be stored in a local warehouse, pending its withdrawal for medicinal purposes on permits from the director's office.

Prohibition agents were mystified in checking up the cargo to note on the manifest 112 empty barrels. They have not yet been able to make out the reason for the empties, but Federal Prohibition Director Ralph A. Day regarded it as a suspicious circumstance.

The passage of the Willis-Campbell law, ostensibly for the purpose of killing medicinal beer, has made it possible for the thirsty to be supplied with good liquors for a much longer period than appeared likely before the measure was adopted, prohibition officials said. In some quarters the provision for the reimport of liquors was considered as a "joker."

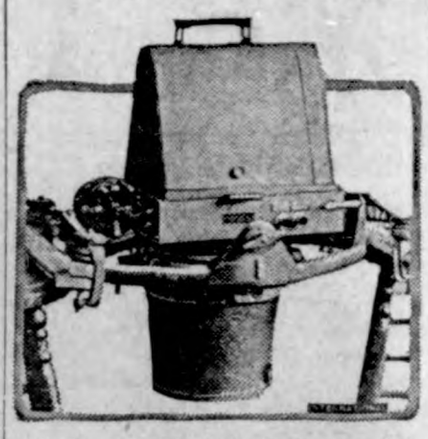
Stored in Other Countries.

The law provided "that the commissioner may authorize the return to the United States, under such regulations and conditions as he may prescribe, any distilled spirits of American production exported free of tax and reimported in original packages in which exported and consigned for redeposit in the distillery bonded warehouse from which originally removed."

Liquors have been stored in France and other countries in large quantities, according to Mr. Appleby. The prohibition department plans to scrutinize carefully the applications for permits to reimport.

What is regarded as another "joker" in the supplemental law is the provision which exempts payment of tax and penalty for distilled spirits upon which the tax has not been paid which are "lost by theft, accidental fire or other casualty while in possession of a common carrier subject to the transportation act of 1920 or the merchant marine act, 1920, or if lost by theft from a distillery or other bonded warehouse."

AN AERIAL CAMERA

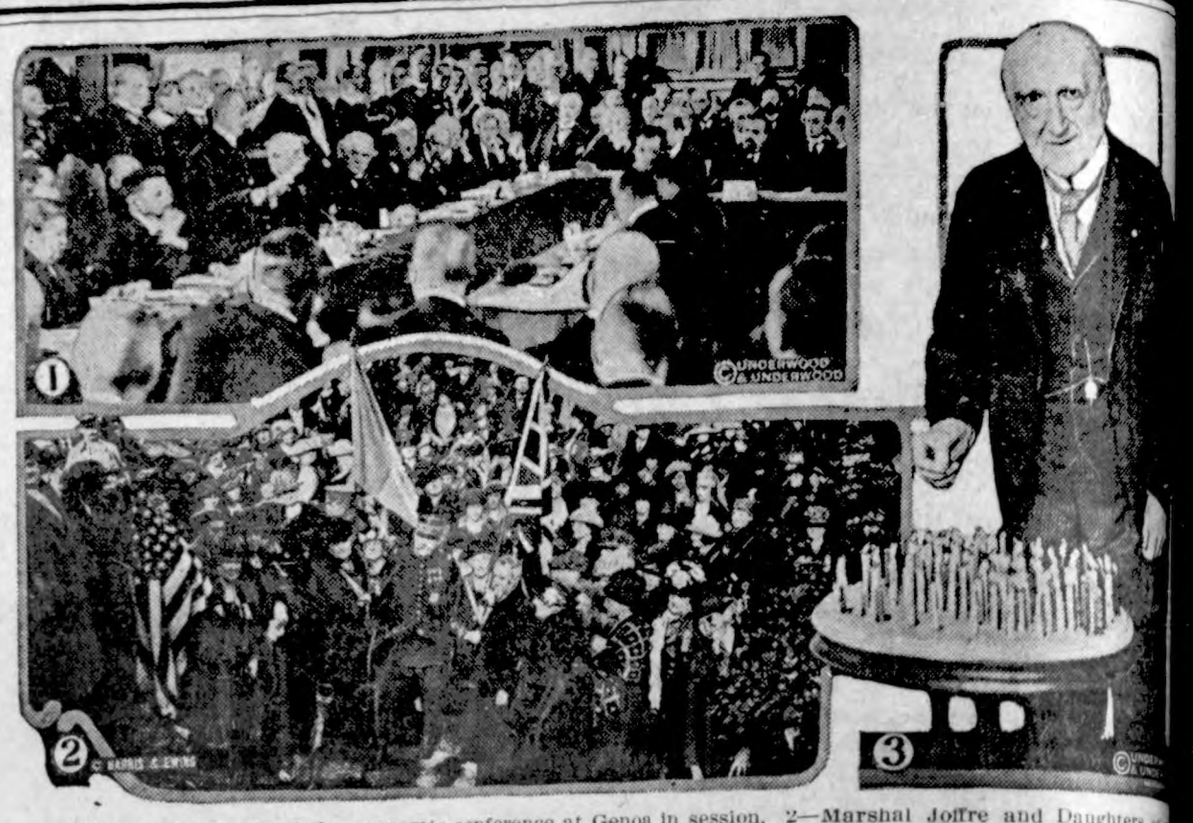


S. M. Fairchild has designed a camera capable of making aerial maps at the rate of 50 square miles an hour. The camera is electrically driven and automatic in its action.

Two Dogs "Luxury" in Berlin.

Berlin.—Ownership of two or more dogs is classed as "luxury" here and extra heavy taxes are imposed under a new schedule.

It is estimated that the owners of 140,000 dogs in Berlin must pay the government 50,000,000 marks for licenses.



1—First photograph of the economic conference at Genoa in session. 2—Marshal Joffre and Daughters of the American Revolution planting a tree at Mount Vernon. 3—Chauncey M. Depew lighting his eighty-eight candles on his birthday, one for each year of his life.

Five Tribes Pay Their Own Way

Education of Oklahoma Indians Is Almost Entirely Paid for Out of Own Funds.

AGRICULTURE IS EMPHASIZED

Have Nine Boarding Schools, Seven Contract Schools and 2,306 Public Districts—Industrial Work Featured.

Muskogee, Okla.—The modern American Indian may be said to be paying his own way in pursuit of an education, for nearly all funds expended in the education of the Indians of Oklahoma belong to the tribe administered under the department of the interior, according to H. C. Calhoun, supervisor of the Five Civilized Tribes schools here. These schools form the largest unit of Indian schools operated under one supervision in the country, he added.

The supervision of the schools of the five civilized tribes—Cherokee, Choctaw, Chickasaw, Creek and Seminole—has to deal with three phases of school activity which are ranked in importance as follows: Tribal boarding schools, public day schools and private contract schools.

Have Nine Boarding Schools.

There are nine tribal boarding schools and seven contract schools, while the public day school system includes 2,306 districts with an enrollment of about 18,000 Indian children. The supervisor's office has jurisdiction over the Indian pupil only in these day schools, not over the public school as such.

The tribal boarding schools are maintained for each distinct tribe and the completed educational plants. Each is equipped with kitchen, dining-room, dormitory, laundry, hospital and facilities for industrial and academic education. Most of these schools have a large acreage which is tilled and the product used in the maintenance of the school.

Emphasize Industries.

Agriculture is emphasized in all the Indian industrial schools, although shop work, carpentry, leather machine and metal work, homemaking for girls and scientific home economics are all a part of the industrial course. The industrial program is a part-time process, Mr. Calhoun explained, with the pupil devoting half his time to industrial education and half to academic instruction. The academic courses are designed particularly for the Indian.

Six of the contract schools are denominational institutions, according to Mr. Calhoun, while the seventh is a state agricultural school. Courses in these institutions include the industrial and academic.

Dog Tows His Master to a Cake of Ice.

Red Wing, Minn.—When eight-year-old Pierce Seebach fell into the Mississippi river, coming to the surface 20 feet from shore, his dog plunged in and swam around until the boy seized his hind legs. Then the dog towed its master to a floating cake of ice, from which he was rescued by onlookers.

Aged Couple Keep Secret.

Lewiston, Pa.—Joseph B. Hostetler, seventy-three years old, and his bride, Lizzie Y. Hostetler, seventy years old, announced their wedding the other day after having kept the secret one month, as arranged by the couple prior to having the nuptial knot tied by Rev. John K. Byler, an Amish preacher, who lives near Belleville.

Pope's Gift to Americans

St. Susanne church in Rome, built in the Fourth century, was recently donated by Pope Pius for the exclusive use of Americans in Rome.

SAY THAT LINER IS UNSINKABLE

Might Float If Cut in Two, Belief of Experts.

Lone Star State on Maiden Voyage to Aid American Sea Commerce—Captain Engages Orchestra to Play Jazz.

New York.—Keen competition has developed in the race for supremacy on the seas. The latest addition to the fleet that is keeping the American flag to the forefront in the sea commerce of the world is the steamship Lone Star State, recently delivered from her builders to the United States Lines, which has just sailed on her maiden voyage to Bremen.

In the Lone Star State, as in other passenger carrying vessels constructed under government supervision, the element of safety was of prime consideration. It is declared that the new liner is practically unsinkable. Originally planned as a transport and later designated to act as a hospital ship to bring back American wounded from France, the Lone Star State was built torpedo proof as nearly as human ingenuity could make her.

The vessel has thirteen water-tight compartments. Shipping men who have inspected her have declared that even if she were cut in twain each half would remain afloat.

From the standpoint of comfort, nothing has been left undone to make her a luxurious vehicle for sea travel. She carries two classes of passengers, first and third. Full attention has been given to the cuisine and amusement facilities on the Lone Star State. The chefs and the kitchen personnel have been carefully selected with a view of rivaling the dining service of a first-class hotel ashore.

Captain Frank T. Burkhart, who is impresario as well as navigator, said before he sailed that he had adopted as his slogan "A bas ennui," which properly translated means a Filipino orchestra of twenty-two pieces. Every member of the orchestra saw service in the United States navy during the war. The captain said they were not only at home in jazz, but that they could venture as well into the realm of grand opera. He promised plenty of dancing on the decks in good weather.

FIX MAIL SERVICE TO RUSSIA

Federal Postal Authorities Form Plan With British Officials for Delivery.

Washington.—The Post Office department has entered into an agreement with the British postal authorities for the delivery of regular mail matter and parcel post packages to various points in Russia, it was announced here by First Assistant Postmaster General Bartlett. Tons of parcels, containing clothing mostly, are being forwarded each week and according to reports received here, 75 per cent of the packages are being delivered to those to whom they were addressed.

NEWS REVIEW OF CURRENT EVENTS

Wrangling and Politics Mark the Doings of the Genoa Conference.

RUSSIA'S GREEDY DEMANDS

France Threatens Independent Action Against Germany and Lloyd George Is Angry—Centenary of General Grant's Birth Celebrated—Great Battle Impends in China.

By EDWARD W. PICKARD

Russia may be forced to quit the economic conference at Genoa. France, which is becoming more and more dissatisfied with the way things are going there, may withdraw her delegates. But it is announced that Lloyd George and his British fellow delegates will stick to the end, determined to get some results from the conference.

With true Oriental wile, the Russians are bargaining with the other powers and last week succeeded in bringing about a deadlock. To end this condition the representatives of the big and little ententes and Portugal drew up what amounted to an ultimatum, warning the soviet delegates that if they would not accept the propositions made to them, the Russian phase of the conference would come to an end.

Briefly stated, here is what the Russians proposed: First, the powers must recognize the soviet government de jure, and must grant it sufficient loans to enable Russia to reorganize her national life. Russia will recognize her pre-war debts, but demands a thirty years' moratorium on these, with cancellation of arrears of interest and of interest during the moratorium. Russia abandons her claims against the powers due to the anti-Bolshevik campaigns and in return expects that her war debts to other powers will be "written down" 100 per cent. Russia refuses to restore confiscated property because this is contrary to their policy of nationalization, but claims Russians have the right to possess property in foreign countries which are under a bourgeoise regime. In short, Russia would take all and give nothing.

Though the British declared some sort of a settlement with the Russians must be made, M. Barthou, chairman of the committee handling the matter, abruptly called a halt to further discussion of the Russian debt. The French, backed by their government, were absolutely opposed to recognizing the soviet government and to granting it credits, and, according to dispatches from Paris, Japan would support them in this stand, and probably also Belgium, Hungary, Poland, Serbia, Rumania and Czechoslovakia.

This only increased the widening breach between France and Great Britain, and each predicted that the policy of the other would lead to another war. They agreed that this would result from a combining of Russia and Germany. The German delegates had accepted the command to keep out of the discussion of Russian affairs because of their separate treaty with Moscow, but this was not enough. The Russian delegates were enraged by the fact that Poland joined in this disciplinary measure and in the note signed by eleven of the powers reserving the right to declare null and void any clauses of the Rapallo pact held to be in violation of the treaty of Versailles or any other treaty. In a note to the Poles, the Russians declared that the soviet government could in no case permit treaties made by it "to depend for their legality on the action of powers not signatory." Considering that Russia has powerful forces massed on the Polish frontier, the language of the note was taken to carry a distinct threat of hostilities against Poland, as well as a warning to all the powers.

MEANWHILE Premier Poincare, in a speech at Bar-le-Duc, asserted that France, if necessary, will undertake alone to see that the treaty of Versailles is executed if the Germans default in their reparations payments, intimating that French troops will be on the march on May 31 unless by that date Germany has accepted the conditions laid down by the reparations commission. The premier declared he ardently hoped for the cooperation of the allies in case Germany defaulted, "but, according to the terms of the treaty," he added, "each may, in case of need, take, respectively, such measures as are deemed necessary."

This also stirred Lloyd George to wrath, because the statement was made without consulting the allies. Said he: "The matter is not connected with Genoa, but French opinion anxiously and excitedly believes that the Russo-German agreement is the outcome of this conference. That idea is being fostered in France by serious misstatements to the French by certain English newspapers"—the reference being to Lord Northcliffe's press.

To meet the situation, the British asked a meeting in Genoa of the powers signatory to the Versailles treaty to discuss measures to be taken if Germany does not meet the reparations commission's demands by May 31. Premier Poincare objects to this plan.

LLOYD GEORGE seems honestly determined both to preserve the peace of Europe and to satisfy the trade demands of the British, which latter are thus expressed by Lord Chancellor Birkenhead: "England's desperate economic condition, her dependence upon world trade as the only means of sustaining her life blood, make imperative the resumption of political and commercial relations with soviet Russia—whatever the character of the government the Russians choose to adopt." In his eagerness for these results, and perhaps coerced by political conditions at home, the premier lays on France the blame for the threatened failure of the conference; and he is volubly supported in that by the English financial "expert," John Maynard Keyes, who, according to the Paris press, is in the pay of a group of Berlin bankers. At this distance one is rather inclined to accept the view of the New York Tribune, which says: "The Francophobes and the Teutophiles are the real factor threatening disruption at Genoa."

Berlin dispatches say diplomatic relations between Germany and Russia will be resumed at once. Prof. A. Bernhard Wiedenfeld will be the German ambassador in Moscow and Leonid Krassin the Russian ambassador in Berlin.

THE hundredth anniversary of the birth of Ulysses S. Grant was observed on Thursday in his birthplace, Point Pleasant, O.; in Washington and in many other places throughout the country. President Harding went to the Ohio town with a large party of prominent men and women, viewed what is left there of the house in which the soldier-president was born, and then delivered an address which was "broadcast" over the land by radio. In the national capital all government business halted while an immense throng gathered in the Botanic gardens to witness the dedication of the magnificent Grant memorial, which is virtually completed after 15 years' work. Vice President Coolidge and Secretary Weeks made the chief addresses, and the memorial was unveiled by Princess Cantacuzene, granddaughter, and Princess Ida Cantacuzene, great-granddaughter of General Grant.

UNLESS President Hsu Shih Chang is able to avert it by his appeal, just issued, the impending civil war in China is soon to culminate in what will probably be the greatest battle that country has had in many years. The big armies of Gens. Chang Tso-Lin and Wu Pei-Fei are prepared for the conflict, near Peking. The president has called on them both to withdraw from that vicinity and from Chihli province and to send mediators for adjustment of their differences. The acting premier has asked the governor of each of the 18 provinces to send to Peking a commissioner to devise measures to rid the country of the armies, which are now the largest in the history of China. American, British and French warships have been sent to Chinese waters and the American legation guard at Peking has been reinforced. If necessary, the allied fleet will land troops to keep communications open between Peking and the sea.

MICHAEL COLLINS, head of the Irish Free State, recently accused the Ulster government of failing to live up to the peace agreement. Sir James Craig indignantly denied words that lead observers to believe a direct break has come. Sir James said that, notwithstanding the mutual takings, armed incursions across the Ulster border continued and the murder outrages have had a deplorable effect. He declared Sinn Feiners committed outrages against the property of Ulster Catholics to intimidate those who were anxious to work in harmony with the northern government.

Fighting between the Free State forces and the "rebels" reached the proportions of a real battle on Tuesday at Mullingar. The regulars captured the town. Dail Eireann met in Dublin and heard reports from the provisional ministers, who severely scored the element fighting the provisional government. De Valera was there, but had little to say. His followers, it was said, smiled and chuckled at the arraignment of the "rebels," who were accused of many robberies, train wrecks and other crimes. The Irish Catholic bishops issued a statement strongly indicting the treaty with England, and unequivocally condemning republican militarism.

WARNED by Senator Watson it would be futile to call the house soldiers' bonus bill before the President would certainly veto it—he had just been talking with Harding—the Republican members of the senate finance committee last week began consideration of a new bill formulated by Senator McCumber. Its outstanding feature is that it will require an outlay next year estimated at $100,000,000, as compared with the Treasury department's estimate of $300,000,000 required by the house. Representatives of the American Legion were consulted, but seemed to prefer the house measure.

AN AFTERMATH of the West Virginia coal field war of 1921 is the trial of nine miners' union officials and members on charges of treason, opened in Charles Town, W. Va. The most prominent of the defendants are C. Frank Keeney, president, and Fred Mooney, secretary of district 17. Thirty-four others are accused of treason and many others of murder and conspiracy. Some of these have already been arrested and some have obtained a change of venue. After motions to quash the indictments had been overruled the court ruled for separate trials. William Blizzard, known as "General of the march against Logan," was selected as the first defendant.

PRESIDENT HARDING is working out a plan for settling the railroad strike and preventing future ones, and which he hopes will serve to stabilize the industry. Details of the scheme have not been given out, but it is known that it does not provide federal supervision of the coal industry, but provides for a standing commission empowered to deal with labor issues and other disputes as they arise.

FEDERAL aid for the upbuilding and development of the American merchant marine is given approval by the American Farm Bureau federation, which has wired President Harding as follows:

"While opposed to any subsidy in principle, we realize the necessity of developing the American merchant marine as naval auxiliary and as an agent in the development of foreign trade. We approve aid to this end until our flag can be established on the high seas, but no longer. Such aid, like tariffs, should be flexible, should not continue after industry becomes self-supporting. If subsidy be granted on naval grounds it is essential that merchant ships be available at all times for training of naval reserves."

Just now our merchant marine is engaged in a little rate war with the Lamport & Holt line of Great Britain, which slashed passenger rates to South America. Chairman Lasker of the shipping board immediately made a cut below the Lamport & Holt rate and told that firm he was in the game to a finish.

Something to Think About

By F. A. WALKER

THE REASON WHY

EVERYDAY contact with such ems as regularly come up for ion in the home or the office, t a process of reasoning them out our own way.

ou will find if you steadfastly per- in such a course that you will reach a higher stage of think- necessary always to a higher state ficiency.

ccepting some one's say-so with- giving serious thought to the er or inquiring as to the reason is an unwise thing to do.

spite of whatever innate clever- you may have, if this dependence ome one else is continued, there never come to you an opportunity how this ability.

ou will form the harmful habit eaning on others instead of stand- alone in your own strength and ting unreservedly in self.

hose upon whom you rely for ad- will keep ahead of you just as as you court their company and stance.

pursuing such a course you ad- incompetence and lack of force, h disqualify you for leadership and advertise to your employers that you are a second-grade man or woman, incapable of forming judgment without help from others.

To observe, reflect and apply ought to be the high purpose of every man and woman in the stern battle of life.

Observe as a child and keep observing until you find the reason why.

If you will reflect, sift out the chaff from the wheat, you will in a short time be qualified to judge the good from the worthless and pick out the best every time you are called upon to make a decision.

With this newly acquired ability, you will know unerringly how to choose the right course and follow it with strength and assurance.

Instead of being a weak dependent, wavering, uncertain and timid, you will grow steadily into a strong, bold leader capable of shouldering great responsibilities.

Keep your eyes open, use the mind given you by the Creator, figure the value of everything that has a direct bearing on your work, apply the useful and you will encounter no real difficulties in finding the reason why, or in piercing the bull's eye of success with an arrow of your own making.

Uncommon Sense

By JOHN BLAKE

ARRY "FOR KEEPS"

YOU have a capital of a thousand ollars, and only a thousand dol- you are likely to be a little par- ar about investing it.

et you invest your capital of hap- ss, which is all you have, and all ever will have, on the first pretty you happen to see.

he average youth devotes more to the selection of a suit of hes than he does to the selection wife.

hen his marriage turns out unhap- he wonders why he happened to hard luck, or cynically observes you never can trust a woman.

bout 90 per cent of the labor and nse of the divorce courts could voided if young men and women d expend a little serious thought t the most serious business of lives, which is getting married.

ither men nor women can so fully disguise their true natures o deceive anybody who is really rnest about investing his capital appiness where it will pay divi- s for all time.

body ever falls so head-over- in-love at first sight that he hasn't to think over the seriousness of ng a wife before he sends for best man and engages the minis-

ere is no source of unhappiness e world so prolific as marriage, y because nobody ever appears ink that it should be entered in way save by accident.

the reformers who cry out against ce, when it is too late, would l the same amount of time and y trying to teach people to find ight kind of mates, there would s divorce, less scandal and more room in the newspapers for instructive news.

You can't tell a man anything he doesn't know about the mistake of an unhappy marriage if he already has made the mistake. You can tell him a good deal about if beforehand.

Some day preachers and editors and educators will organize instruction in matrimony; parents will devote a little time to talking to children about it, and as a result there will be about 50 per cent more happiness in the world.

Kiddies Six

By Will M. Maupin

WANTED—A NAME

WANTED—A name for the baby;
That sweet little mite of a miss,
With pink hands and feet, and puckering lips sweet
Held up for a fond parent's kiss.
Rosie, or Josie, or Mary;
Or Margaret, Lilly, or May;
Priscilla or Prue—does any suit you?
We've just got to name her today.

Wanted—A name for the baby
That's nestling there fast asleep;
A precious wee mite on her pillow of white
God gave us to guard and to keep.
Annie, or Carrie, or Hazel;
Or Annabel, Oral of Jo;
Annette or Sue—does any suit you?
We've just got to name her, you know.

Wanted—A name for the baby,
That little pink image of love
That came with the year with a message of cheer,
Straight down from the mansions above.
Maggie, or Katie or Flora;
Or Amethyst, Kittie or Bess;
All good, I suppose—but dear goodness knows
We'll just call her "Sister," I guess.

SCHOOL DAYS

YOUR HAND

¶How to Read Your Characteristics and Tendencies—the Capabilities or Weaknesses That Make for Success or Failure as Shown in Your Palm

THE HAND OF A MUSICIAN

IN THE hand of a person who is talented in music, the skin is very smooth and soft. This indicates a refined, sensitive nature, with a great dislike for anything that is coarse or unrefined. As a musician, of either sex, must pay attention to details, the fingers must be long in proportion to the rest of the hand.

In the hands of many musicians, the thumb, at its outer angle or joint, is quite pointed. This is held to show a good idea of time or rhythm. A sense of tune is sometimes seen in a point or protuberance on the outside of the thumb, below the joint.

The mount of Venus should be fairly strong and high, to show melody, and this characteristic is seen also in a good mount of Saturn at the base of the middle finger. When there are a good mount of Apollo at the base of the third or ring finger, and a good mount of the moon near the wrist, a decided sense of harmony is shown.

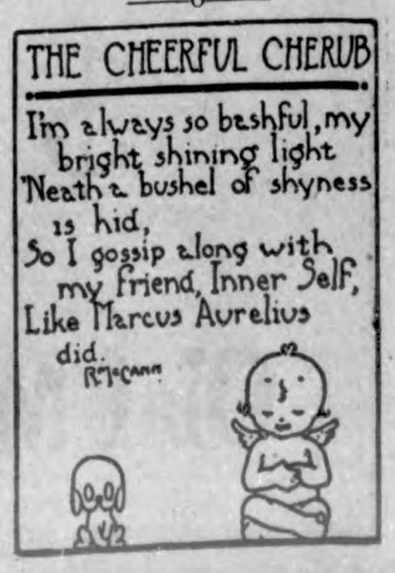
The Hands of His Friends.

"Your enemies call you a spotlight grabber."

"I'm not," protested Senator Sorghum. "I simply undertake to leave the spotlight apparatus in the hands of those who will aim it in my direction."

Dust and Explosions.

Various forms of dust, when mingled with air in certain proportions, are capable of producing explosions. This danger sometimes exists in flour mills. A case is on record where sugar dust caused an explosion.



CALLA LILY'S COUSIN

ONE day little Jack-in-the-Pulpit was telling the wild flowers about him how wonderful was the world in which they lived.

"Just think," he was saying, "how fortunate are we to be out here growing in the light and fresh air when all those flowers we can see through the big glass windows have to live in-

side and never breathe the clear, crisp air.

"And here we are close to this stream and those poor hothouse plants have to wait until some one brings water to them. We should be very thankful for all our comforts."

Right near the window of the conservatory, which was what Jack meant by the big glass windows, grew a stately Calla Lily in a big pot. She often looked out at the modest wild flowers that happened to be growing near the little stream which ran along by the conservatory.

Often the wild flowers had nodded to the hothouse flowers and some of them had bent a little in answer, but not the stately Calla Lily. She pretended she did not see them or their friendly nod.

And there was a reason for this, for Calla knew that Jack-in-the-Pulpit was a relative of hers—distant, to be sure, but still he was related—and if one stooped to look and compare Calla and Jack they would see at once a family resemblance.

Calla's dainty, waxlike cup resembles Jack's greenish-brown pulpit, and Calla's pretty, yellow, upright center resembles in shape Jack himself as he stands beneath the curved pulpit. And that was the reason Calla Lily did not nod or notice the little wild flowers outside her glass home; she was afraid that some one would know that she and humble little Jack were cousins, for she supposed that Jack knew it and was bragging to the other wild flowers about it.

"They will be sure to tell it to some of the flowers standing near the door some day when the gardener leaves the door open."

The truth of the matter was that Jack knew nothing about the stately relative growing inside the hothouse, and if he had he would have pitied her, for he was quite happy and satisfied growing out in the air and light and would not have changed places with Calla for all her beauty and stately bearing.

He loved the woods and the moist spot where he grew and his friends that grew about him.

There were the fickle, late-coming wind-flowers; though they never tarried, Jack was always glad to see them and hear them prattle of the sights they expected to see, and their farewell flutters as they sailed away always made Jack glad he did not care to roam, as they did.

There were the wild Lilies-of-the-Valley; they were friends of Jack's also, and he felt they had much in common, for their name was as long as his; there were the birds and the trees, too. Jack was happy in his wild home and gave no thought to high-toned relatives.

But if Calla Lily had but known it there was another Jack not far from the one she could see from the window, of whom she had more to fear, for he bore much more striking resemblance to the stately Lily than the other Jack.

This second Jack-in-the-Pulpit had a green-white covering which looked very much like Calla's wax white cup, and if sometime you are in the place where the little Jacks grow and you look you may be fortunate enough to find this other Jack with the greenish-white pulpit, though this is not so common a variety as the dark-colored Jacks.

But you can be sure both Jacks would rather live in their airy, light homes in the woods than in the glass house where their stately cousin Calla Lily lives.

The Right Thing at the Right Time

By MARY MARSHALL DUFFEE

CONVENTIONS

"DON'T you think it is perfectly splendid the way we are getting away from conventions?" a gushing young married woman asked the other day. "Why, my mother would have thought it was a disgrace to serve dinner without a table cloth and linen napkins, and she would have thought we were going to land in the poor house if we had had breakfast in the kitchen. But we have given up table cloths entirely, laundry is so expensive, and we never use anything but paper napkins. What's more, some of the most aristocratic people I know are having breakfast nooks in their kitchens and don't ever intend to have breakfast in the dining room. Isn't it perfectly wonderful?"

And, of course, I agreed that it was well that we could alter our customs to suit the times without actually lowering our standards. And she went on:

"And it is just the same with other things. Tom doesn't in the least mind having me have my men friends, and I suppose he keeps up with the girls he used to know. I go to dances without him if I choose and accept invitations from men to lunch—it is all part of this new disregard for conventions. It's just like paper napkins—mother would have been horrified at the idea of either, but mother wasn't advanced."

And I suppose that there are some other people who have this same hazy notion of the "conventions," but there really is a vast difference between the slight innovation that changes our precise mode of having breakfast or dinner, and another innovation that means a radical change in our notion of married life.

So we may change our manners with regard to shaking hands; we might give up hand shaking entirely, but that would not mean that we might change our basic ideas of friendship and loyalty toward our friends.

If you have the gift of thinking clearly you won't confuse these two sorts of unconventionality.

As Usual.

As usual, my monthly allowance had run short. Home went a telegram for money, as usual. Back came a check for half the amount I asked for, as usual. But I fooled them, for I had asked for twice the amount I needed, as usual.—Pennsylvania Punch Bowl.

"What's in a Name?"

By MILDRED MARSHALL

FACTS about your name; it's history; meaning; whence it was derived; significance; your lucky day and lucky jewel

ALETHEA

ALETHEA, though not in common usage, is a most important name. It comes from the Greek Alethia, which in turn was evolved from the Greek "a" and the word meaning "to hide", and thus may be translated as "truth" or "sincerity."

The first appearance of the name is recorded in 1411 when Aletha of Padua lived. It was Dona Maria Aletha, a Spanish princess for whom Charles I of England journeyed to Spain while he was prince of Wales.

Alethea was the form which appeared in the famous Saville family and was given vogue through its prominence. But perhaps the most famous and memorable Alethea was the lady to whom the captive cavalier penned the much-quoted lines:

Stone walls do not a prison make,
Nor iron bars a cage.

To Alethea is given the additional interest of naming the youngest bride known to English history; in 1669, at the age of nine, Alethea Brandling was married to a man named Henry Hitch. The name proved very popular in England and Ireland, where it is sometimes contracted to Letty.

Althea, meaning wholesome, has no connection with Alethea. The former seems to have belonged solely to the unfortunate mother of Meleager.

Coral is Alethea's talismanic stone. It has the power to drive away evil spirts and to protect its wearer from danger and disease. Thursday is Alethea's lucky day and 5 her lucky number.

News of Klemme and Vicinity

Mrs. Letch, of Goodell, was a visitor in Klemme last Wednesday.

Mr. and Mrs. Larner were up from Goodell last Thursday.

Fred Musfelt was a business caller at Garner Monday.

R. W. Elder and family were visiting Belmond friends Sunday.

Ben Katter of Garner, was in this city on business Monday.

Supt. Baggs, of Garner, was a visitor in this city Wednesday morning.

Dr. McMahon, of Garner was calling here on business yesterday.

"Make every kernel pass inspection." See us about that corrn planter now. Paul Stille. adv

Mrs. Mille Smith and daughter, Mrs. Howard Doyle, were Mason City visitors last Thursday.

Attorney Wood and wife of Corwith, were calling in Klemme Monday.

If you want plenty of pep, strength and energy, take Tanlac. E. S. D. Kahrs. adv

Mrs. R. W. Elder and son Clarence and daughter Reva, were Garner visitors Saturday evening.

Chas. Gibbs, of Big Lake, Minnesota, was visiting Klemme relatives the fore part of the week.

After a couple of week's absence Ray White resumed his duties at the Larsen Meat Market.

Ben Katter and family of Garner, were visiting with Klemme friends Sunday afternoon.

"Dad" Yahnke returned from Buffalo Center Saturday where he had been visiting.

Monday evening the kids were all having a great time (and some real big kids, too) hanging May baskets.

Art Wellemeyer drove up to Forest City Tuesday to get some garden and flower plants at the greenhouse.

Mr. and Mrs. M. O. Barr and Orville Burgess drove to Spirit Lake Sunday for a visit with relatives.

Carl Suckow was the lucky bidder for the job of painting the City Hall, the Band Stand and the park seats.

Harold Gruetzmacher and wife of Belmond were Klemme visitors on Saturday and Sunday.

Mr. and Mrs. Ralph Blank, of Estherville, Iowa, were over Sunday visitors at the Tom Blank home.

"More corn per acre!" not more acres of corn. Come in and talk to us about corn planters. Paul Stille, Farm Implements. adv

Henry Lewis and wife were visiting relatives at Clear Lake last week Thursday evening. Mrs. Lewis remained for a longer visit.

If you are feeling all worn out, if you can't eat, sleep or work with any satisfaction, you need Tanlac. E. S. D. Kahrs. adv

Mr. and Mrs. Orson Butterfield of Belmond were visiting at the Larsen home a few days the fore part of the week.

Dr. J. L. Hesselhuus left Monday for Des Moines to attend a dental convention which is in session there this week.

"The extra bushels are the profit bushels." Does your corn planter assure you accurate dropping? See Paul Stille about planters. adv

We are informed that Billie Velau is building a fine bungalow on his farm near Klemme. Now we again wonder—

Chris Blumer returned Monday night from points in Wisconsin where he had been canvassing for the Oil Mop Company.

Mr. Grange, of Ruthven, came last Thursday afternoon, being called to this city by the illness of Paul's little girl.

Mrs. Henry Wille left last Wednesday for Vernon Center, Minnesota being called to that point by the death of a grandchild.

Mrs. Elmer Fuller came over from Clear Lake last Thursday evening to help Mrs. M. O. Barr entertain the Rebeka Circle the following day.

President F. J. White of the Northern Lumber Co., came down from Estherville last Thursday to look after matters of business here.

Dewey Rice drove over from Clarion Sunday to visit at the Fred Musfelt home. His wife and baby, who have been visiting here for a few weeks, returned with him.

Walter Schultz and family left last week for Lakeville, Minnesota, where he will work in a garage. He expects to move his household goods there soon.

Dr. R. W. Schultz, of Mason City, was calling on Klemme friends last Friday. "Doc" was formerly at Garner but now has office rooms in the new M. B. A. Building there.

Howard Doyle received the contract for painting the Farmers Elevator. The building will be painted red with white trimming and will make that end of town look pretty nifty.

Tanlac is the ideal strengthener and body builder for old folks, because it creates a healthy appetite for wholesome food and strengthens and invigorates the digestive organs. E. S. D. Kahrs. adv

"Jack" Andrews, of Garner has been working in and about Klemme the past week soliciting war veterans to join the Gifford Olson Post of the American Legion at Garner. He was very successful and secured practically all of the wordl war vets here.

Mason City, Iowa.

Klemme Locals

Mr. G. W. Darner from Marshalltown, and Mr. W. O. Sunda, of the same place viitsed at the Dr. J. L. Hesselhuus home last Thursday night The first mentioned gentleman is a brother of Mrs. Hesselhuus.

"Happy" Johnson is an all around man, he's a butcher, a gentleman and besides that has tastes for art which latter feature was discovered by us the other day when we viewed the interior decorations at the Meat Market, and aside from a few brush marks and finger prints "Happy" did a good job of painting. He will likely swiel up like a poisoned pup when he reads this bit of praise.

M. O. Hocum and family left today for their new home at Iowa Falls where Mr. Hocum has purchased an elevator. The Hocum family have been residents of this city for a number of years and made a large number of friends who regret to see them leave. Klemme is losing a good businessman and Mr. Hocum built up a large elevator business during his stay here with his honest and square dealing with everybody. We wish them success in their new location.

Klemme's newest newly-weds, Mr. and Mrs. Ed. Jacobs returned from their honeymoon trip Monday, which they had spent visiting relatives and friends at Sioux Falls, S. Dak. Ed. lives right back of us now but we are afraid we won't be abel to get along with him as our favorite worm digging patch for fishing is located on his lot; there's where the argument will begin as Ed won't want us to dig his place all up. We don't wish Ed any bad luck but we hope his wife beats him up with one of those rolling pins like he sold our wife.

We believe the two meanest men in town are Walt Lau and "Happy" Johnson. These two got their heads together May basket night and fixed up a "bird of a basket" to present to a certain young lady well known to "Happy." Not being content with constructing the basket from an old issue of the Times they even had to go out and wake up the sparrows roosting on Walt's porch and one little innocent sparrow was contributed to the contents of the basket. We suppose that when the basket was opened the bird began to sing, but Walt and Happy made tracks after hanging the basket and so cannot verify this statement.

STATE OF IOWA
Hancock County, ss.
TO ALL WHOM IT MAY CONCERN:

YOU ARE HEREBY NOTIFIED, That an instrument of writing purporting to be the last Will and Testament of Daniel Webner, Sr. deceased, dated May 30, 1910, having been this day filed, opened and read, Monday, the 22nd day of May, 1922, is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 3:00 o'clock P. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, April 17th, 1922.

B. E. ERWIN,
Clerk of District Court A-20-27-M-4

Ed. Jacobs was out early this morning picking up tin cans, pans, kettles and old pails which was left at his house last night by the charivari gang. Ed. also showed his ability last night of being an expert "mule buster." The mule and Ed. make a fifty yard dash and then the mule kissed Ed a found farewell and hiked down the street, leaving Ed. on the ground counting the stars and listening to the birds sing. Jimmie Wade and Bub Ulrich, the wild musicians of Liberty township supplied most of the music, ably assisted with a squad of can beaters and howlers headed the parade for Ed's house to give the Mrs. a little free music. Ed entertained the gang with cigars and was then induced to leave the house when he was caught and hog-tied to a telephone pole, where he remained until his wife released him. The gang, numbering about one hundred and fifty then journeyed to the restaurant where they filled up on ice cream, thereby reducing Ed's bank account by quite a number of cartwheels. Ed. and the wife are good sports and took the jokes all goodnatured so the gang left them first giving three rousing good cheers and Bub and Jimmie played Home Sweet Home as Ed. and the Mrs. went in the house. Whose next?

PUBLIC AUCTION

As I have decided to quit farming, I will hold a Public Sale on my farm 4 miles south of Klemme; and 2 miles north and 1 mile east of Goodell, on—

Wednesday, May 10th

SALEE BEGINS PROMPTLY AT 1:00 P. M. SHARP

5 Head of Horses 5

1 team Arabian Mares, 6 and 12 years old, weight 2600.
1 Sorrell Mare 4 years old, weight 1100.
1 Bay Gelding 4 years old, weight 1100.
1 Black Mare 3 years old, weight 1200.

11 Head of Cattle 11

4 High Grade Shorthorn Cows, just fresh.
1 2-year old Rowan Heifer.
1 Purebred Jersey Cow, fresh in June.
1 Yearling Heifer
4 Heifer Calves.

45 Head of Purebred Duroc Hogs and Pigs 45

5 2-year old Sows, by Critic Sensation.
1 Sow by Great Wonder I Am.
2 Sumer Gilts by Critic Sensation.
1 Gilt to farrow this month.
2 Full-sisters of Grand Champion at Sioux City, 1921.
2 Fall Gilts by Critic Sensation.
1 Sow to farrow this month.
31 Spring Pigs sired by Critic Sensation, Orion King Sensattion, and Great Orion Sensation Again; 22 will be weened by sale day.

Farm Machinery, Etc.

Wagon, with box.
New steel wheel Mandt wagon.
Hay rack.
McCormick 6-ft. Binder.
McCormick 6-ft. Mower.
Hay Rake.
Bob Sled
3 Corn Plows
2 16-inch Sulky Plows.
New 9-ft. Disc
20-ft. Harrow.
Moline Corn Planter
11-ft. Seeder
Iowa Cream Separator.
2-hole Corn sheller with stacking elevator.
Feed Grinder.
Seed Corn Rack
Gas Drum, 53 gal capacity.
Kerosene drum, 53 gal.
Galvanized water tank.
Tank Heater.
Pump Jack.
Set Farm Scales.
15 gallons Linseed oil.
2 sets work harness—one is 1 and 3-4 inch and the other is a new set army harness.
2-H. P. Gas Engine.
8 Bushels Seed Corn.
1 Hog house 8x8 with 8 ft pen.
1 Hog house 8x16.
Hog Waterer.
Smith Breeding Crate.
Dipping Tank.
Hog Oiler.
3 Hog Crates.
Hog Troughs.
Hog Barrells.
Many other items.

TERMS— All sums of $10 and under, cash. All sums over that amount will be given 8 month's time on good bankable notes bearing 8 per cent interest from date of sale. No property is to be removed until settled for.

A NEW ENGLAND IDOL

They Had Something to Sell; He Had the Price—But There Was No Deal Made After All

By ELEANOR PORTER

Author of "Pollyanna," "Just David," Etc.

Copyright by Eleanor H. Porter.

THE Hapgood twins were born in the great square house that set back from the road just on the outskirts of Fairtown. Their baby eyes had opened upon a world of faded portraits and somber haircloth furniture.

From babyhood to girlhood the charm of the old place grew upon them, so much so that the thought of leaving it for homes of their own became distasteful to them, and they looked with scant favor upon the occasional village youths who sauntered up the path presumably on courtship bent.

Rev. John Hapgood—a man who ruled himself and all about him with a rod of rigid old-school orthodoxy—died when the twins were twenty; and the frail little woman who, as his wife, had for thirty years lived and moved solely because he expected breath and motion of her, followed soon in his footsteps. And then the twins were left alone in the great square house on the hill.

Miss Tabitha and Miss Rachel were not the only children of the family. There had been a son—the first born, and four years their senior. The headstrong boy and the iron rule had clashed, and the boy, when sixteen years old, had fled, leaving no trace behind him.

If Rev. John Hapgood grieved for his wayward son the members of his household knew it not, save as they might place their own constructions on the added sternness to his eyes and the deepening lines about his mouth. "Paul," when it designated the graceless runaway, was a forbidden word in the family.

Years had since passed—years of peaceful mornings and placid afternoons, and Paul had never appeared.

On the 10th of June, their thirty-fifth birthday, the place never had looked so lovely. A small table laid with spotless linen and gleaming silver stood beneath the largest apple tree.

Rachel came out of the house and sniffed the air joyfully.

"Delicious!" she murmured. "Somehow, the 10th of June is specially fine every year."

In careful, uplifted hands she bore a round frosted cake, always the chief treasure of the birthday feast. The cake was covered with the tiny colored candles so dear to the heart of a child. Miss Rachel always bought those candles at the village store, with the apology:

"I want them for Tabitha's birthday cake, you know. She thinks so much of pretty things."

Tabitha invariably made the cake and iced it, and as she dropped the bits of colored sugar into place she would explain to Huldy, who occasionally "helped" in the kitchen:

"I wouldn't miss the candy for the world—my sister thinks so much of it!"

So each deceived herself with this pleasant bit of fiction, and yet had what she herself most wanted.

Rachel carefully placed the cake in the center of the table, feasted her eyes on its toothsome loveliness, then turned and hurried back to the house. The door had scarcely shut behind her when a small, ragged urchin darted in at the street gate, snatched the cake, and, at a sudden sound from the house, dashed out of sight behind a shrub close by.

The sound that had frightened the boy was the tapping of the heels of Miss Tabitha's shoes along the back porch. The lady descended the steps, crossed the lawn and placed a saucer of pickles and a plate of dainty sandwiches on the table.

"Why, I thought Rachel brought the cake," she said aloud. "It must be in the house; there's other things to get, anyway. I'll go back."

Again the click of the door brought the small boy close to the table. Filling both hands with sandwiches, he slipped behind the shrub just as the ladies came out of the house together. Rachel carried a small tray laden with sauce and tarts; Tabitha, one with water and steaming tea. As they neared the table each almost dropped her burden.

"Why, where's my cake?"

"And my sandwiches?"

"It's burglars—robbers!" Rachel looked furtively over her shoulder.

"And all your lovely cake!" almost sobbed Tabitha.

"It—it was yours, too," said the other with a catch in her voice. "Oh, dear! What can have happened to it?"

The sisters had long ago set their trays upon the ground and were now wringing their hands helplessly. Suddenly a small figure appeared before them holding out four sadly crushed sandwiches and half of a crumbled cake.

"I'm sorry—awful sorry! I didn't think—I was so hungry. I'm afraid there ain't very much left," he added, with rueful eyes on the sandwiches.

"No, I should say not!" vouchsafed Rachel, her voice firm now that the size of the "burglar" was declared. Tabitha only gasped.

The small boy placed the food upon the empty plates, and Rachel's lips twitched as she saw that he clumsily tried to arrange it in an orderly fashion.

"There, ma'am—that looks pretty good!" he finally announced with some pride.

Tabitha made an involuntary gesture of aversion. Rachel laughed outright; then her face grew suddenly stern.

"Boy, what do you mean by such actions?" she demanded.

His eyes fell and his cheeks showed red through the tan.

"I was hungry."

"But didn't you know it was stealing?" she asked, her face softening.

"I didn't stop to think—it looked so good I couldn't help takin' it." He dug his bare toes in the grass for a moment in silence, then he raised his head with a jerk and stood squarely on both feet. "I hain't got any money, but I'll work to pay for it—bringing wood in or somethin'."

"The dear child!" murmured two voices softly.

"I've got to find my folks, sometime, but I'll do the work first. Mebbe an hour'll pay for it—'most!"—He looked hopefully into Miss Rachel's face.

"Who are your folks?" she asked huskily.

By way of answer he handed out a soiled, crumpled envelope for her inspection, on which was written, "Rev. John Hapgood."

"Why—it's father!"

"What!" exclaimed Tabitha.

Her sister tore the note open with shaking fingers.

"It's from—Paul!" she breathed, hesitating a conscientious moment over the name. Then she turned her startled eyes on the boy, who was regarding her with lively interest.

"Do I belong to you?" he asked anxiously.

"I—I don't know. Who are you—what's your name?"

"Ralph Hapgood."

Tabitha had caught up the note and was devouring it with swift-moving eyes.

"It's Paul's boy, Rachel," she broke in; "only think of it—Paul's boy!" and she dropped the bit of paper and enveloped the lad in a fond but tearful embrace.

He squirmed uneasily.

"I'm sorry I eat up my own folks' things." I'll go to work any time," he suggested, trying to draw away, and wiping a tear splash from the back of his hand on his trousers.

But it was long hours before Ralph Hapgood was allowed to "go to work."

His story was quickly told. His mother was long since dead, and his father had written on his dying bed the letter that commended the boy—so soon to be orphaned—to the pity and care of his grandparents. The sisters trembled and changed color at the story of the boy's hardships on the way to Fairtown;

That evening when the boy was safe in bed—clean, full-stomached, and sleepily content, the sisters talked it over. Rev. John Hapgood, in his will, had cut off his recreant son with the proverbial shilling, so, by law, there was little coming to Ralph. This, however, the sisters overlooked in calm disdain.

"We must keep him anyhow," said Rachel with decision.

"Yes, indeed—the dear child.

"He's twelve, for all he's so small, but he hasn't had much schooling. We must see to that—we want him well educated," continued Rachel, a pink spot showing in either cheek.

"Indeed we do—we'll send him to college! I wonder, now, wouldn't he like to be a doctor?"

"Perhaps," admitted the other cautiously, "or a minister."

"Sure enough—he might like that better; I'm going to ask him!" and she sprang to her feet and tripped across the room to the parlor-bedroom door. "Ralph," she called softly, after turning the knob, "are you asleep?"

"Huh? N-no, ma'am." The voice nearly gave the lie to the words.

"Well, dear, we were wondering—would you rather be a minister or a doctor?" she asked, much as though she were offering for choice a peach and a pear.

"A doctor!" came emphatically from out of the dark—there was no sleep in the voice now. "I've always wanted to be a doctor."

"You shall, oh, you shall!" promised the woman ecstatically, going back to her sister; and from that time all their lives were ordered with that one end in view.

The Hapgood twins were far from wealthy. They owned the homestead, but their income was small, and the added mouth to fill—and that a hungry one—counted. As the years passed, Huldy came less and less frequently to help in the kitchen, and the sisters' gowns grew more and more rusty and darned.

Ralph, boylike, noticed nothing—indeed, half the year he was away at school; but as the time drew near for the college course and its attendant expenses, the sisters were sadly troubled.

"We might sell," suggested Tabitha, a little choke in her voice.

Rachel started.

"Why, sister!—sell? Oh, no, we couldn't do that!" she shuddered.

"But what can we do?"

"Do?—why lots of things!" Rachel's lips came together with a snap. "It's coming berry time, and there's our chickens, and the garden did beautifully last year. Then there's your lace work and my knitting—they bring something. Sell? Oh—we couldn't do that!"

But as the days and weeks flew by and September drew nearer, Rachel's courage failed her. Berries had been scarce, the chickens had died, the garden had suffered from drought, and but for their lace and knitting work, their income would have dwindled to a pitiful sum indeed. Ralph had been gone all summer; he had asked to go camping and fishing with some of his school friends. He was expected home a week before the college opened, however.

Tabitha grew more and more restless every day. Finally she spoke.

"Rachel, we'll have to sell—there isn't any other way. It would bring a lot," she continued hurriedly, before her sister could speak, "and we could find some pretty rooms somewhere. It wouldn't be so very dreadful!"

"Don't, Tabitha! Seems as though I couldn't bear even to speak of it. Of course, if I had an offer—a good big one—that would be qquite another thing; but there's no hope of that."

Rachel's lips said "hope," but her heart said "danger," and the latter was what she really meant. She did not know that but two hours before a stranger had said to a Fairtown lawyer:

"I want a summer home in this locality. You don't happen to know of a good old treasure of a homestead for sale, do you?"

"I do not," replied the lawyer. "There's a place on the edge of the village that would be just the ticket, but

"Where's My Cake?"
"And My Sandwiches?"

I don't suppose it could be bought for love or money."

"Where is it?" asked the man eagerly. "You never know what money can do—to say nothing of love—till you try."

The lawyer chuckled softly.

"It's the Hapgood place. I'll drive you over tomorrow. It's owned by two old maids, and they worship every stick and stone and blade of grass that belongs to it. However, I happen to know that cash is rather scarce with them—and there's ample chance for love, if the money fails," he added, with a twitching of his lips.

When the two men drove into the yard that August morning, the Hapgood twins were picking nasturtiums, and the flaming yellows and scarlets lighted up their somber gowns, and made patches of brilliant color against the gray house.

"By Jove, it's a picture!" exclaimed the would-be purchaser.

The lawyer smiled and sprang to the ground. Introductions quickly followed, then he cleared his throat in some embarrassment.

"Ahem! I've brought Mr. Hazelton up here, ladies, because he was interested in your beautiful place."

Miss Rachel smiled—the smile of proud possession; then something within seemed to tighten, and she caught her breath sharply.

"It is fine!" murmured Hazelton; "and the view is grand!" he continued, his eyes on the distant hills. Then he turned abruptly. "Ladies, I believe in coming straight to the point. I want a summer home, and—I want this one. Can I tempt you to part with it?"

"Indeed, no!" began Rachel almost fiercely. Then her voice sank to a whisper; "I—I don't think you could."

"But, sister," interposed Tabitha, her face alight, "you know you said—that is, there are circumstances—perhaps he would—p-pay enough—" Her voice stumbled over the hated word, then stopped, while her face burned scarlet.

"Pay!—no human mortal could pay for this house!" flashed Rachel indignantly. Then she turned to Hazelton, her slight form drawn to its greatest height, and her hands crushing the flowers she held till the brittle stems snapped, releasing a fluttering shower of scarlet and gold. "Mr. Hazelton, to carry out certain wishes very near to our hearts, we need money. We will show you the place, and—and we will consider your offer," she finished faintly.

In the end, Hazelton's offer was so fabulously enormous to their unwilling ears that their conscience forbade them to refuse it

"I'll have the necessary papers ready to sign in a few days," said the lawyer as the two gentlemen turned to go. And Hazelton added: "If at any time before that you change your minds and find you cannot give it up—just let me know and it will be all right. Just think it over till then," he said kindly, the dumb woe in their eyes appealing to him as the loudest lamentations could not have done. "But if you don't mind, I'd like to have an architect, who is in town just now, come up and look it over with me," he finished.

"Certainly sir, certainly," said Rachel, longing for the man to go.

Mr. Hazelton appeared the next morning with two men—an architect and a landscape gardener. Rachel was in the summer-house, and the first she knew of their presence was the sound of talking outside.

"You'll want to grade it down there," she heard a strange voice say, "and fill in that little hollow; clear away all those rubbishly posies, and mass your flowering shrubs in the background. Those roses are no particular good, I fancy; we'll move such as are worth anything, and make a rose-bed on the south side—we'll talk over the varieties you want, later. Of course these apple trees and those lilacs will be cut down, and the summer-house will be out of the way. You'll be surprised—a few changes will do wonders, and—"

He stopped abruptly. A woman, tall, flushed, and angry-eyed stood before him in the path. She opened her lips, but no sound came—Mr. Hazelton was lifting his hat. The flush faded, and her eyes closed as though to shut out some painful sight; then she bowed her head with a proud gesture, and sped along the way to the house.

Once inside, she threw herself, sobbing, upon the bed. Tabitha found her there an hour later.

"You poor dear—they've gone now," she comforted.

Rachel raised her head.

"They're going to cut down everything—every single thing!" she gasped.

"I know it," choked Tabitha, "and they're going to tear out lots of doors inside, and build in windows and things. Oh, Rachel—what shall we do?"

"Do? Why, we'll stand it, of course. We just mustn't mind if he turns the house into a hotel and the yard into a—a pasture!" she said hysterically. "We must just think of Ralph and of his being a doctor. Come, let's go to the village and see if we can rent that tenement of old Mrs. Goddard's."

With a long sigh and a smothered sob, Tabitha went to get her hat.

Mrs. Goddard greeted the sisters effusively, and displayed her bits of rooms and the tiny square of yard with the plainly expressed wish that the place might be their home.

The twins said little, but their eyes were troubled. They left with the promise to think it over and let Mrs. Goddard know.

"I didn't suppose rooms could be so little," whispered Tabitha, as they closed the gate behind them.

"We couldn't grow as much as a sunflower in that yard," faltered Rachel.

"Well, anyhow, we could have houseplants!" Tabitha tried to speak cheerfully.

"Indeed we could!" agreed Rachel, rising promptly to her sister's height; "and, after all, little rooms are lots cheaper to heat than big ones." And there the matter ended for the time being.

Mr. Hazelton and the lawyer with the necessary papers appeared a few days later. As the lawyer took off his hat he handed a letter to Miss Rachel.

"I stepped into the office and got your mail," he said genially.

"Thank you," replied the lady, trying to smile. "It's from Ralph"—handing it over for her sister to read.

Both the ladies were in somber black; a ribbon or a brooch seemed out of place to them that day. Tabitha broke the seal of the letter, and retired to the light of the window to read it.

The papers were spread on the table, and the pen was in Rachel's hand when a scream from Tabitha shattered the oppressive silence of the room.

"Stop—stop—oh, stop!" she cried, rushing to her sister and snatching the pen from her fingers. "We don't have to—see—read!"—pointing to the postscript written in a round boyish hand.

Oh, I say I've got a surprise for you. You think I've been fishing and loafing all summer, but I've been working for the hotels here the whole time. I've got a fine start on my money for college, and I've got a chance to work for my board all this year by helping Professor Heaton. I met him here this summer, and he's the right sort—every time. I've intended all along to help myself a bit when it came to the college racket, but I didn't mean to tell you until I knew I could do it. But it's a sure thing now.

Bye-bye. I'll be home next Saturday.
Your aff. nephew,

RALPH.

Rachel had read this aloud, but her voice ended in a sob instead of in the boy's name. Hazelton brushed the back of his hand across his eyes, and the lawyer looked intently out the window. For a moment there was a silence that could be felt, then Hazelton stepped to the table and fumbled noisily with the papers.

"Ladies, I withdraw my offer," he announced. "I can't afford to buy this house—I can't possibly afford it—it's too expensive." And without another word he left the room, motioning the lawyer to follow.

The sisters looked into each other's eyes and drew a long, sobbing breath.

"Rachel, is it true?"

"Oh, Tabitha! Let's go out under the apple trees and let's—just know that we are there!"

And hand in hand they went.

THE WHITE ROSE

By MILDRED WHITE

Copyright, 1922, Western Newspaper Union.

"The white rose grew high on the old stone wall, just above one's reach. It was a tempting, taunting rose, perfect in unfolding beauty, and it flaunted its perfume and swayed in the sun.

"And because it was provokingly beyond reach, men strove to claim it, but the flower still bent, as though aloof in its purity, beyond each claiming hand."

The girl ceased reading, and glanced smilingly down at the child.

A young man on the step below them looked up at the girl.

"And that," he said, "is life, the white rose of one's desire, always just beyond reach."

As he spoke he turned his face toward the farther end of the summer hotel veranda, where a charming woman sat among her admirers. This worldly, fortunate young woman was very lovely in soft, white chiffon. Her skin was a sort of pearly white, too, and the pale blonde of her hair gleamed like an aureole.

The young man's gaze bent upon her long and dreamily. And presently the young woman arose, and came passing him on the stair. With a careless nod, she went on down the garden path, an eager escort at her side.

"I suppose," said Bruce Webster, slowly, "that every man has in life his white rose."

"And every woman, too," said the girl softly, her eyes on him.

"I don't like that story," spoke up the child, "it has no end."

"I have to finish the stories for Muriel," the girl explained, "or she is not satisfied."

The girl wore no chiffon, but her simple linen was spotlessly white, and neither was she an heiress, this sweet-faced young person, nor a favored guest of the hotel. She, herself, could not quite define her position in the Webster household.

Muriel, her charge, had grown beyond the need of a nursemaid, and Rhoda Brent could not be called a governess. Muriel called Rhoda her "friend," which was, perhaps, the best name of all.

Muriel's uncle gave a quick impatient sigh. "Don't mind me," he said, "go on and finish your story."

"Then one sunshiny day," the girl went on obediently, "a young and earnest knight clambered up the stone wall. Once he lost his footing, but bravely climbed on toward the white rose. He was determined to triumph, you see, in its possession. Its perfume seemed to touch the knight's lips as he sadly gave up the quest—and then, as he slipped back to the ground—well, what do you think?" asked Rhoda.

The child leaned eagerly forward.

"The white rose," finished the girl, "was lying at his feet."

"What did the knight do then?" questioned Muriel.

"Picked it up and wore it, of course," her uncle answered, "next to his heart."

"That was a beautiful end," the little girl said. "And now please carry me up to bed, Uncle Bruce."

Laughingly the young man granted the request, and up the long stairs the three went together. Later, Rhoda Brent, coming alone down to the moonlit veranda, found Muriel's uncle one of a group surrounding the lovely woman's chair. She was singing, this admired and favored guest, and the lonely girl thought the soft charm of the voice in accord with the charm of her person.

On the upraised face of Bruce Webster was an eager light.

Little Rhoda, unseen, retraced her steps. In her own room with the child's even breathing coming from the direction of that second white bed, the girl knelt in the moonlight before an open window. "I must go away," she whispered. "I thought that I might grow not to care for him." She smiled sadly at the futility of the thought. "My white rose, high on a hard stone wall."

Below, a man's figure came from the shadow into the moonlight. The still glorified face of Bruce Webster was lifted to hers. He came nearer, and stepped lightly up the porch trellis.

"My white rose," begged Bruce, "come down to me please, if but for a moment."

Wondering, her heart thrilled at the sound of those unbelievable words, Rhoda went as one in a dream into the garden.

"I had to ask you tonight," the man said. "I could not bear the suspense longer. I know how unworthy I am of all your sweetness, O little white Rhoda, and I have not the money that I should have before asking. That's what held me back—but if you will give me the slightest hope, how I will work and strive. But, of course," he caught himself quickly, "you don't care. Else, why have you avoided me? The only time when I could count on a sight of you was at Muriel's bedtime. Because she likes to have me carry her upstairs. Women do not always hide from those they love. Tonight I had almost forgotten your aversion—it was Gloria Dale's song, perhaps, that gave me hope, a song of love. Do not be afraid to hurt me then, Rhoda. One may not love where one will. It's just the story of the white rose—just out of reach."

Very softly she same to him, soft, caressing little hands against his shoulders.

"Bruce," she said, "Oh Bruce, my knight, your white rose is here, at your feet."

AUNT MOLLY

By ETHEL A. LYONS

©, 1922, by McClure Newspaper Syndicate.

"My, but I'm tired!" Mrs. Symmes sank down wearily in the patent rocker in Aunt Molly Magee's parlor, "I mustn't stop a minute. I've been going night and day trying to make this fair a success. The church needs the money so badly. You'll wash dishes for us, of course, Mrs. Magee?"

"Of course I will—not!"

Mrs. Symmes jumped.

"For twenty years now"—Aunt Molly grasped the arms of her chair with two plump hands and bent forward—"I've washed dishes at every banquet and supper and Sunday school picnic in this town. If you want me to help sellin' things I'll go—but I won't wash dishes."

"Oh, I'm so sorry," Mrs. Symmes was all sympathetic consternation. "I never knew you felt like that. But about the booths—why—er—I don't know. There's nothing left but the aprons, and Mrs. Lucas has always had them."

The night of the fair found Aunt Molly resplendent in her best black silk and rhinestone brooch, presiding over the aprons.

Mrs. Symmes in the cramped little church kitchen, nervously endeavoring to keep hot a half-dozen chicken pies on the little two-by-four cook stove, and hoping that Aunt Molly wouldn't bungle things too badly, was startled into leaving her post by a hilarious shout from the outer room. She glanced out the door to see Mr. Conroy, proprietor of the village market, strutting about, his bulky form swathed in a checked gingham apron of large proportions.

"Oh, dear," said Mrs. Symmes to Aunt Molly. "Mrs. Magee, why ever did you sell that apron to Conroy? I make one like that every year so that old Mrs. Lane will buy it. She never can get things big enough."

"There, now, don't you worry," soothed Aunt Molly, her face aglow. "I made him pay me five dollars for that apron, and if anyone can pry old Conroy loose from a five-dollar bill I say do it."

"Cora Whipple, you come here" Mrs. Symmes felt herself dismissed as a rosy-cheeked girl came at Aunt Molly's bidding. "Cora, don't you ever make fudge for Ervin? You needn't blush, but next time you just wear this pink fudge apron and see what happens. No, a dollar's enough, I guess.

"Elsie, bet your ma'd be just tickled to death with one of these little sewing aprons for her birthday. This white one with the ruffle's mighty cute, too. You want 'em both? Good! "Here, Miss Sykes, you buy this oilcloth jigger and you won't drown yourself when you wash dishes, like you always do."

Aunt Molly knew her "line" and her customers. At 8:30 she was sold out. Complacently she began counting her spoils.

"Oh, Mrs. Magee!" wailed pretty Millie Burke, hurrying across from the fancy work booth, "would you help us with those vanity bags?"

"Sure I'll help, but you ought to've known better than to make them, in the first place. All the girls may not have gingham aprons, but you should know that all those as would use 'em has vanity bags already. Here," she thrust the box of money toward Millie. "You finish counting that. Here comes Doctor Arnister," as the young doctor's lithe, dark figure appeared in the doorway. "Bet you 10 cents I sell him that old-rose bag for $2. Just suits his complexion." With a chuckle she was away.

"Well, what do you think!" An hour later Millie Burke burst into the kitchen, weak from laughter. "Aunt Molly has sold every one of those bags; we haven't a thing left but canned fruit. And Doctor Arnister and Judge Peterson—oh, just come and see." She drew Mrs. Symmes outside. Uproar and feminine shrieks greeted them.

Mrs. Symmes stared—every man's face in the crowd was a work of art. Rouge and eyebrow pencil, lipstick and powder had all been applied with a lavish hand. Conroy's rosy-hued countenance was a ghastly white; someone had used an eyebrow pencil with great diligence on the judge's bald spot; Dandy Smithson's erstwhile blond mustache had turned a brilliant carmine.

"How much? How much?" Aunt Molly had turned auctioneer. Her strident voice was heard above the hubbub. "How much am I offered for this can of peaches? You, judge, how much? Remember, not one bite to eat for anybody till the last thing's sold. How—"

"Great guns," groaned the judge, "pack up the whole business, woman, and send it to the old ladies' home. I'll pay the bill."

With a mighty cheer the crowd made a rush for the supper room.

"Land sakes!" Aunt Molly gave a feeble chuckle as she wiped the perspiration from her face and lowered her weary body into a convenient chair. "I never in my life see folks have such a good time."

Advertising Strategy.

"What's the idea of this big sign here reading 'Go slow. Danger'? What the road is perfect and without a turn for miles."

"That was the happy thought of a publicity expert. He put up the big billboard you see over there on one side of the road, and the danger sign is merely to make motorists slow up so they'll have a chance to read it."

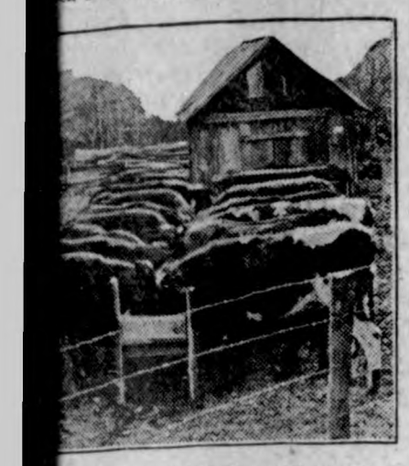
LIVE STOCK NEWS

LL GRAIN THROUGH CATTLE

rmer Who Puts Feed Into Steers and Returns Manure to Land Is One Who Succeeds.

epared by the United States Department of Agriculture.)

n investigation into methods and ts of beef production in the corn t, conducted by the United States partment of Agriculture, covering ee years, and 906 farms, shows in- esting facts concerning the present tus of the industry. The man who ds cattle is marketing his crops as feeds them, and, therefore, is justi- in expecting a return equivalent average market prices for the feeds. en if he sometimes falls short of a



Cattle in Feed Lot Near Flora, Ill.

urn he has not necessarily experi- ed a loss. The corn belt farmer o sells grain sometimes receives re for his crop than the one who ds it to cattle, but on the average, a period of years, except in cer- n limited areas, the man who puts feed into steers and returns the nure to the land is the one who nes out ahead. The conclusion is sed on feeding in Iowa, Indiana, nois, Nebraska and Missouri.

The figures which contain the re- ts of this investigation were ob- ned from a large number of farms d from several agricultural experi- nt stations in the Middle West. One se of the work deals with the cost maintaining a herd of breeding cows producing feeder cattle. It was nd that feed represented 69 per t of the cost of keeping a cow for e year, while the other 31 per cent s for interest, labor, equipment d incidentals.

WINE FOR HOME SLAUGHTER

mbers of Shipping Association in Indiana Solve Problem of Having Pork Supply.

Members of the live stock shipping sociations in Dekalb county, Ind., ve solved the problem of having fat gs on hand just when they are dy to do their home butchering, d the United States Department of riculture thinks the plan could be rked by other co-operatives. Many the members of the association who home butchering often found them- ves with hogs ready for market or ughter before the farmers were pre- red for the work. Under these con- tions they arrange with the man- er of the association to ship their gs to market at the time the ani- ls are ready, and later, when the rmers are prepared to butcher, they the desired number of hogs from e association on the regular ship- g day. The hogs are sold to them the net market price returned to e members contributing hogs to the ipment. This practice is an accom- odation to the members, as often a rmer who is raising hogs for home ughter is not ready to butcher at e time the hogs are in best condi- n, and he is not prepared to feed em as long as he desires.

NG CORN DISCOVERS RIVAL

xperiments at Nebraska University Show Dried Sugar Beet Pulp Is Valuable Feed.

Dried sugar-beet pulp will soon be- me a real rival of corn in livestock- eding, declares the University of ebraska College of Agriculture.

This statement is based on an ex- riment conducted by the college dur- g which different rations were fed lots of Utah lambs, 31 to each lot, r 100 days, to determine the food lue of the sugar-beet by-product in mparison with some of the standard tions, such as corn and alfalfa or rn, alfalfa, and cottonseed cake.

The beet-pulp-fed lambs led with a rofit of $3.80 per head at the end the period, while the corn-and-al- lfa-fed lot showed a profit of only .83 a head. The experiment proved, rthermore, that either corn or dried et pulp is necessary to produce a ished lamb.

Hog Harvesting Time.

Farrowing time is harvest time in e hog business. Success at this time eans live pigs that will quickly grow to cash; failure means dead pigs at will grow into—an entry on the rong side of the ledger.

Clip Horses Before Spring.

Clipping is a practice that should be ore universally adopted than it is, r it is an excellent thing for the ork horse that has been idle the eater part of the winter and is put heavy work during the spring.

DAIRY HINTS

REDUCE EXTENT OF DISEASE

Testing Cattle for Tuberculosis and Cleaning Up Infected Herds Having Effect.

(Prepared by the United States Department of Agriculture.)

That testing cattle for tuberculosis and the cleaning up of infected herds are having a permanent effect in reducing the extent of the disease is shown conclusively by figures recently collected by the United States Department of Agriculture from inspectors in charge of the eradication work in various parts of the country. The inspectors were asked to supply figures on the results of three or more tests on badly diseased herds, those that had not less than 10 per cent of reactors on the first test. The first test on more than 58,000 cattle in these bad herds showed that 26 per cent had tuberculosis. Another test six months later on the same herds, from which the reactors had been removed, showed only 6.9 per cent of the disease. By another six months the percentage had gone down to 2.8. A fourth test on more than 25,000 of these cattle showed only 1.8 per cent of tuberculosis.

The reports from which these figures were taken show that under normal conditions herds very badly diseased may be established as relatively free in a short time. They also show that eradication work can be carried on without destroying the cattle industry as is sometimes thought. Erratic results were obtained on a very few of the 1882 herds tested, the list of this class containing less than 100. Out of the 126,668 herds under

A Dairy Herd Certified by the Department of Agriculture as Free From Tuberculosis.

observation December 1, 1921, there were only a very few that had not shown satisfactory improvement as a result of testing.

COWS REQUIRE MUCH WATER

It Should Be 20 Degrees Above Freezing Point and Same Temperature Every Day.

During the winter, when cows are stabled the greater part of the time, they should be watered two or three times a day, say specialists of the United States Department of Agriculture, unless arrangements have been made to keep water before them at all times. The water should, if possible, be 15 degrees or 20 degrees above the freezing point, and should be supplied at practically the same temperature every day. When water well above freezing temperature is stored in tanks and piped directly to the cow, there is probably little occasion for facilities to warm it. When it stands in a tank on which ice often forms, it usually pays well to warm it slightly. This can be done by a tank heater, by live steam, or by hot water from a boiler. If a boiler is used for running a separator or for heating water to wash and sterilize utensils, steam from it can readily and cheaply be used to warm the water.

CREAMERY TAKES SAFE MILK

Vermont Association Accepts Product Only From Herds That Have Been Tested.

Increasing interest in the tuberculin testing of cattle is evident from reports received by the United States Department of Agriculture from many parts of the country. This tendency applies not only to milk used directly, but to manufactured dairy products. A co-operative creamery association at Barre, Vt., accepts milk and cream only from herds that have been tuberculin tested under federal and state supervision.

The products of the association's dairy plant are butter, cheese, ice cream, milk and cream, the products being sold both wholesale and retail. Specialists in the bureau of animal industry regard the increasing interest in tuberculosis eradication as an important development in the dairy manufacturing industry.

Warm Quarters for Cows.

Cows in winter should have access to warm quarters during stormy weather although they require exercise and should not be stabled all the time. Warm water is a great help in keeping the animals in good winter condition.

Cow Needs Vacation.

After a season of steady, high-pressure work, the dairy cow needs a six or eight week's vacation—not at the shore or in the mountains, but out in the quiet of the back pasture.

USE OF MILKING MACHINES GAINS

Increased Number Being Employed Makes Cleaning Methods of Much Importance.

HOT-WATER METHOD IS BEST

To Keep Mechanical Devices Sweet and Clean All Parts Should Be Scrubbed at Least Once Every Week.

Prepared by the United States Department of Agriculture.)

The increasing use of milking machines in the United States makes the method of cleaning and caring for them an important one. In studies of dairy sanitation the number of bacteria which survive various methods of cleaning and care enables investigators to determine the relative merits of various systems of cleaning machines. In addition to laboratory observations, the United States Department of Agriculture has tried out methods of cleaning and sterilizing mechanical milkers on a number of farms.

On 13 farms where only ordinary care was given, the highest bacteria count was more than 2,000,000 per cubic centimeter, and the average was more than a quarter of a million. After the machines had been kept clean and sterilized by the hot-water method, the average of 261 samples showed less than 20,000 bacteria per cubic centimeter, and one sample showed only one thousand. Of course, with careless methods, milk produced by hand milking may be badly contaminated; but the milking machine, being an additional piece of apparatus between the cow and the consumer, should receive special care.

Hot-Water Method Best.

Sterilizing milking machines with a chlorine solution has been done on a good many farms, but the tests made by the department have shown that much better results come from the use of the hot-water method. Just after milking, the machines are rinsed with cold or lukewarm water drawn through by vacuum, the stream being broken occasionally by pulling the teat cups out of the water and immersing them again. This is done 10 or 12 times. The process is then repeated with hot soda solution, and the cups and tubing are washed with a brush at the same time. Then the parts are rinsed by drawing clean water through by vacuum.

After this cleaning, the long milk tubes with the teat cups attached are

Milking Machine in Operation.

detached from the head of the pail, the air tubes (on inflation types of machines) plugged, and the whole immersed in a tank of clean water. The water is then heated to 160 degrees or 170 degrees F. This may be done by setting the tank on a stove; by setting it up and building a fire under it; or by introducing steam from a boiler. The parts are left in this water until the next milking.

The effect of heating upon the rubber parts has not yet been fully determined, but so far the temperatures used have had little effect on the life of the rubber.

Clean Thoroughly Each Week.

To keep the machines sweet and clean they must be taken entirely apart once a week and all the parts scrubbed with brushes and hot soda solution. The vacuum line should be cleaned every two weeks by drawing hot soda solution through it, but if milk is accidentally drawn into it the pipe should be cleaned immediately after milking. Pails and covers need to be washed and sterilized with steam or boiling water after every milking.

It is important that the development of mechanical milkers should not be handicapped by improper methods of cleaning them.

WOOD ASHES ASSIST GARDEN

Material Should Be Scattered Over Soil to Get Benefit of Potash Fertilizer.

Do not waste any wood ashes from the grate. Strew them over the garden. They are rich in potash fertilizer. It will leach into the ground, but unlike nitrates, will remain there in suspension and the plants can get the full benefit. You are throwing away money when you throw away wood ashes. They are especially valuable for daffodil and tulip beds.

CUCUMBER DISORDER SPREAD BY INSECTS

Mosaic Disease Is Widespread in the United States.

Wild Cucumber Vine and Common Milkweed Are Principal Host Plants of Malady—Eradication Is Strongly Urged.

(Prepared by the United States Department of Agriculture.)

The wild cucumber vine and the common milkweed, as shown by investigations by the United States Department of Agriculture, are the principal wild host plants of the cucumber mosaic, or "white pickle" disease. This disease is widespread in the United States, but is most general and serious in the Middle West, where the major portion of the pickle-growing industry is located. Cucumber mosaic is caused by a virus, and the most common means of spreading it is by two kinds of insects, the striped cucumber beetle, the melon aphis, and by pickers. The disease is not carried through the winter in the soil or by insects, and trials have shown that

Mosaic Disease of Cucumber.

seeds from diseased cultivated cucumbers rarely produce mosaic plants. It has been found, however, that seeds from mosaic fruits of the wild cucumber will produce a certain percentage of mosaic plants when planted and the disease may thus winter over on this wild host. Wild cucumber vines appear along fences and streams from three to four weeks before the cultivated cucumbers are planted, and the striped cucumber beetle feeds on these wild plants and then flies to the cucumber fields, carrying the mosaic virus if it exists. The common milkweed is also subject to cucumber mosaic and as it lives for many years the disease is reproduced each year from the diseased roots. Insects, particularly the melon aphis, are also the agents which carry mosaic from milkweed to cucumber. Eradication of these wild hosts is strongly advised as the most effective control measure yet known. Field experiments indicate that such treatment not only reduces the amount of disease in the fields, but also its seriousness by delaying its appearance by two to four weeks just at the time when the plants are producing large yields.

CORN FOR SILAGE PURPOSES

Early Planting of Well-Matured Seed of Large Variety Is Often Most Profitable.

In the north an early planting of well-matured seed of a large variety of corn is often most profitable when the crop is intended for silage purposes. Of course, if a grain crop is desired, the corn variety must be chosen that has the best chance of maturing a good yield of grain. But if silage is the object, the same degree of maturity is not necessary. The production may be increased simply by choosing a somewhat longer season crop, one that will reach the proper ensiling stage at about the same time the Northern grain would have to be maturing. Here is one more place where the Northern silo owner can get the jump on some of his less fortunate neighbors.

BIG DANGER IN USING LIME

When All Acidity of Soil Has Been Used Up There Is Trouble in Raising Some Crops.

A test was made covering 15 years of growing truck crops with manure, at the rate of ten loads to the acre, and with other fertilizers. The fertilized plots yielded good crops for a few years and then failed. Doctor Hartwell of the Rhode Island experiment station does not advise any fertilizers in continuous crop rotation without green manuring. He said that Rhode Island was responsible for the use of lime, and now it ought to be responsible for saying that there is danger in using too much lime. When you have used up all the acidity in the soil you are in for trouble, especially with such crops as spinach. If you do not get any pink on blue litmus paper, the soil does not need more lime.

BIG VALUE OF ALFALFA

Alfalfa pasture is worth $25 to $35 per acre when it will feed 20 pigs per acre that will gain 200 pounds each during the season. If they are fed without pasture, they will need 1,500 pounds more of corn and 800 pounds of tankage. In addition to this we can cut a ton or two of hay from the same land and still have better grazing than if it were not mowed.—J. M. Evvard, Iowa Station.

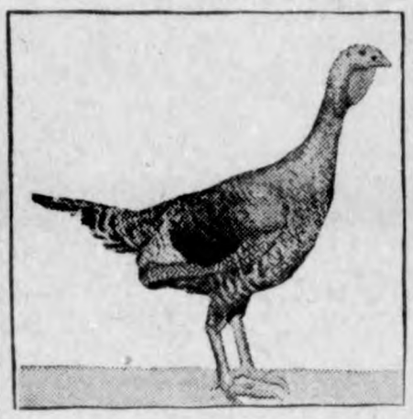
POULTRY

TURKEYS LAY THREE LITTERS

Poults Hatched Later Than June Do Not Develop for Thanksgiving Markets.

(Prepared by the United States Department of Agriculture.)

Soon after mating turkey hens begin to look for nesting places and usually commence laying in from a week to 10 days after the first mating. One mating is sufficient to fertilize all the eggs of one litter, but the hens ordinarily mate three or four times before beginning to lay. All turkey hens, of course, do not begin laying at the same time, and in a flock of about 15 it may be six weeks or more from the time the first hen begins to lay until the last begins. Pullets usually commence laying a little earlier than yearlings or older hens, say poultry



Bronze Turkey Hen.

specialists in the United States Department of Agriculture.

The average number of eggs in the first litter is about 18, although in individual hens it may vary from 12 to 30. Hens that do not have to be set can be broken up on becoming broody and made to lay a second or a third litter. The number of eggs laid in the second litter averages about 12, and in the third about 10, although there is considerable variation in the egg production of different hens.

Some turkey hens can be made to lay four or five litters, but this is not usually advisable, as poults hatched later than June do not have a chance to develop for the Thanksgiving and Christmas markets and are not sufficiently mature by the following spring to be used as breeders. A hen that begins laying in the middle of March will usually finish laying her first litter early in April, her second litter about the third week in May, depending upon the number of eggs she lays and the promptness with which she is broken up on becoming broody.

Hens that are allowed to hatch and raise a brood of poults after laying their first litter often begin laying again in the fall, but poults hatched at that time are of little value except for broilers, as they require too much care and attention to carry them through the winter. Fall-hatched pullets begin laying late the following spring, but they are immature at that time and poults hatched from their eggs do not develop into large, strong birds as do poults from mature stock.

BEST FLOORS IN HEN HOUSE

Disagreeable Condition for Fowls Is Caused by Moisture Coming to Surface.

The floor in any poultry house offers many problems. A large percentage of the moisture in a poultry house comes about through the floor. The moisture rises to the surface of the ground and evaporates, in many instances causing a disagreeable condition for the birds. The best floor in a poultry house is built with first a layer of gravel or cinders, in fact any open material that has large air spaces, then a layer of hollow block tile, next a very thin layer of cement. A good practical floor can be constructed as follows: Six to eight inches' crushed rock, then a layer of tar paper and follow that with about three inches of cement.

POULTRY NOTES

Disinfectants are cheaper than disease.

* *

Keep pure, fresh water always within reach.

* * *

Never feed your fowls musty grain of any kind.

* * *

Fowls, in confinement, to do well, need a variety of food.

* * *

Crowding induces disease and lowers the vitality of fowls.

* * *

The early hatched pullet is the one that begins to lay early in the fall, when eggs are high in price.

* * *

With proper care and food come plenty of eggs. Remember that "anything worth doing at all is worth doing well."

* * *

If cats or rats bothered you last year, plan to outwit them this season. Use plenty of inch-mesh wire netting. It does not take many lost chicks to pay for quite a piece of netting.

HOME TOWN HELPS

WOULD DIVIDE UP INDUSTRY

Prominent Manufacturer Believes Congestion in Large Cities Is in Nature of an Evil.

Have the great industrial centers of the United States reached their maximum growth? A leading manufacturer believes that they have, that the time has come to break up the congestion of workers in large cities, and to get back to the small communities with industry. His theory is that the massing of industrial workers in a large city is bad for the country, and that anything which is bad for the country is in the long run bad for industry. He announces that he has demonstrated to his own satisfaction that industries can be taken to the people who live close to the soil, and that he expects to expand his own industrial activities along this line.

His idea is that instead of housing a large industry in a single large plant or group of plants in a city it can be broken up into small units, and each unit can be successfully operated in a small town, where it will provide employment for the class of people who leave small towns for the industrial opportunities of the cities, and also part-time employment for farmers who are now unable to make a satisfactory living on small farms. The water power available in many small towns will provide the power for the factory, and the factory will provide power for the town's utilities. In this way, he believes, the towns can be made attractive enough to hold the workers, and the whole scheme will save them from the unwholesome life in packed cities.

KEEP TOWN LOOKING RIGHT

Appearance Is Inseparably Connected With Business Success and Prosperity of Community.

The physical appearance of a town has much to do with its business success and progress. People are not attracted to a disorderly town. It looks like the kind of a place where inefficiency is the rule. Visitors have the feeling that that spirit would prevail in the stores in their dealing with the public. But a town whose business and home buildings are kept in good repair and well painted, looks like a winner. People feel that the same spirit of order and system and enterprise must make it a good place to do business.

There are some folks everywhere whose instinct is to slip along as easily as possible. They realize that their real estate is getting to look a little run down, but their motto is, "Never do today what you can put off until tomorrow."

Every time anyone gets out and straightens up a leaning fence, or repairs some tumbledown building, or paints a house that is getting to look shabby, he helps his home town take a step toward progress. His desire for improvement spurs on his different neighbors, and soon the whole street begins to have a new air of alertness and success.—Louisville (Texas) Enterprise.

What Zoning Does.

Some of the things that zoning laws do for a city are summarized by Charles B. Ball:

Zoning substitutes method for chance, symmetry for confusion, progression for patch work, and order for chaos in city development.

Zoning affords for the poor man such security from nuisances and invasion as the rich may provide at great expense.

Zoning is a flexible harness in which city expansion works; it may be adjusted in case it galls or frets at any point.

Zoning will flatten out the human pyramid which congestion has created in a crowded portion of the city.

Zoning sells a town. An unzoned town is like a dead stock of goods on the shelves.

Restorer of Cemeteries.

Miss Marion Eaton of Old Sudbury, Mass., has succeeded in an unusual field for a college woman, that of restoring old graveyards. She is also a garden planner.

"To city people graveyards do not mean much," stated Miss Eaton, "but to the countryman—it holds his loved ones. It is where he goes for his Sunday afternoon stroll, or his after-church smoke, and it should be beautiful. That is what I mean to make it."

Building Up a City.

Build the bungalows, boys, and fill the back yards with chickens and the front yards with flowers and children. The skyscrapers will take care of themselves.—Houston Post.

Carlyle's Estimate of Painting.

It was only by the expenditure of much tact and trouble that Lord Houghton induced Carlyle to give sittings for the fine portrait by Millais which is now in the National portrait gallery. When he went to Palace Gate for the first sitting Millais showed him over the house. "How did you manage to get so many expensive things?" asked Carlyle. "They were all earned by my brush," replied the artist. "Then there are more fools in the world than I imagined."—Manchester Guardian.

Ozark Efficiency.

"Howdy, Gap!" saluted an acquaintance. "I don't aim to mind nobody's business, nor nut'n' that-a-way, but if it's a fair question, what was coming off at yore place yesterday? As I was angling along past I heered you yelling 'Whoa!' sorter like you meant it, and I seed you yanking yore brother-in-law around by the nose, if 'peared like, or the whiskers, or something, and cussing him right sharply while you done so. Recollecting that it wasn't none of my business I went on, but I'm tollable shore I observed you haul off and kick the gent a time or two."

"Aw, he'd drunk up a bottle of my horse liniment," replied Gap Johnson of Rumpus Ridge, Ark., "and that was the only way to handle him."—Kansas City Star.

Kentucky Leads in Tobacco.

Forty-six billion of the 62,000,000,000 cigarettes manufactured in this country last year were consumed here, the remainder were exported. In addition to the cigarettes manufactured 20,500,000 cigars and about 4,000,000 pounds of tobacco were turned out. Kentucky raised the most tobacco, while New York has the largest number of tobacco factories. Tobacco last year brought into the government in the form of revenues nearly $300,000,000.

oard Proposes To Enlarge Old Building To Accomodate Needs

WITH THE SCHOOL BOARD

What do you know about it, our mme School Board has had plans n for an addition to our school se, and they hope to make this rovement this summer. We not- a water color scketch hanging in Post Office which shows how the ol House will look after the new ition is completed. The blue ts may be inspected at the First ional Bank.

embers of the Board say that the building is too small and they t do something to take care of children as our school has been ing each year; and they would to put in the 12th grade. As it has cost the Independent School rict of Klemme quite a sum each to send ten or a dozen twelfth ers to Garner schools and they ve the time has come when it ld be economy to take care of e 12th graders at home.

he proposed new improvement add the following rooms to our ol:

large gymnasium, with a stage ne end to be used as an Opera se for all school entertainments; rge High School room over the nasium; ao Domestic Science n; a Science Laboratory and a ual Training room.

e building will be provided with e-escape and a fire hose on each

e entire roof, both new and old, be covered with fire-proof shing-

e Board expects to spend be- n ten and fifteen thousand dol- of course they will have to have ission from the voters in the ict before they can make this ovement.

e understand different Bonding panies have been eager to buy chool house bonds and the board pping to get the interest rate to a little less than 5 per cent, then they are planning to have ayments on principle for several or until the sewerage taxes are aid off.

ith this addition to our school e the board beleives we could get nicely for 10 or 15 years and e longer.

r school board is very conserva- and the voters can be sure that will spend the money wisely. ct the plans and see how care- they have provided for all the l needs; they are using all good rial too.

th this new improvement, our ols can do just as much for our ren as other towns can with expensive buildings costing ten as much as our proposed new ovement.

INEMENTS ADDED TO FORD ENCLOSED CARS

nd Exceeds Supply as Rush Season Approaches

ny added conveniences and re- ents are to be seen in the Ford ed cars now being sold at the authorized Ford dealers, Olaf edt & Co. The interior of both oupe and the sedan is now fin- in an attractive shade of wal- rown broadcloth; and the seats pholstered with a similar mater- readed with chalked ebony- . Heavy floor rugs give an touch of comfort. Lifts of a l design minimize the effort of g or lowering the windows. bumpers insure a tighter fitt- nd new door grips, both inside ut, add to the rider's conveni-

e demand for Ford enclosed cars een unusually high during the month. Altho production has speeded up in the Ford factory etroit, sales continue to exceed utput, making it necessary for akers in many parts of the ry to wait for their cars. Local rs say this is the reason they been urging customers to place orders as early as possible.

FIRST METHODIST EPISCOPAL CHURCH

The Cantata, 'The Good Shepherd' given so well by 27 persons, includ- the pianoist and violinist, from the First Methodist church at Garner, was greatly enjoyed by the large au- dience that more than filled the church. Miss Peshak is not only a good leader, but a great singer as well. There is a great inspiration in good music and in the singing of spiritual songs that have their foun- dations in the great truths of the gos- pel. David the King of Israel and a great leader in the Jewish church, and Paul the great missionary and writer in the Christian church, knew the value of both music and song, and under their leadership the prin- ciples of their religion were fairly sung into the minds and lives of their hearers. Read what St. Paul has to say in Colossians 3:16. More such singing would greatly add to the real success of the Christian church of today.

The mother's day program is un- der the direction of the young people of the Altruist Class, and will be giv- en on Sunday morning at 10:00 o- 'clock. Let us all come out to hear them. Sunday school at 11:00 A. M., Epworth League at 7:30 P. M. and Eevening Sermon at 8:00 o'- clock. The announcement aas to the Epworth League Social to be given in the near future will be made Sun- day.

W. C. Bergmann, Pastor.

A Petrified Forest

The trees of Arizona's petrified forest did not grow where youu see them today. They were of several kinds, but most of them were re- lated to the Norfolk island pine, now used for indoor decoration. Doubt- less, they grew in a nearby region and after falling, drifted down a wat- er course and lodged in some eddy or small sand bank. Later they were buried by sand and clay, finally to a depth of several thousand feet. The conversion to stone was effected by gradual replacement of the woody material by silica in the form called chalcedony, deposited by under- ground water. A small amount of iron oxides deposited at the same time has given the brilliant and beautiful brown, yellow and red tints which appear in much of the material.

The petrified forest of Arizona is really a series of petrified forests. There are four of these forests in- cluded in a government reservation called Petrified Forest National Mon- ument, created by presidential proc- lamation in 1906. The name "forest" is not strictly appropriate, for the petrified tree trunks are all pros- trate and are broken into sections. The logs are the remains of giant trees that grew in Triassic time, the age of reptiles. Some of the tree trunks are six feet in diameter and more than a hundred feet in length. In the first forest there is a fine trunk that forms a natural bridge over a small ravine, the water hav- ing first washed away the overlaying clay and sand and then, following a crevice worked out the channel un- derneath. Th length of this log is 110 feet, and the diameter four feet at the butt and one and one half at the top. These facts have been giv- en by the United States geological survey.

Petrified forest are very interest- ing objects of study. When thin slices are carefully ground down to a thickness of .003 inch or less and placed under the microscope they show perfectly the original wood structure, all the cells being distinct, though now they are replaced by chalcedony. Several years ago F. H. Knowlton of the national geological survey reported that many of the trees were "araucarian," a tree that is now extinct but which is known to have lived at the same geologic time in the east-central part of the United States, where the remains of some of its associates have been found. These were cone-bearing trees and among them grew tree ferns, cy- cads and gigantic horsetails, which indicate that at that time the rain- fall was abundant.

THE CAUSE OF MANY ACCIDENTS

Automobile accidents are creating such a frightful casualty list, that their causes ought to be carefully studied, to determine what habits and practices among motorists most frequently get people into trouble.

One very common cause of col- lisions, is the habit of passing other cars on curves in the road. Drivers get irritated by having to drag be- hind some slow-moving machine on a narrow and winding highway and can't wait until they reach a clear stretch of road where they can see ahead.

So they try to pass on a curve, but in so doing they get well over on the left side. If another car, hid- den by the turn, happens to be com- ing along in the opposite direction at a high rate of speed, it becomes very difficult to avoid a smash.

The driver who delays passing un- til he knows the road ahead is clear, stands a much better chance of keep- ing out of the law courts, also out of the hospital and the cemetery.

KLEMME STUDENTS WIN TWO PLACES AT BRITT MEET

KLEMME STUDENTS COP PRIZES AT COUNTY DECLAMATORY CONTEST AT BRITT

John Baumgartner and Adella Schroe der Win Second and Fourth

Along with the County Athletic Field Meet held at Britt last Friday, was also staged the County Declama- tory contest in the evening at which two Klemme students took honors.

John Baumgartner entered the Humorous class and took second place; and Adella Schroeder in the Dramatic Class came out with the fourth prize.

Klemme students are forever forg- ing thei rway to the front.

METHODIST EPISCOPAL CHURCH

Morning worship at 10:00 A. M.
Sunday school at 11:00 A. M.
Evening worship at 8:00 P. M.

The Ladies Aid will be entertain- ed on Thursday by Mrs. A. D. Gim- er.

Saturday the Ladies will hold an Apron Sale and Bake Sale at the G. W. Kluckhohn store to commence at 10:00 A. M.

Next Sunday being Mother's Day, a program will be presented by the young people of the "Class in the Corner."

The Sunday school shows an im- provement in attendance an dinter- est. Come next Sunday and make one. Last Sunday's attendance lack- ed a few of reaching the 100 mark. Let us "go over the top" next Sun- day.

"Ask and it shall be given you."
"Seek and ye shall find."
"Knock and the door shall be op- ened." Words of Jesus.

Arthur B. Gedye, Pastor.

SWAT THE ROOSTER EARLY

Early Removal From Flocks Will Give Best Results

Removal of roosters from the &ock at once will give the best results dur- ing the summer, say the poultrymen at Iowa State College. The roosters, if sold early, will bring a better price than if kept until later in the season.

Roosters kept in the &ocks thruout the summer cause many late hatched chicks, due to hens stealing away and hiding their nests and hatching out small broods of chicks. This re- duces the profit in the flock as the late hatched chicks are hard to raise and do not become egg producers at the right time. By removal of the roosgter the eggs are kept infertile and are more salable and keep bett- er.

Eggs that are to be stored for win- ter use will keep better i finfertile and the best way to insure this is to remove the male birds from the flocks. Storing of eggs in water glass or sodium silicate can be done any time now while eggs are at a lower price.

WINS SILVER MEDAL

Belmond Young Man Best Hog Judge In Unusual Contest

F. H. Leinbech of Belmond, won first place in the annual swine judg- ing contest for junior animal husban- dry students at Iowa State College in which 115 students competed. Lein- beck wins the gold medal presented annually for this contest by W. F. Silver, well known Hampshire hog breeder of Cantril.

Second place was taken by J. H. Hilton, of Ames, S. S. Wheeler, of Caldwell, N. J., was third and O. E. Felton, of Fairmont, Ind., fourth.

Eight classes of hogs were judged, including Duroc Jersey aged sows. Hampshire fat barrows, Berkshire gilts, Chester White aged sows, Pol- and China boars, Duroc Jersey bar- rows, Poland China sows and gilts.

The 20 men who ranked highest in this contest will compose the squad from which the inter-collegiate swine judging team is picked next fall to judge at the National Swine Show at Peoria, Illinois.

NEAR-EAST RELIEF WANT OLD CLOTHES FOR BUNDLE DAY

NEAR EAST RELIEF WANT OLD CLOTHING

Des Moines, May 9—C. A. Montan- us, State Director for Near East Re- lief, is sending out a state-wide call for worn clothing for use of Near East Relief in its life saving work a- cross the seas.

Last year America sent 1,000 tons of clothing to Bible Lands. The sup- ply is now exhausted. Numberless men, women and children are desti- tute of clothing and thousands have no covering whatever, save the thin- est rags. They must be clothed. We are facing the problem of supplying the necessary clothing.

The clothing cast aside as worth- less by our people here in America would provide comfortable covering for every unclad person in the Near East, and would be an untold bless- ing to thousands who have been strip ped of all their possessions. This clothing can be transferred to them through the agency of the Near East Relief, incorporated by Act of Con- gress to relieve the suffering in that country. It seems such a little thing for an American to dig those cast-off garments out of the clothes box and send them down to the Bundle sta- tion, but at least one and perhaps to several human beings in that far-off land, it may mean the difference be- tween life, hope, strength and al- most certain death.

Iowa is now collecting her share of this clothing. An effort is be- ing made to secure someone in each community to take charge of the packing and shipping of clothing con- tributed on "Bundle Day." Volun- teer workers will please write to the Iowa Headquarters, Near East Re- lief, 521 Securities Building, Des Moines, Iowa, for any desired inform- ation or instructions. Any individu- al bundles will be gratefully received at the same address.

This is one thing that costs so little and counts so much! Let's help to put it over big.

AVERY TOWNSHIP

Mr. and Mrs. Fred Bachman, and Mrs. D. A. and Mrs. Herbert Marshall were Belmond callers Saturday after- noon.

Kenneth Bell is feeling somewhat blue as his little white pony died on Friday of last week. She was thirty four years and four days old.

Mr. and Mrs. Frank Roths, and Mr. and Mrs. Henry Buseman and family were Sunday visitors at the Ranke Buss home.

Mr. D. A. Marshall was a pleasant caller at the Albert Merkel home on Sunday morning.

Jefferson Bell was a business call- er at Garner Saturday night.

WHITE PIER DANCE PAVILL- ion, Clear Lake, Iowa, May 15th Tom Wells, White Pier seven piece or- chestra will make you dance a lot. Lets Go! adv 1c

News Of The Week Reported By The Schools Of Klemme

NEW TELEPHONE BOOKS OUT

The new telephone directories for the Koerner Telephone Company of Klemme, were printed at the Times Print Shop this week and by this time all the patrons of the Company have received their new copy of the directory..

The Koerner Telephone Company undergo quite an expense each year in having the directories published and they ask that you keep the book in good shape, as a charge will neces- sarily have to be made for another copy. Destroy your old directory as the numbers have been changed for many of the names in the new list.

The directory contains a lot of use- ful informaktion, such as the address es of the subscribers; a directory of business advertisements which you should look over, besides valuable telephone rules.

A Correction

There is but one mistake in the directory this year and if you will take your scissors and clip out the following and paste it in the book in the proper place you will have your directory up to date in every way:—

7309 Stille, Lester .....

Clip the above out now, it will fit in the directory, or mark the new number with a pencil.

A Holiday For Many

FISHING SEASON OPENS MONDAY

Monday, May 15th, will be a day long looked forward to by a great many local fishermen as that is the date on which it is no longer against the law to catch game fish.

Fishing at Clear Lake promises to be exceedingly good this year from reports we gather from game ward- ens. They state that the men en- gaged in seining carp from the lake this year have caught more game fish in the carp nets this year than they have for several years.

Another indication of good fishing is the fact that men fishing for bull- heads this year were bothered with the game fish, which of course they had to throw back in the lake. It is very seldom that a game fish will bite on worms at Clear Lake but this seemed to be the case this year.

A number of local sports are plan- ning to be at the lake on the morn- ing of the 15th and try their luck.

With the new fish hatchery at the lake, which is operated by the State, in a few years there should again be abundant fishing there as it is their intention to restock the lake each season and thus keep up the supply. The main difficulty the past few years has been that the lake was over-run with carp, but they are get- ting them seined out. The carp feed upon the spown of game fish and so in a few years the supply of game fish runs low as so few fish live. But with the hatchery at Clear Lake the supply can be kept up and the game fish can reach maturity as the carp are too slow moving to catch the young fish turned loose from the hatchery.

All right fellows, let's go!

The ministers of Klemme can't al- ways see results from their sermons, butyou should see the changes after the fashion magazines get around.

Before joining in the lively mod- ern dances, the girls should see that their artificial hair and false teeth are firmly fastened on.

A bald man should try some of this hootch on his vacant scalp, and see if it would not grow some hair.

Perhaps the reason why some folks practice cheek to cheek danc- ing, is that their weak heads need propping up.

Many non-advertising merchants are restfully sleeping, waiting for prosperity to come along and wake them up.

Klemme High School Is Victim Of Stolen Game

Last Thursday afternoon the Klem me High School baseball team went over to Britt to play the preliminary game with some team of the county. The teams were drawn and K. H. S. was to play Britt High School the first game. It was decided to play seven innings. We had no outside dis-interested umpire and it was de- cided to let a Britt man umpire and Britt High certainly needed him on the team for he won the game from K. H. S. Here's the situation as it stands: The game was very inter- esting until the beginning of the sev- enth and last inning. The score was 6 to 4 in favor of Klemme High and here's where Britt needed their um- pire. and he sure didn't go back on his good old town for he was either blind or he sympathized with Britt so much that he had to win for them. Wiles struck out the first man, the next man went to first sack on an error and Wiles walked the third man. As the man was walking first Wiles threw the ball to Koerner, our first baseman and Koerner held the ball in his mitt. Wiles acted as if he was about to deliver the ball, the Britt man on first began to take a lead-off. After he was about five feet from first base Koerner touched him and he walked to the side line and was about to set down, thinking himself that hke was out. Then someone shouted "How's that Ump" and the umpire called the man safe. The man took his base and with that raw decision there was only one down. How's that for stealing the game? We would thing Britt would ry to give us a square deal and es- pecially at the tournament. B. H. S. can ask themselves, "Did we win the baseball cup honestly?" We have plenty of sympathizers with us from other towns in the county who declared that the game was stolen from us. The final score was 6 to 5, and five scores were made by Britt after this decision.

Klemme to Play Thornton

Friday, May 12, the Klemme High School will play Thornton on the Klemme diamond. When Klemme played Thornton at Thornton the Klemme boys came home with an easy victory. This is the last game the Klemme High school has schedul- ed so we would like to see a large crowd of Klemme people at the game. Come and root for the K. H. S.

General News

Neota Ridder says when she has finished high school she will be a school teacher. But she won't have to go to college to learn how to teach. She is second teacher for the second and third rooms. While part of the children are practicing for a program to be put on about the fourth week of this month, Neota acts as teacher for the rest of them. All the child- ren think she is an excellent teacher.

The 9th Grade are now R. L. Stev- enson's "Treasure Island."

The Sophomore Class is going to put on a play entitled, "Mr. Bob." This play is being put on as the last number of the Lyceum Course. The exact date is not yet known but will be some time in the near future.

Bertha Johnson was absent Mon- day.

The Sophies are taking Shakes- peare's "Henry V" now.

After the last county examinations the 8th Grade cannot find any more eighth grade studies to take. For the rest of the year they will take Algebra, Physical Geography and read classics.

The Seventh Grade took the 8th Grade county examination in geogra- phy. From now on they will take Physiology instead of geography.

The last debate for the year in the Community Civics class will be May 12. The question is: "Resolved: that all railroads engaged in inter- state traffic should be owned and op- erated by the Federal Government." The negative side side is Glenn Bush, Adell aSchroeder and Gearald Koer- ner; the affirmative side is Neota Ridder, Leona Lau and John Baum- gartner.

Don't be discouraged yet school children; only sixteen more days of school are left.

Reptiles Have Sixth Sense

Famous Zoo Curator Says Snakes Are Endowed With Startling Intelligence.

POSSESS VERY KEEN EYESIGHT

Distinguish Sound by Their Tongues and Scales—Sense of Taste Very Acute—Tells of Lizard That Walks on Water.

New York.—When next you meet a snake in the woods or fields do not, as you leap nimbly out of reach, give way to thoughts of loathing and contempt. Snakes are extremely useful members of society—even the poisonous ones—and they are endowed with far more intelligence than they get credit for, according to Raymond L. Ditmars, curator for reptiles at the Broux zoo.

Also, Mr. Ditmars told 60 or 70 men and women, members of the Reptile Study society, at the sixth annual dinner of the organization, that snakes might even have a sixth sense, an attribute that man cannot even gauge, for human beings have to be content with only five.

"There is a possibility that snakes are far superior to any supposition regarding their attainments," said Mr. Ditmars. "Though their ears have deteriorated, we know that they hear quite well. They are sensitive to sound on their tongues and on the scales on their bodies. Their eyesight is wonderfully keen, especially for moving objects. They have a marvelous sense of taste and of smell.

Investigate Pit Vipers.

"Science is now investigating the various species of pit vipers for proof of another snakish sense that as yet we know nothing about. A pit viper, you know, has a strange organ in the skull, a deep pit which is lined with microscopic nerves all joining a main nerve that goes straight to the brain. Science has not yet fathomed the use of this pit. It may be that snakes are actually superior to man with a sixth sense we can't even gauge, for we do not have it."

The dinner at which Mr. Ditmars made this assertion was held at the Cafe Boulevard. The average person who attended the dinner would get something of a shock to find the guests passing around two or three-foot snakes in bunches and longer fellows singly, handling the reptiles as though they were interesting curios or relics.

While these snakes, which, of course, are all harmless, were crawling around the necks and shoulders of men and women, a member of the society, Arthur H. Gillam, brought out a bag. He got a wide space despite the general craning of necks, for in that bag were rattlers and rattlers are rattlers even to the enthusiasts of the Reptile Study society.

As Gillam cautiously unwound the cord from the bag a hissing, buzzing sound filled the room. Nevertheless, Mr. Rattler was left loose on the floor, a forked stick pinning his neck before he could wriggle an inch. Then Gillam took him by the scruff of the neck (if snakes have scruffs) as a child picks up a kitten. The venemous reptile held thus was passed around for inspection.

A "cotton mouthed" moccasin was then put on display. Another snake that received a great deal of attention, being allowed to recline on the speaker's table at the start of the dinner, was an eight-foot boa constrictor. Boas, it was said, make great pets and are absolutely harmless, so long as they are not too big. Then a playful squeeze might crush the ribs of a man or woman, as an inquisitive child crushes a beetle.

Lizard Walks on Water.

Professor E. R. Dunn of Smith College told of experiences with snakes in Central America and Mexico.

"At a water hole," he said, "we saw a two or three-foot lizard that stood upright when it saw us and ran to the water. Without pausing it kept right on running and crossed the water hole on top of the water. I hardly expect any of you to believe this, but it is true. The lizard had webbed feet that carried it over the water at top speed. Of course, he couldn't stop or turn around on the water, but must keep going ahead."

Edward F. Bigelow, editor of Guide to Nature, described snakes as the "sweetest, loveliest things in creation."

The purpose and object of the Reptile Study society, as set forth in their prospectus, is to educate "everyone everywhere about the life histories of reptiles—snakes, crocodiles, lizards, turtles and tortoises, and amphibians—frogs, toads and salamanders." The society aims to "benefit mankind and these animals by substituting intelligent consideration and kindness for ignorant dread and atrocious cruelty."

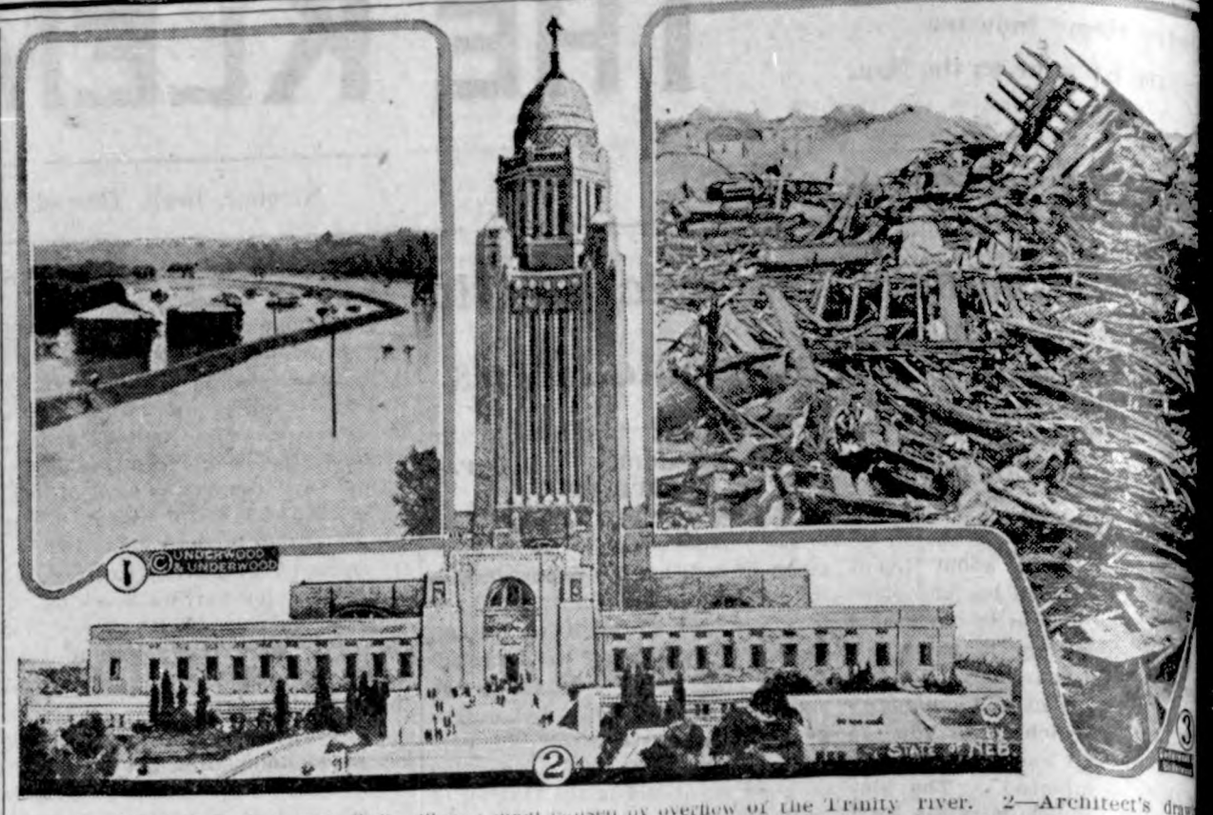
It was said by members at the dinner that the fear of snakes was not instinctive, as generally believed, but was inculcated in children by scared grownups.

Falls Dead in Grave He Dug for Another

Weehawken, N. J.—After completing the digging of a grave in the cemetery here Christian Bock, forty-two years old, of 5 River Road, North Bergen, was stricken with acute indigestion and fell into the grave he had dug for another.

As the man toppled over the funeral cortege bearing the body of Mrs. Mary Bruggman, of Jersey City, had entered the gates of the cemetery. When the casket was about to be lowered to the grave, the body of the grave digger was discovered.

Bock was a veteran of the Spanish-American war, and served as one of the late Colonel Roosevelt's Rough Riders.



1—Scene in Fort Worth, Tex., during flood caused by overflow of the Trinity river. 2—Architect's drawing for Nebraska's new $5,000,000 capitol under construction in Lincoln. 3—Town of Clear Valley, Minn., after it was struck by a terrific tornado recently.

Americans Plan to Study Italy

Arrangements With Royal University of Rome Designed to Promote Friendly Relations.

TWELVE SCHOLARSHIPS OPEN

Diplomats and College Professors to Address the Classes This Summer—Language, History and Culture Featured.

New York.—A series of courses for Americans, to be given in Rome during the summer of 1922, has been organized by the Associazione Italo-Americana, in collaboration with the academic authorities of the Royal University of Rome and under the patronage of the American ambassador to Italy.

The courses are planned with a view to making better known in the United States the language, history, culture and economic conditions of Italy, so that the mutual understanding and friendly relations of the two countries may be increased and strengthened.

Instruction in the courses, which will extend from July 10 to August 31, will be adapted to the needs of the American student. A large number of the courses in the literary, historical and economical development of Italy will be in Italian, supplemented, when necessary, by the use of English.

Twelve Scholarships.

Twelve scholarships, to be assigned by the universities on the basis of merit among the applicants, are offered by the Associazione Italo-Americana to students in the several American universities. All students enrolled for the summer courses of lectures will be entitled to the daily use of the Library of American Studies in Italy, and various rooms open also in the evening, for social gatherings and for study, situated in the center of the city of Rome, not far from the university. Here many American newspapers and magazines will be available. Students will also be entitled to the use of the university library. Each student will also gain free admission, during the period of the courses, to all the antiquities, monuments, galleries and museums of the Italian government and of the city of Rome.

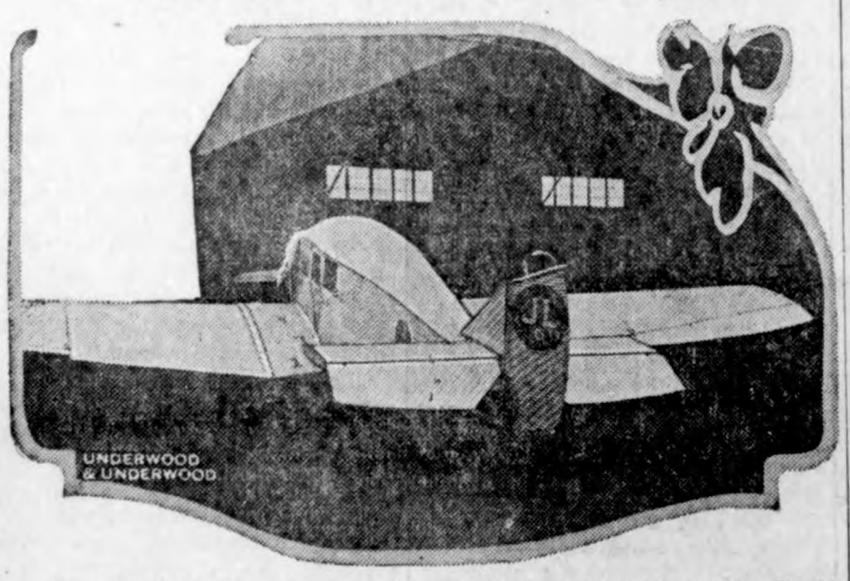
The offices of the Associazione Italo-Americana in Rome, of the Institute of International Education, 419 West One hundred and seventeenth street, this city, and of the Italy-America society, 23 West Forty-third street, will furnish on request information as to the courses, as well as answer questions and make suggestions concerning living conditions in Rome—hotels, boarding houses, etc.

To Promote Friendly Relations.

The Associazione Italo-Americana was organized in Rome in 1919, under the auspices of persons prominent in governmental, scientific, industrial and financial circles, for the following purposes: "To foster cordial relations between Italy and the United States by means of courses of study, publications, lectures, etc.; to establish cooperation with Italian citizens living in America and Americans living in Italy; to increase economic relations and to assist industrial and commercial organizations of Italians and Americans, under conditions which shall not affect the economic independence of the two countries."

Among the speakers in Rome this year will be Tommaso Tittoni, president of the Italian senate, who visited the United States last fall; Professor Rodolfo Lanciana, authority on ancient Rome, and Professors Pietro Bonfante and Carlo Formichi, both of the Royal University of Rome. The association has undertaken to arrange for the exchange of professors, as well as the establishment of scholarships.

Amundsen's North Pole Airplane



View of the Larsen ("J. L.") all-metal plane with which Captain Roald Amundsen, celebrated Norwegian explorer, hopes to fly over the North Pole soon.

TRY TO STOP AIR ACCIDENTS

New Aircraft Engine Eliminates Use of Gasoline.

Use of Heavy Fuel Oil, It Is Believed by Experts, Will Prevent Such Disasters as That to Army Dirigible Roma.

Baltimore, Md.—Experiments conducted by the national advisory committee for aeronautics, under the general direction of Dr. Joseph S. Ames, have developed an aircraft engine eliminating the use of gasoline, which Doctor Ames described as the "fundamental cause" of fire accidents in the air.

By the use of heavy fuel oil, Doctor Ames said, it is hoped to prevent such disasters as that to the army dirigible Roma, in which only three men out of forty-five escaped. Doctor Ames is professor of physics at Johns Hopkins university and chairman of the executive committee of the aeronautic organization.

The new engine, a high speed airplane wing, and a device which is being developed for obtaining data and making tests under actual service conditions, will be reported at the semi-annual meeting of the advisory committee in Washington.

No special processing of the oil employed in the new engine is required, Doctor Ames said. The motor itself is a modified Liberty, with pistons made much longer to provide greater compression. It has no valves. The oil, very thick and gummy, is forced through a jet by a compression pump, and enters the cylinder under high pressure.

The greatest problem involved, Doctor Ames said, was to make a motor of this sort light enough for aviation, but he regarded this as largely accomplished. He added that the oil could be used for automobiles.

DEAD REBELS ADVERTISE U. S.

Pajamas of Hanged Albanians Bear Label "Gift of American People."

Scutari, Albania. — "Gift of the American people" read labels on the pajama-clad bodies of two notorious insurgents which hung from a tree in the center of this town for several days.

The incongruity of the labels evidently did not strike the Albanian authorities who carried out the executions, as all the pajamas given out to the poor by American relief workers are so marked, and these garments evidently were the only ones available in which to clothe the condemned men.

Hens Worked One Day.

Gettysburg, Pa.—John McDonnell has a brood of 15 black Minorca chickens which do strange things. The other day the flock laid 16 eggs. Two of the eggs were joined end to end. Both eggs in this freak combination are perfectly formed and about th size of ordinary eggs.

NEWS REVIEW OF CURRENT EVENTS

Conference of Genoa Is Nearly Wrecked by Divergence Over Russia Plan.

FRANCE AND BELGIUM BALK

Soviet Delegates Don't Like the Terms, Either—Bloody Battle Near Peking—Truce In Irish Fighting—Beveridge Beats New in Indiana Primaries.

By EDWARD W. PICKARD

DEVELOPMENTS of last week almost if not quite put the Genoa conference on the rocks. More than that, they brought Great Britain and France to the verge of a rupture. At this writing the prospect is dark, for all except the soviet Russians, who appear to have maneuvered themselves into just the position they wanted.

Prodded by Tchitcherin and his colleagues to give a quick answer to the proposals of the Russians, the allies drew up terms which Lloyd George declared embodied the maximum that would be granted Russia and the minimum that would be demanded from her. Summarized, these were:

Russia recognizes her prewar debt.

The war debt will be recognized, but reduced.

Russia must restore foreign property or indemnify the owners for damage or confiscation.

Russia will be expected to take such judicial and other measures as will attract foreigners to Russia for business purposes.

France had yielded to the British on the matter of absolute restoration of confiscated property, at the insistence of Lloyd George, but forced an amendment forbidding property in Russia to be allocated to other persons than the former owners. To this Lloyd George appended this rider:

"If exploitation of property can only be carried out by its incorporation in a general group, the preceding arrangements will not apply."

France then signed, but Belgium absolutely refused to approve the proposition. Barthou hurried to Paris and Premier Poincare told him some things that had not come out at Genoa. Thereupon the French cabinet agreed unanimously to support Belgium and withdrew the assent to the proposals offered to Russia. This alone was enough to strain international relations, but the Paris press added to it by its explanation of the dispute over the property clause. It made the flat charge that the soviets were negotiating to transfer to English and Germans oil field property that belongs to Frenchmen and Belgians, and that Lloyd George added the above mentioned rider to further that scheme.

It did not seem probable, anyhow, that the Russians would accept the terms offered them. They were especially displeased with the fact that recognition of the soviet government was not included, and they did not like the article concerning foreign property restoration. There were other features that did not suit them, and they got into communication with Moscow, with the intimation that their answer might not be ready for some time.

THE second plenary session of the conference was held Wednesday and a finance report was submitted containing 19 articles in the nature of recommendations without definite commitments. The main ones were:

Return of stability of currency.

A meeting in the near future of big central banks.

Re-establishment of the gold basis.

Balancing budgets.

Sir Lamington Worthington Evans, chairman of the finance committee, admitted that the proposals could not be carried out without the co-operation of the United States. Tchitcherin declared little could be accomplished by the finance commission because the subject of reparations was excluded, and then detailed a number of the proposals which he said Russia would not accept.

It is quite apparent that what the soviet government wishes is not a general agreement with Europe, but separate treaties with the powers, such as she already has with Germany. It probably could do this with Great Britain and Italy and the neutral nations, and probably with some other powers, and France and Belgium would be left in an uncomfortable position. And Russia will be able to lay on France the blame for the failure of the Genoa conference.

Soviet Russia's defiant attitude toward the world was demonstrated in the May day doings at Moscow. Leon Trotzky, minister of war, reviewed 100,000 most excellently equipped and drilled soldiers, and in an address declared that Russia "will resist until her last drop of blood is shed any attempts of the capitalistic governments to enslave her."

France consented to sign the nonaggression pact proposed by Lloyd George on three conditions: That every European nation signed; that Russia agreed to recognize all her existing boundaries for ten years, and that France surrendered none of her rights to take action to enforce the Versailles treaty. The Russians rejected the second of these and the Germans the third.

DESPITE the hard working propagandists, the American administration shows no signs of willingness to take part at present in all these European negotiations. Its position concerning Russia was made clear by Secretary of State Hughes in his reply to a delegation of the Women's International League for Peace and Freedom which asked him to advocate the immediate recognition of the soviet regime. Mr. Hughes told the women that recognition is in the control of those who dominate the affairs of Russia, and would be accorded only to a government competent to discharge its international relations and demonstrating a disposition to discharge them. He added that there are no legal obstacles to trade with Russia.

THAT France fully expects Germany to default on the reparations is indicated by a statement in Sketch of London, which says it has learned from a reliable French source that preparations are being made for immediate mobilization of the 1918 class of reserves, numbering about 150,000. Mr. Lloyd George gave up his plan for a meeting of the nations signatory to the Versailles treaty in Genoa to take up the matter of enforcing the German payments, but still hopes it may be held elsewhere. The French insist that no such meeting be held with after May 31.

DURING most of last week the predicted battle between Gens. Wu Pei-Fu and Chang Tsao-Lin raged in the vicinity of Peking. Judging from the dispatches, Wu was having the best of the conflict. The casualties were rather heavy. On Wednesday President Hsu made another effort to stop the hostilities, calling to the attention of the rival commanders the fact that the foreign diplomats had protested three times against the fighting and had warned of serious consequences to China should foreigners suffer from the hostilities. Almost all the plans regarding China made at the Washington conference have been suspended because of the warfare. The Chinese press is almost a unit in decrying the fighting, asserting that it is only harmful to the country, whichever side wins. Early in the week General Chang issued a statement that General Wu had been killed by artillery fire. This has not been confirmed.

Sun Yat Sen, head of the South China government at Canton, asserted he had combined with General Chang and would soon start for northern China. Sun's own government was weakened by the defection of Gen. Chen Chiung-Min, who resigned the governorship of Kwantung.

AS FOR the other current war, that between the Irish factions, it ran along as merrily as a Donnybrook fair until midweek. Then De Valera himself asked the Dail Eireann to take steps to stop it. Accordingly a truce of four days was declared and a p committee of five members of each tion was named. It is hoped the posing sections of the Irish army be able to find a basis for unific Before this the Free Staters stormed and captured Ormonds tle, the last stronghold of the ir lars in Kilkenny; the police barr in Mullingar, occupied by irregu had been blown up, and there were merous bloody encounters elsew The situation on the Ulster border reported as again becoming seriou

WHEN the fifth Pan-American ference is held next March Santiago, Chile, it may become other conference on limitation of ament. Acting on instruction his government, the Chilean am sador to Washington has suggested the Pan-American union that the tion of reducing military expens the American republics be placed the agenda.

IN THE United States the most teresting event of the week was defeat of Senator Harry S. New renomination in the Indiana Repu an primaries by former Senator A J. Beveridge. Since New was run on the record of the national admi tration his failure was looked u something of a blow to that adm tration and the "regulars" in the ate were frankly disappointed. S tor McCormick, chairman of the publican senatorial committee, ever, said the committee had take part in the contest and would sup the nominee energetically. Mr. eridge served twelve years in the ate and was a leader in the Progre party movement. He made his paign on such planks as demand the repeal of the Adamson law, r or amendment of the Sherman adoption of a sales tax and the pu tion of greater efficiency and economy in government.

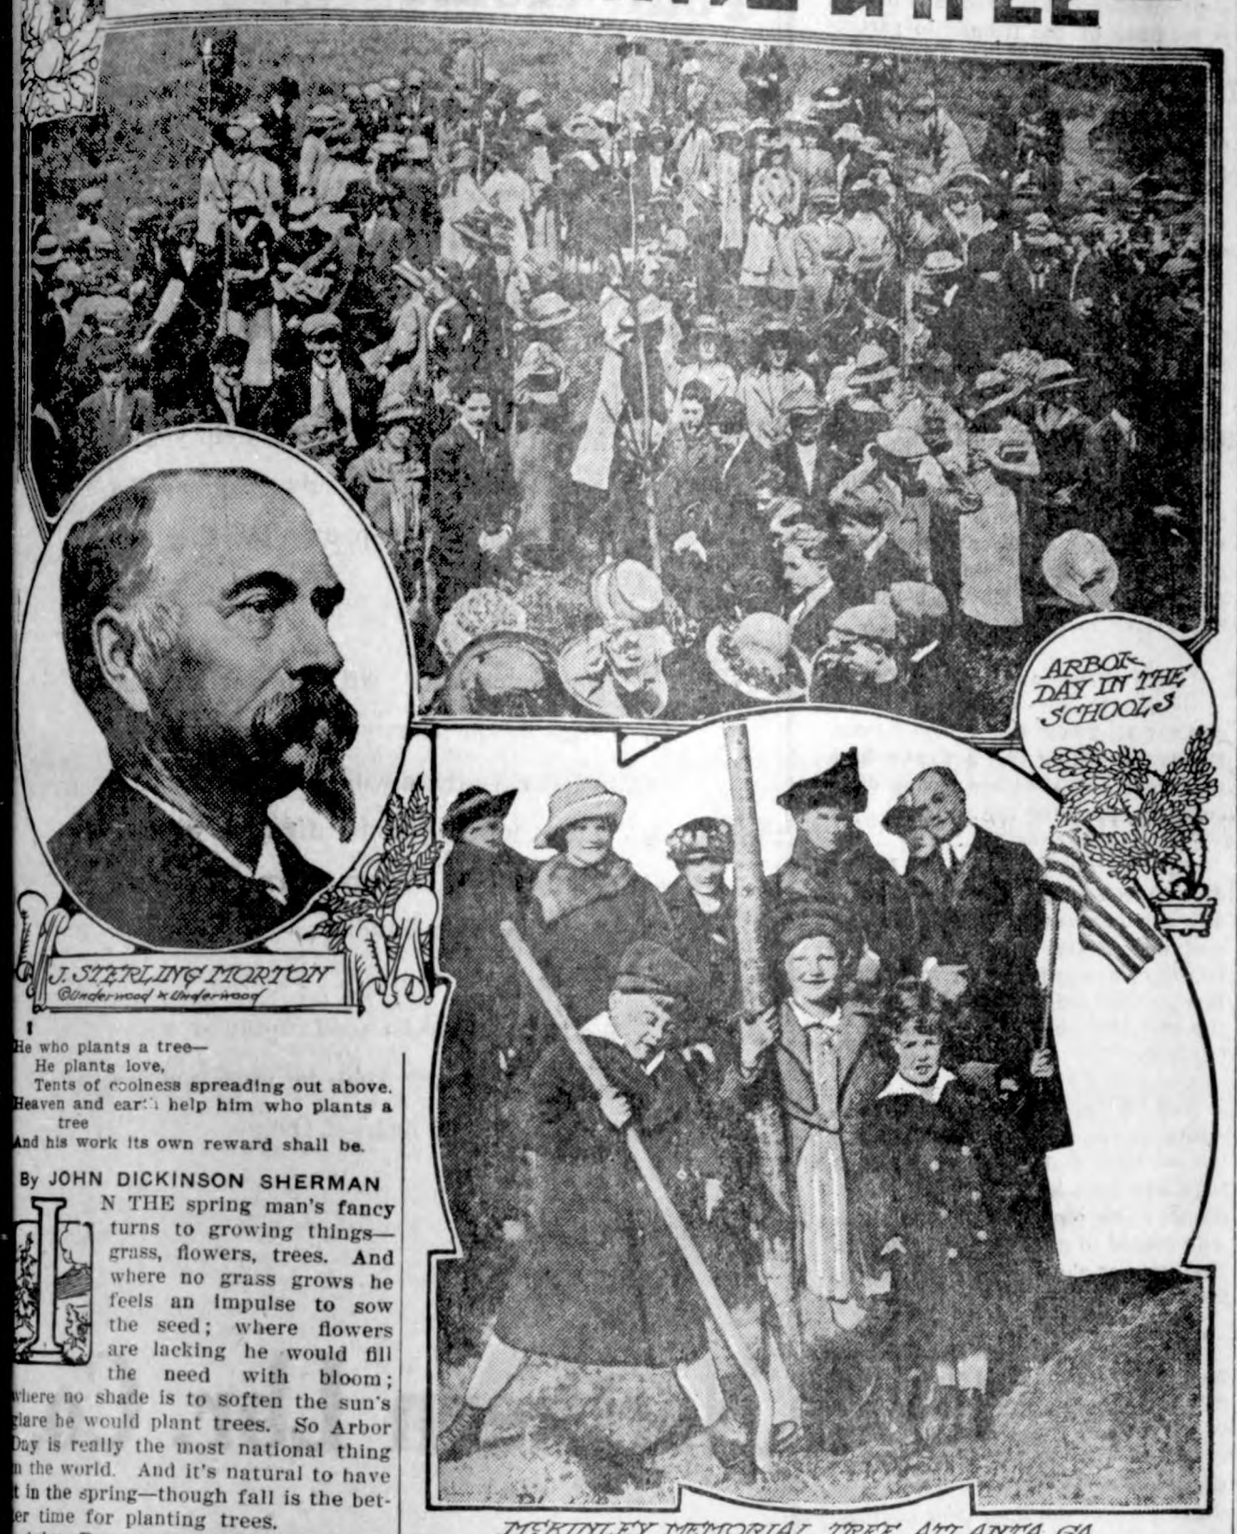
Samuel Ralston, former governo Indiana, easily won the Democ nomination, and in him Beveridge find a strong contender for the s seat. It may be that modificatio the Volstead act will become a pr nent issue of the campaign.

SAMUEL GOMPERS was in the lic eye and the public ear to a siderable extent last week. In a day manifesto the venerable he the American Federation of L made a vigorous attack on Bolshe declaring that American recogniti the Russian soviets would consti "needless and base betrayal of cl tion." He denounced the Bols propaganda in this country and s ed that he had ample proof to su tiate the charges that "Red" m have been sent to America for p ganda purposes and that "W. Z ter, who had no money, went to cow and came back and anno that he was building a great machine to undermine the Am labor movement and turn it over Red internationale, owned by R He began publication of an exp magazine and proclaimed 'a th secret agents in a thousand cou ties.'"

A few days later Mr. Gompers one of the principal speakers mass meeting called by the New branch of the Association Agai Prohibition Amendment, and in dress said that "labor must make fight now, and we will never stop ing until the rights of the people been restored to them." Conti he said: "I and the federation I sent are in favor of beer and wines and against any attempt force sumptuary laws aimed at sonal liberty. Temperance was rule of the great mass of orga labor, but the prohibitionists a so-called Anti-Saloon Leagues done more to undermine the ri and temperance of the work than any other agency I know. I traveled all over the United Sta fore prohibition, including its s dry territories, and today as I through these sections I have more drunkenness than ever bef

THE senate finance committee adopted McCumber's soldi nus plan, with the bank loan pr Smoot still clings to the 20-y dowment life insurance plan.

"He Who Plants a Tree—"



McKINLEY MEMORIAL TREE, ATLANTA, GA.
Photo by International

I
He who plants a tree—
He plants love,
Tents of coolness spreading out above.
Heaven and earth help him who plants a tree
And his work its own reward shall be.

By JOHN DICKINSON SHERMAN

IN THE spring man's fancy turns to growing things—grass, flowers, trees. And where no grass grows he feels an impulse to sow the seed; where flowers are lacking he would fill the need with bloom; where no shade is to soften the sun's glare he would plant trees. So Arbor Day is really the most national thing in the world. And it's natural to have it in the spring—though fall is the better time for planting trees.

Arbor Day nowadays is pretty generally observed and it's what you might call a growing holiday, since the day has come to mean more than the mere planting of trees for the sake of having the trees.

Still, Arbor Day is not yet a fixed day, observed all over the country on the same date. For example, in Minnesota, New Mexico, North and South Dakota and several other states the governor fixes the date of observance. In Illinois the governor appoints the day, which is usually observed, the third Friday in April in the northern and the fourth Friday of October in the southern part of the state. Arizona has selected the first Monday in February; Georgia, the first Friday in December; Idaho, the first Friday after May 1; Rhode Island, the second Friday in May; Kansas, October 12. And so it goes. April, on the whole, is the favored month.

April of this year certainly was full of Arbor Day and tree-day spirit. In fell the fiftieth anniversary of the stitution of Arbor Day; the ninetieth anniversary of the birth of J. Sterling Morton, father of Arbor Day; the ftieth anniversary of the establishment of the famous Arnold Arboretum, nd the fortieth anniversary of the unding of the American Forestry ssociation at Cincinnati.

J. Sterling Morton has no rival for e title of father of Arbor Day. He as born at Adams, Jefferson county, Y., in 1832. He was graduated from nion college in 1854, and the following year settled in Nebraska, first at ellevue and later at Nebraska City, here he founded and edited the braska City News, the first newsper to be established in that state. In 1903, he entered the cabinet of resident Cleveland as secretary of riculture, remaining in office until 97.

At a meeting of the state board of riculture of Nebraska, held in Lin- In January 4, 1872, Mr. Morton induced a resolution "that Wednesy, the 10th day of April, 1872, be especially set apart and consecated for tree-planting in the state Nebraska."

Two years later, Governor Furnas Nebraska set aside the third day April as Arbor day, and in 1885, e state legislature passed an act signating April 22, Mr. Morton's thday, as Arbor day, and making it egal holiday.

Nearly a billion trees have been nted in Nebraska since the instition of Arbor day. Instead of be- the "treeless state," Nebraska is w one of the leaders in practical estry, it being estimated that 700,000 es have been planted in trees. In 1895, in recognition of this great change, the Nebraska legislature passed a resolution giving the state the popular name of "Tree Planter's State."

Kansas, much the same kind of state as Nebraska, followed its neighbor's lead in 1875. Minnesota soon joined the procession; it had lots of pine, but its forests were going fast. Tennessee and North Dakota got interested about this time.

In 1882, Ohio gave a new angle to the idea of Arbor day. A convention was in session in Cincinnati which resulted in the formation of the American Forestry association. Twenty thousand school children marched to Eden park and planted trees. This, called the "Cincinnati Plan," was the inauguration of Arbor Day as a school festival.

Perhaps the first divergence from the idea of tree-planting as a measure of utility was the plan of the General Federation of Women's clubs for decorative roadside planting of the Lincoln highway from coast to coast. It has been given charge of the work and has worked out comprehensive planting plans. Indigenous trees and shrubs are to be used; nut and fruit trees will be included for the benefit of the birds. Federated women's clubs in states through which the Lincoln highway does not pass will see to the planting of feeder roads.

The World war gave and added a new phase of tree-planting and an added interest: the planting of trees in remembrance both of those who gave up their lives for their country, and for the living who offered their lives. The American Forestry association originated the plan; the General Federation of Women's clubs incorporated it in their general planting scheme; many organizations took it up. Now it is a part of the spirit of Arbor Day, though not by any means confined to Arbor Day celebrations.

The photograph given herewith shows the planting of a tree in remembrance of William McKinley, martyred President of the United States. The location is Authors' grove, Atlanta, Ga. The planting was under the auspices of the Sons and Daughters of the Confederacy and Veterans of Foreign Wars. The three children are William D. McKinley, a grandnephew of the martyred President; Margaret D. and James Fuller McKinley.

The causes of good roads and tree-planting have become linked through the memorial tree idea. Good roads are now being lined with memorial trees and called "Roads of Remembrance." This has been done in many states, and the next generation will ride over many a stately and beautiful highway on which this generation is at work.

Out of the increasing interest in the various phases of the Arbor Day spirit and observance has grown the "Hall of Fame of Trees," established by the American Forestry association. Famous trees all over the country—and their name is legion—being registered, with photographs, and recorded. The same organization has also established a registry for the recording of all "Memorial Trees" planted.

A hint of the importance and value of trees to modern life is contained in the proclamation of Acting Governor Earl Cooley of Colorado. He said in part:

"Trees have been and always will be closely interwoven with the happiness and prosperity of the people of Colorado. Their value is measureless for the maintenance of streamflow for irrigation, for the prevention of floods, for shelter to birds and other wild life, for the protection of soil, for the production of lumber, for the preservation of our magnificent scenery and for the health and recreation of the people."

Here are a few of the recent activities brought about by the spirit of Arbor Day: they show how firm a hold tree-planting in its various phases has taken upon the people in all parts of the country:

President Harding issued a proclamation urging the governors of the states to designate the week of April 16-22 as forest protection week, and the last day of that week, April 22, as the golden anniversary of Arbor Day.

The John Burroughs clubs planted memorial trees on the grounds of the Lincoln memorial. The trees were red oaks placed in the shape of a half wheel for Burroughs, Whitman, Emerson, Thoreau and Muir.

The colleges have taken up memorial tree-planting with a vim. For example, the University of Washington, at Seattle, has planted 58 trees in memory of the 57 men and one woman student who gave up their lives in the World war. Hereafter on Armistice day additional trees will be planted in memory of these student heroes.

A comprehensive plan to reforest middle western states was considered at the Chicago forestry conference, April 19-20. Hundreds of delegates representing every section of the United States were present. Governors of Illinois, Indiana, Wisconsin, Michigan, Minnesota, Ohio and Missouri attended the conference.

THE SENSITIVE ARAB

The Arabs form their judgments on ternals that we ignore so it is vitally portant that a stranger should watch ry movement that he makes and ev- y word that he says during his first ks of association with a tribe. No- ere is it so difficult to atone for a start as with the Bedouins. To strate the importance the Bedouins e on externals, on one occasion a ish officer went up country and on the first night when the guest of a Howeitat sheik he sat down on the guest rug of honor with his feet stretched out in front of him. That officer was never popular with the Howeitats. The Bedouins regard it as bad manners to make your feet conspicuous.

Reasonable Request.

A justice of the peace, who had officiated at a marriage in his office a month previously, received the following note signed jointly by bride and groom:

"Dear Judge: You remember making us two man and wife four weeks ago? Well, everything seemed all right then. We each seemed just the right person to the other.

"But since then things have changed and reflection has convinced us that it must have been a case of mistaken identity. So if you will revoke our license on that ground you will greatly oblige.

(Signed) JOHN HOWARD,
MILLIE HOWARD."

THEIR DEBT

By MOLLIE MATHER

©, 1922, by McClure Newspaper Syndicate.

Tess had, in the village home which her aunt had bequeathed to her, a sunshiny studio, where she drew wonderful pictures for the magazines. And though she had a skill all her own, in depicting the radiance of love in the faces of her illustrations, love itself had in some inexplicable way passed Tess by.

She looked up from her sketching one morning to see the forlorn figure of a small boy standing in the studio doorway. The child introduced himself.

"I am Tommy," he said. "May I come in to see your pictures? Our Mary says you make picture books."

"Did you come alone? And will your mother not be anxious about you?" Tess asked.

Tommy shook his head. "Mother has a new book," he replied, "and she likes me to be away, so she can read. I bother."

"But your daddy," Tess suggested, "he will miss you."

Again Tommy shook his head.

"Daddy works in the city, and when he comes home he has to look after mother."

Impulsively Tess took the lonely child in her arms.

"Where does the tot come from?" she asked the privileged Hannah.

Hannah, a resident, had been persuaded to keep house for Tessa Thayer.

"They are new people out from the city," Hannah, the ever-informed, told her. "They say the mother has lung trouble, and came for her health."

Late in the afternoon Tess took the little boy home. It was the new pretty bungalow that the family had rented, and the young mother reclined on a couch on a veranda.

"You are kind to take care of Tommy," she thanked Tessa Thayer.

"I will be glad to help you in any neighborly way that I may," Tess offered sympathetically.

"Then may Tommy go often to your studio?" the mother asked.

"I ought not to have married so early in life," she ingeniously confessed, "it means too much responsibility, but then," her merry laugh rippled, "my husband, Paul, is good; here he comes now."

The tall man hastening up the walk, stopped to kiss the boy, then turned an anxious gaze upon his pretty wife.

"Did you bring the cherry chocolates?" she asked him.

Tess, raising her clear, blue eyes, as the wife spoke her name, met steadily those of Paul Gordon.

"Paul is relieved to have someone take an interest in Tommy," Ethlyn said.

Thereafter Tommy spent most of his time in Tessa Thayer's house, while Paul Gordon formed a habit of calling to fetch his young son home at evening.

Ethlyn, in her new hammock in the garden, was very happy and free from care.

Then one evening when Paul, calling for his son, stopped to smile back into Tessa's face, she seriously regarded him.

"I will have to take Tommy home earlier after this," she said, "I am going to be unusually busy. So, we will not be able to wait for you."

Tess became so unselfishly attentive to the little wife that Hannah was in despair.

Then one beautiful sunshiny morning Mary came, white-faced, to call Tess over to the bungalow. She had carried the little wife's breakfast in to her, and Ethlyn had neither moved nor spoke, maybe she was asleep, but—

Tommy's mother was asleep, sweetly, naturally, it seemed, she had drifted into that sleep, but neither Tessa's loving care, nor that of the faithful husband would be needed more.

Tess took Tommy home with her to the big studio that was his palace of fairy charm. And Paul went far away upon a long deferred business trip. Winter was growing into spring when he came back and Tess had received from him only brief and necessary notes concerning Tommy.

She was waiting in the bungalow garden that his homecoming might not be too desolate. Tall and straight, as she had seen him that first day, Paul came down the path, the same glance of glad recognition met hers. Tess was waiting for his question, though by no word or look had love been spoken between them. "When, dearest?" he asked. "I need a wife and Tommy needs a mother, and in faithfulness and service we have atoned."

In silent answer Tess put her hand in his.

Truly "Some Bed."

Invention of the iron bed dates back to Biblical times. The first such bed is mentioned in the third chapter of the book of Deuteronomy.

"For only Og, king of Bashan, remained of the remnant of giants; behold, his bedstead was a bedstead of iron. . . . Nine cubits was the length thereof and four cubits the breadth of it, after the cubit of a man."

In the breezy vernacular of the day this was some bed. In ancient Egypt the cubit represented the length of a man's forearm from the elbow to the tips of the fingers. It varied between twenty and twenty-one inches. The bedstead of good King Og, therefore, was about seven feet wide and fifteen long.

GLORY AND THE SACRIFICE

In Which the Gift and the Giver Tell Each a Separate Tale

By ELEANOR PORTER

Copyright by Eleanor H. Porter.

THE Honorable Peter Wentworth was not a church-going man, and when he appeared at the prayer meeting on that memorable Friday evening there was at once a most irreligious interest manifested by every one present, even to the tired little minister himself. The object of their amazed glances fortunately did not keep the good people long in suspense. After a timid prayer—slightly incoherent, but abounding in petitions for single mindedness and worshipful reverence—from the minister's wife, the Honorable Peter Wentworth rose to his feet and loudly cleared his throat:

"Ahem! Ladies and gentlemen—er—ah—brethren," he corrected, hastily, faint memories of a godly youth prompting his now unaccustomed lips; "I—er—I understand that you are desirous of building a new church. A very laudible wish—very," with his eyes fixed on a zigzag crack in the wall across the room; "and I understand that your funds are—er—insufficient. I am, in fact, informed that you need two thousand dollars. Ahem! Ladies—er—brethren, I stand here to announce that on the first day of January I will place in your pastor's hands the sum of one thousand dollars, provided"—and he paused and put the tips of his forefingers together impressively—"provided you will raise an equal amount on your own part. The first day of next January, remember. You have nearly a year, you will notice, in which to raise the money. I—er—I hope you will be successful." And he sat down heavily.

The remainder of that meeting was not conspicuous for deep spirituality, and after the benediction the Honorable Peter Wentworth found himself surrounded by an excited crowd of grateful church members. The honorable gentleman was distinctly pleased. He had not given anything away before since—well, he had the same curious choking feeling in his throat now that he remembered to have felt when he gave the contents of his dinner pail to the boy across the aisle at the old red school house.

After all, it was a rather pleasant sensation; he almost wished it had oftener been his.

It was not until the silent hours of night brought a haunting premonition of evil to the Reverend John Grey that the little minister began to realize what the church had undertaken. One thousand dollars! The village was small and the church society smaller. The Honorable Peter Wentworth was the only man who by even the politest fiction could be called rich. Where, indeed, was the thousand to be found?

By the end of the week an urgent appeal for money had entered the door of every house in Fairville.

This was in February, yet by the end of May there was only four hundred dollars in that fund treasury. The pastor sent out a second appeal, following it up with a house-to-house visit. The sum grew to six hundred dollars.

Then the ladies held a mass meeting in the damp, ill-smelling vestry. The result was a series of entertainments varying from a strawberry festival to the "passion play" illustrated. These heroic efforts brought the fund up to eight hundred dollars. Two hundred yet to be found—and it was November!

With anxious faces and puckered brows, the ladies held another meeting in that cheerless vestry—then hastened home with new courage and a new plan.

Bits of silk and tissue paper, gay-colored worsteds and knots of ribbon appeared as by magic in every cottage. Weary fingers fashioned impossible fancy articles of no earthly use to any one, and tired housewives sat up till midnight dressing dolls in flimsy muslin. The church was going to hold a fair! Everything and everybody succumbed graciously or ungraciously to the inevitable.

The fair and a blizzard began simultaneously the first day of December. The one lasted a week, and the other three days. The people conscientiously plowed through the snow, attended the fair, and bought recklessly. The children made themselves sick with rich candies, and Deacon White lost his temper over a tin trumpet he drew in a grab bag. At the end of the week there were three cases of nervous prostration, one of pneumonia, two of grippe—and one hundred dollars and five cents in money.

The ladies drew a long breath and looked pleased; then their faces went suddenly white. Where was ninety-nine dollars and ninety-five cents to come from in the few days yet remaining? Silently and dejectedly they went home.

It was then that the Reverend John Grey rose to the occasion and shut himself in his study all night, struggling with a last appeal to be copied on the faithful mimeograph and delivered by his patient youngest born. That appeal was straight from the heart of an all but despairing man. Was two thousand dollars to be lost—and because of a paltry ninety-nine dollars and [illegible]ve cents?

The pres[illegible]severe and became cru[illegible]holidays approached. The tree for the Sunday school had long since been given up, but Christmas eve a forlorn group of wistful-eyed children gathered in the church and spoke Christmas pieces and sang Christmas carols, with longing gaze fixed on the empty corner where was wont to be the shining tree.

It was on Christmas day that the widow Blake fought the good fight in her little six-by-nine room. On the bed lay a black cashmere gown, faded and rusty and carefully darned; on the table lay a little heap of bills and silver. The woman gathered the money in her two hands and dropped it into her lap; then she smoothed the bills neatly one upon another, and built little pyramids of dimes and quarters. Fifteen dollars! It must be five years now that she had been saving that money, and she did so need a new dress! She needed it to be—why—even decent!—looking sourly at the frayed folds on the bed.

It was on Christmas day, too, that the little cripple who lived across the bridge received a five-dollar gold piece by registered mail. Donald's eyes shone and his thin fingers clutched the yellow gold greedily. Now he could have those books!—his eyes rested on an open letter on the floor by his chair; a mimeograph letter signed "John W. Grey." Gradually his fingers relaxed: the bit of money slipped from the imprisoning clasp, fell to the floor, and rolled in flashing, gleaming circles round and round the letter, ending in a glistening disk, like a seal, just at the left of the signature. The lad looked at the yellow, whirling thing with frightened eyes, then covered his face with his hands, and burst into a storm of sobs.

On the 26th of December, the Reverend John Grey entered on his list: "Mrs. Blake, $15; Donald Marsh, $5."

The little minister's face grew pale and drawn. The money came in bit by bit, but it wanted twenty dollars and ninety-five cents yet to complete the needed thousand. On the 27th the teacher of the infant class brought a dollar, the gift of her young pupils. On the 28th, nothing came; on the 29th, five cents from a small boy who rang the bell with a peal that brought the Reverend John Grey to the door with a startled hope in his eyes. He took the five pennies from the small dirty fingers and opened his mouth to speak his thanks, but his dry lips refused to frame the words.

The morning of the 30th dawned raw and cloudy. The little minister neither ate nor slept now. The doorbell rang at brief intervals throughout the day, and stray quarters, dimes, and nickels, with an occasional dollar, were added to the precious store until it amounted to nine hundred and eighty-five dollars and eighty-five cents.

It was nearly midnight when there come a gentle tap at the study door. Without waiting for permission the minister's wife turned the knob and entered the room. Her husband sat with bowed head resting on his outstretched arms on the desk, and her eyes filled with tears at the picture of despair before her.

"John, I suppose we can take this," said she, in a low voice, reluctantly laying a little pile of silver on the desk; "there's just ten dollars there." Then she recoiled in terror, so wildly did her husband clutch the money.

"Where did you get this?" he gasped.

"I—I saved it from time to time out of the household money. I meant you should take it and go out to Cousin Frank's for a rest and vacation after this was over," said she doggedly.

"Vacation! Mary—vacation!" he exclaimed, with unutterable scorn. Then he fumbled in his pocket and brought out a little change. With trembling fingers he picked out ten pennies and a five-cent piece, putting a lone quarter back in his empty pocket.

"Thank God, Mary, we've done it!" and the man's voice broke.

New Year's night there was a jubilee meeting in the town hall. The Reverend John Grey hurried through his bread-and-milk in some excitement. He was to preside, and must not be late.

The hall was full to overflowing. On the platform with the minister sat the deacons of the First Congregational church—and the Honorable Peter Wentworth. The well-fed, well-groomed honorable gentleman himself looked about with a complacent smile—this was indeed a most delightful occasion.

The Reverend John Grey's address was an eloquent tribute to the great generosity of their distinguished fellow townsman. The minister's voice trembled affectingly, and his thin cheeks flushed with emotion. The First Congregational church was deeply indebted to the Honorable Peter Wentworth, and would fain express its gratitude.

The minister's wife listened with a faraway look on her face, and little Donald Marsh gazed with round eyes of awe at the great man who had been so very generous; while over in an obscure corner of the hall a pale little woman stealthily rearranged the folds of her gown, that she might hide from inquisitive eyes the great darn on the front breadth of her worn black cashmere.

A Farmer-Friend Says This:

—o—

Keeping sons and daughkters on the farm; getting and keeping competent help; depend not so much on the farm as on the tow,n the trading-center nearby, that serves the farm.

Help make Klemme a better place for your sons and daughters to visit and trade in. Help make its stores and inst.tutions bigger and better by doing your part towards supporting them.

You will profit by it—directly and indirectly.

News of Klemme and Vicinity

Mrs. Lew Wesenberg of Goodell, was a Klemme caller Friday.

E. C. Ford, of Iowa Falls, was in Klemme on business Saturday.

Ed. Rhodes and wife from Goodell were Klemme visitors Saturday.

GIRL WANTED—For general house-work. Mrs. E. J. Arnold. tf

Mr. and Mrs. Theodore Wendel of Meservey were Klemme callers last Friday.

Geraldine and Caroline Smid returned last Thursday evening from their Minnesota trip.

Tanlac is appetizing, invigorating and strengthening. Try it and be convinced. E. S. D. Kahrs. ad

James Thomas of Belmond was in Klemme Saturday for a visit with his sister, Mrs. J. W. Brooks.

Walter Schutlz and family have moved to Lakeville, Minn., where they will make their future home.

Grandma Bryan, of Marshalltown came last Thursday for a visit at the Ben Knoll home.

Mr. and Mrs. H. Ludwig and son, G. H., of Nevada, Iowa, spent Sunday at the E. S. D. Kahrs home.

Mrs. J. W. Brooks went out into the country last Thursday for a visit at the Joe Starnes home.

Peck Hanson of Garner was a business caller in Klemme last Thursday afternoon.

Wm. Livermore of Garner was a business caller in Klemme last week Thursday.

Wm. Vescelius, of Britt, and candidate for Sheriff, was a Klemme caller last Friday morning.

Henry Lewis and wife have moved into the Hocum place on Main street, which they have purchased.

A number of married people held a dance at the Idle Hour last Thursday evening. All report a good time.

Mr. and Mrs. Art Wellemeyer and daughters, Ruth and Nora, visited with Grandma Wellemeyer at Charles City Sunday.

Mr. and Mrs. Al Koerner and family and Dr. and Mrs. Hesselhuus spent Sunday at the Koerner cottage at the Lake.

Miss Maurine Hake came Saturday for an over Sunday visit with her folks here. She is attending school at Belmond.

Walter Lau and familp and Wes Schuldt and family drove over to Twin Lakes Sunday for a picnic supper.

If you once give Tanlac an honest trial, you will add your voice to the thousands of others who are praising it. E. S. D. Kahrs. adv

Dr. J. L. Hesselhuus returned last Friday morning from Des Moines where he had been attending a dental convention.

Mrs. West left for her home at Webster City after a week's visit at the home of Mr. and Mrs. Paul Grange.

Mrs. Hattie Lanahan and daughter Laura, went to Garner last Friday morning to have Laura's picture taken.

Miss Annabelle Carlson finished her term of school last week and so left for her home at Ingram, Wis., to spend the summer withh re parents.

Hattie Lanahan took a week's vacation last week from her duties as clerk in the G. W. Kluckhohn & Sons store. She is back on the job again this week.

Fred Schreiber who came from Miles City, Montana, a few weeks ago for a visit with Howard Doyle, left Monday for Riceville, Iowa, for a visit with friends.

R. W. Elder and family and Milvern Ell left in their car for Minnesota last Saturday afternoon. The Elder family drove to Vernon Center but Milvern went to Mankato for a visit with his folks.

J. P. Larsen celebrated his 77th birthday anniversary Tuesday. Mrs. Clarence Larsen served a big dinner that evening in his honor and invited a number of his friends to participate.

Summer is sure hear now. yesterday it was real warm; the trees are all leafed out and the plum and the apple tees are in full bloom. Even our strawberry patch is showing signs of producing berries this year.

Tanlac Vegetable Pills are sold on a positive guarantee to give perfect satisfaction. Try them tonight and you will be delighted to find the results you have obtained. E. S. D. Kahrs. adv

Mr. and Mrs. Hake, wh onow live in the up-stairs part of the Mrs. Leo Wilkins house, have rented the rooms over Henry Lewis' store as Henry has purchased the Hocum place and has moved in there.

Lloyd Ulrich and Charles Fritzell both bought new Ford touring cars of Olaf M. Twedt Co., the past week. Fords are selling like hot cakes here this year and they are having difficulty in supplying the demand.

The cantata given by the Methodist church of Garner here last Sunday evening was a real musical treat and one of the best entertainments Klemme has enjoyed for some time. It was very much enjoyed by all and the church was packed to more than capacity.

The Misses Edna and Lena Bergmann returned home from Sioux City where Lena had been attending college and Edna had been taking treatments at the Methodist hospital. Lena was forced to give up her studies for this year as she has not been weel of late.

Mr. and Mrs. C. F. Keraus, Wm. Keraus and family and Mr. and Mrs. C. G. Waterman and Mr. and Mrs. J. W. Waterman allspent Sunday at the C. F. Keraus cottage at Clear Lake. We suppose that Charles will be over there most of the time after the fishing season opens.

GRAND OPENING

WHITE PIER DANCE PAVILLion, Clear Lake, Iowa, May 15th Tom Wells, White Pier seven piece orchestra will make you dance a lot. Lets Go! adv 1c

Editor Tierney and wife of Garner were visiting Ye Editor and family a short time Monday evening. The fact of the matter is that we were at Garner on that date and thought it would be much nicer to have Ted haul us down in his gas wagon than to ride the "scenic railway" between Garner and Klemme.

Auditor Chris Jacobs and wife of Garner were here last Wednesday and Thursday. Chris was showing his son Ed the correct way to grow a garden. But we beleive Chris' instructions were all in vain as we have not been able to see Ed doing any exercising with the hoe, Mrs. Ed tends to that..

NOTICE OF PRIMARY ELECTION

Garner, Iowa,
May 8th, 1922.

Notice is hereby given to the qualified electors of Hancock County, Iowa, that a primary election will be held at the regular polling places in the several election precincts of Hancock County, Iowa, on Monday, June 5th, 1922. The polls will be open from nine o'clock a. m. to eight o'clock p. m.

At this primary election candidates are to be nominated by the Republican and Democratic parties for the following offices:

One United States senator.
One governor.
One lieutenant governor.
One secretary of state.
One auditor of state.
One treasurer of state.
One attorney-general.
Two railroad commissioners.
One representative in congress (10th district.)
One state representative (86th district.)
One county auditor.
One county treasurer.
One clerk of the district court.
One sheriff.
One county recorder.
One county attorney.
One county coroner.
One supervisor, whose term commences January 1, 1924.

TOWNSHIP OFFICERS:—

Two justices of the peace.
Two constables.
Three township trustees.
One township clerk.
One township assessor.

One party committeeman from each precinct and delegates to the County convention are to be elected.

In testimony whereof, I have hereunto set my hand and affixed the seal of the county of Hancock, this 8th day of May, 1922.

CHRIS JACOBS,
County Auditor, Hancock County, Iowa.
(SEAL) M11-18

Our office devil, Clarence Elder is the proud owner of a new suit. Now of course a new suit is not such a noteworthy event with Clarence but this particular suit is an exception to the general rule he has in the past followed in buying suits. Next Sunday we hope to see him parading the streets in "long pants" for the first time.

POSTAL IMPROVEMENT WEEK IS OBSERVED

May 1 Sees Inaugurated First General Campaign of Kind in Service.

Without the Postal Service, business would languish in a day, and be at a standstill in a week. Public opinion would die of dry rot. Sectional hatred or prejudice only would flourish, and narrow-mindedness thrive.

It is the biggest distinctive business in the world and it comes nearer to the innermost interests of a greater number of men and women than any other institution on earth. No private business, however widespread, touches so many lives so often or sharply; no church reaches into so many souls, flutters so many pulses, has so many human beings dependent on its ministrations.

"Postal Improvement Week" has been set for May 1, by the Postmaster General. This is the first general campaign of its kind in the Postal Service for several decades. Business men and their organizations, large users of the mail, newspapers, motion pictures, advertisers, and the entire organization of 326,000 postal workers are to be enlisted in this country-wide campaign of interest in postal improvements. **Your help is vital. Address your letters plainly with pen or typewriter. Give street address. Spell out name of State, don't abbreviate. Put your return address in the upper left hand corner of envelope (not on the back) and always look at your letter before dropping in the mail to see if it is properly addressed. This care in the use of the mails is for your benefit and speeds up the dispatch and delivery of mail matter.**

If you have any complaints of poor service make them to your postmaster. He has instructions to investigate them and report to the department.

COURTESY

It sticks in human relations like postage stamps on letters. The POST OFFICE DEPARTMENT expects it to be used by its postmasters and employees in dealing with the public.

Help them in its use beginning with POSTAL IMPROVEMENT WEEK, May 1-6, 1922.

THANK YOU

WITHOUT STREET ADDRESS YOUR MAIL IS DELAYED AT OFFICE OF DELIVERY

The Dead Letter Office has been in existence ever since Ben Franklin started our postal service. Even then people addressed mail to Mr. Ezekiel Smithers, "Atlantic Coast," and expected Ben to know just where Zeke lived.

Perhaps they had Zeke's address in letters up in the garret, maybe a chest full of 'em, but then it was easier to let Ben hunt Zeke. Today people are addressing letters to John Smith, New York, N. Y., or Chicago, Ill., thinking Uncle Sam can locate him, which is just as incomplete as was Zeke's address of yore. **The Postoffice Department asks you to put the number and street in the address. It helps you.**

Trinidad Col.

How do you expect the Postal Clerk to know whether you mean Trinidad, California, or Trinidad, Colorado?

ALWAYS SPELL OUT THE NAME OF THE STATE IN FULL IN THE ADDRESS.

"MORE BUSINESS IN GOVERNMENT"

This apt phrase was used in President Harding's first message to Congress and applies particularly in postal management where postmasters are being impressed with the fact that they are managers of local branches of the biggest business in the world.

HERE COMES A STRANGER!

Let's make our post office look neat, Mr. Postmaster. Straighten up the rural letter box, Mr. Farmer. Tidy up some, Mr. Rural Carrier. First impressions are lasting. Maybe Mr. Stranger, taking notice of these improvements, will come back, bringing you benefits. Start these with "POSTAL IMPROVEMENT WEEK" May 1-6.

HUMANIZING THE POSTAL SERVICE

"There is no unimportant person or part of our service. It is a total of human units and their co-operation is the key to its success. In its last analysis, postal duties are accommodations performed for our neighbors and friends and should be so regarded, rather than as a hired service performed for an absentee employer."—Postmaster General Hubert Work.

Something to Think About

By F. A. WALKER

THE WRONG KEY

OF THE hapless earthlings who call themselves men and women, thousands are wandering hither and thither in life, trying with the wrong key to unlock the door of fame, success and honor.

If you will observe closely, you will see them every hour endeavoring to force a key into a lock which stubbornly refuses to respond to the violent twists and turns of nervous fingers.

The man who carries the key which will open the door to minor places, where he is sure of earning an independent competence, persists in tampering with locks behind whose paneled door there reposes the coveted chair of manager or president, too big for his occupancy.

Instead of reshaping his key by hard work and high thinking, filing away the roughness to make it smooth, he continues foolishly to waste his time and energy, quite oblivious all the while to what he is really doing.

And so it is frequently with men of talent, too indifferent or indolent to do anything but routine work, when instead they should make use of the key given them by an all-wise Providence, unlock the right door, and rise to greatness.

If persuaded by reason to do this, they would find opportunity waiting with open arms to receive them, glad to round out their lives with happiness and prosperity.

Not to all is given supreme wisdom in these matters, but such as is bestowed, is generally hidden away in a napkin and ignored or forgotten.

Thus, when a young man or woman in a burst of passion unlocks the door to enmity, instead of friendship, to evil, instead of good, it becomes at once apparent that use has been made of the wrong key.

Proper judgment and action, all the exalted things in life, including faithfulness, honor and virtue, decline to show their shining faces to the carriers of the improper key.

What the foolish do with keys entrusted to them to open the world of life, makes wise men and women shudder.

And yet, when all has been said, when the story of life has been revealed from the morn of the toddling infant to the night of tottering age, who shall say that he or she has not at some time or another in his or her folly, used the wrong key?

(Copyright.)

Uncommon Sense

By JOHN BLAKE

YOUR WORK

BY LAZINESS, procrastination, or by pretending to be stupider than you are, you can get quite a good deal of your work done for you—for a while.

If the man above you is quick and competent, he will frequently get so disgusted with you that he will snatch a job out of your hands, and do it himself.

No competent executive will do that, but you can count all the competent executives of your acquaintance on the fingers of one hand.

It will save you a good deal of trouble to have the hard job taken away from you. You can devote your time to doing the easy jobs at your leisure, and in your own way.

You will probably congratulate yourself on having a boss that is so skillful—so much abler than you—that he can do all the hard work.

But the congratulation will be short-lived. In about a year's time you will discover that you can't do anything but the easy jobs—which are the poorly paid ones, because you never gave your mind any exercise doing the hard ones.

All the opportunities for growth and for progress were in those jobs that were taken out of your hands. Maybe the boss who took 'em away from you didn't need the mental exercise, but the point is that he got it, and you didn't. By letting him take it away you got just as much out of the game as a ball player would whose captain played his position every time there was a critical stage in the game.

No matter what kind of work you have, a time is coming when it is going to become suddenly difficult. The importance of a certain task will increase tremendously owing to unexpected circumstances.

That is the time that is going to take your measure. If you tackle that harder job and go through with it, the chances are that you will do it well. It is presumed that you have the training.

If you stand aside and let the man above you step in, you might as well make up your mind that you are going to work for the same or less wages for the rest of your days.

For you have repudiated the chance to grow. You have proved yourself a coward.

Some day we may write about the boss who deprives himself of competent help by insisting on doing everybody's work for them. But today we are writing about you.

It you are in the habit of standing back and asking for assistance every time an unusually hard job comes along, get out of it. You will become an assistance-asker all your life. Assistance-askers sometimes get assistance, but they never get responsibility, or good pay, or respect, or anything else that makes life worth the while.

Kiddies Six

By Will M. Maupin

HIS FATE

LITTLE Willie Wait-a-Bit
Intended well to mind,
But, somehow, always managed it
To be a bit behind.
"In a minute," he would say
When time came to cease his play.

Little Willie Wait-a-Bit
Grew to be a man;
But he loved to sit and sit
Scheming out some plan.
"In a minute," he would say,
"I will get to work straightaway."

Mr. William Wait-a-Bit
Neared St. Peter's Gate,
But, alas, he managed it
So that he was late.
"Wait a minute!" shouted he;
But St. Peter turned the key.

William Wait-a-Bit was sent
To the nether clime,
Where without his own intent
He arrived on time.
Now he mourns his torrid fate,
For his master will not wait.

SCHOOL DAYS

YOUR HAND

How to Read Your Characteristics and Tendencies — the Capabilities or Weaknesses That Make for Success or Failure as Shown in Your Palm

THE HAND OF AN ACTOR

IN THE first place, to recognize whether a person, male or female, is or will be successful on the stage in playing dramatic or tragic parts, note whether the fingers are long and crooked. That is a good sign. Long fingers denote careful attention to details, and if the hand is wide and open, with the fingers widely separated, freedom of thought and independent action are indicated.

The mount of Venus (ball of the thumb) should be well criss-crossed or grilled, to denote inspiration and assumed passion. Next, note whether the second phalanx of the thumb is long, to show intellectual power. The mount of Luna should be unusually long, reaching well up on the outside of the palm toward the line of the heart, to show great imagination and eloquence, so essential to the actor of dramatic or tragic parts. Courage also is shown by a strong mount of Luna.

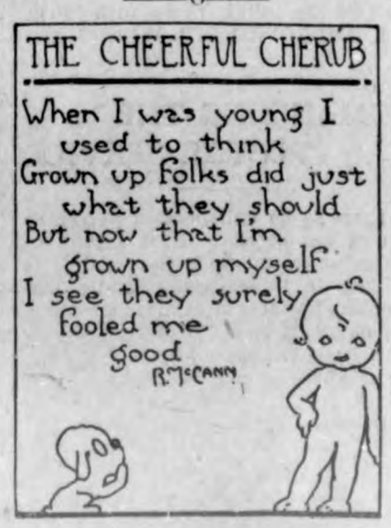
This One a Singer.

The golden-crowned kinglet has nothing much in the way of a song, says the American Forestry Magazine, but the ruby-crowned has a beautiful song of most surprising power for so small a bird and, while singing, the male often elevates his ruby crown patch.

Big Platinum Yield.

Practically from a single district Colombia produces an average of 30,000 troy ounces of platinum annually.



Mother's Cook Book

I know a bank whereon the wild thyme blows
Where ox-lips and the nodding violet grows
Quite over-canopied with lush woodbine
With sweet musk roses and with eglantine.

—Shakespeare.

GOOD THINGS FOR THE FAMILY

EVERYBODY in the household likes cinnamon rolls or cinnamon buns. The following is a reliable recipe:

Take one cupful each of milk, water and sugar, two eggs, three-fourths of a cupful of shortening, one yeast cake and a teaspoonful of salt. Scald the milk and while it is still hot pour it over the shortening and add the sugar and hot water; when cool add the yeast cake which has been softened in one-half cupful of water, add the salt and enough flour to make a batter which drops from the spoon. Beat it thoroughly and let stand in a warm place over night. In the morning add the well beaten eggs and flour to make a dough which can be kneeded; knead lightly and well, put back into a well buttered bowl and let rise until double its bulk. Separate into two parts and roll out into a sheet. Spread this with soft butter, brown sugar, cinnamon and well washed and dried currants. Roll in a long roll and cut the buns in inch slices. Place them in a pan and set in a warm place to become light. Bake in a moderate oven with a grate under them if there is danger of burning.

If the family likes sticky buns put one tablespoonful of butter, one-half cupful of brown sugar, one-half cupful of sirup, and one-half cupful of water in a sauce pan and boil until thick. Add currants to it. When the buns are baked turn them upside down and spread this mixture evenly over the sides and bottom of the buns.

Pimento Cheese Rolls.

Roll out a raised dough like the above cinnamon bun mixture, spread with a layer of softened butter, then with pimento cheese. Roll up and cut in slices one inch thick, place cut sides up in a greased pan, let rise until light and bake in a moderate oven.

A good finish for a plain raisin cake is to spread it while hot very generously with butter, then sprinkle with a mixture of cinnamon and powdered sugar, using a teaspoonful of cinnamon to one-half cupful of sugar—more if desired.

The SANDMAN STORY

FOX SPOILS THE FUN

WHEN Toby Dog and Ikey Drake were tired of living in the barnyard they did not know that Mr. Fox was going to spoil all their fun, or they would not have set up housekeeping in a hut by the river close to the woods.

Ikey Drake said he was tired of having all of his relatives quacking after him every time he went anywhere, and Mr. Dog said he was tired of sleeping with both eyes open at night to watch for the farmer, when in the daytime he was always chained up. So one night off they tramped and went to live in a hut by the river, and all went well until Mr. Dog growled over having so many worms for food instead of "a nice ham bone or something."

Ikey Drake began to quack loudly that bones were too hard to digest and that Mr. Dog would find his health much better if he made a diet of things such as he ate.

It was just then that Mr. Fox, strolling by in the woods, heard the noise and came that way to see what was going on. When he saw fat Ikey

Drake he forgot all about Toby, only that he was a young dog and might be fooled if necessary. He wanted Ikey very much for a dinner some night, so he set his wits at work to find a way.

The next day Ikey went swimming on the pond and Mr. Fox, who was watching in the woods, strolled along to the hut and said:

"Ah, I see I have a neighbor. Mr. Dog! I do not live far from here, and you and I ought to have some fun hunting. Do you like chasing rabbits?"

"Rabbits?" repeated Toby, his ears sticking straight up. "I love nothing better. Show me one and see."

Mr. Fox knew just where to take Toby Dog, and it was not long before he was running through the woods after poor Mr. Rabbit, and Mr. Fox, knowing that Toby would be busy for some time, ran back to the hut to wait for Ikey Drake.

Now it happened that Ikey had met all his family on the pond, and because they were afraid he would leave them again followed him back to the hut, in spite of all poor Ikey could do to get rid of them.

Mr. Fox, who was hiding inside, could hardly keep still, he was so anxious to pounce upon them. His eyes sparkled as Ikey and his family came nearer, but, to his surprise, he heard Ikey telling them, "You better go home; old Mr. Fox might be around."

"He will get you, too, Ikey," said one plump duck. "Why don't you run?"

"I am not afraid of Mr. Fox," pretended Ikey, strutting toward the hut, "but if you will all start for home I'll come along soon. There, what did I tell you?" he said, pointing to the tip of Mr. Fox's nose sticking through where the boards were broken.

Of course, Ikey Drake thought it was Tobey Dog's nose, and he laughed as his family turned to run; but he soon changed it to a loud "Quack!" and ran, for Mr. Fox, thinking all the plump ducks would get away, came running out after them. But, luckily, he got only a few tail feathers and the ducks swam safely home.

When Tobey Dog missed Mr. Fox he began to think of poor Ikey, and away he ran for the hut by the river, to find only the tail feathers of poor Ikey strewn by the water side. Sadly he went back to the farm, and he made up his mind on the way to watch over Ikey's family from now on, to make up for leaving poor Ikey to his sad fate, for, of course, he was sure Mr. Fox had caught him and carried him off to his den. But the first ones he saw when he reached the barnyard were Ikey Drake and his family.

"Did you chase Mr. Fox?" they all asked, for Toby Dog looked very warm from running.

"He won't bother you any more," said Tobey. But he never told Ikey how Mr. Fox had got him to go hunting, and then had run back to catch Ikey Drake. However, he kept his word, for Mr. Fox did not bother them any more.

Toby Dog slept none that night, and when Mr. Fox came skulking around he was after him with a bound, and by the way he acted Mr. Fox knew that if he wanted to live he had better keep away from that farm.

Peace.

A writer says sunken warships make ideal spawning places for fish. And after war's alarums, the swallow nests in the cannon's mouth and the young fish play peekaboo in the portholes of the ironclad.—St. Louis Globe-Democrat.

Helene Chadwick

Miss Helene Chadwick, the charming little "movie" star, has made quite a success of "vamp" parts in screen pictures and in order to secure first hand color for some of her future work, recently attended a murder trial. She was so impressed with the court proceedings and the effect some of the evidence had on the audience that she has declared she will never again take the part of either the "vamp" or the woman who kills.

—O—

A LINE O' CHEER

By John Kendrick Bangs.

CHILDREN ALL

NO LIVING man, if he be good,
Would hate a child if so he could,
But with a strong protecting arm.
Would hold him safe from every harm;
And since despite our years 'tis clear
We're all of us but children here
I move we follow out that plan
Whene'er we meet a fellow-man.

The Right Thing at the Right Time

By MARY MARSHALL DUFFEE

THE BOY'S MANNERS

EVERY age has its own peculiar bad manners. The self-satisfied mother is most apt to show one type of ill breeding; the pretty girl is prone to be rude in another. The business man errs in this direction and the college boy in another. So just because you don't transgress one set of rules for good manners don't imagine that you have not your own failings of another sort.

"What shall I do to teach my boy of fifteen good manners?" writes a mother who seems to have had rather bad luck in this respect so far.

First of all try and give him the point of view that the really manly, grown-up thing to do is to be courteous to women, especially to women older than himself. Show him that it is the man's man who doesn't forget to offer his seat to a woman on the car, to stand aside when a woman passes, and generally to be considerate where women are concerned. If your son meets you in the street and you are carrying packages, don't say, "Bob, I want you to carry these things for me, do you hear?" Instead tell him that now that he is getting to be a grown man he must act as a man would act and that a man would of his own accord offer to take packages from a woman he met in the street.

It is especially hard to teach a boy good manners if his father is lax in this regard, for usually a boy thinks of his father as the embodiment of all that is thoroughly manly. In fact, usually a father has better luck in instilling a fondness for good manners in a boy than does a mother.

Perhaps we don't realize fully the importance of teaching boys the superficialities of good breeding. It is important because it is so difficult for a man to master these things once they have been neglected in boyhood.

The Friendly Path

By Walter I. Robinson

HAVING FRIENDS

Be bright and jovial among your guests.—Shakespeare.

AT THIS season visiting around is a popular diversion. And it is well. Most of the pleasure in life comes through associations of one kind or another. Without real friends to greet or to welcome one, no person could find much enjoyment in life. But it is essential that our guests be the proper kind and that those whom we visit welcome us because they like us and not because an ulterior motive is back of the hand they proffer us.

Unless those we would welcome to our hospitality are those we can welcome to our respect and esteem, if not our friendship, it is far better that the latchstring be not left out for them. We cannot be false in our greeting without feeling a keen resentment against ourselves.

And the same rule applies when we go visiting. For our own happiness and self-respect it is far better never to visit with people at all than to realize the welcome given us is hypocritical.

Someone has said: "First day, a guest; the second, a burden; the third, a pest." Do those you invite to enjoy the hospitality of your own roof come under this category; or do you fit into it when you accept the invitation of so-called friends? It is well carefully to consider this question before trying to be one of the jovial throng in your home or elsewhere. There must be sincerity or false greetings are certain to find one out.

Just as one's sins will find him out, will false friends deceive him and will his own hypocrisy lead him to a sorry route.

"What's in a Name?"

By MILDRED MARSHALL

FACTS about your name; it's history; meaning; whence it was derived; significance; your lucky day and lucky jewel

ROBERTA

ROBERTA, the charming boyish name signifying "bright fame," is one of the many examples of feminine names coined directly from the masculine cognomen, Robert. Though Robert can be clearly traced, there is no record of the evolution of the feminine and it can only be deduced that some parent, disappointed at the birth of a daughter, bestowed the family name upon the girl-child and added the final "a" as a concession to the sex.

Roberta has a charmingly poetical heritage. Her counterpart appears in the most famous pasages of England's early history. The origin of the name was in "red," which accounts for the translation of "bright."

One of the wild dukes of Normandy brought it back to England and numerous earls and nobles seized upon it, establishing its vogue permanently.

The dearly beloved Robin Hood, whose deeds are recorded in English ballads, did much toward making it popular. Robin was the epithet by which Queen Elizabeth addressed the two earls, stepson and stepfather, who sunned themselves in her favor. Robert of Bruce was the national hero of Scotland and Robin Lawless was a favorite Irish character.

Roberta is essentially American, though the contraction, Bertie, which is the endearment for several other names as well as Roberta, has the real Yankee sound.

Roberta's talismanic stone is the sapphire, which is said to guard her from danger and disease. Tuesday is her lucky day and 7 her lucky number.

Egypt, Again Independent

© Underwood & Underwood

View of Cairo.

(Prepared by the National Geographic Society, Washington, D. C.)

It is difficult to shake the dust of ages from the land of the Nile and to realize that there is an Egypt of the vibrant present. The recent pronouncement of the withdrawal of the British protectorate from the country, however, and the setting up of its first king in more than 1,900 years turns the spotlight squarely on the modern aspect of this long civilized region.

The map lacks much of giving one the true picture of Egypt. The country is shown covering a large area of northeastern Africa. This is the nomal Egypt. The real Egypt is a narrow, tortuous strip on either side of the Nile and the fan-shaped delta surrounding its mouth. Save for a few oases outside the river valley, the rest of Egypt is but a sea of sand practically uninhabited. Figures confirm this, for of the more than 350,000 square miles of Egyptian territory only about 12,000 can ever be cultivated; and a considerable part of this tillable area has not yet been reclaimed.

Looking only at the surface of Egypt's institutions, one is likely to decide that the changes since the days of the Pharaohs have been great, but when certain fundamentals are considered the wonder may well be at the lack of change. To be sure, the Egyptian of today speaks Arabic instead of his old tongue; and Osiris, Isis and Horus have been long forgotten for Allah and Mohammed. But in spite of numerous invasions, the blood of the great majority of the population has been altered hardly at all.

Egypt's resources are almost wholly agricultural, and in the agricultural scheme the millions of fellaheen are the ultimate units. They work long hours scratching the soil with crude implements, or tediously raising water in skin buckets attached to pivoted poles that the thin stream may save their plants from parching. Taxes are heavy, and it is the lowly fellaheen who keeps the treasury supplied. Living conditions are very poor; mud huts house most of Egypt's thirteen millions. In the fields they wear little more than a loin cloth, and the younger children of the villages go naked. When the fellah is "dressed up" he wears a rough shirt and loose trousers.

Cairo the Wonder City.

The stamp of the outside world and of the Twentieth century on Egypt is to be seen chiefly in Cairo, that wonderland which has superseded Bagdad as "the city of Arabian Nights." Cairo is a living kaleidoscope, with its gleaming and drab human fragments tumbling into a changing pattern not merely from East and West, but from North and South as well. White-robed Bedouin, ill-clad fellah, shiny-black Soudanese and central African negro, swarthy Turk, Persian, Hindu, Mongolian, dusky Moor, Italian, Greek, Jew, Armenian, and the whiter folk from Europe, America and the antipodes—all are jumbled together in Cairo, their various tongues making a babel that can hardly be duplicated at any other spot on earth. The life that flows along the streets of Cairo could not be duplicated anywhere else in the world. At times the Western observer is likely to be reminded forcibly of circus parades down Main street back home. Swaying camels move along with brightly dressed riders perched upon them or with suspended cars in which are veiled damsels, while drummers thunder their rhythm and fife blowers emit their shrill notes. Snake-charmers pass along with their bags of snakes; magicians perform in some nook; donkey-carts and laden donkeys compete for space with shining limousines.

Cafes in the Streets.

The al fresco cafe is one of the most characteristic marks of Cairo. It is not the more or less well-ordered affair of the boulevards of Paris. Sidewalks and streets, overflow with seemingly innumerable chairs and tables until often a single file of pedestrians can hardly force its way through. One gets the impression that few people need to work in Cairo. Even in the mornings the chairs are filled with apparently prosperous men sipping coffee or sweetened water, puffing cigarettes and talking. Toward noon they disappear for their siestas, but again at four or five o'clock they are out in force and remain far into the night. Among them circulates a stream of peddlers offering for sale almost every conceivable ware from sweetmeats to mouse-traps and underwear.

The dweller in Cairo who has not his servant or his group of servants is low indeed in the economic scale. These serving men carry tiny bundles for their employers or masters. They run ahead of carriages to clear the way; they fan away the flies; and one after another they come in troops into the presence of the prosperous to bring smoking materials or to offer a bewildering succession of drinks and foods. Life is hard and a few cents a day satisfies them. Even the porters who carry heavy bundles and the boatmen who laboriously pole the Nile craft against the current work 12 or 15 hours for little more than as many cents.

In Cairo is the Oxford of the Mohammedan world, the University of El-Azhar. It seems a queer "university" to those familiar with the higher institutions of learning of the West. Its classrooms are the halls and niches of a mosque. Its professors receive no salaries but are primarily religious officials, government employees, lawyers and the like who teach in addition to performing their regular duties. The pupils, who at times number more than 5,000, squat on mats while their instructors lecture. This premier college of the Moslem world has been in existence for 950 years and hundreds of thousands of students have passed through its doors. It has been the center of the nationalist propaganda which has sought entire freedom for Egypt. More, it is the hotbed of Pan-Islamism, which, like its companion movement in the past—Pan-Germanism—would combine its own culture with militarism to dominate the world. But Pan-Islamism would go further, and would bring the world, as well, under the religion of Mohammed.

Glimpse at Egypt's Past.

The Egypt that emerges now again as a kingdom has had a checkered history, but that is reasonable enough when one recalls that it had one of the earliest of starts. Here is one of the first places in which man lived an ordered life and left records of his activities. Some anthropologists, in fact, look upon central Africa as the place of origin of man, and upon Egypt as one of the first way-stations in his diffusion over the other continents.

After the long reign of the Pharaohs Egypt had its Grecian and Roman regimes which brought but few changes. Then in 641 A. D. came the invasion of the Saracens, from which time began Egypt's Mohammedan history. For a time the country was a province of the Arabian caliphs; later it was independent, though still Mohammedan, under the Mamelukes; and finally, in 1516, it became a province of Turkey, which controlled it first through a governor and later through a sort of hereditary viceroy or khedive.

For the third time Europe took a hand in the affairs of Egypt in 1798 when Napoleon won his battle of the Pyramids. The British drove the French out in 1801 and turned the country back to Turkey. In 1869 came the building of the Suez canal by De Lesseps, which has given Europe an ever-growing interest in Egyptian affairs. To protect European bondholders France and Great Britain made a joint intervention in 1879 and for a while controlled finances. The uprising in 1882 against the khedive was suppressed by the British alone, and after that they controlled finances without assistance. The government was in effect Egyptian with British assistance and with the nominal suzerainty of Turkey acknowledged.

When the World war began Great Britain established a protectorate, abolished Turkey's suzerainty, deposed the Germanophile khedive, and appointed another prince of the family to be sultan. The British protectorate is now being withdrawn, but instead of the former Turkish interest being restored, Egypt is set up as an independent kingdom.

RAVAGES OF JIM CROW IN SPRING

His Raids on Cornfield Are Largely Responsible for His Unsavory Reputation.

ATTACKS OTHER WILD BIRDS

Does Farmer Big Favor, However, by Devouring Grasshoppers, Caterpillars, White Grubs and Other Insects.

(Prepared by the United States Department of Agriculture.)

Like most outlaws, the notorious Jim Crow has some points that are commended among law-abiding citizens, but when he is a bad bird he is a hard-boiled egg. His springtime ravages on the cornfield are largely responsible for his unsavory reputation, but he has added to it by occasional raids on the poultry yard, depredations on wild birds, and attacks on crops other than corn. At certain seasons and in certain localities he becomes such a nuisance and a detriment to farming that he must be warned by making an example of some members of his gang.

Jim is only about half bad, and because of his better half, which does not mean his wife, who is just as black as he is, it is not advisable to treat him too harshly. Nearly one-fifth of his food is made up of insects, and he includes on his menu some of the farmer's worst enemies—grasshoppers, caterpillars, and white grubs and their parents, the May beetles.

Been Going Too Far.

Probably we could not get along so well without Jim Crow as with him. Killing off the whole family, if that were possible, would be a short-sighted policy. So, when the United States Department of Agriculture recommends the poisoning of crows, this measure should be looked upon merely as a warning to Jim and his family that they have been going too far and that they can't get away with everything. They are wary enough not to need many repetitions of the lesson.

Every spring farmers revive their old feud with the Jim Crow family, carrying on a desultory battle by means of scarecrows, epithets, and the more effective deterrents of coal tar and poison. Coal tar, which may be secured at gas plants and some paint shops, is not a poison, but it imparts a disagreeable gassy odor to the seed grain that is distasteful to crows and other pests. It has the advantage, not possessed by some other deterrents on the market, of not affecting the germination of the corn when used in limited quantities. A tablespoonful is used to half a bushel of seed.

Strychnine Is Favored.

The best deterrent, however, is strychnine, which may be applied to corn in a paste made up in the proportion of one ounce of powdered strychnine, two tablespoonfuls of starch, and one and one-half pints of water to 20 quarts of corn. The starch and strychnine are put into the water, which is heated to boiling, and stirred well when the starch begins to thicken. This paste is poured on the corn and stirred into it until thoroughly distributed. The corn is spread to dry and is then ready to use. This method is better than the old one of steeping the corn in a strong strychnine solution. Because of their wariness it will not be possible to kill many of the crows, but a little of this

At Certain Seasons Jim Crow Is Decided Nuisance.

poisoned corn scattered over the field of sprouting corn will get a few of them and the rest will take the warning and leave. Using whole corn for bait lessens the danger of poisoning smaller seed-eating birds. Care should be taken not to distribute the poisoned grain near the farm buildings where domestic animals might pick it up. The crows usually do their corn pulling at some distance from the buildings.

Before going ahead with poisoning operations which involve the spreading of poison it is always advisable to look up laws and local regulations regarding the distribution of poison. Local conditions may modify practices a great deal, especially in thickly-populated regions.

GRASS AS BALANCED RATION

Cost of Production of Milk and Butterfat Can Be Lowered by Use of Succulence.

Pasture grass is considered as near a balanced ration of any one feed as we can get. With an abundant supply of nature's palatable, inexpensive, succulent, nutritious and well-balanced food we can lower the cost of production of milk and butterfat.

EFFECTIVE MEASURES TO AVOID SWARMING

Less Troublesome in Some Localities Than Others.

Inclination to Swarm Is Reduced Where Colonies Have Ample Brood-Chambers—Good Combs Are of Importance.

(Prepared by the United States Department of Agriculture.)

Honey production on an extensive scale makes it necessary sometimes to distribute the colonies of bees in several apiaries to avoid overstocking. Then comes the serious problem of controlling the swarm. Swarm control is less difficult in producing extracted honey than with comb-honey. It is less troublesome in some locations than in others. The reasons for these differences are important in devising measures for swarm prevention. These, and other problems relating to swarming are discussed in Farmers' Bulletin 1198, issued recently by the United States Department of Agriculture. This bulletin may be had, free, upon request addressed to the division of publications.

Some strains of bees, the Department of Agriculture says, have a stronger tendency to swarm than others. So, to some extent, swarming may be reduced by careful selection in breeding.

Control of Swarming Is Difficult Problem.

Colonies having large brood-chambers are less inclined to swarm than those in quarters too small. Strong colonies having good queens may need 60,000 to 70,000 cells for rearing of brood, during the period of extensive brood-rearing in the spring, in addition to the cells used for storing honey and pollen. Colonies having good combs throughout are less inclined to swarm than colonies having poor combs. Inferior combs may greatly increase the swarming tendency, both by reducing the amount of available brood-rearing space and by acting as barriers in the way of a free expansion of the brood-nest. The bulletin gives a dozen or more swarm-preventive measures to be taken by bee owners.

EXERCISE GIZZARD MUSCLES

Soft-Feed Idea Can Be Overworked by Poultryman—Time of Feeding Will Vary.

Many of the most successful poultrymen feed a part of the daily grain ration ground. Many of these feed the ground grain moistened with milk or water, although more feed it dry. A fowl's gizzard can grind all kinds of grain, but it is considered more economical to have a part of the grinding done by steam or water power.

However, the soft-feed idea should not be overworked. Beginners often reason it is cheaper for the miller than for the fowl to grind the grain; but the powerful muscles of the gizzard are there to be used, and experience has shown the balance of power of functions in the fowl's economy makes the vigorous exercise of the gizzard beneficial. When feeding moistened ground feed, have it a comparatively dry, crumbly mash, and not a thin slop. Give what they will eat readily in 15 to 20 minutes.

Poultrymen do not agree as to the time of day when soft feed should be fed. Some say it should be fed in the morning, others at noon, and still others at night. Many give the ground feed in the morning, a large number at noon, and a few at night. The number who feed at noon, however, is becoming larger. In the egg-laying experiment in West Virginia reported to the United States Department of Agriculture, the egg production was practically the same whether mash was fed in the morning or at night.

CHIEF VALUE OF SANDY SOIL

Roots of Plants Are Permitted to Pass Through Readily, but It Dries Out Quickly.

The chief virtue of sandy soil is that the roots of plants can pass through it readily; its chief fault is that it dries out too quickly. Clay soil holds water well, but it tends to pack and harden. Both types of soil need stable manure—it loosens up clay and helps sand to hold moisture.

DAIRY FACTS

SAFE MILK SUPPLY INSURED

Suggested That Two or More Small Towns Hire Inspector and Maintain Laboratory.

(Prepared by the United States Department of Agriculture.)

Milk inspection is of prime necessity. In most of the larger cities laboratories are maintained where bacteria counts and chemical analyses are frequently made on samples collected from retail delivery wagons, stores, and restaurants. But the small cities and towns that cannot afford the expense of a tester and laboratory find it hard to give proper supervision to their milk supplies.

The United States Department of Agriculture suggests that a practical

Cleanliness Is Essential to the Production of Milk of Low Bacterial Count.

way for such cities and towns to insure a safe milk supply is through the co-operation of two or more adjacent towns in hiring a milk inspector and maintaining a laboratory. The cost of supervising such a plan may be prorated among the different towns on the basis of population without the expense being burdensome to any one of them. State and federal authorities are always willing to co-operate in work of this sort.

This plan of town co-operation in milk and dairy inspection has been carried out in different parts of the country, probably the most conspicuous example being the group of towns in northern New Jersey known as "The Oranges." In these towns the plan has been in use for a number of years with results that have been very satisfactory to all concerned.

MARKS OF GOOD DAIRY COW

Angularity and Leanness Should Be Apparent When in Milk—Mammary System Important.

A good dairy cow should show angularity and leanness in appearance when in milk. A feminine head; a bright, full eye; a wide muzzle and large open nostrils indicate dairy temperament. The chest should be full and deep, giving ample room for large heart and lung development. A long, deep, wide body with well-arched ribs gives room for handling large amounts of feed. And of extreme importance is a well-developed mammary system made up of long, branching milk veins entering large milk wells; teats of convenient and uniform size, good shape and well placed in the udder and an udder that is large, well-shaped and has a mellow, flexible handling quality.

DAIRY COWS WORK HARDEST

Animals Give From Five to Ten Times Their Weight in Milk—Need Best of Feed.

People seldom think of the dairy cow as a hard working animal, yet it is a fact that she works harder than other domestic animals. Every year she gives from five to ten times her weight in milk, containing as much actual dry matter as do the bodies of two or three steers. It requires approximately the same amount of energy to produce 20 pounds of milk as it does to plow an acre of land. This gives us some conception of the enormous amount of work the cow does and indicates why she should be well fed and cared for.—Utah Farmer.

Best Roughage for Cows.

Clover hay is one of the best of all roughages for the cow. It furnishes large amounts of crude protein so essential to milk production and is palatable and much relished. Clover hay is unusually rich in lime and lime is also needed.

Plant Food Removed.

A ton of butter removes only seventy cents worth of plant food from the farm, while the sale of the feeds that produce it would carry away over $400 in soil fertility.

POULTRY

ANIMAL FEED IS IMPORTANT

Meat Scrap, Milk and Its Products, Tankage or Fish Scrap Increase Egg Yield.

(Prepared by the United States Department of Agriculture.)

A great increase in our annual egg production may be expected when poultrymen and farmers in general recognize the importance of animal feeds in the rations for the laying flock. The demonstration of the superiority of feed combinations containing meat scrap, milk and its products, tankage, or fish scrap is one of the most valuable additions to our knowledge of poultry management contributed by the United States Department of Agriculture and various experiment stations.

Practically all experimental tests have shown that these feeds will greatly stimulate egg production, especially during the fall and winter months. The fact that many farmers get no eggs at all during this period may usually be attributed to a lack of essential animal feed. The addition of from 10 to 25 per cent of one of those named would in most cases make a remarkable difference. Which one of these feeds should be used depends upon local conditions and prices. They are of about equal value when the protein content is taken into consideration. The fish meal and tankage have given just as good results as meat scrap. Milk is just as good when available at a low cost, and fresh buttermilk and skim milk produce good results. In some sections condensed buttermilk and semi-solid buttermilk have been fed with success.

In a test extending from November 1 to July 10 on the government farm

Hens Need Animal Feed to Make Big Egg Returns.

at Beltsville, Md., 30 hens on a ration without meat scrap or any animal feed averaged 74 eggs each. Another flock of 30 hens of the same breed during the same period laid an average of 113 eggs each, the difference of 39 eggs being attributed to the ration which contained meat scrap. Both flocks were out on range whenever the weather was favorable, which made the difference less than it would have been had the birds been kept in pens. In a test made by Purdue university agricultural experiment station animal feeds were shown to have a decided value in the ration of laying hens and pullets. The pullets fed skim milk averaged 140.2 eggs in a year; those fed meat scrap, 135.9 eggs, and those in the check pen that received no animal feed of any kind laid an average of only 61.2 eggs.

It has been shown that it is impossible to judge the value of a hen as a layer unless she has been fed a ration that would give her an opportunity to demonstrate her capacity. Pullets that have not yielded profitably because of a ration lacking in animal matter have become profitable layers when the defect in the ration was corrected.

CARE FOR INCUBATOR LAMPS

Some of Principal Reasons for Smoking Are Improper Trimming and Poor Oil.

Guard against smoking incubator lamps. Not allowing for wick to creep up as it warms, not fitting lamp shade tightly, improper trimming of wick, filling lamp too full, direct draft on lamp and poor grade of oil are the principal reasons for smoking. All of these can be avoided by care.

SEEK CONSTITUTIONAL VIGOR

Good, Strong Birds Are of Great Importance in Building Up Flock of Heavy Layers.

Constitutional vigor is most important in building up a flock of heavy layers. No bird should be used for breeding which ever has been sick. Good, strong, vigorous birds may be used for a number of years; longevity is a real test of constitutional vigor.

BEST GEESE FOR BREEDERS

Usually Waste of Time to Try to Dispose of Old Fowls—Keep Them for Breeding.

Old geese do not sell well in market, and it is usually a waste of time and money to attempt to so dispose of them. Keep the old ones for breeding purposes, as they will be serviceable for from ten to twenty years, and then sell the young ones at market.

Ed. Kahrs and Rev. Art Gedye went over to Clear Lake one day last week to fish for bull-heads but were only able to catch a pickerel that they judged would weigh about six pounds. Of course they had to put him back in the water and watch him swin away again. Ed. done a lot of cusing about that time and Gedye kept on saying, "Ditoo, ditto, ditto," which finally got on Kahrs' nerves and he asked him why in Sam Hill he kept on saying "ditto." The preacher said, "Well, I feel like swearing too, but as I am a Methodist minister, I just say ditto."

Art Wellemeyer drove to Forest City last Thursday to get a truck load of garden plants. Art uses about a third of all the plants that the greenhouse is able to grow each season; and besides that he buys plants at Mason City and Charles City also and has been at both of those places to get plants this year.

REAL CANDY——

You will find a dandy assortment of all kinds of Candy here—Candy for the kids, Candy for the grown-ups, and Nice Box Candy for her! Also you will find our sundaes and drinks the best.

CIGARS, CIGARETTES——

We carry all of the popular lines of Cigars and Cigarettes. You will find that our "smokes" are always nice and fresh as we turn our stock fast and keep a fresh supply. Also nice fresh smoking and chewing tobacco.

Get Thi $6,000,00 Booklet

Lightning losses last year a estimated at six million dollar

If every farmer who shared that tremendous loss had read this booklet and acted upon its suggestions they wouldn't have lost a dollar!

Its author, Mr. Jos. Barnett, is a recognized authority on lightning and lightning protection. He has devoted his life to this fascinating subject, and thousands of farmers are richer today because of his efforts.

You need this book!

It may be worth thousands of dollars to you—and it's free if you'll write for it.

Annual Farmers Picnic Will Be Big Event This Year

BIG ANNUAL FARM EVENT TO BE HELD AT CONCORD CAMP GROUNDS

Large Number Expected To Attend

Practically all arrangements have been made for the Farm Bureau Picnic to be held at the Camp Grounds at Garner, Thursday, June 1st. The Program Committee has arranged for a good program with Mr. C. W. Hunt, President of the Iowa Farm Bureau Federation as principle speaker. They will also have a lady speaker.

There will be two bands on the grounds to furnish music, as the committee has arranged for both the Duncan and Crystal Lake Bands.

The Sports Committee is busy arranging for games of various kinds, and everyone is assured of plenty of amusement along this line.

The Stands Committee has made arrangements for refreshments, and expects to be able to handle the big crowd much better this year than last year.

The picnic which was held last year drew a crowd of approximately 3,000 people, and we feel sure that there will be even a larger crowd at the picnic this year.

DEMONSTRATION APIARIES

Mr. N. I. Lyle, of the Extension Department of Ames was in the county recently conducting the first of a series of demonstrational meetings at the S. A. Barber and A. L. Irish apiaries.

Mr. Lyle is an expert on bee management, and these two demonstrational apiaries were established by the Farm Bureau for the purpose of demonstrating to the bee keepers of the county the most up to date methods of handling bees for honey production.

Mr. Lyle will be in the county again on June 9th, at which time he will take up the method of swarm control. This meeting is considered the most important of all. It will be well worth while for all those interested in bee keeping to attend. The first demonstration will be given at S. A. Barber's at Kanawha at 10 o'clock A. M., and the next one will be given at 2:00 P. M. at A. L. Irish at Britt.

COW TESTING ASSOCIATION

Enough signers have been secured to insure theCow Testing Association in the vicinity of Britt, Crystal Lake and Woden. The association will be started about July 1st. It will consist of twenty-six farmers once per month to test and weigh the milk from each cow, and at the end of each year return the complete record for each individual cow in each of these herds.

CORN VARIETY TEST PLOT

The Hancock County Home is cooperating with the Farm Bureau in conducting a Corn Variety Yield Test. The idea of this experiment is to determine which variety is best adapted to this county. The different varieties which were planted consisted of both yellow and white corn. At the end of the season the corn will be husked and weighed to determine which plot yielded the most corn. The moisture content, and per centage stand will also be considered in determining the winner of this contest.

The corn for these plots was furnished by Ed. Williams, C. A. Hartwig. Milo Brown, A. G. Lau, Chas. Steiner, Ray Baker, Henry Schleusner and the County Home.

DIRECTORS MEETING

The next Farm Bureau Directors' meeting will be held at Kanawha. The directors have followed the rule this year that the meetings shall be held at the different towns of the county so that any of the members who want to attend will have at least one convenient meeting. They are always glad to have any one come, and any member is at liberty to attend.

MOTION PICTURE MACHINE

At the last meeting of the Board of Directors of the Farm Bureau they voted to purchase a portable motion picture machine to be used to furnish entertainment for Farm Bureau meetings, especially at the regular township meetings. The Board felt that some extra entertainment was necessary and that something of this kind would be very valuable in drawing people to the meetings.

These machines are being operated in practically half of the counties of the state and are proving a great success. Usually a five reel film is given, consisting of two agricultural films, two industry films, and one comedy. This machine is operated from storage batteries, and can be taken to any place in the county. The service is free, and any community wishing to have use of this machine can get information from the Farm Bureau office at Britt.

COUNTY DEMONSTRATION

A demonstrational orchard has been established by the Hancock County Farm Bureau on the George Luick farm, three miles west of Goodell. This is an old orchard consisting of approximately 500 trees. The varieties are largely Northwestern Greenings and Wealthies. There are a few Patten's Greenings and Wolf Rivers.

The idea of this project is to demonstrate the value of spraying, as well as management. The project will probably cover a period of two or three years. Spraying is far the most important part of this work, and this is all that will be done this year. It is not considered advisable to do heavy pruning, especially in an old orchard. Some pruning will be done, however, which will be simply a matter of removing all dead branches as well as a few others which cross or interfere with the growth of the branches.

The first spray has been applied and the second one will probably be applied about May 20th. Approximately 1500 gallons of spray material was applied for the first spray, and it will take as much for the next spray. There will be four sprays applied in all.

MESERVEY PLANS GREAT PLAY DAY FOR MAY 24

An exhibit and play day will be given at Meservey next Wednesday, May 24th, with a picnic dinner at th noon hour. All patrons, friends and neighbors interested in Meservey and vicinity are invited to attend the celebration.

The forenoon will be given over to exhibits of school work, manual training, domestic science, note book work, writings, drawings, paper cutting, etc.

For the afternoon a fine program is planned, including all kinds of racing, jumping and athletics with drills plays, physical culture, May Pole, marching and singing, basket ball, volley ball and base-ball, all under the supervision of the different teachers. The noon hour will be given over to basket dinners by families, by groups and any manner to suit the visitors. There will be one hour given over to "Ye Old People," for fun and frolic. A program is being carefully prepared and in order to carry it out and have it enjoyed it must have to be stictly adhered to.

It is possible that a speaker will be secured for an address at one o'clock p. m.

Mr. John Hartfelter has consented to take charge of the "Old People's" hour.

TWO YEAR OLD BABY FALLS IN RIVER AND DROWNS

DUBUQUE, May 17.—The first drowing of the season occured in the Maquoketa river near Durango, when Ernest Keller, 2-year-old son of Mr. and Mrs. Alfred Keller, fell into the stream from a high bank. The disappearance of the child was not discovered until resusciation was impossible. The body was recovered lodged against driftwood in a shallow place.

IOWAN HAS TWO PIECES OF FURNITURE USED BY HISTORIC BETSY ROSS

WEBSTER CITY, May 18—Two interesting pieces of furniture, a mahogany dresser and a chest of drawers, used by Betsy Ross, designer of the first American flag will be among the furnishings of the new home of Miss Marion Crosely, following her wedding early next month to Clarence Happ, of Winnetka, Ill.

The two pieces were given by Betsy Ross to her granddaughter, Mrs. Rachel Albright, who was Miss Crosley's aunt by marriage, and also her cousins, twice removed. On the latter's death the furniture was left to Miss Crosley.

NOTICE OF SPECIAL SCHOOL ELECTION

Public Notice is hereby given to qualified voters of the Independent School District of Klemme, in the County of Hancock, State of Iowa, that a special election of the voters of said District will be held on the 19th day of June, 1922, at the Town Hall, Klemme, Iowa, from 1 o'clock P. M. until 6 o'clock P. M., at which time there will be submitted to the voters of said District the following proposition:

"Shall the Independent School District of Klemme, in the County of Hancock, State of Iowa, issue bonds in the sum of not to exceed $15,000 for the purpose of constructing and equipping an addition to the school house within said School District?"

at which time and place you are hereby notified to appear.

This notice is given by order of the Board of Directors of the Independent School District of Klemme, Hancock County, Iowa, pursuant to a sufficient petition in accordance with Sections 2820-d et seq. of the Supplement to the Code of Iowa, 1913, as amended, and in accordance with a resolution of said Board duly adopted on the 18th day of May, 1922.

Dated at Klemme, Iowa, this 18th day of May, 1922.

LEW LEWIS,
Secretary, Board of Directors.
Pub. M-18-25-J-1-8

KLEMME MEN CATCH BIG ONES ON OPENING DAY AT LAKES

Monday quite a number of Klemme men were on the lake bright and early to try their luck at catching some of those big fish we hear so much about but seldom see.

Howard Doyle caught the next to the biggest fish that was pulled out of Clear Lake Monday. The pickerel which he succeeded in capturing tipped the scales at a few ounces over ten pounds, and measured thirty-two inches in length. The biggest fish caught at Clear Lake Monday was caught by John Rezab of Plymouth and weighed twenty pounds and was 43 inches long. It was necessary to break an oar over this fish before he could be landed and it took four men a half hour to play him out. This fish was caught along the north shore late in the afternoon on a bassereno bate, with rod and reel.

Outside of these two catches there were not many fish caught on the lake Monday and only a few caught the limit of game fish.

Lee Mitchell and Joe Gronsdal went to Spirit Lake where Mitchell captured the biggest pike on the opening day. The pike which he succeeded in capturing weighed seven and three-quarters pounds, which is considered to be "some pike."

CLARENCE BACHMAN BUYS BAUMGARTNER SHOP

New Barber Takes Charge Saturday

A deal was closed last week whereby J. E. Baumgartner disposed of his barber shop, building and fixtures, to Clarence A. Bachman of this place.

John has been in the barber business in Klemme for a great number of years and has enjoyed good business during that time and he will have many friends and customers who will miss having "Baum" give them their regular weekly Saturday shave. For a long time "Baum" has had what he called the only "Left-handed, three chair barber shop in the state of Iowa."

The new proprietor, Clarence A. Bachman is a son of Wm. Bachman of this city and of course is known by practically everyone. Clarence is a graduate of the Des Moines Barber College and can "swing a good razor." He is having the shop re-painted and re-papered and will make a number of changes and will also install a number of new fixtures.

We welcome him into the business circle of Klemme and wish John the best of luck wherever he may decide to locate.

Last week we mailed out over two hunderd statements to subscribers whose paper was past due. A great many subscriptions come due at this time of the year. There are still a few who have not remitted and to those we wish to again call their attention to the matter o please make an early settlement so that we can revise our mailing lis. Editor.

News Of The Week Reported By The Schools Of Klemme

The Klemme High School wishes to publicly express its gratitude to the gentlemen, Chris Gram and Walter Schultz, who so kindly opened up their garage to give the High School girls and boys a place in which to play basket-ball during the winter. We beleive that the public should know that these gentlemen furnished the garage to us without one cent of rent, and that they were put to some inconvenience to do so. The public does know how the young people enjoyed their basket-ball and the public enjoyed it as well. Thanks to Mr. Gram and Mr. Schultz for their generosity.

Fifth Number of the Lyceum Course

The fifth number of the Lyceum Course will be given by the Klemme Grade School at the Idle Hour on next Tuesday evening, May 23rd, beginning at 8:00 o'clock.

The complete program is given in another position in this week's issue of the Times. Look it over carefully as you will also find that the school will present a home talent on that evening as well as giving a large program besides. Don't miss this number on next Tuesday night.

Eighth Grade Examinations

The returns from the Eighth Grade examinations have come and we are more than pleased to learn that the entire class of fifteen passed. The members of the Seventh Grade were all successful in passing the examination in Geography, so they will not be required to take it next year.

Next Season's Crop off Freshies

The following is a list of the successful candidates for High School entrance next year.

Beatrice Busch	Helen Maitland
Janette Smid	LeNora Larsen
Anna Keeper	Ralph Larson
Harl Gimer	Ruth Johnson
Elvira Stille	Wayne Lemke
Mable Schaefer	Blanche Hulse
Florence Behringer	Frank Gibbs

Clara Larson

Much credit is due Miss Smith for her success in getting so large a class through successfully.

Klemme High Defeats Thornton High

Friday, May 12, Thornton High School base-ball team came to Klemme to play a return game.

The game was on the local diamond, and was interesting all the way through. At the end of the ninth inning the score was 9 to 2 in favor of the K. H. S. team. The box score of the local team was:

Players	AB	R	A	E
Wellemeyer	5	2	0	0
Busch	1	1	0	0
Ell	5	1	2	1
Lauritzen	5	0	1	0
Bergman	5	0	0	0
Wiles	5	1	2	0
Koerner	4	0	2	0
Gimer	4	0	0	0
Stille	4	2	0	0
Lemke	3	2	0	0
TOTAL	42	9	7	1

This was the last game we had scheduled but we hope to play three or four more games this school year.

General News

Edna Bergmann is back to school again after an absence of several months on account of sickness. She takes only practical law. Everyone is glad to see her back again.

John Baumgartner was absent on Monday afternoon and Tuesday morning. He said he was helping his father.

While some of the Intermediate and Grammar Room were practicing Tuesday, Gearald Koerner took charge of the Grammar Room and Florence Behringer of the Intermediate room.

The 7th Grade are now taking "Miles Standish."

The Eighth Grade are taking two ninth grade studies, Ancient History and Algebra. They will study these the rest of the year.

The last Freshman debate ended in a victory for the Negative side. The decision of the judges was 2 for the negative and 1 for the affirmative. The judges were Edna Bergmann, Marie Blank and Edwin Bock.

The 10th Grade play, "Mr. Bob," will probably be given at the Idle Hour Theatre June 1st. The date is not yet set. This play is the last number on the Lyceum Course; so everybody watch for the date and prepare to come. The cast of characters will be published in this paper next week.

Newborn Danger in Yellow Fever

May Cross Ocean in Event of Quick Transit Between American and African Tropics.

GORGAS' WARNING RECALLED

In Former Days Time of Transit Across Atlantic Was Long Enough to Allow all Cases of Fever on Board to Kill or Cure.

Panama.—The two Portuguese aviators flying across the Atlantic from Africa to South America brings to mind a prophetic warning of the late General Gorgas. This was to the effect that when quick transportation between tropical Africa and tropical America should develop, as it eventually would, it would greatly increase the danger of the spread of yellow fever to the Eastern Hemisphere as long as the disease remained in South America, especially in Brazil.

Days of the Slave Trade.

The reason why yellow fever did not spread from America to Africa in the days of the slave trade, as malaria did spread from Africa to America then, illutrates beautifully an important difference between the two great tropical plagues, as well as gives point and pertinence to General Gorgas' warning. Yellow fever kills or cures in a very short time; malaria may linger in the system for a very long time. In former days the time of transit across the Atlantic was long enough to allow all cases of yellow fever on board a ship to die or to recover before the voyage ended. Recovery conferred immunity on the fortunate, and if a mosquito should bite them after they reached Africa they found no germs in them to transmit to others. So it required a very quick transit to get the infection across. It is not yet positively certain that yellow fever ever did cross the ocean. General Gorgas was on his way to the west coast of Africa to settle this question definitely when he died in London.

An Important Difference.

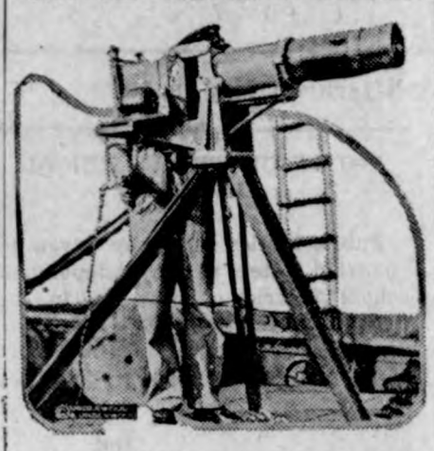
But malaria, which seems to have originated in Africa, does not confer immunity upon those who recover from an attack. The germs may survive in the system of the sufferer for months, or even for years, in a more or less dormant state, even if acute attacks do not again develop, and these germs may infect the anopheles or malaria-carrying mosquitoes, and so enable them to infect others. In this way the African slaves brought malaria to America with them, but the slave traders did not carry back yellow fever with them to Africa—at least it is not definitely known that they did—and the long time of transit was unfavorable to any considerable transportation of the infection. It is certain that Africa has not suffered from the imported American plague of yellow fever as much as America has from the malaria imported from Africa.

Airplane May Change This.

But the airplane may easily change all this. If the Atlantic is crossed in two or three days any member of the crew of an airplane having an infection of yellow fever may easily carry the disease to where the mosquitoes are waiting to do their part on both sides of the Atlantic. Yellow fever does not reveal itself immediately after a man is bitten by an infected mosquito.

The only safety would lie in a strict quarantine at the port of arrival in Africa or Europe, the crew and passengers all being detained under watch until the period of inoculation has passed. The other remedy is to clean up South America of yellow fever, as General Gorgas so strongly urged.

NAVAL MOVIE CAMERA



This looks like a cannon, but actualy it is a long-range movie camera used to take pictures of shells landing on targets during the navy shooting practice. It pictures the results at from 300 to 20,000 yards range.

Restore Minnie Hauk's Sight.

Paris.—Baroness Von Hesse-Wartegg, formerly Minnie Hauk of New York, has undergone what is described as a most successful operation for blindness. Her eyesight has been failing for the last seven years, until recently she had been barely able to distinguish between day and night. The operation was performed at the American hospital here.

1—Procession in Stratford-on-Avon when Shakespeare's birthday was celebrated, with the flags of all nations unfurled. 2.—First interior picture of the Lincoln Memorial in Washington, showing the statue of Lincoln. 3—Women strike pickets who, with their babies, were put in jail in Chicago for contempt of court, but later released by the judge who sentenced them.

Would Harness Heat of Kilauea

Borings in Volcano Suggested to See if It Can Be Converted Into Power.

EXPERTS SEE POSSIBILITIES

Tentative Plans for the Experiment Embrace at Least 50 Borings to Provide Thermal Map of Hot Belt of Volcano.

Honolulu.—An immediate start on experimental borings in the bed of the active volcano of Kilauea, on the island of Hawaii, to determine whether the heat of the volcano can be harnessed and converted into electrical power, was urged by Dr. T. A. Jaggar, director of the Volcano observatory, at the annual meeting of the Volcano Research association here.

Doctor Jaggar said that tentative plans for the experiment embraced at least 50 borings so located as to provide a thermal map of the hot belt of the volcano. The first boring would be sunk to a depth of 200 or 300 feet in the center of the crater, with the others at 50 to 100 feet deep, depending upon the nature of the resultant discoveries.

Most of these borings will be made at the source of old lava flows.

The meeting, commemorative of the tenth anniversary of the founding of the research association, decided that the borings should not be made until subscriptions totaling $8,000 had been obtained to defray the expenses. Of this sum $7,000 already has been donated.

Doctor Jaggar also recommended the construction of a practicable pack trail to the summit of Mauna Loa, 14,000 feet above sea level. Kilauea is situated 4,000 feet above sea level, on the slopes of Mauna Loa. Doctor Jaggar said that he expected a summit outbreak of Mauna Loa, in the crater of Mokuaweoweo, next year, or in the year 1924, as nine years will have lapsed then since Mauna Loa's last activity.

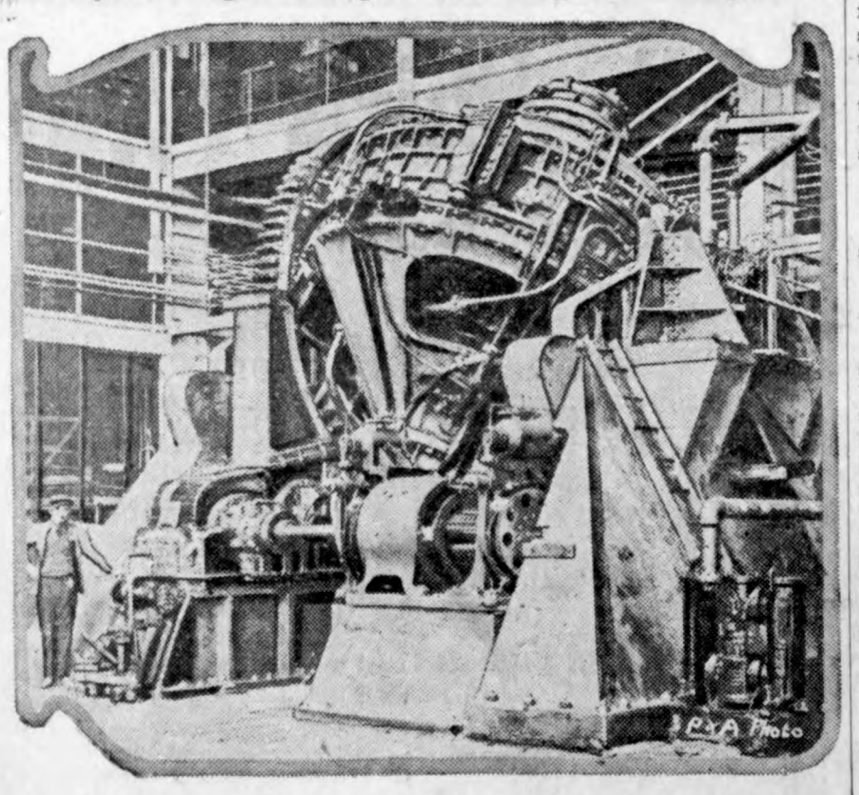
Wants House for Scientists.

He also urged the construction of a house at the summit in order that scientists might be quartered there in anticipation of this outbreak, as nobody has been known to have witnessed the first stages of one of Mauna Loa's activities.

Previously attention has always been attracted to the outbreak at the summit by the reflection in the clouds above of the glow of the boiling fire fountains which had risen through the summit crater. The board of directors indorsed this suggestion.

Doctor Jaggar's report reviewed the work of the research station on the brink of Kilauea volcano and the activities of the association.

Gyroscope Stops Rolling of Ships



Here is the giant Sperry gyroscope, a mechanical device which will prevent the rolling of the ship which is equipped with it. This is one of the biggest of its kind and will be installed on the shipping board liner Hawkeye State.

PULLS TOOTH TO TOOT FLUTE

Schoolboy Sacrifices Crooked Incisor to Further Life's Ambition to Become a Musician.

Philadelphia.—A real martyr to music has been brought to light by Miss Winnetta L. Stacks, superintendent of the Methodist Episcopal Deaconess home here. Miss Stacks in describing her efforts to initiate music classes in settlement work, told of one small boy who confided that his life's ambition was to play the flute. The teacher struggled in vain to teach, but his lips would not pucker right.

"Joe, I guess you will never learn to blow a flute because of the way that front tooth has grown. It is in the way," she said finally.

A few days later the lad's mother returned home to find her son's face bloody, but shining with triumph. He had borrowed pliers and had pulled the tooth.

"And at the first recital of the students of the class," Miss Stacks concluded, "he blew notes on the flute."

NEWS REVIEW OF CURRENT EVENTS

Russia's Reply at Genoa to the Allied Proposals Merely Dodges the Issues.

IS INACCEPTABLE TO FRANCE

Text of Russo-German Military Pact Published in Paris—No Peace Yet in Ireland—Chicago Wars on Labor Terrorists—Daugherty on Army Contract Frauds.

By EDWARD W. PICKARD

RUSSIA'S reply to the proposals of the allied nations represented at the Genoa conference, awaited with greatest anxiety for days, was handed in last Thursday, and proved to be not a real reply but a long controversial document.

"Wholly unsatisfactory," was the verdict of the French and Belgians, but M. Barthou and his colleagues awaited word from Paris before withdrawing from the conference.

On the other hand the British, though far from satisfied with the answer of the soviet delegates, professed to see in it a chance for further negotiations which might well lead to an amicable settlement. They called the Russian note distinctly conciliatory.

Concerning the crucial clauses of the allied note dealing with the restoration of foreign property confiscated by the soviets, the Russians made the general proposition that all financial matters between Russia and the powers be placed in the hands of a mixed commission of experts, but they rejected the proposed mixed commission to determine the payment for nationalized property because it "would make the sovereignty of the Russian state a plaything of chance." Since the other powers refuse the immense loan the Russians demanded, the latter withdrew their renunciation of counter claims based on allied help given the various anti-bolshevik leaders.

Lloyd George was hopeful that, if the financial questions were turned over to a mixed commission, the conference might be carried along until his nonaggression pact is made a reality. The Italians are supporting him, while Japan shows signs of standing with France and Belgium in demanding immediate and definite reply by Russia.

THAT story of a military convention signed by representatives of the Russian soviet army and the German general staff in Berlin April 3, first sprung by the London Times and vigorously denied, will not down. Now the Paris Journal L'Eclair prints what purports to be the text of the pact. In it the Germans agree to furnish the Red army with arms and material for 180 regiments of infantry and heavy field artillery for 20 infantry divisions; to train 60 Russian instructors in the latest developments of chemical warfare and to send technical experts to Russia to speed up the munition plants and open new ones. The German general staff pledges to reorganize the Russian Baltic and Black seat fleets and to supply at the earliest possible date 500 new airplanes together with a supply of spare parts, and 150 field wireless outfits.

The Russian army staff guarantees the establishment in Russia of three German plants, one for the manufacture of airplanes, one for poison gas and one for arms, on condition that the Russian army can use the output when needed. German specialists would be admitted to "the new arms factory in Afghanistan." The two staffs, it is agreed, will prepare a joint plan of operations to give Russia access to the Baltic sea.

ANOTHER session of the council of the League of Nations opened Thursday in Geneva with Count Quinones de Leon of Spain presiding. Unexpectedly, the earl of Balfour interjected the matter of Palestine, announcing that he would demand immediate approval of the British mandate, following formal agreement on the matter between Great Britain and the United States. It was feared this would create another opening for friction between France and Great Britain.

GENERAL WU PEI-FU'S victory over General Chang near Peking was complete. The Manchurian army was scattered and thousands were taken prisoners and disarmed, each man being given a sum of money which Wu obtained by levying on banks that had supported Chang. The defeated leader fled into the country with his body guard with Wu's soldiers in hot pursuit. Near Luangchow, on the railway to Mukden, Chang gathered some of his forces and entrenched, and at latest reports another fight was expected there. Wu, who appointed himself governor of Chihli province, approved the appointment of Wang Shih Cheng as premier to succeed Liang Shi-Yi, who fled to Japan. President Hsu then dismissed Chang as governor of Manchuria and deprived him of all his titles. More important was his action in decreeing that hereafter each province shall be responsible direct to the central government instead of through military dictators. He thus sought to abolish the system of tuchuns or military inspectors who have been ruling over two or more provinces and were virtually independent of Peking. General Wu says his sole aim is the reunification of China and the end of militarism, and he urges the immediate calling of a national assembly. He has no choice as to the form of government except that it be democratic and representative.

FOR a few days it looked as if Ireland might have something resembling peace—but only for a few days. On Wednesday the peace committee, on which both sides were represented, reported to Dail Eireann that it was unable to agree on a basis for adjusting the differences between the Free States and the republican extremists, neither party being able to compromise without complete surrender. At the same time the truce expired automatically. The radicals declare they will try to prevent the holding of the election scheduled for the second week in June and the Free State men declare it shall be held; which conflict of intentions furnishes the basis for a continuation of the bushwhacking warfare.

NAGGED by congress through a resolution for an investigation of Attorney General Daugherty's failure to proceed legally against those who have been robbing the government in war contracts, that official made a report to President Harding in which he blamed the delay on congress.

The attorney general laid the blame for failure to prosecute upon congress and promised an energetic campaign against war profiteers as soon as necessary legislation is enacted. He called for prompt action on the measure creating twenty-three additional federal judgeships, the bill establishing a special grand jury in the District of Columbia to grind out indictments against accused contractors, and an additional appropriation of $500,000 to enable the department of justice to continue its inquiries.

Mr. Daugherty called attention to the fact that nearly all the transactions in question took place during the preceding administration and that naturally little was done then to bring them to light. He promised that he would soon make public the names of influential personages who had knowledge of the transactions but were personally interested in concealing them.

DIRECTOR OF THE BUDGET DAWES made a report to the President on the operation of the budget system in which he showed it had resulted in economies totaling $225,000,000 for the current fiscal year, and that there would be a reduction of over $1,600,000,000 from the actual expenditures for 1921. In transmitting the report to the house appropriations committee Mr. Harding said it conveyed to the people the determination of those in authority to operate the government effectively at the least possible cost, to make the government's full contribution to a return to the normal ways of peace and ultimately lifting the excessive burden of taxation."

"Political bunk" was the retort of Democratic members of congress. They asserted the report was deceptive and that the actual expenditures for the routine business of the government have increased rather than decreased. They called attention to deficiency appropriations aggregating $292,000,000, but Representative Madden challenged them to deny that only $[illegible] 000,000 of this deficiency was attributable to the activities of the present administration.

MR. SPENCER, the junior senator from Missouri, got into an unpleasant mess through his efforts to have the senate confirm the unfortunate appointment of Nat Goldstein to be internal revenue collector for the eastern Missouri district. Mr. Goldstein was a delegate to the Republican national convention but was unseated after admitting he had accepted money from one of Frank O. Lowden's managers. The appointment was violently attacked in the senate, and Mr. Lowden, who was on an ocean steamer, sent a radiogram declaring that in his opinion Goldstein was unfit for the job. Finally, to relieve the President and Senator Spencer from embarrassment, Goldstein asked that the nomination be withdrawn. This was done, but the Democrats made it plain that they intended to keep the incident alive for use in the approaching campaign.

LEADERS of building trade unions in the Chicago district who have been fighting the Landis wage award appear to have overreached themselves at last. Not content with bomb throwing, incendiarism and blackmail, some of them or their hired gunmen during a week killed two policemen who had interrupted their operations, and wounded a third. The brutal murders aroused Chicago to the determination to wipe out the outlaw bands. Subsequent police raids caught a large number of labor leaders, including some who were ex-convicts and others who are under conviction of crimes or awaiting trial. Among the prisoners, asserted by the police, are the men really responsible for the reign of labor terror which has gripped Chicago for so long a time.

Samuel Gompers of course also has refused to countenance violence in labor disputes, but it is hard to see how he came entirely avoid some share of responsibility for these crimes in Chicago, in view of the open encouragement he recently gave the unions that are seeking to repudiate their agreements to accept the verdict which might be rendered by Judge Landis, the arbitrator chosen by themselves.

AMERICA lost one of her most eminent financiers in the death of Henry P. Davison, who passed away at the conclusion of an operation to remove tumor from the brain. By his own efforts he had attained a high position among bankers and he had also accumulated a large fortune. During the World war he made a great record as head of the American Red Cross.

AT THIS writing President Harding has not stated which of the bills for a soldier's bonus bill—the sales tax or the insurance—he prefers, but whether he will accept either one the prediction in Washington is that he will veto the bill and that it will be passed over his veto. Leaders in congress have refused to let the session go beyond July.

THE interallied war council in Paris, has agreed that Germany shall manufacture a Zeppelin of 2,000,000 meters capacity to replace the one allotted to the United States by the Versailles treaty but destroyed by Germany. It will probably be delivered within nine months and a German crew is to bring it across the Atlantic.

THE federal railroad labor board has issued an order last week which may serve to avert the threatened strike of 600,000 shopmen and trainmen. This ruling places a ban on the contract system of farming out shop work under which many railroads are said to have been evading the decisions of the board as to wages, working conditions and other matters.

"ANGEL" WILL BUY A VILLAGE

Swedish Red Cross Nurse Seeks to Rehabilitate War Wrecks.

Aristocratic Girl Gathers German Refugees From Wastes of Siberia—Has Already Repatriated Thousands of War Prisoners.

Stockholm,—A refuge of rest and physical rehabilitation where the human wrecks of German war prisoners from Russia and Siberia may be treated and salvaged is being purchased by Miss Elsa Brandstrom, known throughout central Europe and Russia as "the angel of Siberia."

Miss Brandstrom is negotiating for a village in southern Germany which she proposes to turn into a human reclamation camp for the derelicts that once marched proudly under Hindenburg and other Teutonic military leaders against the Russians and were captured and sent to Siberian concentration camps.

They remained in Siberia till long after the world war was over, and there are still thousands of them left, free to return home if they could. But they have neither the means nor the physical strength to do so.

Miss Brandstrom is a young Swedish Red Cross nurse, the daughter of the late Gen. Edward Brandstrom, for many years Swedish minister to Russia under the czar's regime. Leaving her comfortable home in Stockholm and the aristocratic social set in which she had been brought up, she led a small Red Cross expedition into western Siberia and has succeeded in repatriating thousands of German and Austrian war prisoners.

But she found that when the former soldiers reached their homes they were unable to assume their former places in society. They were wrecks.

So she has collected a considerable fund and hopes to purchase a village and have it ready for occupancy this autumn.

As to the war prisoners still wandering about Russia and Siberia, many of them never will be found, and none of them will ever be able to get back without outside aid. Miss Brandstrom proposes to continue rounding up these waifs and bringing them to her haven of rest.

Wooden Leg as Flask.

Spartanburg, S. C.—The storied "uses of adversity" proved anything but sweet the other day for Alex Ballenger, a one-legged Spartanburg Negro. When a faint and muffled "splash, splash" was heard to accompany him as he hobbled down Main street a policeman took him in. At the station a cache in his wooden leg was found to contain a pint of liquor. The judge imposed a fine of $100 for transporting intoxicants.

Organize Wild Life League.

Clarksburg, W. Va.—Organization was perfected here of the Wild Life League of West Virginia, designed to foster fish, game and forest protection.

A COUPLE OF CAPITALISTS

They Saved and Saved to Get the Thing They Wanted, and Then Found It Didn't Satisfy.

By ELEANOR PORTER

Author of "Pollyanna," "Just David," Etc.

Copyright by Eleanor H. Porter.

ON THE top of the hill stood the big brick house—a mansion, compared to the other houses of the New England village. At the foot of the hill nestled the tiny brown farmhouse, half buried in lilacs, climbing roses, and hollyhocks.

Years ago when Reuben had first brought Emily to that little brown cottage, he had said to her wistfully: "Sweetheart, 'tain't much of a place, I know, but we'll save and save, every cent we can get, an' by an' by we'll go up to live in the big house on the hill!" And he kissed so tenderly the pretty little woman he had married only that morning that she smiled brightly and declared that the small brown house was the very nicest place in the world.

But, as time passed, the "big house" came to be the Mecca of all their hopes, and penny by penny the savings grew. It was slow work, though, and to hearts less courageous the thing would have seemed an impossibility. No luxuries—and scarcely the bare necessities of life—came to the little house under the hill, but every month a tiny sum found its way into the savings bank.

Reuben never smoked. While other men used the fragrant weed to calm their weary brains and bodies, Reuben ate peanuts. It had been a curious passion of his, from the time when as a boy he was first presented with a penny of his very own, to spend all his spare cash on this peculiar luxury; and the slow munching of this plebeian delicacy had the same soothing effect on him that a good cigar or an old clay pipe had upon his brethren. But from the day of his marriage all this was changed; the dimes and the nickels bought no more peanuts, but went to swell the common fund.

It is doubtful if even this heroic economy would have accomplished the desired end had not a certain railroad company cast envious eyes upon the level valley and forthwith sent long arms of steel bearing a puffing engine up through the quiet village. A large tract of waste land belonging to Reuben Gray suddenly became surprisingly valuable, and a sum that trebled twice over the scanty savings of years grew all in a night.

One crisp October day, Mr. and Mrs. Reuben Gray awoke to the fact that they were a little under sixty years of age, and in possession of more than the big sum of money necessary to enable them to carry out the dreams of their youth. They began joyous preparations at once.

The big brick house at the top of the hill had changed hands twice during the last forty years, and the present owner expressed himself as nothing loath to part, not only with the house itself, but with many of its furnishings; and before the winter snow fell the little brown cottage was sold to a thrifty young couple from the neighboring village, and the Grays took up their abode in their new home.

"Well, Em'ly, this is livin', now, isn't it?" said Reuben, as he carefully settled himself down into the depths of a velvet covered chair in the great parlor. "My! ain't this nice!"

"Just perfectly lovely," quavered the thin voice of his wife, as she threw a surreptitious glance at Reuben's shoes to see if they were quite clean enough for such sacred precincts.

It was their first evening in their new abode, and they were a little weary, for they had spent the entire day in exploring every room, peering into every closet and trying every stair that the establishment contained. It was still quite early when they trudged anxiously about the house, intent on fastening the numerous doors and windows.

"Dear me!" exclaimed the little woman nervously, "I'm most afraid to go to bed, Reuben, for fear some one will break in an' steal all these nice things."

"Well, you can sit up if you want to," replied her husband dryly, "but I shall go to bed. Most of these things we've been here nigh on to twenty years, an' I guess they'll last the night through." And he marched solemnly up stairs to the big east chamber, meekly followed by his wife.

It was the next morning when Mrs. Gray was washing the breakfast dishes that her husband came in at the kitchen door and stood looking at her thoughtfully.

"Say, Emily," said he, "you'd ought to have a hired girl. 'Tain't your place to be doin' work like this now."

Mrs. Gray gasped—half terrified, half pleased—and shook her head; but her husband was not to be silenced.

"Well, you had—an' you've got to, I say. An' you must buy some new dishes—lots of 'em! Why, Em'ly, we've got heaps of money now, an' we don't ought'er wear such lookin' rags."

Emily nodded; she had thought of it before. And the hired-girl hint must have found a warm spot in her heart in which to grow, for that very afternoon she sallied forth, intent on going to her counsellor on all occasions—the doctor's wife.

"Well, Mis' Steele, I don't know what to do. Reuben says I ought to have a hired girl; but I hain't no more idea where to get one than anything, an' I don't know's I want one, if I did."

And Mrs. Gray sat back in her chair and rocked violently to and fro, eyeing her hostess with the evident consciousness of having presented a poser. That resourceful woman, however, was far from being nonplussed; she beamed upon her visitor with a joyful smile.

"Just the thing, my dear Mrs. Gray! You know I am to go south with May for the winter. The house will be closed and the doctor at the hotel. I had just been wondering what to do with Nancy, for I want her again in the spring. Now, you can have her until then, and by that time you will know how you like the idea of keeping a girl. She is a perfect treasure, capable of carrying the entire work of the household, only"—and Mrs. Steele paused long enough to look doubtfully at her friend—"she is a little independent, and won't stand much interference."

Fifteen minutes later Mrs. Gray departed, well pleased, though withal a little frightened. She spent the rest of the afternoon in trying to decide between a black alpaca and a green cashmere dress.

That night Reuben brought home a large bag of peanuts and put them down in triumph on the kitchen table.

"There!" he announced in high glee. "I'm goin' to have a bang-up good time!"

"Why, Reuben," remonstrated his wife gently, "you can't eat them things—you hain't got no teeth to chew 'em with!"

The man's lower jaw dropped.

"Well, I'm a-goin' to try it, anyhow," he insisted. And try it he did; but the way his poor old stomach rebelled against the half-masticated things effectually prevented a repetition of the feast.

Early on Monday morning Nancy appeared. Mrs. Gray assumed a brave aspect, but she quaked in her shoes as she showed the big strapping girl to her room. Five minutes later Nancy came into the kitchen to find Mrs. Gray bending over an obstinate coal fire in the range—with neither coal nor range was the little woman in the least familiar.

"There, now," said Nancy briskly, "I'll fix that. You just tell me what you want for dinner, and I can find the things myself." And she attacked the stove with such a clatter and din that Mrs. Gray retreated in terror, murmuring, "Ham and eggs, if you please," as she fled through the door. Once in the parlor, she seated herself in the middle of the room and thought how nice it was not to get dinner; but she jumped nervously at every sound from the kitchen.

On Tuesday she had mastered her fear sufficiently to go into the kitchen and make a cottage cheese. She did not notice the unfavorable glances of her maid-of-all-work. Wednesday morning she spent happily puttering over "doing up" some handkerchiefs, and she wondered why Nancy kept banging the oven door so often. Thursday she made a special kind of pie that Reuben liked, and remarked pointedly to Nancy that she herself never washed dishes without wearing an extra apron; furthermore, she always placed the pans the other way in the sink. Friday she rearranged the tins on the pantry shelves, that Nancy had so unaccountably mussed up. On Saturday the inevitable explosion came:

"If you please, mum, I'm willin' to do your work, but seems to me it don't make no difference to you whether I wear one apron or six, or whether I hang my dish-towels on a string or on the bars, or whether I wash goblets or kittles first; and I ain't in the habit of havin' folks spyin' round on me. If you want me to go, I'll go; but if I stay, I want to be let alone!"

Poor little Mrs. Gray fled to her seat in the parlor, and for the rest of that winter she did not dare to call her soul her own; but her table was beautifully set and served, and her house was as neat as wax.

The weeks passed and Reuben began to be restless. One day he came in from the post office fairly bubbling over with excitement.

"Say, Em'ly, when folks have money they travel. Let's go somewhere!"

"Why, Reuben—where?" quavered his wife, dropping into the nearest chair.

"Oh, I dunno," with cheerful vagueness; then suddenly animated, "Let's go to Boston and see the sights!"

"But, Reuben, we don't know no one there," ventured his wife doubtfully.

"Pooh! What if we don't? Hain't we got money? Can't we stay at a hotel? Well, I guess we can!"

Nancy was tremblingly requested to take a two weeks' vacation, and great was the rejoicing when she graciously acquiesced.

On a bright February morning the journey began. It was not a long one—four hours only—and the time flew by as on wings of the wind. Reuben assumed an air of worldly wisdom, quite awe-inspiring to his wife. He had visited Boston as a boy, and so had a dim idea of what to expect; moreover, he had sold stock and produce in the large towns near his home, and on the whole felt quite self-sufficient.

As the long train drew into the station, and they alighted and followed the crowd, Mrs. Gray looked with round eager eyes of wonder at the people—she had not realized that there were so many in the world, and she clung closer and closer to Reuben, who was marching along with a show of indifference.

"There," said he, as he deposited his wife and his bags in a seat in the huge waiting room; "now you stay right here, an' don't you move. I'm going to find out about hotels and things."

He was gone so long that she was nearly fainting from fright before she spied his dear form coming toward her. His thin, plain face looked wonderfully beautiful to her, and she almost hugged him right before all those people.

"Well, I've got a hotel all right; but I hain't been here for so long I've kinder forgot about the streets, so the man said we'd better have a team to take us there." And he picked up the bags and trudged off, closely followed by Emily.

His shrewd Yankee wit carried him safely through a bargain with the driver, and they were soon jolting and rumbling along to their destination. He had asked the man behind the newsstand about a hotel, casually mentioning that he had money—plenty of it—and wanted a "bangup good place." The spirit of mischief had entered the heart of the newsman, and he had given Reuben the name of one of the very highest-priced, most luxurious hotels in the city.

As the carriage stopped, Reuben marched boldly up the broad steps and entered the palatial office, with Emily close at his heels. Two bellboys sprang forward—the one to take the bags, the other to offer to show Mrs. Gray to the reception room.

"No, thank you, I ain't particular," said she sweetly; "I'll wait for Reuben here." And she dropped down into the nearest chair, while her husband advanced toward the desk. She noticed that men were looking curiously at her, and she felt relieved

"Why, Reuben Gray! Whatever in the World Are You Doing?"

when Reuben and the pretty boy came back and said they would go up to their room.

She stood the elevator pretty well, though she gave a little gasp (which she tried to choke into a cough) as it started. Reuben turned to the boy.

"Where can I get somethin' to eat?"

"Luncheon is being served in the main dining-room on the first floor, sir."

Visions of a lunch as he knew it in Emily's pantry came to him, and he looked a little dubious.

"Well, I'm pretty hungry; but if that's all I can get I suppose it will have to do."

Ten minutes later an officious head waiter, whom Emily looked upon with timid awe, was seating them in a superbly appointed dining-room. Reuben looked at the menu doubtfully, while an attentive, soft-voiced man at his elbow bent low to catch his order. Few of the strange-looking words conveyed any sort of meaning to the poor hungry man. At length spying "chicken" halfway down the card, he pointed to it in relief.

"I guess I'll take some of that," he said, briefly; then he added, "I don't know how much it costs—you hain't got no price after it."

The waiter comprehended at once.

"The luncheon is served in courses, sir; you pay for the whole—whether you eat it or not," he added shrewdly. "If you will let me serve you according to my judgment, sir, I think I can please you."

Two hours later they started for a long walk down the wonderful, fascinating street. Each marvelous window display came in for its full share of attention, but they stood longest before bakeries and restaurants. Finally, upon coming to one of the latter, where an enticing sign announced "Boiled Dinner Today, Served Hot at All Hours," Reuben could endure it no longer.

"By Jinks, Em'ly, I've just got to have some of that. That stodged-up mess I ate at the hotel didn't go to the spot at all. Come on, let's have a good square meal."

The hotel knew them just one night. The next morning before breakfast Reuben manfully paid his—to him astounding—bill and departed for more congenial quarters, which they soon found on a neighboring side street.

The rest of the visit was, of course, delightful, only the streets were pretty crowded and noisy, and they couldn't sleep very well at night; moreover, Reuben lost his pocketbook with a small sum of money in it; so, on the whole, they concluded to go home a little before the two weeks ended.

When spring came Nancy returned to her former mistress, and her vacant throne remained unoccupied. Little by little the dust gathered on the big velvet chairs in the parlor and the room was opened less and less. When the first green things commenced to send tender shoots up through the wet, brown earth, Reuben's restlessness was very noticeable. By and by he began to go off very early in the morning, returning at noon for a hasty dinner, then away again till night. To his wife's repeated questioning he would reply, sheepishly, "Oh, just loafin', that's all."

And Emily was nervous, too. Of late she had taken a great fancy to a daily walk, and it always led in one direction—down past the little brown house. Of course she glanced over the fence at the roses and lilacs, and she couldn't help seeing that they all looked sadly neglected. By and by the weeds came, grew, and multiplied; and every time she passed the gate her throat fairly choked in sympathy with her old pets.

Evenings, she and Reuben spent very happily on the back stoop, talking of their great good fortune in being able to live in such a fine large house. Somehow they said more than usual about it this spring.

One day, in passing this same little house, Emily stopped a moment and leaned over the gate, that she might gain a better view of her favorite rosebush.

She evinced the same interest the next two mornings, and on the third she timidly opened the gate and walked up the old path to the door. A buxom woman with a big baby in her arms, and a bigger one hanging to her skirts, answered the knock.

"How do you do, Mis' Gray. Won't you come in?" said she civilly, looking mildly surprised.

"No, thank you—yes—I mean—I came to see you," stammered Emily confusedly.

"You're very good," murmured the woman, still standing in the doorway.

"Your flowers are so pretty," ventured Mrs. Gray, unable to keep the wistfulness out of her voice.

"Do you think so?" carelessly; "I s'pose they need weedin'. What with my babies an' all, I don't get much time for posies."

"Oh, please,—would it be too much trouble to let me come an' putter around the beds?" queried the little woman eagerly. "Oh, I would like it so much!"

The other laughed heartily.

"Well, I really don't see how it's goin' to trouble me to have you weedin' my flowers; in fact, I should think the shoe would be on the other foot." Then the red showed in her face a little. "You're welcome to do whatever you want, Mis' Gray."

"Oh, thank you!" exclaimed Emily, as she quickly pulled up an enormous weed at her feet.

It took but a few hours' work to bring about a wonderfully happy change in that forlorn garden, and then Mrs. Gray found that she had a big pile of weeds to dispose of. Filling her apron with a portion of them, she started to go behind the house in search of a garbage heap. Around the corner she came face to face with her husband, hoe in hand.

"Why, Reuben Gray! Whatever in the world are you doing?"

For a moment the man was crushed with the enormity of his crime; then he caught sight of his wife's dirt-stained fingers.

"Well, I guess I ain't doing no worse than you be!" And he turned his back and began to hoe vigorously.

Emily dropped the weeds where she stood, turned about, and walked through the garden and up the hill, pondering many things.

Supper was strangely quiet that night. Mrs. Gray had asked a single question: "Reuben, do you want the little house back?"

A glad light leaped into the old man's eyes.

"Em'ly—would you be willin' to?"

After the supper dishes were put away, Mrs. Gray, with a light shawl overhead, came to her husband on the back stoop.

"Come, dear; I think we'd better go down tonight."

A few minutes later they sat stiffly in the best room of the farmhouse, while the buxom woman and her husband looked wonderingly at them.

"You wa'n't thinkin' of sellin', was ye?" began Reuben insinuatingly.

The younger man's eyelid quivered a little.

"Well, no,—I can't hardly say that I was. I hain't but just bought."

Reuben hitched his chair a bit and glanced at Emily.

"Well, me and my wife have concluded that we're too old to transplant—we don't seem to take root very easy—and we've been thinkin'—would you swap even, now?"

It must have been a month later that Reuben Gray and his wife were contentedly sitting in the old familiar kitchen of the little brown house.

"I've been wondering, Reuben," said his wife—"I've been wondering if 'twouldn't have been just as well if we'd taken some of the good things while they was goin'—before we got too old to enjoy 'em."

"Yes—peanuts, for instance," acquiesced her husband ruefully.

Bird Islands of Peru

Heaping Screened Guano for Transfer to Mainland.

(Prepared by the National Geographic Society, Washington, D. C.)

Peru, already of considerable agricultural importance and destined to become much more so, is fortunate in having one of the most valuable sources of natural fertilizer in the world—its famous "bird islands" on which thousands of tons of guano are deposited in a sort of annual crop. These deposits, rich in precious nitrogen, have been laid down on the islands for thousands of years, and until recently there seemed a well-nigh inexhaustible mine of the material. But the tremendous world demand which arose near the middle of the past century brought in its train wasteful methods, and all the accumulated deposits have been stripped away. The annual accumulations are still available, however, and are worth many hundreds of thousands of dollars.

Peru's peculiar geographical conditions make possible the preservation of her valuable guano "crop." A few showers might wash away the valuable fertilizer, but thanks to its mountain masses, its very cold off-shore waters and its prevailing winds, the region of the Bird islands is rainless.

Guano, it will be understood, is primarily the deposit of fish-eating birds, into which may be mixed and incorporated—in greater or less proportion—a variety of other substances, such as the eggs and bodies of birds and the deposits and the bodies of sealions. It may be found mixed with gravel and sand in very small proportion or sometimes to an extent rendering it unprofitable to extract.

Peruvian Guano Is Best.

"Peruvian guano" is practically synonymous with nitrogenous guano and has long been recognized as the best nitrogenous fertilizer—that is, as a fertilizer of generally high nitrogen value in which the nitrogen compounds are found in a condition most readily assimilable by our plants.

Nitrogen is a primary necessity to the farmer. Whatever be the importance of adding to the soil potash and other mineral components of our food and our clothing, there never exists a doubt as to the fundamental importance of nitrogen. Consequently a peculiar interest attaches to birds of the Peruvian islands, which have long served to aid the world's agriculture and which, given due protection, may continue indefinitely to contribute materially to the support of humanity.

The peculiar climatic conditions previously mentioned offer merely the proper environmental conditions for the preservation of the product. The primary requisite for abundant bird life is the existence of a plentiful food supply, and this is found in the schools of small fish, called anchobetas, that swarm in the Peruvian current. There shoals of fish, acres in extent, are often pursued in the water by bonito and other large fish, while beset from the air by thousands of birds.

Billions of pounds of fish must be consumed each year by the birds, besides the incalculable quantity devoured by other fishes; but the fecundity of the anchobetas is such that their numbers are still maintained. At times great acres of the sea are made red by myriads of small, brightly colored shrimp-like crustacea; and these, too, play a part of importance as food for the fishes and birds.

Islands Crowded With Guanays.

Not all of the birds are of equal importance from the commercial point of view. Indeed, three species virtually support the guano industry at the present time—the white-breast cormorant (guanay), the big gray pelican and the white-head gannet.

Guanays occur on the Peruvian coast from near the northern to the extreme southern boundary, but their preeminent home is the double group of islands opposite Pisco, in the South, the Chinchas and the Ballestas.

The largest guanay flocks are found on the Chincha islands. Upon the south island of the Chinchas, a small and generally triangular body of land between 20 and 30 acres in area, there is a rookery whicli for size and compactness can scarcely be rivaled in any part of the world.

The nesting ground occupies about two-thirds of the surface of the island, embracing the crown and the gentle slopes of the hill that surmount its low bluff walls. The nests are very uniformly spaced, averaging nearly three to the square yard, and not a yard of ground within the outside limits of the rookery is unoccupied. In form and arrangement the nests appear as heavy rolled-rim basins stuck into the hillside.

The guanay well deserves its common name. Its gregarious habit, its choice of the level places or more gentle slopes for nesting grounds, and its custom of remaining on the islands a great part of the time all combine to cause the formation of enormous deposits of guano, from which there is little natural waste. In the region where this bird is most abundant, about the Chinchas and Ballestas islands, the climate conditions are most favorable to the preservation of the nitrates. It is doubtful if the guano of the Chinchas and Ballestas islands is ever wet from atmospheric moisture. A pair of guanays, with their offspring, produce nearly $1.50 worth of guano per year.

How the Work Is Done.

The guano workers are practically all Peruvians of the ancient stock, and many of them come down from the mountains to engage in this work. Often there are few in the camp who can speak Spanish and the foreman can communicate with the employees only by signs or through an interpreter.

The extraction of guano is a very simple process. Where the material is comparatively recent, the only implements required are the pick and the shovel, a screen and a few sacks. The surface cake is first broken up and thrown into small heaps. Where several contractors have a concession from the government covering the same island, there is much rivalry in getting the best guano mounded, for this is the only recognized method of establishing a claim to a particular field.

The guano is subsequently pitched through slanting wire screens to remove the gravel, and then sacked for embarkation by lanchas, which are strongly constructed lighters in the form of rowboats, adapted for use in the heavy swell liable to prevail about the islands.

A very common method of conveying the guano to the lighter is by means of the andarivel, an aerial trolley consisting of two stout wire cables suspended between a frame at the top of the island and some convenient rock somewhat removed from the shore.

The boat is rowed beneath the lower part of the cable to receive the guano, lowered by pulleys and windlass. Both ends of the line being attached to traveling pulleys, the sacks of guano, descending by gravity, draw the empty sacks back. No power is applied to the windlass except to prevent the too-rapid descent of the guano. When the lancha is loaded it is rowed out to the vessel, where the sacks are hoisted into the hold.

A much more extensive equipment is found on the larger islands of the north. An American company, contracting for the Peruvian exporters, has laid lines of track for conveying the guano by tram-cars, and the screening is done from trestles over a lower-level track.

By far the greatest portion of the guano that has been exported consisted of the ancient deposits, called "mineral" guano, which in places covered the islands to great depths. This has been simply stripped away until scarcely any of the old guano remains except some of the lowest grades that scarcely justify exportation.

It is within the bounds of possibility that additional deposits, buried beneath the surface, may yet be located. Unless this be the case, the industry is permanently reduced to the annual deposits, which scarcely exceed the demands of Peruvian agriculture in its present condition, without providing for the great future developments in land cultivation in that country that must follow sooner or later with the adoption of more elaborate systems of irrigation.

Though the important birds have been greatly reduced in numbers, it is reasonable to expect a substantial increase under natural conditions, if interference with the breeding be reduced to the minimum consistent with the utilization of the deposits.

News of Klemme and Vicinity

FOR SALE—Tomato Plants. Anna Gibbs, Klemme, Iowa. 1wp

Mrs. C. M. Gram was a visitor at Goodell the other day.

Mr. T. D. Rankins of Belmond was in Klemme last Fridap.

Levi Klotchbach and family were Clear Lake visitors Sunday.

Mr. and Mrs. R. A. Jorgenson and son spent Sunday visiting Garner relatives.

Maxine McCullough came down from Garner last evening for a visit at the home of her brother, G. P.

Give nature a chance. Take Tanlac, nature's own medicine. E. S. D. Kahrs. adv

M. A. Fell, of Garner, was in town Tuesday morning looking after matters of business.

J. P. Larsen and wife returned last week from Cornelia, Iowa, where they had been visiting.

Mrs. Gee came over from Goodell Thursday for a visit with her daughter, Mrs. Chris Gram.

Art Wellemeyer drove to Forest City Monday after another truckful of garden plants.

Mrs. J. Jorgenson, of Garner, visited from Sunday evening until Wednesday at the home of her son and family here, R. A. Jorgenson.

Mr. and Mrs. Hubbard, of Goodell, and a brother of Mr. Hubbard, of Chicago, were Klemme visitors one day the past week.

Walter Bredlow was taken to the hospital at Mason City Saturday evening to undergo an operation for appendicitis.

Mrs. A. W. Ross, of Steamboat Rock, Iowa, came Saturday for a visit at the Rev. Schmidt home north of Klemme.

Mrs. C. J. Papousek came over from Belmond yesterday for a visit with her brother, Ed. Jacobs and wife.

Mrs. Hake was called to Belmond last Thursday evening as her aged father had fallen and broke a bone in his hip. The old gentleman is 77 years old.

Lester Ross, of Minneapolis, was in this city last Thursday and Friday visiting at the Wm. Smith and J. N. Day homes. Lester is a son of Chas. Ross of Garner.

Mr. and Mrs. L. Davis and family of Mason City were visiting at the home of Henry Freie the latter part of last week. Sunday the families had a picnic at Morris Lake.

The Ladies Aid Society of the English Methodist church held an apron and bake sale at the Kluckhohn store last Saturday which they report was quite successful.

Tanlac strengthens the nerves and brings back the normal state of health through its effect on the appetite and nutrition of the body. E. S. D. Kahrs. adv

Prof. H. E. Wilson reports that he has a position as superintendent of schools at Lansing, Iowa, for the coming year. He will have a nice modern school.

The Ladies Aid Society met last Thursday afternoon at the home of Mrs. A. D. Gimer. The ladies worked on aprons for their sale Saturday. Refreshments were served and all report a good time.

Crops are looking fine in this locality. The oats is coming along in fine shape and in many corn fields it is possible to see the rows clear thru the field.

Klemme merchants will keep their stores open two nights a week during the summer as they have done in the past Wednesday night and Saturday night will be the open nights here.

It is reported that it hailed quite hard up north of Forest City Tuesday, but the crops were not damaged Some hail fell here for a few minutes that day, but not enough to hardly be noticeable.

This locality is being visited by a great number of little showers of late. It seems to rain in patches, as it will rain hard in one place and a short distance from there it does not rain at all.

Mr. and Mrs. Herb Bailey, and Rev. A. B. Gedye and family drove to Fort Dodge last Friday. On their way they stopped at Vincent and visited Rev. and Mrs. Howdeshell, who also accompanied them to Fort Dodge.

If the people who have taken Tanlac were to form a line of march in single file, this grand army would reach clear across the American continent from New York to San Francisco and extend over 3,000 miles into the Pacific Ocean. E. S. D. Kahrs. adv

NOTICE OF PRIMARY ELECTION

Garner, Iowa,
May 8th, 1922.

Notice is hereby given to the qualified electors of Hancock County, Iowa, that a primary election will be held at the regular polling places in the several election precincts of Hancock County, Iowa, on Monday, June 5th, 1922. The polls will be open from nine o'clock a. m. to eight o'clock p. m.

At this primary election candidates are to be nominated by the Republican and Democratic parties for the following offices:

One United States senator.
One governor.
One lieutenant governor.
One secretary of state.
One auditor of state.
One treasurer of state.
One attorney-general.
Two railroad commissioners.
One representative in congress (10th district.)
One state representative (86th district.)
One county auditor.
One county treasurer.
One clerk of the district court.
One sheriff.
One county recorder.
One county attorney.
One county coroner.
One supervisor, whose term commences January 1, 1924.

TOWNSHIP OFFICERS:—
Two justices of the peace.
Two constables.
Three township trustees.
One township clerk.
One township assessor.
One party committeeman from each precinct and delegates to the County convention are to be elected.

In testimony whereof, I have hereunto set my hand and affixed the seal of the county of Hancock, this 8th day of May, 1922.

CHRIS JACOBS,
County Auditor, Hancock County, Iowa.
(SEAL) M11-18

BOY CUTS OFF TOE, BUT PROVES TO BE GAME KID

FOREST CITY, May 17.—Emery the 5 year old son of Mr. and Mrs. Elmer Anderson, had the misfortune to cut off his little toe while at play Wednesday evening. The little fellow came to his mother saying he had "cut his toe off." As he was not crying or there was no sign of blood Mrs. Anderson looked at the injured foot and found the toe had been entirely severed. On investigation, the toe was found in the yard where the lad had played. The injury is not very painful but keeps Emery from his play to some extent.

The "eternal triangle" is so called because it isn't "square."

METHODIST EPISCOPAL CHURCH

Morning worship 10:00 A. M.
Sunday school 11:00 A. M.
Evening worship 8:00 o'clock.

The Mother's Day program rendered by the Class in the Corner was enjoyed by all and the young people and their teacher deserve great credit.

Memorial Day will be observed on Sunday the 28th of May, with suitable exercises, announcement next issue.

The young peoples' Sunday evening choir will meet for practice at the church on Thursday evening at 7:30 o'clock. Senior choir on Friday evening at 8:00 o'clock.

The Womans Foreign Missionary Society will meet a week from this Thursday; hostess to be named later.

The Sunday school attendance last Sunday reached the "high water" mark, with 110 present. Let us do better next Sunday. Come and make one. Be a booster for the Kingdom. This is the age of the Kingdom.

"Be ye doers of the word, not hearers (only.) St. James.

"Seek ye first the Kingdom of God."

"If ye would be my deciples, take up your cross daily and follow me." —words of Jesus.

Arthur B. Gedye, Pastor.

FIRST METHODIST EPISCOPAL CHURCH

Sunday services as follows:—
Sunday school at 11:00 o'clock.
Epworth League at 7:30 P. M.

The study topic for the League is one of a series on the subject, "Growing a Character."

Growing a character—The Soil—The Seed—The Growth. May we have a full attendance and try to do justice to this so important topic.

Mid-week prayer service at the home of Mr. August Ridder.

On Sunday evening at 8:15 o'clock the Ladies Foreign Missionary Society will present their annual Thank Offering Program. A full house is desired to hear this well prepared program. All "Extention" members are especially urged to be present. The program is as follows:—

1—Voluntary.
2—Devotions.
3—Ladies Quartette.
4—Demonstrations. Mite-box opening.
5—Piano Solo.
6—Five Minute Talk, "What the world needs."
7—Five minute talk, "What is required of us."
8—Consecutive Songs in the life of a missionary.
9—Reading, "God is calling me." Last words of D. L. Moody.
10—The mustard seed, X.f - 6.the
10—Demonstration, The mustard seed.
11—Reading, "There's work for us. With piano accompaniment.
12—Ladies Quartette.
13—Remarks, and free Thankoffering.

FISH FROM CLEAR LAKE HATCHERY SENT ALL OVER

The fore part of the week half a million fish fry of the pike variety were shipped from the state hatchery at Clear Lake, bound for Ottumwa, Iowa City, Grinnel and Chariton.

The fish will be placed in waters in and about these cities by officials of the state fish and game department, under the supervision of W. E. Albert, state fish and game warden.

The consignment consisted of seven tanks, each containing about 7,500 fish fry per tank.

ROBERTS SPEAKS TO GOODELL GRADUATES

Rev. Tom Roberts from Sheffield, preached the graduation sermon to the Goodell graduating class Sunday evening in the U. B. Church of that place. He preached a very interesting sermon. There are eight graduates this year. The graduating exercises will be held in the U. B. church Thursday evening, Dr. Shannon of Des Moines will deliver the address. The class flower is lilly-of-the-valley, and the class colors are silver and old rose. Supt. Nelson, who has been laid up with pleural pneumonia is able to be out again. Mrs. Miller filled his place in the high school during his illness.

GIRL WANTED—For general house-work. Mrs. E. J. Arnold. tf

SURVEY REVEALS 142 CREAMERIES IN IOWA

ALGONA, May 17.—W. T. Maakestead of this city reports that out of 99 questionaires sent out to county agricultural agents in Iowa, 62 replies received show that there are 142 creameries, 669 cream stations, 27 centralizers and three cheese factories in the reporting counties.

The report further shows, according to Mr. Maakestead, that while 25 creameries in these counties were closed since 1916, 26 others were established since that time.

The compiler of these statistices declares that the co-operative creamery is proving the best market.

Something to Think About

By F. A. WALKER

GETTING RESULTS

BY LEARNING things rather than words, observing closely how things are done to produce results, keeping in intimate touch with improved methods, making careful mental analysis of the failure or the success of others, and applying the practical information thus gained, ought to be the dominating purpose of every man or woman who earnestly desires to get out of and away from the packed and beaten roads.

To think along the same groove day after day and possibly using the same unproductive form of reasoning, grown threadbare by frequent handling, contracts the mind and weakens it.

If you do not go afield among new thoughts, you can never hope to create new things.

If you fail to lay hold of the forces within you, and thus become a part of the ever-expanding universe, you may set it down that you are marked for a mere imitating plodder, of which the world at present has a tremendous over-supply.

No harm can come to you in exploiting new fields.

It is better to fail in untried effort than painstakingly to avoid it, for by exerting yourself you may quite unexpectedly arouse some dormant capability of whose existence you had not the slightest suspicion.

Life is a search for substance on which life depends.

It is through this search that we discover things and get from them useful results.

To take no part in this ever-expanding search is to admit defeat.

You cannot long continue in the chase of honor and fame without soon feeling the exhilarating thrill of the ennobling adventure.

And when your blood runs hot your brain tingles with clearing vision, and your whole being becomes attuned to novel surroundings, you stretch out eager arms and cry in joyous voice for more, more!

And the beautiful part of such experience is that what in your days of slackness you considered drudgery barren of results, resolves itself into a thing of inspiration, bearing you on strong, swift wings to the top of your dreamland hill.

Uncommon Sense

By JOHN BLAKE

INSPIRATION

A RECENT Sunday newspaper printed a picture of the head of one of New York's biggest banks. He was in a baseball uniform, and but for a mustache—an ornament now discarded by ball players—looked like a professional.

The picture was taken at an outing of the Bond club. The banker served as pitcher for the New York team. The type below recited the fact that he got his first job in an Albany bank because he was a crack ball player, applied himself to banking as eagerly as he had applied himself to baseball, and in a few years was well on his way to his present position.

It is needless to say that this particular baseball player didn't put all he had into the game. He was unusually gifted as a pitcher, and might easily have got into one of the big leagues, too.

But he had the good sense to know that baseball was not a steady business, and that banking was. And instead of seizing an opportunity to make fairly big money early in youth, he was content to try the banking business on a small salary.

Of course there are a good many men who started in the banking business when he did, and who are still about where they were when they started. But at least they still have steady jobs. If they had taken to baseball they would not be doing as well.

Our object in referring to this particular case is to call attention to the fact that if you want inspiration in your work you can get it in the newspapers—plenty of it.

Brief bits of biography such as the one we have cited appear almost every day.

Seldom is a prominent man's name mentioned in connection with an important affair that you do not learn something about how he started and why he succeeded.

If you want to read about the failures—and the horrible examples, you can read about them, too.

While this man was rising from a bank clerk to a bank president, another man who started as an important official of a bank—chiefly because his father owned most of it—was preparing to travel in the other direction. He made the journey, and has just arrived at the point he started for.

All human history is epitomized in the daily news.

Read the papers. Think about what you read. After that if you don't succeed, it will not be because nobody told you how.

THE ROMANCE OF WORDS

"ELECTRICITY"

IN SEEKING the derivation of this word, one might be pardoned for supposing that it had something to do with the ancient word for lightning or even for steel or iron, because these substances have become connected in our minds with the substance itself. But "electricity" is one of those words which might be termed "natural errors," for it has its origin in the Greek word for amber—elektron. In fact, a literal translation of it would be "the quality of being like amber."

The connection is far from apparent until we dig back into Greek history and find that the scientists of ancient Athens discovered that, by rubbing a piece of amber vigorously they were able to attract light objects with it. We now know that the force which we call "electricity" was generated by the rubbing of the amber, by the friction applied to its surface, but the Greeks were of the opinion that this was a quality inherent in the amber itself. While the existence of this force has been apparent in the form of lightning, magnets and the like, for countless centuries, it was only in very recent times that it was recognized as a distinct power, to be studied and catalogued and used for the benefit of mankind. The name applied to it, however, was the name given by the Greeks to the substance which manifested it.

SCHOOL DAYS

Mother's Cook Book

"All service ranks the same with God,
With God, whose puppets, best and worst
Are we: There is no last and first."

EVERYDAY FISH DISHES

ONE may usually find good salt or smoked fish in the markets when the fresh fish are unobtainable. Finnan haddie is haddock which is dried and salted, then smoked, which gives it the flavor so well liked. It should be freshened very carefully not to lose that flavor. Twenty to thirty minutes' soaking in warm water is sufficient to remove the excess of salt. Picked up, added to cream and served with baked potatoes it is very good.

Finnan Haddie With Tomatoes.

Take one and one-half pounds of finnan haddie, two tablespoonfuls of flour, three tablespoonfuls of butter, a dash of pepper, three tablespoonfuls of minced onion, two cupfuls of tomato juice and two tablespoonfuls of green peppers minced. Freshen the fish and cook it gently in water for twenty minutes. Flake it into small bits with two forks, carefully removing all bones. Melt the butter in a saucepan, fry the onion and pepper until softened, add the flour and gradually the tomato juice. Let the mixture boil, add the fish, and when it becomes very hot serve at once with boiled macaroni.

Casserole of Smoked Halibut.

Take one and one-half pounds of smoked halibut, three small onions, one-half cupful of carrots cut in strips, six potatoes quartered, one-fourth teaspoonful of pepper, one and one-half cupfuls of tomato juice, four tablespoonfuls of butter, boiling water and bread crumbs. Brown the carrots and onions in the fat and parboil the potatoes for five minutes, then drain and rinse them. Scald the fish and cut in pieces suitable for serving. Put a layer in the casserole, then some crumbs and vegetables, more fish, until all is used. Barely cover with boiling water and tomato juice. Put the cover on the dish and bake for one hour.

Codfish Salad.

If the flaked fish is purchased, a thorough scalding will be all that is necessary to remove the salt, while the whole fish will need to be soaked over night.

Take one pound of salt fish, one-half cupful of stuffed olives, one cupful of finely diced celery, one teaspoonful of minced parsley, one-fourth of a teaspoonful of Worcestershire sauce, three tablespoonfuls of olive oil, one tablespoonful of vinegar and a dash of red pepper. Freshen the codfish over night, then flake and cook gently for thirty minutes. Cool, add the olives, celery, parsley, seasonings, oil and vinegar and let stand an hour. Then toss together with boiled dressing and garnish with sliced olives and parsley.

Nellie Maxwell

KIDDIES SIX

By Will M. Maupin

THE REASON

I OFTEN get a piece of pie,
Or bread, or even cake,
That's equal to the very best
That mother used to bake.
And mother was a famous cook
Known all the country through
For putting up the best of meals
That hungry children knew.

I used to think that modern cooks
Had lost the noble art,
But after long reflection I
Espouse their cause and part.
So when some grouchy man complains
And calls their art in question,
I know just what the matter is—
It's simply indigestion.

(Copyright.)

Systematic Accumulation.

"How did prices get to be so high in the first place?" inquired the plain citizen.

"Well," replied Mr. Dustin Stax, "the more profit you made the more surtax you had to pay and the more surtax you had to pay the more profit you had to make."

OLD SUN MAN SCOLDS

THERE had been many sunny days in the early spring, once upon a time, but instead of building their nests and working as they should have done, two chattering young Robins and three Sparrows were quarreling as hard as ever you heard in a big tree in the orchard.

Ted Squirrel ran over from the big tree at the edge of the woods, and when he heard what it was all about he began to wonder if he did not want that very tree, too, for that was what they were quarreling about, you see.

It happened that one young Robin came to the tree just as the other had decided he would build there, and such a chattering and fluttering as went on!

Then along came three Sparrows, and when they found that some one wanted the tree very much they all decided that they wanted it, too, though they were comfortably located

behind the attic blinds of the farmhouse.

All day they quarreled, and when night came the two young Robins had to sleep in the branches without a nest. They had wasted the time in disputing and no work was done.

But the first thing the next morning, when the sun came up, they all began quarreling again.

The Sparrows should have been repairing their nests instead of quarreling over something they did not want, for the winter winds had broken their homes and they were very ragged looking, indeed.

Teddy Squirrel, too, should have been at home making his nest clean from the shells he had left from his winter meals, but he, too, came back to say the tree was his because he had been looking at it all winter out of his hole in the tree at the edge of the woods.

And so all these silly creatures wasted two warm spring days in quarreling and the next morning they awoke to find the sky all gray and the air cold and damp.

The two young Robins began to shiver. They did not feel at all like quarreling. The Sparrows wished they had repaired their broken nests so they would have a warm place to stay until the sun shone again.

Teddy Squirrel began to think of the time he had wasted, for he had no more nuts in his nest and he was too cold to go out for some that he knew were hidden under a rock in the woods.

By and by the old Sun-Man peeped out from behind a cloud and looked at the Robins and Sparrows. He peeped into Teddy's hole in the tree, too, and then he began to scold.

"Why do you all think I made the days so nice and warm, I should like to know? I gave you two sunny days and you wasted them in quarreling over a tree.

"Here are trees enough for you all, and many more besides, but you foolish ones must pick out one tree and insist that there is no other. Get to work every one of you or I will go back behind the cloud and not shine again for a week."

They all went to work, you may be sure, and there was no more fussing, for none of them wanted to have the old Sun-Man scold again or go away and make the earth cold and wet.

Tsuru Aoki

Tsuru Aoki is the charming li wife of Sessue Hayakawa, the m star. After an absence of many y from the screen she was recently duced to return to play opposite husband in one of his big productio She has been deeply interested Hayakawa's work of translat Shakespeare's plays into the Japan language.

The Right Thing at the Right Time

By MARY MARSHALL DUFFEE

DON'T AIR YOUR ILLS

REMEMBER that the man who makes a point not to air his bodily ills, and who makes it a matter of principle not to grumble about the ups and downs of his health always has an advantage over the man who keeps his associates posted concerning the way he feels.

Instinctively your associates feel that you are superior when they realize that possibly you too sometimes feel under the weather but that you never grumble about it. The thoroughbred man, like the thoroughbred animal, does not whimper over the slightest discomfort. There is something of the Stoic in all true aristocrats and it is a characteristic of all mean and ill-bred natures to like to reveal the fact of their discomfort even to close associates. This is, of course, absurd—absurd because it actually causes more discomfort to your associates than would an admission of your illness.

Remember that there is only one person in the world to whom you have a right to tell all the bad feelings that you experience, only one person whom you are privileged to burden with your symptoms—and that is your doctor, and the only reason you are privileged to tell him is because you pay him to listen and because by telling him you hope to remove the symptoms.

(Copyright.)

The Friendly Path

By Walter I. Robinson

"INCURABLES"

"WHILE there's life there's hope." No truer statement ever was made. Every one has heard it and nearly every one believes it. But to judge by the pitiable lives of many one is inclined to believe that a large number fail to put their belief into practice.

There's another old proverb which says in substance that nothing is certain but death. And this is likewise believed by most persons, though many times one finds the handwriting on the wall indicating that certain things are inevitable.

Nevertheless, the latter proverb is just as sound as the old one given at the beginning of this essay. The world would, therefore, be much more happiness in the world if many more would live with both thoughts clearly in mind.

There is no sadder institution in the world than those devoted to the treatment and care of persons afflicted with incurable ailments. No one in the world deserves greater sympathy and comfort and aid than those who are suffering from ills which they believe cannot be cured. But there are entirely too many who are declared incurables or decide themselves that nothing can be done to bring them good health. Every community of considerable size has some such residents who make life unhappy for themselves and others, and many thousands of them may be found in the United States. Yet, thanks to the advances of medical science, only a very small proportion of these are actually incurables.

Wonderful would be the increase in the world's happiness if this fact were widely known and understood and believed. It is, therefore, a matter of great importance which should make every one glad that President Harding's personal physician, Brig. Gen. Charles Sawyer, is engaged in planning for the welfare department of the United States government. For Doctor Sawyer has devoted most of his life to seeking "incurables" and curing them, and he believes that the happiness and welfare of thousands of persons depends on teaching them that few are actually incurable and that most of the sick can be made well.

"What's in a Name?"

By MILDRED MARSHALL

FACTS about your name; it's history; meaning; whence it was derived; significance; your lucky day and lucky jewel

LENA

LENA or Lina, as it is frequently spelled, is one of the most conflicting of feminine names. Etymologists find it derived from the same source as Helen and also discover it through the evolution of Charlotte. Who shall say which is correct?

It is not difficult to understand how Lena or Lina came to be a contraction of Helena, but preference is generally given to the theory that Lina is the correct form and that its real course is identical with the great Karl of the Franks who was the forefather of the feminine Charlotte.

Charlotte of Savoy, who married Louis XI, introduced her name to French royalty, whence it traveled quickly to Germany. There it changed form, becoming first Lettchen, then Caroline, and finally Lina. Meanwhile Charlotte d'Albret of France, who was given in marriage into the House of Tremouille, was responsible for the brave Lady Derby carrying it into England. The queen of George III, bringing the name from Germany, established in England the popularity of the diminutive Lina.

The Spanish make Lola from the contracted form of Charlotte or Carlota, as they call her, and the French have na equivalent Lolette. Caroline, the form from which our own Lina is probably most often derived, was popular in Germany and was brought to England by the wife of George II, who gave it vogue among the nobility.

The lovely mysterious lapis lazuli is the talismanic stone assigned to Lena. It promises her freedom from danger and disease; indeed, it is said to be a cure for fevers. Friday is her lucky day and 5 her lucky number. The morning glory of contentment is her flower.

YOUR HAND

¶How to Read Your Characteristics and Tendencies—the Capabilities or Weaknesses That Make for Success or Failure as Shown in Your Palm

THE HAND OF A SOLDIER

AS MIGHT almost be expected, the hand of a successful soldier must be square and firm. The top phalanx of the thumb must be strong, to indicate will power and ability to command. As the soldier—that is, the officer—must frequently use tact and diplomacy, the second phalanx of the thumb should be well curved.

Ambition is indicated by a line running from the line of life to or toward the mount of Jupiter, under the forefinger. A star on the mount of Jupiter reveals distinction gained in the field or elsewhere.

If there is present in the hand what is called a second mount of Mars—that is, a mount lying between the line of life and the mount of Jupiter—it indicates unusual bravery and daring. A short line running from the line of fate, which runs vertically up the palm of the hand to Saturn, shows a government appointment. The mount of Mars—about the middle of the palm, on the outside—should be strong, to express endurance.

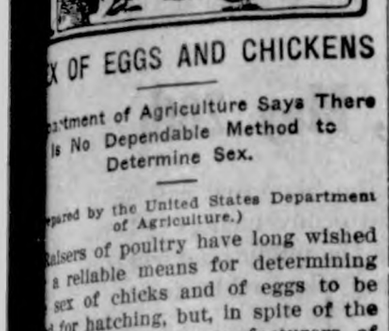
POULTRY



X OF EGGS AND CHICKENS

rtment of Agriculture Says There Is No Dependable Method to Determine Sex.

epared by the United States Department of Agriculture.)

aisers of poultry have long wished a reliable means for determining sex of chicks and of eggs to be d for hatching, but, in spite of the mise of various manufacturers of ices, the United States Department Agriculture says there is no very endable method for determining the of chicken that a certain egg will duce, and that it is extremely diffi- to determine the sex of chicks of st breeds.

The department has made tests of a mber of devices claimed by the

Barred Plymouth Rock Cockerel.

kers to give good results in sorting male, female and infertile eggs. all cases they have been found to useless for the purpose, as two rsons could never get the same re- t with a lot of eggs, and hatching ts showed that one could do just well by closing his eyes and picking the eggs at random.

On account of the difference in the or of the down of the sexes it is en possible to select with consid- able accuracy the hens and cockerels the Barred Plymouth Rock as soon they are hatched, but in the case most other breeds and varieties this ection cannot be made with any cer- nty until some time later. Those o know the breed well are able to tinguish between the sexes of Leg- rns when they are three to four eks old. The sexes of the medium- ight breeds, with the exception giv- above, have the same appearance til the chicks are 10 or 12 weeks l. The surface sex differences in Asiatic breeds are not as apparent until the birds are three or four nths old.

There may be differences that will ke it possible to sort the sexes rlier, but so far poultrymen have nd no reliable basis for selection.

REAT IMPORTANCE OF OATS

ed in Ration of Growing Chick It Does Much to Build Up Strong Frame and Muscle.

The importance of oats in the poul- ration cannot well be overlooked. forms the backbone in many rations. is chiefly important in the growing tion for young chicks, for it will ow frame and muscle more eco- mically than any other grain. Steel- t oats, rolled oats, or growing mash- having ground oats or oatmeal as base are exceptionally economical eds for growing stock. Fed in con- ction with buttermilk, it makes the st growing ration now known. Of urse, a grain mixture should be fed r variety.

POULTRY NOTES

Confine the hen until the chicks are eaned.

* * *

The busy hen is the one that lays e most eggs.

* * *

Chicks should not receive feed until ey are 36 hours old.

* * *

The baby chick will not stand chill- g. It must have access to heat when- er it desires.

* * *

Toe-mark the chicks as soon as they e hatched. This enables one to tell eir ages later.

* * *

Disease control and sanitation are mong the most important things in oultry management.

* * *

Chicks chilled at some time early in eir development keep dropping off en after attaining considerable size.

* * *

The coop for hen and chicks should well ventilated, easy to clean and sufficient proportions to insure com- rt.

* * *

The cockerel that can be marketed a broiler in March or April brings ore money than the one marketed June.

* * *

In cold weather ten to thirteen icks are sufficient for one hen, while warmer weather fifteen to twenty n be cared for successfully.

DAIRY FACTS

FEEDING COWS ON ROUGHAGE

Interesting Test Made With Mature Holstein Cow on Government Farm in Montana.

(Prepared by the United States Department of Agriculture.)

What will a dairy cow do in the way of milk and butterfat production when fed on roughage exclusively? Perhaps the consensus of opinion is that she will not do very well, but the United States Department of Agriculture has some figures that show what a few cows did that were fed on alfalfa hay and corn silage, without grain.

A mature Holstein cow was pastured on irrigated, tame grass at the department farm at Huntley, Mont. During the winter months she received nothing but corn silage and alfalfa hay. She was under test and was milked three times a day. For 140.5 days and 98 nights she was on pasture. During the rest of the year she consumed 9,014 pounds of alfalfa hay and 8,985 pounds of corn silage, a rather large amount of bulky feed. While this ration was fed the cow maintained her weight at practically what it was at the beginning of the test, and produced 14,210.1 pounds of milk and 470.24 pounds of butterfat.

For the 12 months following the next freshening this same cow was milked three times a day and given, in addition to roughage, all the grain she would eat. The surprising fact is that she ate 7,056 pounds of grain and practically the same amount of roughage as before. The actual quantities of roughage were 10,093 pounds of alfalfa hay, 8,325 pounds of silage and 4,230 pounds of beets. She was on pasture 130 days and no nights. The milk production for the year was 25,499.4 pounds, and butterfat 823.11 pounds, and the gain in weight 200 pounds.

But notice the difference in the nutrients required to produce the product the first year and the second year, when 75 per cent more butterfat was produced. The first year, over and above maintenance and in addition to pasture, the cow consumed for each 100 pounds of butterfat 156.37 pounds of digestible protein and 558.69 pounds of total digestible nutrients, and for each 1,000 pounds of milk yielded she used 51.7 pounds of digestible protein and 184.8 pounds of total digestible nutrients.

The second year, when she received all the grain she would eat, she received above maintenance and in addition to pasture, in the production of 100 pounds of butterfat, 218.7 pounds of digestible protein and 1074.4 pounds

A Record-Breaking Holstein Cow.

of total digestible nutrients; and in the production of 1,000 pounds of milk she used 70.43 pounds of digestible protein and 345.9 pounds of total digestible nutrients.

From a nutrition standpoint the cow made a more economical use of the roughage ration than of the roughage plus heavy grain ration. No attempt was made to compare the relative economy of the two systems of feeding on a dollars-and-cents basis, as the relation between prices of roughage, grain, milk, and butterfat, which vary by localities and seasons, would be a large factor in determining this question.

There are now several cows on this farm that have records made on roughage alone. One made 477 pounds of butterfat in 350 days, and promises to have a record of 490 pounds at the end of her year, which will be within 45 pounds of the record made the year before when grain was fed. Another cow in the herd made 345 pounds of butterfat in 245 days without grain, and still another 195 pounds in 120 days. It is now planned to try some of them on moderate grain rations to make comparisons of the amounts of nutrients required to make butterfat and milk under all conditions.

Later and more complete figures on additional cows will show the effect on production of three plans of nutrition—no grain ration, light grain ration, and heavy grain ration. The relative prices of milk, butterfat, and feed will then determine the method of feeding most profitable for a given section.

Benefits of Limestone.

Place a shallow box of ground limestone where the cows will have to walk through it when entering the barn. This will clean their feet, keep them from slipping, and add to the value of the manure.

Increasing Milk Production.

In working for an increased milk production the cow has to be taken into consideration as well as the feed. Some cows are not capable of good production no matter how well they are fed

KILL NUISANCES WITH WAR GASES

Deadly Fumes Being Tried to Destroy Noxious Birds, Animals and Insects.

SOME PROMISE TO BE USEFUL

Migratory Blackbirds Do Damage Amounting to Thousands of Dollars in Imperial Valley of California—Injure Milo Crop.

(Prepared by the United States Department of Agriculture.)

Deadly gases that were developed for war purposes are now being tried out by the United States Department of Agriculture as a means for destroying noxious birds, animals, and insects. Some of them promise to be useful when applied under proper conditions, particularly those that are heavier than air and can be used on burrowing rodents, and possibly subterranean insects and pests in stored products.

Kill Destructive Birds.

The most recent proposal is to use gas to kill destructive birds that congregate in marshes. In the coming fall the biological survey, in co-operation with the chemical warfare service, is planning to make a trial of the method on blackbirds in the Imperial valley of California. In that region these birds are said to do at least $50,000 worth of damage to the milo crop each year. Because of their feeding habits it is impossible to destroy these birds with poisoned baits, but, as they roost on the reeds in the marshes, it is thought that they can be killed by a gas cloud at night when the wind is favorable. The blackbirds are migratory and return to the same places year after year. It is thought that a big killing in a certain locality will probably free it of the pests for many years. A few other birds in the blackbird-infested marshes will be killed at the same time, but the department believes that these local birds will soon reach their normal numbers again.

Try Gas on Rodents.

Arrangements also are being made by the biological survey with the chemical warfare service for investigating the possibility of using poison gases on such burrowing rodents as rats, prairie dogs, ground squirrels, and woodchucks. Tests on pocket gophers and ground squirrels by these two co-

Blackbirds Return to Same Place Year After Year.

operating branches of the government in California show that chlorine may be used with good results if handled properly. The chemical warfare service used phosgene on rats in Porto Rico with promising results. Some of these war gases will be compared with carbon bisulphide for the killing of woodchucks and other rodents in their burrows.

Entomologists of the department have already worked in co-operation with the War department in testing various gases on insect pests of growing plants and those that infest stored grain, but it has not yet been found advisable to recommend anything to take the place of hydrocyanic-acid gas or carbon bisulphide.

The serious disadvantages of many of these new gases is that they are dangerous or very irritating to men, horses, and mules, and require the use of masks and great care in handling.

HOT FORMALDEHYDE IS BEST

Potato Growers Interested in Method Because It Saves Time and Is Effective.

Many Minnesota potato growers are interested in the hot formaldehyde method of treating potato seed because it saves time, is less poisonous than corrosive sublimate, does not corrode metals, and is effective for both scab and rhizoctonia.

The solution is made by mixing two pints of 40 per cent formaldehyde to 30 gallons of water. This is heated to a temperature between 118 degrees F. and 122 degrees F. The potatoes are dipped in the solution for two minutes and then dumped in a pile and covered with a canvas cover or sacks for one hour. They can then be dried or cut and planted immediately. Formaldehyde, when used without heating, will not control rhizoctonia and requires one and a half hours' soaking for best results in control of scab.

PLAN FOR GREASING WAGONS

One-Half of Lifting Usually Employed Can Be Eliminated by Working on Each Side.

A wagon can be greased with one-half the lifting usually done by removing the burrs from both wheels on one side of the wagon, then grease them, leaving the wheels hang about two inches out, go to the opposite side of the wagon, remove both burrs and give the wagon a shove towards the loose wheels.

HESSIAN FLY HARMS WINTER WHEAT CROP

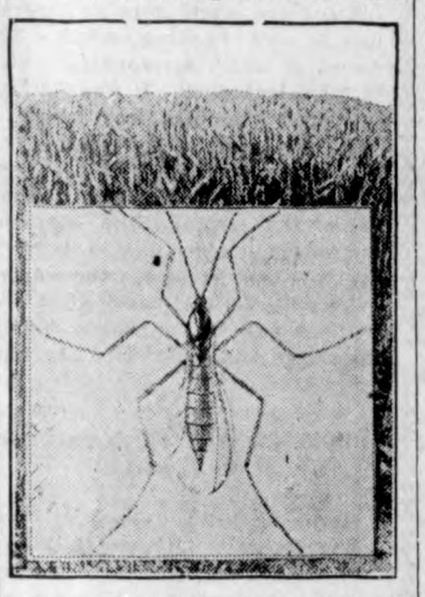
Infestation Regarded as Worst in Many Years.

Where Parasite Is Present in Large Numbers Crop Should Be Plowed Under, as It Will Not Amount to Anything.

A prevalence of Hessian fly is reported in winter wheat sections and, judging from samples received from many areas, the infestation is the worst for several years.

Favorable climatic conditions, coupled with an absence of a parasite that ordinarily destroys the larvae of the Hessian fly and too early planting of the wheat last fall, is the cause of the outbreak. Where wheat was sown early it needs to be carefully examined for traces of the fly.

Signs of the infestation may be detected by examining the wheat field.



Hessian Fly and Wheat—Insert Shows Adult Female, Greatly Enlarged.

If it has stunted plants upon which small brown seedlike bodies are attached to the stalks, the fly is probably present in the pupal or "flax seed" stage. These brown seedlike bodies can be found below the surface of the ground between the leaf sheath and the stem of the plant. Within a few weeks small gnatlike flies hatch out, laying a second crop of eggs which result in the spring brood of flies.

The Hessian fly has four stages in its life. The egg, the maggot, the pupal and the fly. It is the maggot, a white, flaky worm, about one-fifth of an inch long, that does the damage. If the plant survives the first attack there is a chance of considerable damage resulting from the second crop, which eat the stems and cause the grain to lodge and lessens the grain production.

Wheat that is badly infested with the Hessian fly ought to be plowed under, as it will not amount to anything as a crop and will only serve as a hatching ground for further crops. Often some parts of the yield only are affected and the farmer may use his judgment as to turning under only a part of the field.

Where volunteer seedings of last year's crop are detected containing Hessian fly they should be plowed under at once. If there are any suspicious signs of the presence of the fly in the fields the entomologists urge that samples be sent to the state entomologist for examination.

PLANS TO CONTROL EROSION

Gullies Cause of Considerable Loss by Washing Away Fertile Soil—Ways to Reclaim.

The gully is one of the things that keep rain from being an unmixed blessing to the farmer. That it is an inconvenience and causes damage is obvious, but in Farmers' Bulletin 1234, "Gullies—How to Control and Reclaim Them," by C. E. Ramser, just issued by the United States Department of Agriculture, it is shown that loss is produced in 10 different ways, and that the most important is the washing away of fertile soil that can never be returned.

After discussing the different types of gullies and their causes, the bulletin, which is illustrated with photographs and drawings, goes on to describe in detail methods of controlling erosion, such as plowing in and seeding, planting trees, and building dams of various kinds. By following the suggestions and plans farmers should be able to prevent further erosion in most cases and to reclaim badly gullied land. In some cases expensive structures such as concrete walls are needed, but usually inexpensive materials—brush, straw and stones—are recommended.

The bulletin may be obtained free of charge by addressing the department at Washington, D. C.

PLAN TO ERADICATE SORREL

About Simplest Way Is to Spray With Solution of Copperas—Quicklime Also Kills.

About the simplest way of killing sorrel, if you do not want to cultivate the land, is to spray it with a solution of copperas (sulphate of iron), made by dissolving two pounds of copperas to each gallon of water. Repeat the spraying as often as the sorrel begins to make growth. You can also kill this weed by slaking quicklime in water and sprinkling the water and lime over the plants, repeating as often as necessary.

FARM LIVE STOCK

MORGAN HORSE IS HONORED

Booklet Issued Telling of Remarkable Sturdiness of Castor, Owned by Government.

(Prepared by the United States Department of Agriculture.)

The Morgan Horse Club of America has honored Castor, an 800-pound registered Morgan horse bred and owned by the United States Department of Agriculture, by issuing a booklet telling of his remarkable sturdiness and endurance. Castor was one of the few horses to finish the United States mounted service endurance test held last October. The horses traveled from Camp Alfred, Vail, N. J., to Washington, D. C.

During the test Castor carried 245 pounds, nearly one-third of his weight, without developing any leg trouble.

Castor, Registered Morgan Horse.

His loss of only 12½ pounds during the three-day test was a remarkable part of his performance, especially considering the fact that he was by far the smallest horse in the contest.

The booklet published by the Morgan Horse club is entitled "Morgan Horse Wins Laurels in Mounted Service Endurance Test, 1921." The author is H. H. Reese, animal husbandman in charge of the United States Morgan horse farm, Middlebury, Vt.

ERADICATE MITES AND LICE

Two Principal Kinds of External Parasites Are Injurious to All Classes of Hogs.

Lice and mange mites are the two principal kinds of external parasites affecting hogs, say experts of the United States Department of Agriculture. They are injurious to all classes of hogs, but the greatest losses occur in pigs and poorly nourished hogs kept in unsanitary quarters.

The losses are caused by irritation, unthrifty condition, functional disturbances, arrested growth, low vitality, and increased death rate.

Only one species of lice commonly affects hogs, and this parasite obtains its food by puncturing the skin of the hog and sucking blood. It can be eradicated by hand application, spraying, medicated hog wallows, and dipping. Dipping is the best method of applying treatment. Crude petroleum and tar creosote dips are effective remedies.

Two species of mange mites commonly affect hogs. The nature and habits of these mites, the symptoms caused by each species, and the methods of control and eradication are discussed in Farmers' Bulletin 1085, Hog Lice and Mange, Methods of Control and Eradication, issued by the department, and sent free on request. Crude petroleum and lime sulphur dips are effective remedies for common or sarcoptic mange of hogs.

Plans for hog wallows and dipping plants, together with directions for building them and for dipping hogs, are given in the bulletin.

FEED BROOD SOWS PROTEINS

When Pasture Is Not Available Alfalfa Hay, Wheat Shorts or Tankage, Are Essential.

Brood sows should have feed that is rich in proteins, such as alfalfa hay, wheat shorts or tankage, when pasture is not available. The greatest development of the unborn pig takes place during the last 60 days of the gestation period, hence the importance of feeding brood sows from now until farrowing time.

FEED BROOD SOW LIBERALLY

Animal Should Be Provided With Clean, Comfortable Quarters—Watch for Parasites.

Feed the suckling sow liberally; provide her with clean, comfortable quarters, and get her and the pigs on pasture as soon as possible. Watch the pigs carefully for signs of disease or parasites. A little attention now to insure a good start for the litter will result in many additional pounds of pork next fall.

Corn Best for Fattening.

No other food equals corn in the fattening of pigs, and some farmers feed too much corn. Alfalfa or clover hay may be fed with profit.

Pig Yard Free From Mud.

Care should be taken to provide a pig yard as free from mud as possible.

Building Up Sows.

Sows thin in flesh should have their feed gradually increased so as to be in good condition before farrowing.

HOME TOWN HELPS

GIVE CARE TO SHRUBBERY

Good Idea to Note How Dame Nature Has Arranged Growth to the Best Advantage.

In a state of nature, shrubs that grow in masses or thickets stand close together, intermingle their branches from the time they spring up as seedlings and make their growth wholly upward from an early age, since the light is shut off from them on all sides by their crowding neighbors. Thus, all run to height save those on the outermost edge of such mass.

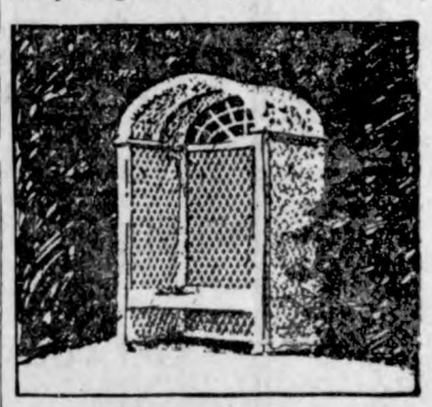
To arrange a planting that will at once conform to this that Nature produces, shrubs that grow erect and "to the top" must be used for background, with low-growing, spreading, and even drooping kinds planted against them. Yet the mistake of a monotonous, evenly graded bank of green extending from the turf upward everywhere is to be avoided, for this is truly fearful in its artificiality.

The proper way to assemble a shrubbery is to cluster the individual shrubs loosely and irregularly, grouping them by kinds, in the main, but invariably scattering the kinds together at the edges of each group; and further scattering one or two of any dominant kind here and there throughout the entire mass. Or, to express it in formula: All varietal clusters should give way on their edges to the neighboring variety, so that a friendly intermingling shall prevail, to a considerable degree in some places down to almost none at all in others; for all the world as daisies and buttercups intermingle in a meadow.

GARDEN SEAT THAT INVITES

Makes for Delightful Hours Out of Doors During the Long Days of Summer.

The embowered garden seat entices one to pause and rest, and while away many delightful hours out of doors in



Ideal Seat for Garden.

peaceful seclusion. It is also another excuse for more graceful climbing vines and flowers.

Bungalow Vs. Two-Family.

Put a two-family house on the usual size lot and the neighborhood at once takes on a citified look. A bungalow, probably costing less than half, on the same lot would preserve the character of the neighborhood. But if the town, in seeking to maintain its suburban characteristics, zones out the two-family structure, is it within its constitutional rights or does it unreasonably infringe the rights of the property owner?

There is a very nice question here, the right of the neighborhood as against the investment right of a single property owner, and complicated by the constant likelihood of operation by the real-estate speculators. Probably it is the last that make most of the trouble. It would be quite an intricate calculation to say whether the maintained value of the neighborhood would in case of resale compensate the individual bungalow builder for what he might have earned by building a two-family house and renting one floor.—Newark Evening News.

Planting the Lawn Shrubbery.

It is an axiom of good design that a lawn that is broad, sweeping and picturesque shall be planted in a broad, sweeping, picturesque manner. Straight lines must never show anywhere, either as boundaries at the foundations of buildings or as drives or walks. The effect to be created is of a broad, open glade in the midst of the forest—or at least in the midst of dense and secluding growth, if the impression of actual forest background is impossible. On every side should be vistas of swirling masses of shrubbery suggestive of the shores of a bay or any small body of water—shrubbery that looks to have been pushed back and piled against the heavier background material to make a clear space where the turf may grow.

To Study City Planning.

About thirty of the large cities of California, if the extension division of the University of California and the Real Estate association of that state carry through their joint plan, will have the benefit of a unique series of conferences on city planning that was begun nearly a year ago in Los Angeles, where the regional problems of the vicinity offered an especially fruitful basis for discussion. Another course, aided by local experts, was given in Oakland.

COMING TO KLEMME

WILLIAM McCABE'S

GEORGIA TROUBADOURS

THE BEST COLORED SHOW ON THE ROAD TODAY!

At the Idle Hour Theatre, Klemme, Iowa

THURSDAY, MAY 25th

—Satisfaction guaranteed or your money refunded.

REAL CANDY——

You will find a dandy assortment of all kinds of Candy here—Candy for the kids, Candy for the grown-ups, and Nice Box Candy for her! Also you will find our sundaes and drinks the best.

CIGARS, CIGARETTES—

We carry all of the popular lines of Cigars and Cigarettes. You will find that our "smokes" are always nice and fresh as we turn our stock fast and keep a fresh supply. Also nice fresh smoking and chewing tobacco.

IT DON'T PAY TO BAKE—

When you can get a big loaf of fresh choice bread each day for a dime—Try it.

State Savings Bank

Klemme Iowa

Fred Shipley, at one time publisher of The Times, is now living at Woden. For a time Fred was running a hotel at Whittemore, later a restaurant at Spencer and more recently he sold out his apartment house business at Minneapolis. We had a short talk with Fred the other day and he said he was coming down here one of these days for a visit with his old Klemme friends.

Mr. and Mrs. C. G. Waterman and Mr. and Mrs. R. A. Jorgenson attended the Concert given by the Mason City Chamber of Commerce at the Garner Opera House last Friday evening. Thirty four male voices constituted the glee club which was very good. Violin and cello solos as well as vocal solos were given in connection. Harry Keeler had charge of the concert. Other Klemme folks we saw at the concert were Mr. and Mrs. W. C. Keraus and Dr. and Mrs. J. L. Hesselhuus.

Some of the fellows went fishing for bull-heads with "Slim" Brinkman one day last week over at Clear Lake and for some unaccountable reason Slim seemed to do all the fishing and the others were just merely looking on and getting no fish. The secret of Slim's extraordinary good luck has leaked out—It was the kind of worms that Slim was using. It was later found that Slim has a regular worm brooder wherein he confines the worms after digging them out of the garden. Slim imprisons the worms in a box sunk in the earth and it is said he fattens them up on buttermilk, for they reach great proportions and the bull-heads bite at the choice milk-fed worms like hungry wolves.

PROPOSAL FOR ERECTION OF SCHOOL HOUSE

Notice is hereby given that the School Board of Ell Township, Hancock County, will receive sealed bids for the erection of a school house two miles north of Klemme.

Bids can be given where the contractor furnishes it all, labor and material. Or bids for Concrete work, laying concrete block, plastering and building chimney. Contractor to furnish material. Bids do not need to include hauling material.

Plans and specifications may be seen at the undersigned.

Bids will be opened and examined by the Board at 1:00 o'clock P. M., June 9th, 1922, to the lowest responsible bidder. The board reserves the right to reject any or all bids.

May 16, 1922,
Peter Josten, Secretary.

Any wishing to see how this work is led may do so by visiting the rd that date and anyone having questions regarding their ords can get the advice of a speciby being there at that date.

orge Schafer, of Webster City, a business caller here yesterday. ge is well known around Klemand it is good to see George's ng face occasionally. When Ye or was a kid at Garner George our neighbor and he helped us to ur first kite; he even bought us her ball of string so that we sail the kite higher. We will r forget him.

REV. WM. KOERNER TO BE BURIED HERE SUNDAY

Died in California Last Thursday

Rev. Wm. Koerner, father of A. G. Koerner of this city, passed away at his home at Hollywood, California last Thursday, May 18th.

The body is being shipped to Klemme and funeral services will be held at the First Methodist church on Sunday afternoon at 3:00 o'clock. The Rev. John Klaus, of Charles City will conduct the services.

Rev. Koerner is well known in this part of the state. He retired from the ministery a fefw years ago and has spent most of the time since in the west. A complete obituary will be published in next week's issue of the Times.

METHODIST EPISCOPAL CHURCH
Arthur B. Gedye, Pastor

Morning worship at 10:00 o'clock.
Sunday school ata 11:00 o'clock.
Evening worship at 8:00 o'clock.

Services last Sunday were well attended, a fine spirit of earnestness being evinced.

The Sunday school is preparing to celebrate Childrens' Day with a program.

The W. F. M. S. met at the church on Thursday afternoon for their meeting. The Society is doing fine.

The Epworth League Convention for the orthwest Iowa Conference will be held at Algona on the 14th and 15th of June. Dr. Mossman of Morningside College; Dr. F. C. Taylor, of Grace M. E. Church, Sioux City and Dr. Benson Baker, missionary from India, are billed as speakers. It would be a fine source of inspiration if some of our folks took in the convention with their young people. Consider this carefully, please.

The Memorial Day services will be held in the church Sunday morning; special program and address. The program of exercises appended. Veterans of the Civil, Spanish American and World Wars are cordially invited to attend. Come without uniform, but come and take part. Seats will be reserved for the veterans.

—Arthur B. Gedye, Pastor.

Program of
MEMORIAL DAY EXERCISES
Methodist Episcopal Church
SUNDAY, MAY 28, 10 A. M.

Instrumental Music

Double Recitation—
(a) In Flanders Field.
(b) America's Reply.
Song, 'Battle Hymu of Republic, All
Address, 'David's Three Mighty Men'
Offering for Hospital Work.
Doxology.
Benediction.

FIRST M. E. CHURCH
W. C. H. Bergmann, Pastor

Sunday being Memorial Sunday, a fitting Memorial Service will be held at 10:00 o'clock. Sunday school at 11:00 o'clock.

In the afternoon at 3:00 o'clock the funeral service of Rev. William Koerner, who recently died in California, will be held. Rev. John H. Klaus will preach the funeral sermon.

In the evening the service will be in charge of the teachers and pupils of the Klemme High School. Rev. Arthur B. Gedye will preach the baccalaureate sermon.

Thursday being Ascension day, a fitting sevice will be held at the church at 8:00 P. M.

You are all invited to attend these meetings.

W. C. Bergmann.

It is often hard to keep up appearances and keep up with expenses.

Better bite off more than you can chew, than not to bite off anything at all.

FARM BUREAU PICNIC TO BE HELD AT GARNER THURSDAY, JUNE FIRST

Plenty of Amusements; Two Bands

Next Thursday, June 1, beginning at 10:00 A. M. will be a big day for the farmers of Hancock County when they meet at the camp grounds just south of Garner to celebrate their Second Annual Farm Bureau Picnic.

There will be plenty of amusments for all; music; sports; Duncan and Crystal Lake Bands; big horseshoe pitching contest and many other big sports. Following is the program we received from County Agent L. T. Nutty:—

Program
(A. O. Christenson, Chm.)

10:00 Music ..... Duncan Band
10:30 Song, America, by audience, led by Swiger and cornet.
Invocation ..... Rev. Gauger
Address of Welcome, A. O. Christenson, Pres. of Farm Bureau.
Solo ..... Irene Peshak
11:00 Address, Mrs. Fred Brownell, of Winterset.
12:00 Picnic Dinner; everyone to bring lunch. Free coffee.
1:00 Music .... Crystal Lake Band
Song ..... Male Quartet
Address, C. W. Hunt, Pres. Io. Farm Bureau Federation.
2:30 Music .. Crystal Lake Band

Sports

Horseshoe pitching contest beginning at 10:30 a. m.
Wheelbarrow race.
Tug of war.
Foot races.
Grease pole.
Egg race.
Potato race.
Grape vine auto race.
Many other interesting contests for old and young.

NEWBERGER TWIN DIED WEDNESDAY THIS WEEK

Little Daughter of Mr. and Mrs. John Newberger Passed Away Yesterday

Margaret Newberger, year and a half old twin and daughter of Mr. and Mrs. John Newberger who reside near Klemme passed away yesterday following an illness of scarlet fever and spinal trouble.

On account of the nature of the diease a private family funeral service was held today at the home in the open air and was officiated by Rev. A. B. Gedye. Burial was made in the Klemme cemetery.

Margaret Marie Newberger was born October 14, 1920 and was a twin the other baby being a boy. The bereaved family have the heartfelt sympathy of the entire community in their sad loss.

MANLL MAN WINS BUTTER CONTEST AT MEET

Large Crowd of Buttermakers Compete at Algona

ALGONA, May 17.—Ed Andreson, of Manly, won the May competition in the Iowa educational buttermaking contest held at Algona, defeating 61 other entries. Andreson's butter, which won the gold medal, scored .96. Carl Gamm of Waverly, who was second with a score of .95, won the silver medal. Of the 62 tubs of butter entered, 51 scored above .90.

Algona's Butter Day drew a large number of buttermakers from the surrounding country and in the evening 155 men sat down to a banquet and listened to a program on cow testing and buttermaking.

Prominent speakers addressed the buttermakers both in the afternoon and evening.

These Are Busy Days For The Students Of Klemme

Jack Wellemeyer, School Editor

LAST UMBER OF LYCEUM

The 10th grade play, "Mr. Bob," which is the last number on the Lyceum Course, will be given at the Idle Hour Theatre, Thursday, June 1, at 8:00 P. M. For the cast of characters, etc., see add elsewhere in this issue.

ATHLETIC NOTES
Belmond Defeats K. H. S. Score 17 to 3

Monday, May 22, Belmond High played the last scheduled game with the Klemme High base ball team on the local diamond. Belmond proved to be more than a match for the Klemme boys. They started out in the lead right from the start. In the fourth inning Klemme got their first score. When the dust of the battle cleared away the score board said 17 to 3, for Belmond.

Notice—New bus line to and from all base-ball games; select crowd, ladies only. Rates are low, and intermediate, courteous treatment. Free lunch at noon. Harl Gimer, Prop. (adv-?)

NEW SCHOOL

We, Boys and Girls who are attending school at Klemme, are very grateful to the tax-payers of this Independent School District for providing us with a good chance to get a common school education. We have figured out that this community is spending $4.86 per day for each of us for education, and we sure are all boocters for our town, and the taxpayer.

The proposed new addition to our school will be of great benefit to us, the Boys and Girls of Klemme, and if you will all vote "yes" on June 19th, we will pay you back by doing better school work, being good during school time and we promise to win all the prizes. Doing our best to put the Klemme School in the lead all around. We thank you in advance for your "yes" June 19th.

SENIORS

Seven students, the largest graduating class in the history of Klemme High school, will receive diplomas this year.

By special request of the members of the class, all special graduating exercises, except baccalaureate, will be omitted this year.

We feel that the class of '22 has reason to be proud of it's record. They have been a constructive force in the life of the school; showing interest in every line of school activity.

It's members have been reprsented in the declamatory contests, plays, and athletic events and the K. H. S. will miss them from its ranks.

We wish them good luck in the schools in which they shall continue their work, as we understand it is the intention of most of the members to continue in school next year.

The members of the class are:—
Edwin Bock.
George Bergmann.
Pearl Johnson.
Glenna Gruetzmacher.
Adolph Lauritzen.
Donald Stille.
Howard Wiles.

Alright now, all together, 15 for the Seniors!

BACCALAUREATE

The Baccalaureate Sermon for the Klemme High Seniors will be held Sunday evening at the First Methodist Church. Reverend Gedye will preach.

ANNUAL SCHOOL PICNIC
Koerner's Grove, June 2

Friday, June 2nd, is the day of days. Sure, its the day when every one over eats and has loads of fun in Koerner's Grove. It also means that the school house doors will be closed for three whole months. We all hope to have a new school house by next picnic day.

Find your largest baskets (bushel baskets if you have them) and fill them to the brim with the best things you have to eat. Bring your smiles and good nature, and leave your frowns and grouches at home. There will be just loads and loads of fun; races, games and everything. The K. H. S. ball team will play the Alumni on the ball grounds north of the picnic grounds.

The entertainment committee has appointed the Freshies as the lucky ones to solicit for the picnic dinner.

Everyone is invited to the Picnic Dinner on June 2nd at Koerner's Grove, providing they bring their own dishes.

PARTY

The High School students all agreed Monday morning that they certainly had a good time at Howard Wiles' surprise party. But we are all sorry that he is the one who surprised us, instead of our surprising him. We wish to thank the parents of this prominent young man for the evenings enjoyment.

GENERAL NEWS

This is semester test week. Most of the tests will be taken Thursday and Friday in the High School.

Albert Priebe was absent Monday.

Neota Ridder was absent Friday morning. We wonder why?

John Baumgartner read a very interesting theme on "Conifers" last Thursday.

The girls who took charge of the Grammar Room while some of the children were practicing this week are Pearl Johnson, Adala Schroeder and Neota Ridder.

Many children have been coming in late mornings. Some as late as 30 minutes. This should be stopped because it breaks in on classes, and breaks the standard of the school. We don't know if they get up late or have to work or what it is, but anyhow it should be stopped.

Monday morning seats were changed in the 11th grade. We all wonder why, but guess it's all right.

Only a week of school left. Oh, Boy! Aint it a grand and glorious feelin'?

The girls who taught the Intermediate Room while some were practicing this week are: Blanche Hulse, Neota Ridder and Adala Schroeder.

The Senior Class regrets the loss of Edna Bergmann in their graduating class this year. But by special work she may receive her diploma with her class mates.

GRADE ROOM NOTES

The Seventh Grade finished 'Miles Standish' last Thursday.

No one was absent in the Intermediate last week. We think this is a very good record.

Next week Monday the Eighth Grade from Klemme will go to Britt to the County Eighth Grade Graduation Exercises. They will receive their diplomas and thehy will be ready for high school.

Next week Wednesday and Thursday the 7th grade will take semester tests. The 8th grade will be excused these two days.

COUNTY EIGHTH GRADE COMMENCEMENT MAY 29th

The Eighteenth Annual Commencement Exercises of the eighth grade pupils of the Public Schools of Hancock County will be held Monday morning, May 29th at 10:00 o'clock, at the High School Auditorium at Britt, to which the public is cordially invited to witness.

There are a large number from Klemme and vicinity who will graduate from the eighth grade this year and will be eligible to enter high school in the fall.

Following is a list of the pupils from this community who will graduate from the eighth grade:—

Ell Township—	
Hallie Greiman	Walter Henschen
Lydia Meyer	Winnie Albers
Fred Albers	Carrie Albers
Anna Merkel	Dora Swanson
Martin Barz	Alvina Buss
Harl Gimer	Florence Behringer
Beatrice Busch	Anna Keeper
Clara Larson	Ralph Larson
Wayne Lemke	Helen Maitland
Jeanette Smid	Mabel Schaefer
Elvira Stille	Frank Gibbs
Ruth Johnson	Blanche Hulse
Liberty Township—	
Ernest Pringnitz	Fred Pringnitz
Richard Ax	Sadie Schlawein
Elmer Haberkamp	Harold Loy
Arthur Carlson	Norma Lenz
Ruby Goll	Meta Leinke
Fern Stille	Alice Carolus
Avery Township—	
Esther Fuller	John Fuller
Alvin Goll	Edward Halfpop
Paul Halfpop	Wayne Bachman
Russel Bell	Evelyn Chelsvig
Mavis Rapp cmfwyp vbgkqj xzfiffff	
Curtis Schuldt	Wemkie Trampel
Nettie Chase	Hattie Steinblock
Loren Ulum	Ethel Church
Maurine Lieuwen	Omi Bjelland
Pearl Engeseth	

Depot Agent M. O. Barr is all swelled up like a poisoned pup. The reason for his condition is that the Rock Island has dolled up his office with some new equippment. A man was here last week and installed all new telegraph instruments and sending keys, as well as mounting the whole works on a brand new solid oak insgtrument table. The instruments now make as much racket as a clock factory.

Klemme Creamery One Of Best Producers In North Iowa

KLEMME CREAMERY BEATS ALL FORMER RECORDS

195 Tubs Butter Shipped Last Week

Last week the Klemme Creamery manufactured more butter than in any other one week since the creamery was established. Last Friday the creamery shipped out 195 tubs of butter, the record week's production since the creamery was started. The former record for a single week was 149 tubs. The tubs average 64 lbs. each. This record production was manufactured from Friday to Friday.

The Titonka, Crystal Lake and the Woden Creameries are now shipping their butter with the local factory, in this way they can ship in a full car load lot and thus get cheaper rates. The shipment Friday from the local creamery was greater than the combined shipment of the three other towns mentioned, which certainly is a feather in the cap of the local outfit.

The Klemme Creamery has grown to be one of the large producers in the state. Much credit for its rapid growth is due Buttermaker A. D. Gimer and his efficient helper, R. W. Elder.

BIBLE THOUGHTS
—For This Week—

Sunday

GLADNESS IN SERVICE:—Serve the Lord with gladness. Enter into his gates with thanksgiving, and into his courts with praise: be thankful unto him, and bless his name. For the Lord is good.—Psalm 100:2,4.

Monday

A VERY NEEDFUL PRAYER:—Shew me thy ways, O Lord: teach me thp paths. Let integrity and uprightness preserve me: for I wait on thee. —Psalm 25:4 21.

Tuesday

THE LOVE THAT SAVES:—For God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life.—John 3:16

Wednesday

REWARD OF THE RIGHTEOUS:—Mark the perfect man, and behold the upright: for the end of that man is peace.—Psalm 37:37.

Thursday

PEACE AND SAFETY:— Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee.—Isaiah 26:3.

Friday

LOVE MASTERS FEAR:— There is no fear in love; but perfect love casteth out fear.—1 John 4:18.

Saturday

A SURE SUPPORT:—The eternal God is thy refuge, and underneath are the everlasting arms.—Deut. 33: 27.

PILOT KNOB WILL BE POPULAR WITH NORTH IOWANS THIS YEAR

FOREST CITY, May 17.—Sunday seemed the grand opening day at Pilot Knob and phophecies that the mound will be more popular than ever the coming summer.

The executive council has appointed H. L. Taylor as custodian, his powers and duties being to enforce all rules and arrest violations against the laws of the state board.

CHANGES WITH TIME

A story going the rounds: "I suppose that girl in the short dress is your daughter, that young man in riding breeches is your son, and the woman in the tea gown is your charming wife." "Nope, you're wrong. The girl in the short dress is my grandmother, the young fellow in the riding breeches is my wife, and the woman in the tea gown is my twelve year old daughter, who likes to dress up in her great-grandmother's dresses."

More red blooded Americans needed, and fewer red minded socialists.

Money comes and money goes, but automobile expenses go on forever.

Something to Think About

By F. A. WALKER

PUT FORTH YOUR HAND

WHEN you put forth your hand to feel the throb of the laughing water of a little mountain stream you touch the waters of the whole world!

So do you come in contact with the universe when with a hard word you touch the heart of a child, a dear friend, a father or a mother and leave a scar which in later years you would gladly give all you have to obliterate.

Words and water flow on and on forever, carrying with them their songs of cheer or their dirges of sorrow.

They purr in the sunlight or snarl in the storm, doing good or evil, leaving in their wake gladness or desolation, never stopping in their swift run to the great sea of eternity with which unconsciously all human lives are in touch.

Consider this and get from the thought a principle for honest judgment and noble action.

When tempted to blurt out an ugly word, hold your tongue.

When inclined to ridicule, be careful lest you humiliate, discourage and rob the miserable victim of his or her last ray of hope.

Rather than do mean things, put forth your hand and lay hold of the cosmic forces all about you and become strong and high-minded with them.

There is no barrier between these forces and you which cannot be overcome; no height to which you cannot ascend when once you move with them in perfect accord.

Touch the little rill of friendliness and observe how it grows into a limpid sea of love, on which the great ships of life sail to and fro on their kindly missions, bearing to all mankind their precious cargoes and helpful tidings.

Pitiful, indeed, is the soul-state of the man or the woman who, through selfishness or blind indifference, cannot see the beauty of friendly acts, or sense the vital effect they exert on humanity.

Most of us are prone to sit in our houses of clay and discuss with one another the faults and frailties of our neighbors without giving thought to our own.

Instead of paying tribute and touching hearts with kindness we do the opposite, and then wonder in our more serious moments why the world is so cold and uncharitable.

It is a big world through which we are traveling, and there is big work for each one of us to do in the mere touching of the stream which flows into the hidden sea of happiness everywhere around us, eager to cool our fevered flesh and give us peace.

Uncommon Sense

By JOHN BLAKE

WHAT OTHERS HEAR

"THAT man isn't on the level," said a very experienced judge of humankind recently. "When he talks he doesn't mean what you hear."

Talkative, even persuasive people who don't mean what you hear are considerably too numerous in the world.

Their words sound plausible, convincing. You can hear them. But you cannot hear the silent thoughts that are going on in the head of the man who is talking to you; the thoughts that do not check up with the words at all.

You will learn in time that such men are not to be depended upon. Unless you are shrewd or widely experienced, you are likely to learn too late.

But never mind that. You will profit by what your first mistake costs you. And after that you will be a little bit cautious about words, unless you know that the thoughts behind the words agree with them.

Of course it is impossible for you, or for me, or for all the forces in this world, to make every man mean what we hear him say.

But we can at least contribute to the general sum of frankness and honesty by always meaning what the other fellow hears.

As it always pays to be on the level—a thing no crook ever seems to be able to discover—it will pay us to make our words express our thoughts, and nothing but our thoughts.

It is not necessary to pour out our hearts to strangers and acquaintances. It is not necessary to acquaint our friends with everything that is in our minds, although most men are far more secretive than is at all necessary.

When we do talk, whether much or little, we ought to speak our thoughts, and not continually make mental reservations as we go along.

The writer knows of an able and brilliant man who might have gone far in the world but for a reputation for mental trickiness that he earned deservedly long ago.

He is not dishonest. He means nobody any harm. But in order to curry favor he is continually telling people things he doesn't mean. By and by the people get to comparing notes, and presently they have his measure.

Today he earns in his profession about half the salary he ought to earn, and stands about a quarter as high as he could stand, chiefly because he never means what the other fellow hears.

Words are an imperfect means of expressing thought, but they are all we have. If we use them to conceal thought we are getting very little out of them, and incidentally doing very poorly by ourselves.

KIDDIES SIX

By Will M. Maupin

THE OLD SONGS

SWEET songs of old! How memory brings
Their music back to me
Until each bell of heaven rings
Salvation full and free!
"Joy to the world," the music sweet
Has filled a million souls,
And marked the time for marching feet
To where old Jordan rolls.

"I need Thee ev'ry hour," for I
Oft weary by the way;
And "while the years are rolling by"
Thou art my guide and stay.
"Abide with me" through calm and stress,
Protect me by Thy might;
My weak and falt'ring footsteps bless
With Thine own "Kindly Light."

The dear old songs! Their echoes fill
The quiet evening air;
They bid me bear life's load until
"There'll be no sorrow there."
"By cool Siloam's shady rill"
Whose waters floweth free,
Lead me each day and night until
"Nearer, my God, to Thee."

And when "on Jordan's stormy banks"
My feet shall stand at last;
When I shall see the ransomed ranks
From whom all care is cast,
"O there may I, though vile as he"
Christ did that day behold,
The city's walls of jasper see
And walk its streets of gold.

(Copyright.)

SCHOOL DAYS

Mother's Cook Book

"Yes, in a poor man's garden grows
Far more than herbs and flowers,
Kind thoughts, contentment, peace of mind
And joys for weary hours."

CAKE FILLINGS

IF ONE is fortunate enough to have a cupful of sour cream a most delicious cake filling may be prepared with sugar and nuts. Boil one cupful of brown sugar, one cupful of white, or two of either, with one cupful of cream until it may be stirred into a waxy mass, then add one cupful of minced hickory nuts or any nuts at hand—pecans are especially good. Beat until cool and creamy, then spread on the cake.

Maple Raisin Filling.

Take one cupful of maple sugar, one-half cupful of chopped raisins, two tablespoonfuls of cream and one-half cupful of chopped beechnuts. Cook the sugar and cream, adding the raisins. Stir until cool, adding the nuts after taking from the heat. Fine filling for gold cake.

Strawberry Whip.

Boil one-half cupful of water and one cupful of sugar until it spins a thread, pour over the stiffly beaten whites of two eggs and beat until smooth. Add one cupful of crushed strawberries and use on top of angel food.

Nellie Maxwell

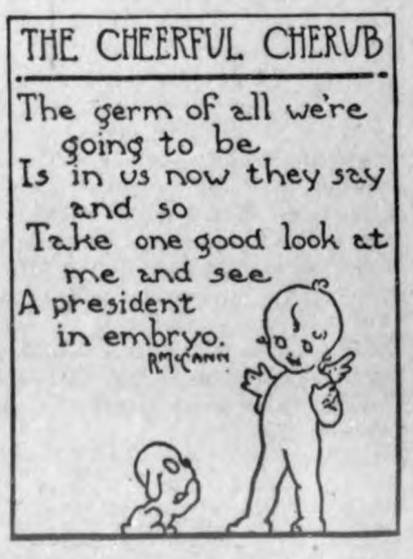
THE CHEERFUL CHERUB



THE FRIENDLY PATH

By WALTER I. ROBINSON.

AIM high.

"If you hit the mark, you must aim a little above it; every arrow that flies feels the attraction of the earth."

This was the advice of the great poet, Longfellow. By following this rule he won lasting honor, and scattered sunshine throughout the world. But even with all his success, one finds conclusive evidence in many of his writings that he was never satisfied. He never quite gained the place he aimed to reach, according to the estimate placed upon his work by himself.

A man is unfortunate if he is absolutely satisfied. This assertion has been widely contradicted. But proof of its logic is found in the careers of all the truly great.

If he is satisfied with what he has done or is doing, he never is likely to get much further unless pushed ahead by sheer luck.

To everyone there comes a feeling of satisfaction and happiness whenever he accomplishes something which brings him returns in gold or honor. But there may still be something lacking to make his joy complete if he does not see the benefits of his labors reflected in the smiles of the world.

No matter how high he may go in the opinion of others, there is certain to be a feeling of resentment in his own breast if he believes he is leaving undone some service which will add to the joys of his fellows.

The most inviting pathways are bordered by blossoms. The happiest lives are surrounded by smiles.

Let us aim to deserve the honest praise of thankful friends.

AT GRAVE OF HIS SOLDIER BROTHER IN FRANCE

A view of an American cemetery in France showing Corporal Harry McLaughlin of the One Hundred Sixty-fifth infantry (old Sixty-ninth of New York) at the grave of his brother Daniel, who died of wounds received at Chateau Thierry. ALL the graves of our fallen heroes are marked with cards stating the name of dead soldier, his regiment, and the date of his death.

BRAVE HEARTS THAT LIE IN THE BELLEAU WOOD

They sleep
But cannot die,
For now the world is all their own,
And, led by thoughts our brave have sown
Till Might has bowed nor could
Withstand the force that stood
Secure and safe, God wrought.
Through stormy times they fought,
And now they lie
In sleep.

"Allez! Allez! Les Boches!" cried the French territorials streaming back through the Second division of the American army, which had just come forward in support and relief. "Fly! Fly! The Hun!" they shouted.

"Retreat, h—ll! We have just come. Let the Boche retreat!" called back an officer of the American forces as he and his men rushed forward.

It was May in France, 1918, records Clara Whiteside in the Philadelphia Ledger. The French line from Soissons to Reims paralleled in a general way the line of the ancient road. Chemin des Dames, and the French defenses were so strong that the war-worn gallant French armies were using middle-aged men known as territorials to hold this part of the line. Perhaps because of this, and also to make an effort to split the French and English armies, the Germans made a great attack on this sector at the end of May, and in five days had driven back the French to open country, following the great half circle of the Marne, which the Germans crossed at Dormans on the east side of the salient at Chateau Thierry and at Belleau.

There were no trenches and no fortifications so far back from the fighting front, and the war was again in the open. Foreseeing the purpose of the German army to enter a wedge between the allied armies, Marshal Foch selected American troops to stop this advance, which at Les Meres farm and at Chateau Thierry had reached the nearest point to Paris—37 miles—since the previous advance in 1914.

Heroism Commonplace.

The Second American division had just taken that part of the line in the neighborhood of Belleau, while at Dormans and Chateau Thierry the First and Third were holding back the Hun. Rocks and crags hid the enemy's machine guns, but in the early part of the engagement the French were virtually without artillery protection and were fighting a hand-to-hand action to stop the Germans until help could come. In the fighting of May and early June, 1918, the American troops were without supports and reserves, but the individual initiative was remarkable. Heroism was a commonplace of the American soldier in action.

"We need supplies, gas masks. Who'll volunteer?"

"I'll go!" promptly answered a young sergeant of the marines.

His offer was accepted. He had an almost uncanny sense of direction, and no one in the company possessed a better knowledge of wood lore. All his summers had been spent in the open, and these playtimes of earlier days had developed qualities that now stood him in good stead. The playtime of the child had become the opportunity of the man.

Creeping cautiously through the underbrush, he reached the shelter of the woods, only to find that he had stumbled on a quarry and a camp of more than sixty German soldiers. Trembling with excitement, he rushed forward. "Surrender!" he shouted. "The whole American army is behind me!" Surprised, bewildered, the men marched out, under cover of the hold-up, and were brought prisoners into the American line. One of the majors in the Second division wrote in June, 1918, of the death in action of this marine: "He was killed in the Bois de Belleau by a shell near where my command post was, shortly after bringing his captain out, who had been wounded in an attack we were making. The day before he went into a quarry and brought out 60 Germans as prisoners, single-handed. Such an act speaks for itself."

It was by this spirit these men fought, and because of this spirit these men won. It was a dearly bought victory, but it stopped the German objective, and the enemy never again won a victory or made another drive.

Many States Share Glory.

In the little cemetery on the western edge of Belleau woods, there is hardly a state in the Union not represented. There are 200 alone from Massachusetts. Belleau woods, just above the village of Belleau, where the Germans sheltered their guns, is now called the "Wood of the Marine Brigade," and what was once a lovely wooded hill is now a rocky devastation; its crown of nature's green now rows of "toothpicks" standing naked to the sky.

In Washington, in June, 1921, the plan of the Belleau Wood Memorial association to rebuild the town of Belleau by popular subscription was launched. The Belleau Woods Memoral association thinks it better to rebuild

"a house that has echoed a baby's laugh and held up its stumbling feet,"

better to put a

"home's loving wooden arms around a man and his wife,"

than to erect a shaft of marble cold to the sky in memory of our dead. The national committee hopes to raise $300,000 and with this money rebuild the little town of Belleau shattered by our boys in their advance on Belleau wood.

The plan is to rebuild the village as it was, with the addition of a better church, school, and with an adequate water supply; the supervision will be in the hands of Col. Charles R. Forbes, director of the Veterans' bureau, who served in the A. E. F. and who is a noted engineer in civil life. Every cent raised will go into the rebuilding memorial, as the organizing expenses are being borne by a small group of contributors. The names and addresses of every contributor will be preserved in the archives of the rebuilt "Marie," or city hall. Eighty-two buildings are to be restored, as well as a group of small farms on the side. The French government promised to have all roads put in condition as their contribution, and will be guarded by our boys who silent in the little green-and-cemetery just across the way.

Homes Must Be Rebuilt.

In time nature will restore to her trees and flowered loveliness, neither time nor nature can restore shattered homes. Those of us who have not been intimately touched the horrors of war or the cruel sudden overwhelming separation those we love can only approximate the sadness in the lives of those us who have not been so fortunate. Many a mother's heart is buried her enthusiasm deadened. It is through some practical memorial her interests can be roused and awakened.

The field of honor at Belleau will the permanent Aisne-Marne cemetery "where a shining forest of snow-white crosses will stand as sentinels over the mortal remains of 6,000 of our boys." The organization for this morial to our dead has its headquarters in Washington, with Marshal Foch chairman for France, John Weeks, honorary president. The president is Mrs. James Carroll Parker, vice president of the Navy League of the United States, and Vice President Coolidge as a member of the national committee. Mrs. Charles Lea is chairman for Pennsylvania; Mrs. Theodore W. Reath, acting chairman; General T. Waller, executive secretary; Miss Helen Foster, secretary.

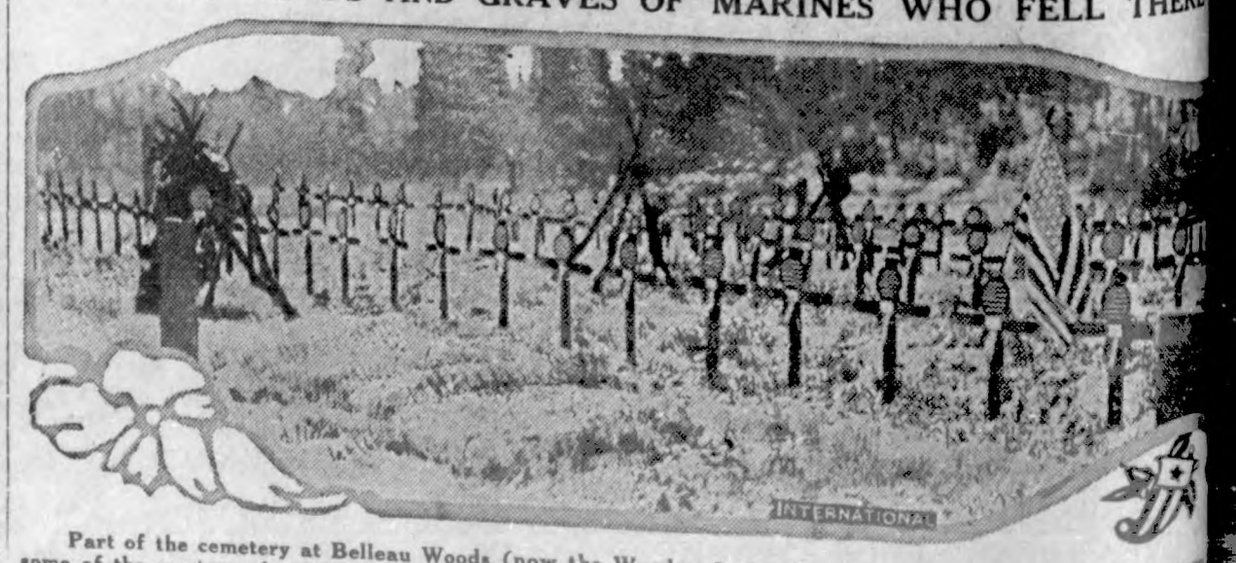
How Our Boys Went Into Action.

Mrs. Reath revisited France this summer and went over all the ground in the neighborhood of Belleau. At Les Mores farm she made the acquaintance of a young Frenchman who had been severely wounded at the battle of the Marne. "He had witnessed the advance of the American troops," said Mrs. Reath, "and his account was so graphic and bore such testimony to the truthfulness of the American correspondents who had covered the advance of the American army in action and described the troops in action at Belleau, that I feel I should tell it to you as he told it to me.

"'Those men were magnificent, madame! They had taken off their coats and had pinned to their shirts a piece of py. As they rushed forward they yelled, and, madame, as they fought the Germans went hipity hop! hipity hop.' This was the only English word that Frenchman knew, but it was the most expressive English word I have ever heard. It does seem incredible that our boys should have been careless with their lives," continued Mrs. Reath, "but I have no reason to doubt the truth of the man's story, especially as it corroborated the account of our own correspondents at the time."

This memorial at Belleau is to be established to those boys—our boys—to their idealism; to their heroism that brooked no barrier. It is to be a memorial that will give to the people of this part of France a practical expression of the good-will of the American people as well as a national tribute to the men whose "souls shall be with the heroes are" and whose memory shall "shine like the morning star."

BELLEAU WOODS AND GRAVES OF MARINES WHO FELL THERE



Part of the cemetery at Belleau Woods (now the Woods of the American Marines) showing the graves some of the marines of our forces who gave up their lives in the battle of Belleau Woods.

POULTRY

SUCCESS IN HATCHING EGGS

Care and Attention to Detail Are What Makes One Man Succeed Where Another Fails.

(Prepared by the United States Department of Agriculture.)

Between making or losing money in raising chickens there is only a narrow margin. Contrary to many persons' ideas, no magic road leads to success in this work. Care and attention to detail are what make one man succeed while another one with similar equipment fails.

The following suggestions on incubation are given by poultry specialists of the United States Department of Agriculture:

Have everything ready beforehand, and start your hatching operations early in the year.

A well-ventilated cellar is the best place to operate the incubator.

The machine should be operated according to the manufacturer's directions.

See that the incubator is running steadily at the desired temperature before filling it with eggs. Do not add eggs to a machine during incubation.

Turn the eggs twice daily after the second and through the eighteenth day. Cool the eggs once daily, according to the weather, from the seventh through the eighteenth day.

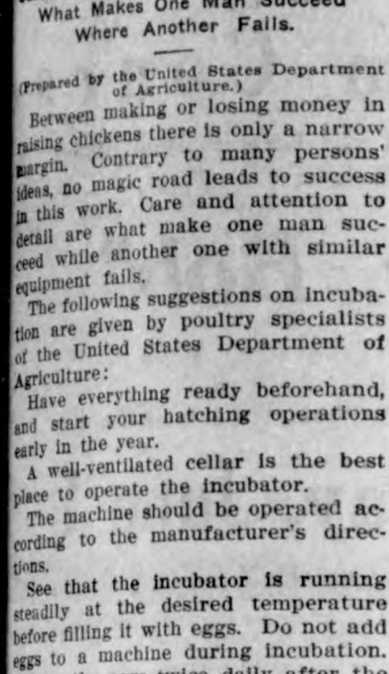
Turn the eggs before caring for the lamp.

Attend to the machine carefully at regular hours.

Keep the lamp and wick clean.

Test the eggs on the seventh and fourteenth days.

Do not open the machine after the



Care Is the Keynote of Success in Hatching Eggs.

eighteenth day until the chickens are hatched.

Eggs saved for hatching purposes should not be subjected to high or low temperatures.

In cold weather place from 10 to 13 eggs under the hen; in warm weather from 13 to 15.

Always try the hen on china or nest eggs before setting good eggs.

Given proper care and attention, the hen is the most valuable incubator for the farmer.

Use insect powder freely to exterminate lice when necessary.

February, March, April, and May are the best months for hatching, depending on the section of the country.

If several hens are set in one room, it is desirable to confine them to their nests.

Straw and hay make good nesting material.

Broody hens should be moved to the permanent sitting nest at night.

While corn is a good feed for sitting hens, water, grit, and dust baths should also be provided.

All eggs should be tested by the seventh day, which often makes it possible to reset some of the hens.

Which Hens to Keep

Strong, healthy, vigorous hens with short, neat heads and strong beaks.

The hens with long, deep, rectangular bodies and parallel top and bottom lines.

The hens with large, bright eyes, active appearance and short, well-worn toe nails.

The hens with dusty, worn feathers, especially worn tail feathers, but having a bright, healthy look.

The hens that molt late and those that molt rapidly.

The noisy, happy, friendly hens.

The early risers and those late to roost.

The vigorous hens with the faded beaks and shanks.

The hens with the thin pelvic bones spread wide apart.

The early-hatched, well-grown pullets.

Large, strong, active, quick-maturing cockerels of desired variety type and high-producing mothers.

THE DAIRY

BIG COWS GIVE MOST PROFIT

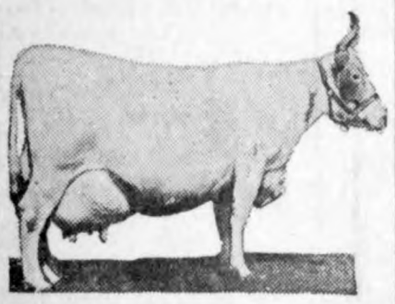
Records Show That Large Animals Are Biggest Producers of Milk and Butterfat.

(Prepared by the United States Department of Agriculture.)

Figures collected from various cow-testing associations throughout the country and compiled by the United States Department of Agriculture tend to confirm the previous conclusions of the department that within the breeds, so far as they were represented by these animals, which were mostly grades, the large cows are the biggest producers of dairy products and are also the most profitable. The evidence seems to point to the fact that in the individual farmer's herd it will be found that on the average the larger cows are more profitable than the smaller ones, although there are some indications that this may not hold true in the case of herds of native cattle containing much beef blood.

The cows whose records have been used by the department have been sorted out so that only mature animals were used for these comparisons, thus eliminating any differences that might have been caused by the immaturity of some cows.

In one group for which figures have been prepared there were 160 cows classified as small, 201 as medium, and 129 as large. The small cows averaged 243 pounds of butterfat a year, and made an income over the cost of feed of $77.39. Those of medium size made 289 pounds of butterfat and an income over feed cost of $88.91. The large cows produced 345 pounds of



A High Producing Cow—The Result of Good Breeding.

butterfat and a return above feed cost of $105.74.

In another group there were 461 small cows, 483 classed as medium, and 326 large. Those in the first classification made 240 pounds of butterfat on an average and an income over cost of feed of $89.11. The mediums made 278 pounds of butterfat and $106.09 over feed cost. The large ones produced 299 pounds of butterfat and an income over feed cost of $108.29.

These tables were based mostly on figures for the years 1916 to 1919, inclusive, which accounts for the high average income over cost of feed.

CARING FOR SPRING CALVES

Young Animals Should Be Quartered in Clean Shed or Lot and Given Proper Feed.

Dairy calves should be kept in a clean shed or lot and fed regularly, according to A. C. Baer, professor of dairy husbandry at Oklahoma A. and M. college. He suggests the following feeding schedule:

First week—Feed three times a day of mother's milk.

Second week—Feed three times a day of whole milk.

Third week—Feed three times a day but substitute one-third skim milk.

Fourth week—Feed two or three times a day; one-half skim milk. Regulate the amount of milk to the size and vigor of the calf.

"After the fourth or fifth week all skim milk can be fed and a little grain, ground oats, corn, barley, and a little bran," Baer says. "Let them eat some good hay, as much as they can eat.

"Calves can be kept on pasture, but should receive some grain and hay in addition. To prevent scours, all buckets and cans must be kept clean. The shed or lot should also be cleaned regularly."

ECONOMICAL FEED FOR COWS

Quantity of Grain Required by Animal Depends on Her Size and Milk Capacity.

Silage, fodder, shredded stover or sudan and millet hay may be depended upon for supplying carbohydrate roughness. The quantity of grain the cow requires depends upon her size and capacity as a milk producer. The most economical feeding results when cows are fed as individuals. It isn't always possible to do this on the busy farm; but sufficient attention may be given each animal to see that she receives the right proportion of feed for maintaining her milk flow.

FALL FRESHENING IN FAVOR

Cow Will Produce 10 to 15 Per Cent More Milk and at Time When Prices Are High.

The fall-freshened cow produces 10 to 15 per cent more milk than the spring-freshened cow, according to the dairy department of the North Dakota Agricultural college, while the large production of the fall-freshened cow comes at a time when dairy products are highest in price.

BETTER CARE OF PIGS NECESSARY

Smaller Litters Are Reported in Many Parts and Crop Will Be Below Normal.

SOWS WERE IMPROPERLY FED

Besides Feeding Sanitation Is Big Problem for Grower—Young Animals Will Not Thrive if Permitted to Run Loose.

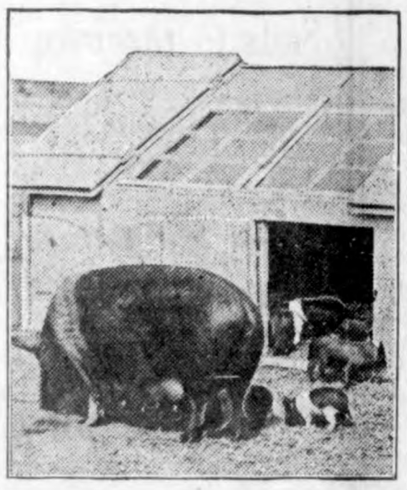
(Prepared by Information Service, Iowa State College, Ames.)

Small litters of pigs are reported in many parts this spring and indications are that the pig crop will be far below normal. This will mean that better care of the surviving pigs will be necessary if the nation's supply of animals is kept anywhere near the average.

The reason for the shortage of pigs is explained by the fact that, due to the cheapness of corn the past winter, it was fed in large amounts to brood sows, while tankage, or protein balancer for the ration, was comparatively high priced and was not given to the animals in large amounts. As a result many of the sows are farrowing pigs that are weak.

Sanitation Most Important.

In order to keep those pigs successfully farrowed, proper feeding is not the only problem of the farmer. Lack



The Number of Pigs Saved Will Pay for This House in a Single Year and You Have the Building Left.

of sanitation carries off more pigs than does improper feeding. Dr. K. W. Stouder, veterinarian at Iowa State college, has found that where pigs are allowed to live "anywhere" they will often develop into runts with bull nose and snuffles and soon die due to unknown diseases. A streak of wet weather will start pigs going backward, especially where they are allowed muddy quarters. Soon infections break out in their gums or jaws and faces become distorted and "bull nose" is the result. When the infection causes the cutting off of the wind by pressing on the nostrils "snuffles" results. Often this infection gets down into the stomach and intestines and death is not far away.

Often a pig, although the sow is furnishing plenty of good milk, becomes thin and scrawny and soon dies. Although many names have been given this disease, Doctor Stouder says that it is the result of "filth infection." The germs which cause the trouble are frequent in old manure piles and wallows where bacteria thrive.

Experiments with pigs show that where the pigs are allowed to run on good blue grass pasture the majority of the litter survive, while pigs confined to yards where they have to run through mud and under sheds die in 50 per cent of the cases before they get their growth.

Movable Hog House Favored.

The farmer who has a large number of pigs can well afford to build a movable hog house. Such houses, designed by the Iowa experiment station at Ames, have been used for a number of years and have proven their worth. Recently requests for plans were received from Italy where some farmers had heard of the houses and wanted to try them. These houses are inexpensive, easily kept clean and can be pulled from one field to another. They can be turned so that sunlight is allowed to enter and are arranged so that plenty of ventilation is provided for. The feature of the house is the manner in which sunlight is allowed to enter through the top.

The movable hog house is also easily disinfected at any time and if several are used the hogs and pigs can be transferred from one to another while cleaning is being done.

Rotation of hog pastures prevents infestations by parasites, such as worms which get into the soil and affect the entire herd.

CHEAP SEED MOST EXPENSIVE

Poor Strain of Alaska Peas Sown in Maryland and Delaware Resulted in Loss.

It pays to know the parentage and quality of seed. In 1920 some 1,700 acres of a poor strain of Alaska peas were sown in Maryland and Delaware, resulting in loss to the canners as this strain when canned became dark and of course was not of much value for the market. Cheap seed is often most expensive.—LeRoy Cady, associate horticulturist, University Farm, St. Paul.

MANY GARDEN PLANTS ARE SOWN TOO THICK

To Produce Best Vegetables Thinning Out Is Necessary.

Many Gardeners Use More Seeds Than Needed Under Expectation of Securing Fuller Stand—Some Must Be Pulled.

(Prepared by the United States Department of Agriculture.)

Thin your garden crops to an even stand if you want to produce good vegetables.

Gardeners usually sow more seeds than are necessary, under the expectation of getting a fuller stand, or at least of having enough. This results in no particular harm except the waste of seeds, provided the plants are thinned before they begin to crowd each other.

Peas very seldom need any thinning, as they will thrive when planted quite close together. Beans planted five seeds to the hill and the hills 12 inches apart will not need to be thinned, but if six or seven seeds have been dropped it will be desirable to thin them, leaving only four or five in the hill. Corn should always be thinned to three or four stalks in the hill, the weaker stalks being pulled out, leaving only the best. Radishes, unless too thick, can be allowed to stand, thinning being accomplished by pulling up plants for table use as they reach edible size.

Lettuce is generally sown entirely too thickly and, to thin the bed, the small or medium-sized plants can be pulled out and used. Some of the plants may be lifted and transplanted, spacing them three or four inches in each direction, so that they will develop into distinct heads for use later. Beets are usually planted entirely too thickly, partly due to the fact that each seed ball contains two or three seeds and, as a rule, every one of these seeds grow. They should be thinned to stand not closer than two inches apart in the row. Still later every other beet should be pulled out. This last thinning, however, can be postponed until the beets are large enough to use.

Carrots and parsnips are generally sown too thickly and must be thinned. The thinning should be done just as soon as the plants are large enough to pull out, and as they are thinned a little loose soil should be worked in around the plants that are left. Two or two and one-half inches is about the right distance to leave the carrots, and three to five inches for parsnips.

The gardener may be reluctant to pull out nice, thrifty plants, but he should remember that if all are allowed to remain few, if any, will mature satisfactorily.

WINDBREAKS PROVE POPULAR

Undertaking Meeting With Favor in Minnesota—Conifers and Deciduous Trees Planted.

The planting of windbreaks, which was started in Minnesota as an extension project in co-operation with the state forest department, has proven, in a little over a year, to be a very popular undertaking wherever it has been taken up. Demonstrations of windbreaks have been established under the direction of forestry experts, and trees have been furnished by the for-

Windbreak for an Orchard.

est experiment station at Cloquet. Inspections have been made by a representative of the forestry department. In 14 counties 72 demonstrations of windbreaks have been given. This work has been done through 1920 and 1921, and in some counties plans are already made for 1922 and 1923 plantings. A year's preparation of the soil is required before the windbreak is set out. Both conifers and deciduous trees are included.

TOOLS AND MACHINERY RUST

Best Plan to Prevent Depreciation Is Liberal Use of Paint and Grease in Spring.

Many farm tools and machines rust and rot out rather than wear out. The best way to prevent this depreciation, which, unlike wear, goes on both winter and summer if the tools are exposed, is to use paint and grease to save the cost of new tools or parts in the spring. A little paint on wooden parts prevents warping, checking, and rotting; oil on wearing surfaces of cultivator, mowing machine, or binder, and common axle grease smeared on the bright parts of plows, will cut winter depreciation in two

LIVE STOCK

FEEDERS AVOID HEAVY LOSS

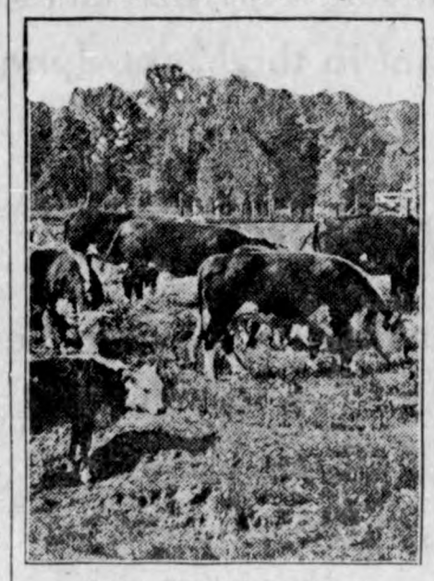
Cattle Cost Studies in Corn Belt Show Losses Are Small When Roughages Are Used.

(Prepared by the United States Department of Agriculture.)

Cost figures on 20,217 head of beef cattle fed in five corn belt states, summarized in a statement issued by the United States Department of Agriculture, show that scattering droves made good profits last season, in spite of the fact that there was an average loss of $20.87 per steer. Department investigators cite the fact that some of these droves made profits under the most adverse conditions, as emphasizing the extreme importance of watching the details of feeding and management in slump periods in the cattle business.

The feeders in the areas studied who made the most economic gains, in general, used standard rations. In Illinois and Indiana this ration consisted of corn, protein meal, mixed clover and timothy hay, and silage, with some stover and fodder. In Nebraska and Iowa the standard rations consisted of corn and alfalfa hay, while in Missouri it consisted of corn, protein meal, hay and fodder. In the latter state some of the cattle covered in the study were finished on grass.

"The average loss of $20.87 per head," one of the department investigators explains, "should be looked at in the light of the fact that all feeds were charged to the cattle at farm prices for all home grown feeds, and store prices for feeds bought." Thus the effect of the loss in question on the farm business as a whole was in some measure offset by the return from 1,000 to 2,600 pounds of unmarketable roughage fed to the average steer in the different localities. Even



Cattle Finished on Grass.

though the cattle-feeding enterprise may show a presumptive loss, there may be a profit for the farm operation as a whole, provided home-grown feeds have been produced at a cost far enough below the market price.

"No inidivdual feeder could be sure of marketing his field products at a profit, including stover and low-grade hay, if he were to choose to sell crops rather than feed them to live stock. If all feeders, or even if a considerable number of feeders, were to try such a shift, the market for all field products would be glutted, with the probable result that the farmers could not even dispose of their corn. The cattle feeder, though he knows that his business for the time being is a precarious one, hesitates to turn to crop farming as a possible relief, because he realizes that cattle feeding is the business he is best fitted for, and because he believes a recovery to profitable production is not far distant."

The studies in question were made by the United States Department of Agriculture in co-operation with the state agricultural colleges of Nebraska, Iowa, Illinois, Indiana and Missouri. Preliminary reports issued by the department, and by the several state institutions concerned, give in detail the quantities of feed and hours of labor used in ordinary feed lot production of fat cattle.

All reports may be obtained upon request to the Department of Agriculture, Washington, D. C., or single reports from the state agricultural colleges co-operating. Farmers' Bulletin 1218, "Beef Production in the Corn Belt," gives a discussion of feeding.

ESSENTIAL TO CONTROL LICE

Plenty of Nutritious Feed and Thorough Cleaning Up of Surroundings Are Needed.

In the control of cattle lice, plenty of nutritious food and a thorough cleaning up of the animals and their surroundings are essential to success, whatever method of control you choose to adopt.

Feeding Calves.

Calves intended for beef should begin on grain when three to four months old. A mixture of equal parts oats, bran and corn (preferably ground) is the best grain ration.

Pay Attention to Worms.

Successful growers of swine are each year paying more attention to the prevention of worms in swine.

Dock Early.

Lambs should be docked and gelded while yet quite small.

Adrift With Humor

LIVING IN THE PRESENT

"I have here a poem on Helen of Troy," said the visitor.

"Helen has been dead a long time," mused the editor.

"But imagination bridges the centuries."

"Quite true, but I don't believe our readers care to be taken back that far. In fact, most of them regard the 1919 world series as ancient history."

An Athlete.

"Although you considerably outweigh your antagonist, you seem to have had the worst of the fight," said the sympathetic old gentleman.

"I was out of luck when I struck him," replied the man who was nursing a broken face. "Nobody told me he'd been playing for years in a jazz orchestra."

No Great Risk.

"Wife, the people next door are having a tin wedding anniversary. The lady has been neighborly. Better buy her something in tin."

"Now if we start that they'll have a leather wedding and a silver wedding."

"Oh, you'll quarrel with her before that."

Explaining His Income.

"It is inferred from the works of a Chinese poet who wrote centuries ago that he must have paid taxes."

"Do you know anything else about that bard?"

"No. Why do you ask?"

"I thought a little investigation might show that he operated a silk mill or a pottery works on the side."

Mental Consideration.

"You used to specialize on sympathizing with the working man."

"The working man reciprocated," replied Senator Sorghum. "During their recent years of affluence the working men in my constituency have sympathized with me for having to keep up appearances on a government salary."

OUTSIDE THE SANCTUM

"Nope, the editor is seeing no poets."

"What, sirrah, you refuse to admit the bard."

"You said it. The bard is barred."

Sweet Things.

The greatest pair
The world has known:
A little boy
And an ice cream cone.

A Human Fact.

"The ideas of men and women will always differ in one respect," said Miss Cayenne.

"What is that?"

"When a man goes out to enjoy himself he wants his old clothes, and a woman can't be happy without new ones."

A Chilly Reception.

"How would you approach Mr. Wadleigh for a loan?" asked the impecunious citizen.

"First of all, I'd make sure that I was physically fit to stand exposure."

"Exposure to what?"

"A sudden drop in temperature."

The Social Hungerer.

"Have you any idea for the improvement of society?"

"I have," replied Senator Sorghum. "One improvement I'd suggest for society is to serve some regular beefsteak at these fancy luncheons and not so much mayonnaise dressing."

Fascination of the Game.

"Did you enjoy the bridge whist party?"

"Not much," answered Miss Cayenne. "No one had any new stories that were really worth listening to."

Comprehensive.

Tom—So Miss Blugore rejected you. On what grounds?

Dick—Well, it sounded to me like an essay on eugenics, genealogy and finance.

Dates Back.

"There's an old custom of a girl giving a man a kiss for every star she can see. Wonder how that originated?"

"In the old days when a man did his courting by whacking a girl on the head with a club."

Insignificant.

Cholly—I should weally like to see myself as others see me, don't you know.

Miss Keen—You wouldn't give yourself a second glance.

GIFTS FOR GRADUATION—Scheaffer Fountain Pen and Gold and Silver Pencils; Pearl Necklaces; Ivory Goods and Jewelry. E. S. D. Kahrs, Druggist. 1wc

John Iberling, of Cedar Falls, was visiting at the Ben Swalve home Monday night. He is a cousin of Mrs. Swalve and is a traveling salesman and just dropped in for a visit.

Mr. and Mrs. Roy Joneson are reported to be the parents of a fine baby boy. They live in Illinois. Mrs. Joneson was formerly a Schwichtenberg girl.

Ernest Palmby's who live in Minnesota are reported to be the parents of a baby girl. Mrs. Palmby will be remembered as a former Klemme girl, Miss Hartbeck.

Lester Ross, who has been visiting in this vicinity expects to leave for Minneapolis the latter part of this week where he has a position in the post-office there.

Lurley Wilson is here visiting with her sister, Miss Leafy Wilson. She recently closed a term of school in Montanna where she was teaching this year.

Tanlac is a powerful, reconstructive, systemic and stomachic tonic. It tones up the system, restores lost appetite and makes you feel strong, sturdy and well, as nature intended. E. S. D. Kahrs. adv

Marlin Croner and Al Emerson returned last Friday from up Spirit Lake way. Al had been visiting his daughter there and Marlin was looking after business matters. Meanwhile they found a little time to do some fishing and brought back a few of the big ones.

We have to take our hats off to young Donald Turgeson for catching the most peculiar variety at Clear Lake this season. "Turgy" was with Grandpa Kluckhohn at the lake Saturday afternoon and was throwing out a minnow on his line when one of those little lake gulls made a swoop for the bait and got tangled up in the boy's line. It was a few exciting minutes for Donald reeling in a "flying fish." We don't know who was the most scared, "Turgy" or the bird.

NOTICE OF SPECIAL SCHOOL ELECTION

Public Notice is hereby given to qualified voters of the Independent School District of Klemme, in the County of Hancock, State of Iowa, that a special election of the voters of said District will be held on the 19th day of June, 1922, at the Town Hall, Klemme, Iowa, from 1 o'clock P. M. until 6 o'clock P. M., at which time there will be submitted to the voters of said District the following proposition:

> "Shall the Independent School District of Klemme, in the County of Hancock, State of Iowa, issue bonds in the sum of not to exceed $15,000 for the purpose of constructing and equipping an addition to the school house within said School District?"

at which time and place you are hereby notified to appear.

This notice is given by order of the Board of Directors of the Independent School District of Klemme, Hancock County, Iowa, pursuant to a sufficient petition in accordance with Sections 2820-d et seq. of the Supplement to the Code of Iowa, 1913, as amended, and in accordance with a resolution of said Board duly adopted on the 18th day of May, 1922.

Dated at Klemme, Iowa, this 18th day of May, 1922.

LEW LEWIS,
Secretary, Board of Directors.

The American Legion

(Copy for This Department Supplied by the American Legion News Service.)

LEGION WOMAN, MOTHER OF 21

Mrs. Jacob Caranek, Healthy and Happy, Holds Record Among Producers of Americans.

Mrs. Jacob Caranek, who runs a neat little grocery store in New Orleans and therein sells butter and eggs, bread, meats, canned corn and maybe the necessities for making those delicious Southern pecan candies, is also champion mother of the American Legion Auxiliary. She is, at least, until some one comes along who is the mother of 22 children, to beat Mrs. Caranek's 21.

A child had come to Mrs. Caranek's house each year for 21 years when America entered the World war. Which of the 21 was dearest to her she herself could not tell, but when the two eldest boys, Joseph and Louis, went away to war the large Caranek family was cast into shadow. "What else should I do?" Mrs. Caranek questioned. "They are Americans and their country needs them. If it is a duty to raise children, it is right to make them love their country." But when Joseph and Louis came home—Joseph served overseas with the Rainbow division and fought in four big battles, while Louis fought in and around Camp Beauregard—the little grocery store could scarce contain the joyful celebration.

Mrs. Caranek came to America when she was fifteen years old, leaving her native village of Petravice in Czechoslovakia. She is forty-seven years old now and her husband is fifty-eight. The youngest child is six years old and the oldest twenty-eight. Mrs. Caranek has been to but one motion-picture show in her life and she left before that one was over. She works from five in the morning until ten at night in her grocery. And she hasn't a gray hair and has never been sick but once and enjoys life.

NAMED FOR THE COMMANDER

Legion Member Pays Honor to New Son and the Leader of the American Organization.

Since the first time that America had a war, babies have come into the world named for a great or favorite general. The namesakes of Gen. George Washington are still numerous; those of Robert E. Lee and U. S. Grant are going strong into the second generation and there are not a few John J. Pershing Smiths and Joneses to vie with the less recent Deweys and Teddy Roosevelts.

One service man of the American Legion has, however, started the naming of babies after the national commander of the Legion of the year in which the child was born. The first on record is young Hanford Morris, Atlanta, Ga., born a few days after Hanford MacNider, Mason City, Ia., was elected national commander of the Legion. His father, Albert R. Morris, is a member of Atlanta post No. 1 of the Legion.

Recently an ex-soldier of Chicago went into court and asked to be allowed to drop his middle name, which was unpronouncable, he declared. The court gave permission and the service man, an enthusiastic Legionnaire, chose the name of Legion to accompany him through life.

Legion Post Stages "Movies."

To satisfy curiosity-hounds, the Hollywood (Cal.) post of the American Legion stages a "model movie" every week. This saves wear and tear on the nerves of the people in Movieland, and at the same time gives tourists a view of how movies are made. Real reel directors, cameras, and stars are used in the model exhibitions—but the Legion does the work.

Consider "Star" Flag an Insult.

The idea, conceived by the W. C. T. U., of putting star flags in windows of homes where no liquor is consumed, is protested by an American Legion post in San Francisco, composed entirely of newspaper men. The Legion men claim that the liquor star flag is an atrocious plagiarism of the service flag of war days, and that it is an insult to all former service men.

To Halt "Fake" Money-Raising.

In an effort to stamp out the sale of publications by ex-service men who allege that the money derived is going to be used for the benefit of sick and wounded ex-service men, the American Legion national offices have warned its 11,000 posts not to sanction any sale of periodicals until the Chamber of Commerce or some like civic organization has first approved.

LEGION 'QUEEN' IS DIPLOMAT

Miss Ruth Metcalf, Burlington (Ia.) Girl, Names Her Brother Carnival "King."

Women began practicing the art of diplomacy when Eve was about three days old, and the present generation of fair ones are not so bad at it, the world knows. Even the distinguished foreign diplomats who wear red stripes across their boiled shirts at formal dinners will give the palm to a sweet Iowa girl, however, and if they hesitate, a number of Iowa men might have a word to say that would prompt them.

It happened that the American Legion of Burlington, Ia., having a high carnival and desiring a queen, chose one. The girl selected for her outstanding beauty, wit, and spirit was Miss Ruth Metcalf, who later displayed tact. Miss Metcalf being duly and fittingly crowned queen, now would choose one of the ex-soldiers as king, it was announced, whereat some hundreds of assorted male beauties struck attitudes of attention. After looking closely over the assembled Legionnaires, Miss Metcalf calmly picked out her own brother and crowned him king. Whereupon the issue was settled with nice diplomacy and the big carnival parade got under way.

ENDED SITTING BULL'S REIGN

Chief Red Tomahawk, Sioux Warrior, and Commander MacNider Smoke Pipe of Peace.

Since the passing of the dime novel, the 40 redskins who used to bite the dust so frequently have become lost to the world. But the exploits of old Sitting Bull may well be remembered, even today, when the marble-shooting generation is reading deep volumes that puzzle exasperated parents.

Sitting Bull also bit the dust in approved fashion and, while touring through Bismarck, N. D., recently, Hanford MacNider, national commander of the American Legion, had the pleasure of meeting the gentleman who caused the Bull's downfall. It was none other than old Chief Red Tomahawk, Sioux warrior, who some years ago captured Sitting Bull's pelt, and who came from the reservation to greet the big chief of the white tribe. With Red Tomahawk came a number of the younger Sioux braves who fought in France with the A. E. F. and gave the Germans the surprise of their lives.

While in North Dakota Mr. MacNider smoked a peace pipe with the Sioux chief and received congratulations of the chief of the first Americans for the organization which is endeavoring to keep America for the present Americans.

Physical Deterioration.

"Physical examinations of regular army officers show the most clear-cut evidence of physical deterioration which is due to strain incident to the World war," the army medical department reports. That investigation may bring to light a scientific explanation of some part of the restlessness among former soldiers which can be laid to their having undergone a severe nervous strain.

Alaska Has the Wealth.

Alaska could not only pay for adjusted compensation, if it were rightly developed, but the whole war debt besides, according to Albert B. Fall, secretary of the interior. What is believed to be the greatest oil field in the world is in the Arctic near the Aleutian islands. A tremendous coal belt in Alaska is undeveloped, and the greatest copper mine in the world as well.

Legion Asks for New Law.

"Oh-o-o say can you see-e—?" The band-organ man ground out the national anthem and the monkey danced and squinted his sharp eyes. Then the hand-organ man passed the hat. But in New York state he will have to change his tune, if the American Legion gets its bill through the legislature prohibiting the playing of the "Star Spangled Banner" for the purpose of collecting money.

Carrying On With the American Legion

The official American Legion grave markers may be had from national headquarters for $1.30 each, now.

* * *

The Legion post of Decatur, Ark., has bought the city's telephone system and, after an overhauling, will operate it.

* * *

Pershing stadium, built by the A. E. F., has been designated as the place for the holding of the 1924 Olympic games.

* * *

The famous French general, Gouraud, has been invited to attend the reunion this year of the Rainbow division, in Minneapolis, Minn.

1—The Crucifixion as represented by the Oberammergau peasants in the Passion Play now being presented. 2—Sackville street, one of Dublin's busiest thoroughfares, during the one-day strike of workers against civil warfare. 3—Lady Astor, now touring America, greeted by an old family servant on the Virginia homestead.

NEWS REVIEW OF CURRENT EVENTS

Genoa Conference Ends After Planning Parley on Russia at The Hague.

EIGHT-MONTHS' TRUCE SIGNED

America Declines Invitation to Participate in the New Meeting—Good Work by League of Nations' Council—Pinchot's Victory in Pennsylvania.

By EDWARD W. PICKARD

TOTAL results from the Genoa conference that was to bring about the regeneration of Europe, economically and financially, and which has adjourned, appear to be: Plans for new negotiations for a settlement of relations with Russia, to be carried on by commissions which will meet in The Hague in June; a truce of eight months between all the soviet republics and the other European powers; a clearer comprehension on the part of the world of the arrogant attitude and extravagant demands of soviet Russia; and a repeated affirmation of the position of the United States, that it will not participate in the political wrangles of Europe and will not enter into dealings with the Moscow government until the latter recognizes its international obligations.

The last mentioned result came when the Genoa conference invited the United States to take part in the proposed negotiations at The Hague, virtually admitting that without the aid of America's financial resources any agreements for the commercial regeneration of Russia would be useless. Secretary Hughes' reply, after expressing the deep sympathy of this country for the people of Russia and its desire to aid them in every practicable way, continued:

"This government, however, is unable to conclude that it can helpfully participate in the meeting at The Hague, as this would appear to be a continuance, under a different nomenclature of the Genoa conference, and destined to encounter the same difficulties, if the attitude disclosed in the Russian memorandum of May 11 remains unchanged.

"The inescapable and ultimate question would appear to be the restoration of productivity in Russia, the essential conditions of which are still to be secured and must, in the nature of things, be provided within Russia herself."

Intense disappointment was caused in Genoa by this answer, and though it seemed final, some of the delegates, especially the British, refused so to consider it. Before the meeting at The Hague gets under way it is likely another attempt will be made to obtain the co-operation of the United States.

ACCORDING to the accepted plan, the nations represented at Genoa will send delegates to The Hague, and from them will be selected a commission that will deal with the financial and economic problems involved in the recognition of soviet Russia, but not with political affairs. The findings will be submitted to the various powers, and, if they are approved, the commission will begin conferences with a commission of Russians. Meanwhile the eight months' truce with the soviet republics will be in effect and the powers will not enter into separate treaties with Moscow or back their nationals in trying to obtain property in Russia which did not belong to them before the soviets came into control there.

Because it already has made a treaty with Russia, Germany is not to be included in the negotiations at The Hague. To this exclusion M. Tchitcherin made strong objection, on the ground that one of the chief objects of the meeting, credits, was not dealt with in the Rapallo pact. The Russian leader also had a hot exchange with the Japanese, asking whether Japan intended to engage in a truce in the Far East or to continue the state of war in Siberia. Viscount Ishii's swift reply was that regardless of past differences among the Russians which had necessitated the presence of Japanese troops in Siberia to protect the property of their nationals, Japan was now ready to conclude a non-aggression pact in the Far East if the Chita republic also complied with the truce.

Tchitcherin then squabbled with the Poles, Rumanians and others over alleged plans of anti-Bolshevik leaders to organize expeditions against Russia, but was again squelched. When he asked that what is left of General Wrangel's army be removed farther from Russia, Mr. Lloyd George retorted: "Who wants them? We don't." The British premier severely scored Tchitcherin's defense of Russia as an "innocent, patient, and tolerant model of all the Christian virtues," and in concluding said. "Speaking after 16 years as a minister, longer than anyone else here, I believe the best we can do is to mind our own business. Organizing an expedition under General Wrangel to convert the heathen in Russia or under MM. Tchitcherin and Litvinoff to convert the heathen in our country will only bring trouble."

The Russian delegates have been trying hard to "save their faces" and it is predicted they will not be enthusiastically received by the more extreme communists at home. They have the treaty with Germany to their credit, but they have failed to obtain recognition for their government, and, what hurts more, they haven't the ghost of a show of getting the huge loan which was demanded.

DOCTOR WIEDFELDT, the recently arrived ambassador from Germany to the United States, just before he left Berlin concluded a contract by which the Krupp establishment was granted a concession of 56,000 acres of land in Russia to be used in raising food supplies for the Russians. Berlin says this concession gave rise to the "false report" that the Russo-German treaty contained a secret military clause including Krupp delivery of war materials. Dispatches from the German capital state that the success of the Krupp project depends on the co-operation of America and that one of Doctor Wiedfeldt's first tasks is to persuade Secretary Hoover that America should supply agricultural machinery, grain and seeds, as well as moral support.

NOTWITHSTANDING the decisive defeat of his ally, General Chang, near Peking, Sun Yat Sen, head of the southern Chinese government, is "carrying on" and at last reports was preparing to attack the northern forces in Kiangsi province. General Wu is ready to attack Sun's army in the rear and believes he will soon crush it. Meanwhile Chang has established himself for the time being in Manchuria and has declared the independence of that province and Mongolia. Plans for the unification of China await the result of the coming conflict with Sun Yat Sen's army.

OLD-LINE Republicans received another jolt last week, in the success of Gifford Pinchot who defeated George E. Alter for the gubernatorial nomination in Pennsylvania. As was the case after the Indiana primaries, the Democrats hailed the result as a blow at the national administration, which was denied by the Republican leaders. Really, Mr. Pinchot, ardent conservationist and former Progressive, owed his nomination largely to the women of Pennsylvania. They took an active part in the campaign all over the state, and appeared at the polls in full force.

Senator Pepper easily defeated Congressman-at-Large William J. Burke for the nomination to fill the unexpired term of the late Senator Penrose, and David A. Reed of Pittsburgh was nominated for the unexpired term of the late Senator Knox and for the full term beginning next March.

THE council of the League of Nations adjourned last Wednesday after accomplishing a lot of important work. Among the accomplishments of this session are the signing of the German-Polish treaty settling the Upper Silesia question; the establishment of a financial and economic protectorate over Albania by the league; the throwing open of the court of international justice to all nations, including Russia, Turkey and Mexico; the creation of a commission for international intellectual co-operation with an American member, and the setting of a definite date for disposal of the mandate over Palestine.

The last thing the council did was to decide to support Germany in her protest to the league against the treatment of more than a million Germans residing in Poland. They were barred from citizenship by a ruling that Germans must prove continuous residence in Poland for six years. Nearly all of them were serving in the German army during the war and so are deprived of citizenship. The council determined to urge strongly on Poland the reconsideration of the ruling.

IN PASSING upon the constitutionality of the grain exchange law the Supreme court of the United States found that the taxing features of the measure are unenforceable. Therefore the agricultural bloc in congress, under the leadership of Senator Capper of Kansas, is drawing up a revamped bill to overcome the objections. In place of the taxing power the new bill will probably provide for federal control over exchanges by declaring their activities to be a form of interstate commerce and therefore subject to government supervision.

THE Supreme court knocked out another piece of legislation last week, holding that the child labor law, passed in 1919, is unconstitutional, as an attempt by congress to regulate through its taxing power something entirely within the jurisdiction of the various states in the exercise of their police power. The law was designed to regulate the employment of children in any mill, cannery, workshop, factory or manufacturing establishment, under the age of fourteen or in any mine or quarry under sixteen years by imposing an excise tax of 10 per cent upon the net annual profits of those employing such labor. The Supreme court ruling is in effect another victory for the mill owners of Southern states.

PROGRESS in the senate debate over the tariff is outrageously slow, despite the fact that night sessions are being held. This is by no means due altogether to the Democratic opposition. Republican members are so lax in their attendance that Senator McCumber felt called on to take them to task, telling them if they couldn't keep on the job they should resign. The Democrats attack especially the section of the bill which gives the President power to raise or lower duties within a range of 50 per cent and to proclaim American valuation. This, they assert, is unconstitutional.

ANOTHER battle in conference between the house and the senate is presaged by the action of the senate appropriations subcommittee in agreeing that the army for next year shall consist of approximately 140,000 enlisted men and 12,530 officers. This represents a cut of 10,000 from the strength asked by the War department, but is an increase over the house bill of 25,000 men and 1,500 officers.

WILLIAM RANDOLPH HEARST is again causing the Democrats of New York state great distress of mind. He has declared himself a candidate for the nomination for governor and told the party leaders that he has done so much for the party that it should do that much for him. Mayor Hylan of New York city has come out strongly in favor of Hearst, and his chief up-state supporter is W. J. Conners, the Buffalo editor. Tammany doesn't know just what to do.

REPRESENTATIVES of Chile and Peru are holding, at the invitation of the United States, a conference in Washington in the attempt to settle the Tacna-Arica dispute that has kept those countries apart so many years.

Home Town Helps

CIVIC DUTY OF IMPORTANCE

Writer of Authority Calls Attention to Need of Co-Operation for the General Good.

Are the people in your community, as a general thing, genuinely interested in public affairs? Or are they so absorbed in their own concerns that they give little thought to civic problems and issues? Is their prevailing spirit one of hearty neighborliness? Do they co-operate to maintain a pleasant community life?

Are they free from the snobbishness of wealth? Are they tolerant in regard to religious questions? Do they frown upon petty gossip and all scandalmongering?

Have they a proper pride in the appearance of their homes and streets, so that the neighborhood maintains an attractive appearance? Or is their attitude in regard to this—as in regard to compliance with public-health regulations—one of indifference?

These are questions of more than academic interest to you. They bear directly on your welfare, and in especial on the future well-being of your children.

It goes without saying that you wish to see those children grow to be efficient and worthy men and women. Do not forget that the kind of community in which they are reared is bound to play a part in determining the kind of men and women they shall be.

Do not think that if the life of your community is an inferior life your children will be unaffected by it. They are certain to absorb something of its spirit to their lasting hurt. Whereas, if it is a superior life the benefit to them will be equally lasting.

Now ask yourself whether, as a member of the community, you are helping to raise or to lower community standards. Put to yourself regarding yourself the same questions I have put to you regarding the community as a whole.—H. Addington Bruce in the Chicago Daily News.

The Flyless City.

The flyless city is the dream of health officials. McPherson, Kan., with a population well under ten thousand, plans to realize the dream next summer by the enforcement of an ordinance enacted by the city commission, which offers an example to every community which makes the well-being and comfort of its citizens one of the foremost considerations.

The commission, after studying the problem from all angles, has ruled that no resident of McPherson shall be allowed to keep more than one horse, cow or hog within the corporate limits. All barns, stables, chicken houses and even dog houses must be cleaned three times a week and the refuse removed outside the city, where means will be available for its destruction. Every merchant must place wire flytraps at the front and rear entrances of his place of business and all citizens must take similar precautions in their homes under penalty of incurring a fine.—Providence Journal.

Might Learn From Athenians.

To have a grownup body of citizens in a town it is essential that local loyalty, local interest, local pride, augmented by local service, be inculcated and assigned their tasks.

Why not recall the spirit and method of ancient Athens in her period of highest civic power and grace? The Athenian youth, on reaching his majority at eighteen years, was intrusted with a citizen's weapons, the shield and spear. He took his citizen oath at a public meeting in the temple of Dionysius, where solemn rites to Zeus and the local divinities were observed in connection with a drama. Among the new Athenian citizen pledges was this: "Not to leave my town in worse but in a better condition than I found it."—Quincy L. Wood, in the Chicago Daily News.

Petunias Single and Double.

Because of the ease and facility with which all of the single-flowered varieties of the petunia can be grown from seed, this plant commands attention as a worthy candidate for the summer flower garden. The young plants grow rapidly and come into bloom early, and in addition to this they furnish a continuous wealth of blossoms until destroyed by frost. The large-flowered strains are very beautiful and of great variety.

For the best results the seeds of these sorts should be sown in a gentle hot bed, coldframe, or in fine soil in a box placed in a sunny window before or by the time freezing weather is over.—United States Department of Agriculture.

Landscape Beauty Enlists an Ally.

The state of Michigan is embarked on a gigantic tree-planting campaign, not reforestation, but beautifying the roads of the state. It is pleasing to note that there is one commonwealth which is recognizing a long-felt need in this country. When a nation begins to recognize itself as a landscape as well as farm land and town lots its soul is beginning to awaken. Beauty of nature costs little, aside from common sense planning and careful execution. Here's hoping that other states may follow Michigan's co

Immunity in Measles Serum

Doctor Rudolf Degkwitz Reports Successful Experiments With New Preventive.

MEDICAL SCIENCE INTERESTED

Hope to Conquer the Most Deadly of all Children's Diseases—Danger in Public Apathy and Ignorance of Infectious Malady.

Manchester, England.—Dr. Rudolf Degkwitz announces in the Deutsche Medizinische Wochenschrift (an authoritative publication) that he has succeeded in conferring immunity to measles by injecting a serum prepared from convalescent patients.

"This may prove to be one of the greatest epochs in preventive medicine," writes a medical correspondent of the Manchester Guardian. "In his last series of 1,700 cases Degkwitz claims that all the contacts inoculated were completely immunized or so protected that the disease was developed only in its mildest form and there was no untoward result.

"If these results are confirmed and the method can be effectively and generally applied, the result should be an even greater saving of life than has accrued from Jenner's discovery of vaccination.

Most Deadly of All.

"Measles, the most deadly of all the diseases of childhood, continues to be the least controllable of the scourges which regularly affect our people," the Guardian's correspondent says warningly. "With the possible exception of influenza there is no form of epidemic disease in face of which preventive medicine is so helpless. The causes for this are mainly two. In the first place the disease is not only highly infective but its infectivity is highest before the symptoms can be recognized. The child which contracts measles has three or four days in which to infect his family, his friends and his schoolfellows before it is known definitely that he is suffering from measles at all. The second cause is public apathy and ignorance of the dangerous nature of the complaint.

"Half a century ago there appears to have been some justification for regarding measles as a trifling disorder, something that every child must 'get over,' and the sooner the better. Owing to the operation of the still mysterious laws which govern changes in type of disease, scarlet fever, which was justly dreaded, has declined in virulence and ceased to be one of the major dangers of childhood: diphtheria is also much milder in form and its dangers can almost be eliminated by the early use of anti-toxin. But measles has become more deadly year by year.

Recent Epidemic.

"The present writer can recall one recent epidemic of measles in a Lancashire town which slew in six months precisely the number of children that had succumbed to scarlet fever in ten years. Yet it is still not an unknown thing for a mother to put the other children in bed with a case of measles so that they may all 'get over it together,' and it is the constant complaint of doctors that they are not called in until the child is blue from pneumonia and beyond all aid.

"Compare this apathy with the horror of smallpox. Yet, before the introduction of vaccination, when smallpox was regarded as the national plague, the death rate from this cause averaged 420 per million. In 1915 the death rate from measles was 1,398 per million. Neither the government nor the local authorities seem to have waked up to the facts represented by these figures. We continue to lavish enormous sums of money on the hospital isolation of scarlet fever with very little effect on the prevalence of the disease, but hospital accommodation for measles is very rarely provided.

"Scarlet fever is compulsorily notifiable; the notification of measles is optional and, in these days of anti-spending as opposed to true economy, practically in abeyance."

Plans to Dive for Lost Treasure of Buccaneers

Cape May, N. J.—Jay E. Mecay of Cape May, N. J., is organizing a syndicate to try to recover the doubloons and pieces-of-eight which formed the cargo of the Spanish vessel Matizaneros, sunk off Turtle Cut inlet a century ago. Manned by pirates and en route from the Spanish main to New York to dispose of the loot, the ship was driven by a gale on the shoals off the inlet about seven miles north of Cape May.

Eight Pairs of Twins in Los Angeles School

This photograph might lead one to think that the residents of Los Angeles were specializing in twins. It shows the eight pairs of twins who are pupils in just one of the city's schools.

Study Chinese in New York City

Group of Philosophers Live in Bamboo Forest and Teach Lore of Far East.

SCHOOL IN A TEA GARDEN

But a Foreign Language May Also Be Learned by Dancing, Head Philosopher Finds—Comes From Famous Family.

New York.—Not many people know that among the many interesting things which develop in New York city is a group of Chinese philosophers who dwell in a bamboo forest. Knowing that the forest is on Macdougal street helps, for many interesting things come out of Macdougal street.

The head of the philosophic group is Dr. Liu Tien Tao, who received degrees both in China and at Columbia, and who, once a week, may be found imparting knowledge of Chinese language, philosophy and poetry to a group of students. These include artists, writers and Chinese students. The Chinese in themselves are interesting, for they come from different parts of the world, where they have lived since leaving their native land. One speaks French and does not understand English; another speaks Russian.

Teach Chinese.

Chinese is taught by Doctor Liu in a semi-popular way, much as the European languages are taught. It is comparatively simple to obtain a slight working knowledge of the language, the students find. The delight of writing mysterious characters such as those which grow on tea chests is one of which the pupils never tire. In time they expect to a certain extent to read Chinese poetry and philosophy. In the meantime they imbibe it from Doctor Liu, who later is to arrange special courses in Chinese poetry and philosophy, with the aid of lecturers from Columbia.

Doctor Liu believes that his work is valuable in promoting mutual understanding between Chinese and Americans. He thinks each country can obtain of the other something of value which it needs—that China can get practical business methods from America and America can feel the quieting influence of Chinese philosophy.

In the meantime, the American students of Chinese are absorbing knowledge literally in a bamboo forest. It is something like Shakespeare's "tongues in trees, books in running brooks." At the Bamboo Forest the students read—if they can make it out—Chinese poetry written on lacquered tables, some of it by great national poets and other verses contributed by Doctor Liu himself. Big decorative Chinese characters signifying "happiness" or "wisdom" cover the walls or the bamboo poles which form the forest.

In Bamboo Forest.

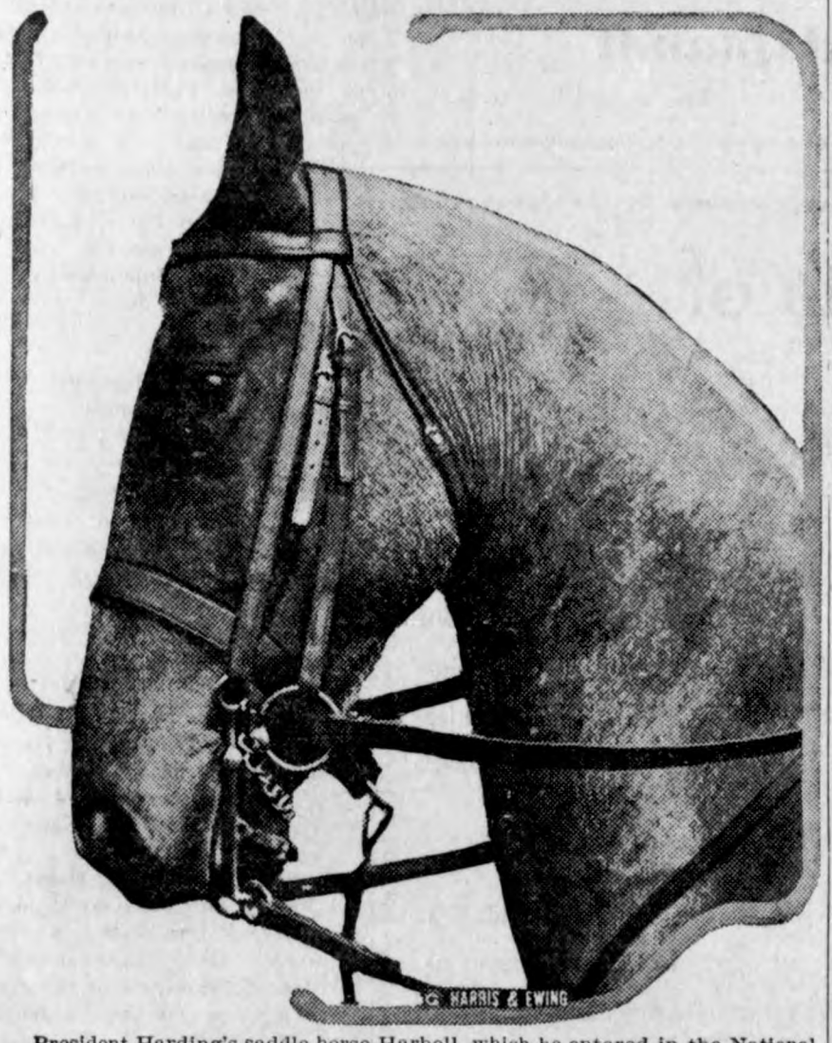
This forest is a Chinese tea garden which, with American business vision, Doctor Liu saw would have to pay overhead charges while he was carrying on his chosen work and gathering around him as applicants for Chinese wisdom little coteries of interested philosophers and friends. The tables covered with Chinese characters were all decorated by the head philosopher himself.

The Bamboo Forest is indoors in a basement of the little old Macdougal street house in winter, but in fair weather extends to a more real bamboo forest in the open at the rear.

Doctor Liu is a philosophic philosopher. He takes the American world as he finds it and adopts its customs and habits. He attended the recent ball of the Independent Artists at the Waldorf dressed as a prince of the old Tang period. But he danced American dances with the rest of the American world, an accomplishment he learned while at Columbia.

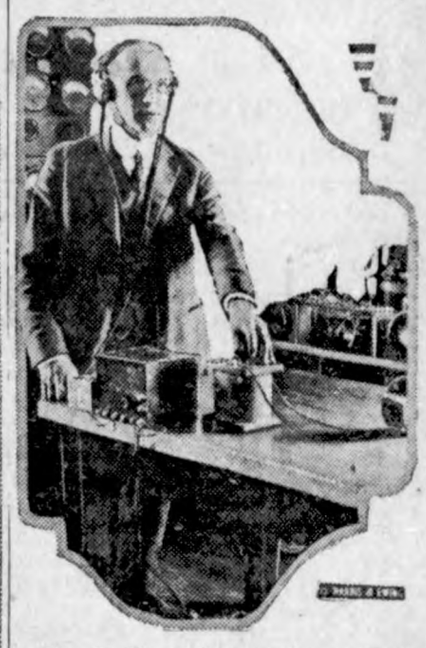
The head philosopher of the Bamboo Forest comes from a family of both students and warriors. His father was president of a Chinese college, and an uncle, the famous Gen. Hwang Hsing, led the republican forces in the revolution in China in 1912.

President's Saddle Horse, Harbell



President Harding's saddle horse Harbell, which he entered in the National Capital horse show. Harbell was ridden and exhibited at the show by Sergt. Joseph Metheson.

UNIVERSAL AMPLIFIER

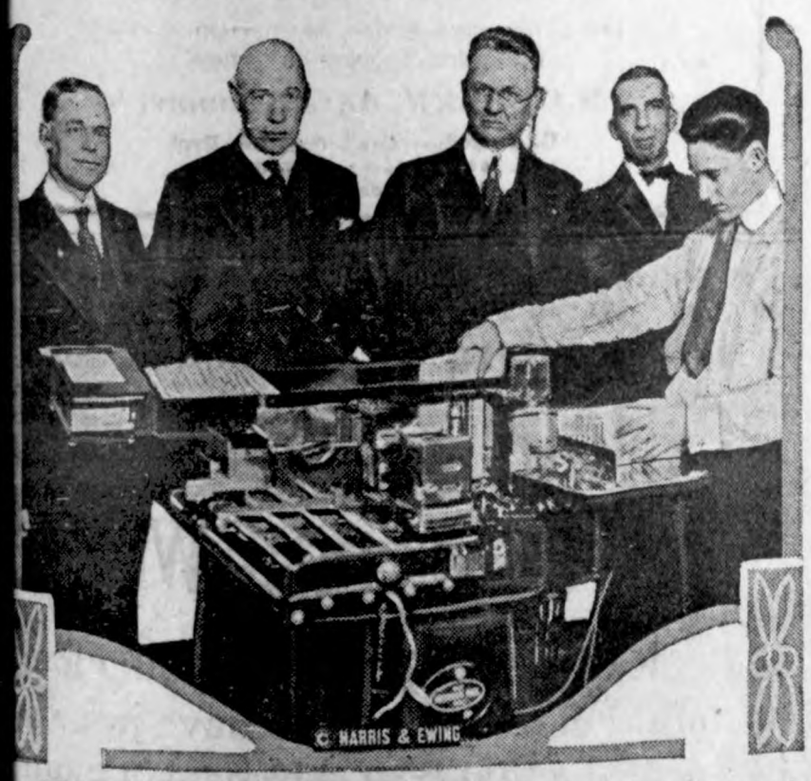


Dr. J. M. Miller of the radio research laboratory, United States Navy department, and his apparatus for amplifying radio signals. It is called the "universal amplifier" because of its uniform efficiency in making louder radio signals over a wide range of wave-lengths.

MOONSHINE, STILL HOUND

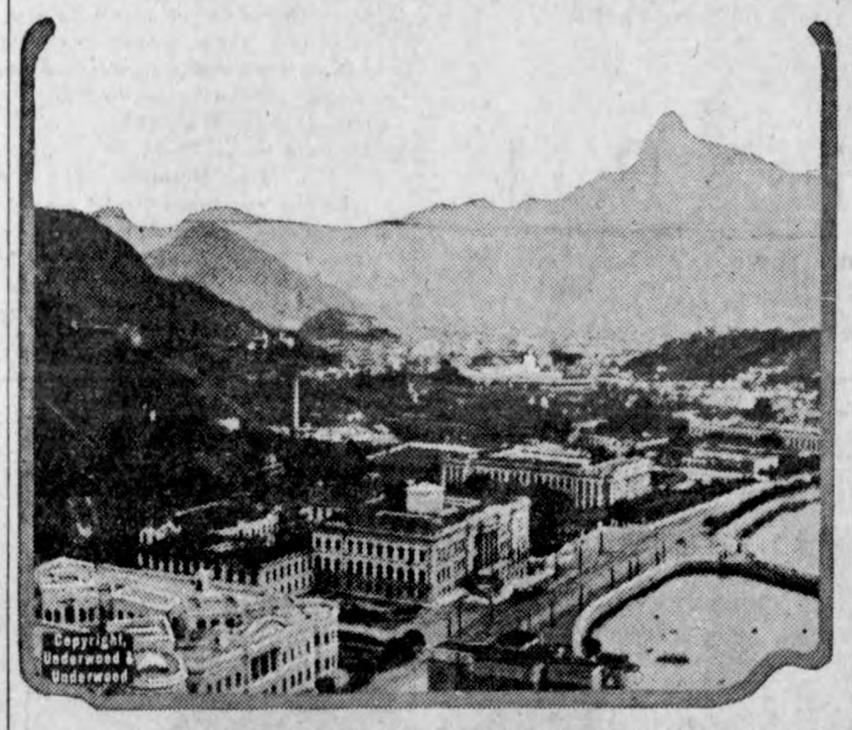
Not long ago the prohibition agents of Baltimore raided a moonshiner's farm and among the things captured was a beautiful collie, which they named Moonshine. A few days later they journeyed to a small town nearby in search of a still. They couldn't find it, but it occurred to them to put Moonshine on the trail. They did so, and the dog, seeking his customary atmosphere of mash, led them straight to a 15-gallon still.

Trying the New "Postage Meter"



Officials of the Postoffice department in Washington are here shown watching the first demonstration of a new stamp cancelling machine. This remarkable machine, known as the "postage meter," postmarks, stamps, seals, counts and stacks letters at the rate of 35 per minute.

New Sea Wall Boulevard for Rio



A view of Rio de Janeiro, Brazil, taken from the aerial car running to the summit of Sugar Loaf mountain, showing the recently completed million dollar water front boulevard. This boulevard also acts as a sea-wall in times of storm and high tide.

Lightning Kills Trout in New York State Pond

Washington. — An interesting letter was received by the fisheries bureau the other day from B. H. Norton of Syracuse, whose ponds were stocked with trout fry by the bureau a while ago. It reads:

"We have been very successful in raising the trout allotted to us. The only loss we have had was one trout that was struck by lightning."

Town Puts Ban on Aviators.

Rye, N. Y.—An ordinance prohibiting aviators from flying less than 500 feet above the land or water of the Rye town park at Oakland beach has been passed by the commissioners of parks. The ordinance forbids the performance of aerial acrobatics at any height over the park, because of the danger to persons in the park.

MEXICO IS NOW FAST PICKING UP

Remarkable Progress Being Made in Overcoming Illiteracy.

Night Schools in Capital Have Taught Many Persons to Read and Write —Laboring Class Is Deeply Interested.

Mexico City.—Remarkable progress is being made in overcoming illiteracy in the capital, according to information obtained from the department of public education of the federal government.

During the first three months of the present year approximately 15,000 persons of the lower class were taught to read and write. This educational work is being carried on largely by means of night schools, which are of themselves something of a novelty in Mexico.

It is stated that interest on the part of the laboring class in this educational work is unbounded. They crowd the schools to full capacity and there are hundreds who cannot as yet be taken care of on account of the lack of teachers and other facilities. Men and women of middle age vie with sandal-footed youths to obtain enough instruction to enable them to read and write.

The teaching of the fundamentals, which is being done in the schools, is supplemented by a series of educational lectures that are given in moving picture theaters on Sundays. So successful has been this plan of teaching the lowly natives the rudiments of reading and writing in this city that the department of public education plans to extend the work to all of the larger cities and many of the smaller communities of the country.

President Alvaro Obregon has shown a keen interest in this new phase of education and has pledged to provide the necessary financial means for carrying it forward.

Submachine Gun to Curb Riots

Policeman in a motorcycle sidecar using the Thompson submachine gun, which fires a thousand 45 caliber bullets per minute. This weapon weighs but 9½ pounds, whereas the next lightest automatic gun weighs 18 pounds. It fires bird shot as well as bullets.

He Has a Dancing Stenographer.

He has a dancing stenographer—she fox-trots, one-steps, toddles and turkeys every night. She comes to business looking as weary as a jonquil after a hailstorm.

"Say, you oughta stay home a night or two and get a wink o' sleep," he said, after he had found about a dozen errors in a letter he had dictated. The rebuke made her a bit wrathy and she replied:

"I suppose you would be glad to see me sitting around here singing a dirge instead of 'Ain't We Got Fun?'"

"No, I'm not that harsh," he answered, "but one thing's a cinch—your successor here is going to be a girl with a wooden leg."

His Accomplishment.

After testing the youngsters with numerous questions, the school inspector was trying to impress upon them the importance of one point.

"Now," said the inspector, "the thing that you must keep in mind is that you should always seek to do some one thing better than anyone else can do it. You can begin to do that right now. Tell me—is there anyone among you who can do that one thing better than anyone else?"

A youngster held up his hand.

"And what is it?"

"I can read my own writing better than anyone else can," said the boy.

PLUMBING

We are equipped to handle all kinds of PLUMBING JOBS. Write or call us; we will be glad to give you an estimate on any job of plumbing, large or small.

THE CRYSTAL CAFE "The Best Place to Eat"

The Fruits of the Plow--

Plowing is hard, tedious labor; yet, like many other forms of toil, it is vital to our existence. And when the fruits of the plow are harvested, we are likely to forget the immense value of the instrument that broke the ground.

In life we must break the ground. If you have not yet opened one with us, an account in our Savings Department will prove an efficient plow. The little sacrifices you make today in order to save regularly will be lost sight of in later years when you are enjoying the fruits of your thrift.

For Treasurer

I hereby announce myself a candidate for re-election to the office of Treasurer of Hancock County, Iowa, subject to the decision of the Republican primaries to be held June 5, 1922. John Suurballe 1w

Good Example.

Aunt Polly was milking in the cow lot, and her politically excited son found her there. "Maw, you're a Democrat, ain't you?" he asked. She made no answer, but he persisted: "Say, maw, ain't you a good Democrat?" Finally she said, emphatically: "I hain't nothin'. I'm a woman milkin' a cow. You go in the house and shut up!"

Dreaming of Writing.

To dream that you write with a pen denotes good luck; with a quill, loss of health; with a stick, firmness of purpose; with a pencil, warns you of secret enemies. To dream of writing a letter foretells good news; a bill, an accusation.

Why Farmers Choose This Policy

Eight out of every nine policy holders of the Western Life are farmers. Why? Because this policy better protects their family; or themselves in old age.

THE FARMER'S SPECIAL

Pays a cash monthly income from sixty years on. Double indemnity for accidental death. Pays your premium should you become permanently disabled. Provides lower premium each succeeding year; or cash dividend coupons. Every policy protected by securities deposited with the State. Let me tell you all about this special policy which gives you more than ordinary insurance.

THE KLEMME TIMES

wenty-sixth Year—Number 38 | Klemme, Iowa, Thursday Afternoon, June 1, 1922 | $2.00 In Advance—$2.50 Outside of County

uneral Of Rev. Wm. Koerner Held Here Sunday

EMOIR—WILLIAM KOERNER

William Koerner was born in Moeck, Lippe Detmold, Germany, on gust 14, 1842. He grew up in a autiful country home which beged to his father, received a care training in a Christian home and s educated in the village schools. 1868 he came with his ynungest other, August, to America and nt one year in Yellow Creek, near eeport, Illinois. During this year was converted and became a mem- of the Methodist Episcopal urch at Yellow Creek. The next r he went to Flood Creek, near arles City, Iowa, with the intent- of farming, but feeling the call the ministery, he yielded and in 70 was received into the North- st Conference on probation by Bis- Clark. In 1871 he was ordain- Deacon under the Missionary rule Bishop Simpson; received into full nection of the Conference in 1872 Bishop Janes and ordained an El- in 1874 by Bishop Amess. He ved in succession the following rges:

Shellrock mission, including Nora ings and Newburg, 2 years. Nora ings experienced a great revival there were added to his credit, on City, Clear Lake and Garner.

Colesburg, Iowa, 2 years, where, ugh he issued thirty letters of dis- sal, he could yet report an in- se at the end of the year.

Sherrills Mound, 1 year.

Manchester, 1 year.

Lansing, 2 years. Here a revival ulted in the reception of 20 young ple into the church on one Sun-

t. Paul, Minn., Second Church 2 rs and in connection therewith for e months also the First church.

Winona, Minn., 3 years.

Garner, Iowa, 2 years. A new rch was built at Germantown.

eMars, Iowa. Here also a new rch was built and the parsonage odeled.

Yellow Creek, Ill., 3 years.

Flood Creek, Iowa, 1 year.

s presiding Elder he served six rs, giving special attention, to- her with J. F. Hirsch and L. J. nner, to the parking of the unds of the Charles City College.

Charles City, 3 years.

St. Charles, 1 year.

Because of nerve-trouble he was obliged to take a rest and dwelt for three years at Klemme.

Then he resumed the care of a church and was stationed for 5 years at Reinbeck, Iowa.

His health, however, demanded a change of climate and he went to Pueblo, Colorado, where he served a congregation for four years.

For many years he was a member of the Trustee Board of the Charles City College and served part of the time as its Chairman. He was also one of the organizers of the Mutual Insurance Co., for the property of churches and pastors and wrote the constitution for the same.

From Pueblo, he moved to Haswell Colo., where he spent four years. After that he spent one year with his children in Iowa and Minnesota and then, after having attended, for the last time, the session of his Conference in 1920, and where he, together with Brother Henke, celebrated the 50th anniversary of his activities as a minister of the Gospel, he went to California to spend his declining years. About one and one third years he dwelled at Pasadena. Finding it difficult to keep up the household because of old age, he entered the Old People's Home at Hollywood with his wife and there spent the last four months of his life in peace and contentment.

In 1869 he was married to Mary F. Vennekolt, of Freeport, Ill., who shared with him the joys and sorrows of life. Six children were born to them who now, together with the mother mourn his departure. He was a good husband and father, and deeply concerned about the spiritual as well as the material welfare of his children, giving himself in loving sacrifice in order that their greatest good might be attained. He was held in high esteem by all who knew him. Frequently he was called upon to preach in one or the other pulpit and always delighted in delivering a message to the glorification of his Lord and Master. He was a careful student of the Bible, devoting much time and thought in his declining years to the things that pertain to the Eernal, and coming of his Lord and Master, Jesus Christ.

He had been asked by Brother Durbahn to conduct the devotionals of the District Meeting o fthe California Conference at the First church of Los Angeles on Thursday morning, May 18. Brother Durbahn, upon arriving at the church, found him already there and remarked about his early arrival. He answered, "Yes, I have a message to deliver this morning." At the opening of the session he delivered to those assembled an address on thhe Second Coming of Christ, that, by every one, was declared to be remarkable, not so much by what he said, as by the glory that shone forth from his countenance as he seemed already to partake of the things he was speaking about. Having finished his address he sat down while the meeting proceeded. A few minutes later he heaved a deep sigh, his head sank upon his shoulder and he had passed on to meet his Lord. Attention was immediately turned up on him. The doctor having pronounced life extinct, the brethren gathered about his lifeless form. Prayers were spoken and songs sung and over and over the wish of one or the other was expressed that their departure might be like unto his.

A memorial service was held at the First Church of Los Angeles, the church in which he died, was largely attended. Rev. Edw. Funk and J. H. Durbahn paid tribute to his memory while other pastors of the California Conference honored him by their presence and participation in the program.

His home going was triumphant. While his beloved shall miss him, yet with joyful anticipation, they look forward toward meeting him again.

He leaves his beloved wife, Mary; four daughters, Mrs. Herman Stille, Mrs. Wm. Stille Mrs. John Stille, and Mrs. Aug. Lau, of Klemme, Iowa; and two sons, William, District Supt. of the Northern Ger. Conf., St. Paul, Minn., and Albert of Klemme, Iowa, and a host of relatives and friends.

Funeral services were held at the First Methodist Church of Klemme Sunday afternoon, May 28th, and were conducted by Rev. John H. Klaus, of Charles City. Interment was made in the beautiful Klemme Cemetery.

BENN COOBS AND LEALY WILSON MARRIED MONDAY

Benn Coobs and Leafy Wilson, of this place, were married at the M. E. Parsonage at Mason City, Iowa, on Monday afternoon at three o'clock May 29th.

They were accompanied to Mason City by Harry Buss, and Miss Lurley Wilson, the latter being a sister of the Bride, and who acted in the capacity of Best Man and Bride's Maid.

The Bride is a daughter of Mr. and Mrs. G. A. Wilson, formerly residing in this community but now of Columbus, Indiana. She has made her home near Klemme for a number of years and until recently worked for Mrs. Elmer Arnold. She is a pleasing young lady and has proven herself to be an excellent house-keeper and a good cook, the two best ways of reaching a man's heart and qualities which so many poung ladies lack in this age.

The Groom is the son of Mr. and Mrs. Herman Coobs, of McGregor, Iowa, and has spent most of his life in this community. He joined the colors when the United States called for men and served over-seas for about eight months and saw active service with Co. E. 129th Infantry of the 33rd Division. After the war he went to Ames where he took a mechanical course and coming back to this city was employed at the Gram & Schultz garage. A short time ago he purchased Mr. Schultz's interest in the business and the firm is now known as the Gram & Coobs garage.

The newly weds will make their home in the house formerly occupied by Walter Schultz and their announcements state that they will be "at home after June 15th.

We wish to join their man friends here in wishing them a happy and prosperous married life.

Mr. Will Anderson of Forest City, began work at the Klemme Co-Operative Creamery todap. Mr. Anderson is an experienced man and will take charge of the churning at the local butter factory. The creamery have been rushed for several months with a large increase in business and have been on the look-out for another good man to help take charge of a part of the work.

Vote Monday, June 5th.

HANSON HAS FINE RECORD

E. P. Hanson, our present Sheriff, is a candidate for re-nomination at the coming primaries this next Monday. He was first elected in 1920 and is therefore serving his first term and is the only candidate that will appear before the primaries in this county who has any opposition for a re-election to his second term for the office which he seeks.

During the year and a half which he has served as Sheriff he has made a diligent officer, serving all papers placed in his hands, the same day he received them, or within a few days thereafter.

The records of the Justice Courts of the county show that he has filed more information against booze venders than has any other person. In fact all the information filed in the Justice Courts charging criminal offense have been signed and sworn to by Mr. Hanson or his deputy.

The Sheriff of this county is paid a salary of $1700.00 per year which is less than is paid to most of the other county officers and during the administration of Mr. Hanson as Sheriff he has not only earned sufficient to pay the salaries of the Sheriff and his deputy, but he has exceeded these salaries by the sum of $2195.00 which amount has been collected and turned into the County Treasury, and it is the first time that there has been sufficient fees and fines collected by the Sheriff to pay even his own salary.

Below is a statement of the fees and fines collected by the sheriff during the years 1919, 1920 and 1921:

Fees earned by sheriff as shown by report filed with County Auditor—

Year 1919.	
Fees earned	$ 351.42
Fines collected	$ 405.80
Total	$ 757.23
Year 1920.	
Fees earned	$ 427.02
Fines collected	$ 750.00
Total	$1177.02
Year 1921.	
Fees earned	$ 1866.11
Fines collected	$2879.78
Total	**$4745.89**
Sheriff's salary	$1700.00
Deputy	$ 850.00
Total	$2550.00

Amount earned over and above the salary of Sheriff and Deputy $2189.-89. It is, in fact, the first year that the office of Sheriff has paid a revenue to the county since it became a salaried office.

BOY SCOUT CORNER

A. B. Gedye, Scout Master

Resignation of Prof. H. E. Wilson, Rev. A. B. Gedye takes control of the Scout Troop.

The troop is planning an all day hike as soon as school is out.

Headquarters for the troop have been secured through the kindness of Mr. F. A. Arnold, as he has placed the room beneath the Bank at the disposal of the Scouts for their meetings.

The Boy Scouts of America is a fine organization for boys and is world-wide in scope. Rev. Gedye has been a Scout Master for eleven years in Iowa and Minnesota, in fact almost from the beginning of the organization in America and was connected with the Baden Powell Scouts in England.

Any boy having passed his 12th birthday is eligible to join, if willing to undertake the obligations of Scout hood and become a red blooded American.

The "Scout Corner" will become a weekly feature and will be published in the Times each Thursday.

The Scouts plan on having many good times this summer and all boys wishing to join should get in early so that they can get in on all the fun.

Parents should urge their bops to join the organization as it helps to build up boys physically as well as morally.

PIANO SALE GOING BIG

Word comes from Mason City, that a large number of people from all around here are taking advantage of the Big Sale of new and used Pianos and Player Pianos at the Chamber's Music House. Used Pianos are going as low as $50, while equally attractive prices are being made on all makes of needle talking machines. (Advertisement)

I wish to again call attention to my candidacy for the nomination for Recorder of Hancock County. I am an ex-service man, and would greatly appreciate your support at the primaries June 5th. Oscar H. Wenck.

Better Cream

Let every patron of this creamery arrange some suitable COOLING TANK and have the tank in the separator house or in the shade.

We urge all patrons to put their cream in cold water. This is absolutely essential to the production of High Grade Butter.

WE MUST HAVE QUALITY CREAM

to make BUTTER OF 92 SCORE on the Eastern Market.

We want to pay you the very highest prices that the market will afford at all times and ask your co-operation in delivering to the Creamery the best QUALITY CREAM possible.

Don't forget to stir your cream often.

Thanking you for your Cream Patronage—

The Klemme Co-Op Creamery Co.

Women Urged To Vote At The Primary Election Monday

KLEMME STUDENTS GRADUATE AT GARNER TONIGHT

The commencement exercises will be held at Garner tonight and in the class of twenty-three graduates are four students from Klemme who are completing their high school course at Garner this year. Charles Gibbs, Arthur Johnson, Mildred Johnson and Earl Josten will receive diplomas tonight. Fred Arnold was to have graduated with them but as he missed several months of school due to illness he will complete the work next ear.

FIRST M. E. CHURCH
W. C. H. Bergmann, Pastor

We invite you to the following services:

Morning service at 10:00 o'clock.

Sunday school at 11:00 o'clock.

Epworth League at 7:30 P. M.

Prof. H. E. Wilson, who is about to leave our little city, will have charge of the evening service. Come out to hear him. His message will be both interesting and helpful, I am sure.

Midweek prayer service June 8th, at the home of Mr. Herman Ludeke.

W. C. Bergmann.

METHODIST EPISCOPAL CHURCH
Arthur B. Gedye, Pastor

Morning worship at 10:00 o'clock.

Sunday school ata 11:00 o'clock.

Evening worship at 8:00 o'clock.

The Sundap School last Sunday nearly reached "High Water Mark." Let's try again. Everyone come out next Sunday.

There was no service last Sunday evening. We hope to see you out next Sunday. A week ago Sunday there was a fine crowd, we appreciate your presence.

The "Busy Bee" class is preparing the program for Childrens Day, and they ask your support. Children's Day is a week from next Sunday.

Arthur B. Gedye.

EIGHTH GRADERS GRADUATE

The Eighth Grade pupils of the schools of the cfiounty held their graduating exercises at the Britt High School Auditorium Monday.

Over two hundred and fifty eighth grade pupils were in the graduating class and received diplomas admitting them to any high school.

Congressman L. J. Dickinson and Governor Kendall addressed the ensembled class of graduates.

The list of graduates from this city and community was published in the Times last week.

Most of the number who graduated Monday signify their intention of continuing their work in the various high schools of the county next year.

Vote Monday, June 5th.

CHAS. STIEHL LANDS WRIGHT COUNTY CULVERT WORK

Chas. Stiehl went to Clarion yesterday to bid on the Wright Countp culvert and bridge work which they are putting in thi ysear. Charles was the successful bidder for the biggest share of the work and landed the job on about thirty eight culverts; the job amounting to approximately $8,453.00.

Charles was the successful bidder last year on the North Iowa Pike job and put in all the culverts between Ventura and Wesley.

He was over in Franklin County last week to bid on some county jobs but was not successful there in getting the work. However, he was the next to the lowest responsible bidder and was only a little over the successful bidder.

Charlie will put a crew on the job in Wright county in a short time and will give them a good job. He is getting to be quite a contractor on bridge and culvert work and perhaps the next thing we will hear of will be Charles going into the paving business.

Piano Lessons

Will start two beginners classes, 6 to 8 ears old. Notify Miss Thorman before school closes 1wpd

Vote Monday, June 5th.

WOMEN WILL VOTE IN THE PRIMARY

Primary Election Monday, June 5th

(By Mrs. R. R. Roberts)

The Primary Election next Monday will be the first chance of the women of Iowa to pick from the field the candidates of their choice; and, knowing that a great many of them would welcome a little information about the election, this article is prepared toto supplement the citzenship school which was held two years ago.

The primary election is where those in the same party desiring certain offices, offer their names for the choice of the voters. Those chosen in the primary will have their names on the ballot in the fall election. It is thought by many that there will be no U. S. Senator nominated as there are six names on the primary ballot from which to choose and one must have 35% of the vote to be nominated. In case no one gets as many as 35% the nomination will be made at the state convention in August.

County Auditor Chris Jacobs has furnished a sample ballot of this election which I will explain. When you go to vote you will need to say whether you are a Democrat or a Republican. They will give you a ballot of either and all names on it are of the same party. There are no contests in the Democratic field in this county so we will consider the Republican ballot. You will find no circles on it, but you will need to place a cross in the squares before the names of those for whom you wish to vote.

In the left hand column are the state offices. Six names for U. S. Senator, vote for one. For Governor Lieutenant Governor, Auditor of State and Attorney General there is only one name so you may vote for them. For Secretary of State and Treasurer of State there are two names each, you will vote for one each.

In the second column you will find at the top three names for Superintendent of Public Instruction, vote for one. Two names for Railroad Commissioner, vote for both of these. Next two names for Representativve in Congress, vote for one. One name for State Representative, vote that.

In the third column the county offices. You will find two names for Auditor, one for Treasurer, one for Clerk, two for Sheriff, two for Recorder, one each for County Attorney, Coroner and Supervisor. You vote for one each of the different offices.

In the forth column are the township offices. You should vote for as manp of these as directed on the ballot. You will notice that in each of the offices on the ballot there isa blank space left for writing in names. This is printed according to law but unless there has been some campaign work done for some one it is of little use to write in names, but if you do be sure to mark the square also.

At the bottom of the fourth column you will find blank spaces left for your township delegates to the county convention. You will have to write in names here as Mr. Jacobs says there are no candidates who got their names on the ballot. You will write in the names you wish, not voting for more than directed, and mark the squares. There should be some women elected from each township. In some townships the judges will give ou a sticker on which is a list of names. You will not need to vote for more than one or you may vote for not more than it says at the top. This ticket should be pasted in place on your ballot before you give it to the judge.

Do not erase, tear, nor smudge your ballot, or write anything on it. If you do ask the judge for another. Do not be afraid to ask for information. The names of those who vote in this primary election are NOT taken to make up the jury lists. Next Monday is the day. Be sure to vote.

I wish to again call attention to my candidacy for the nomination for Recorder of Hancock County. I am an ex-service man, and would greatly appreciate your support at the primaries June 5th. Oscar H. Wenck.

Vote Monday, June 5th.

Sell Daughters, Brag of Prices

Fathers in French South African Colony Drive Hard Bargain With Suitors.

TOWN HALL IS MARKET PLACE

Deals Are Always Settled in the Oriental Manner of Bargaining—French Government Seeks to Wipe Out Practice.

Paris.—The French colonial office is investigating ways and means of wiping out slave selling and slavery in general in certain sections of France's possessions in Africa.

In the tribe of the Kabylie, the French colony in Africa, fathers sell their daughters and brag of the high prices they get for them. A Parisian traveler, De Waleffe, who went to Africa with Albert Sarraut, the French colonial minister, and has just returned from extensive journeys in the colonies, reports that France is very much misguided in believing that women are comparatively free and highly considered in the Babylie tribe.

M. de Waleffe was told by a proud father that he had sold his first daughter for 6,000 francs, but that he got 14,000 francs for the second girl, as she was very pretty. All the fathers gather for their Turkish coffee at the Caravanserai and discuss between puffs of their narghiles (Turkish water-pipes) the prices they expect to get for their daughters or brag of the amount somebody paid them.

Suitors Drive Hard Bargain.

The deals are always settled in the typical oriental manner of bargaining. The father asks several times as much as he thinks he can get and the suitor offers as little as he can without insulting the maiden. Then they settle down to business, each reducing or raising the price as the hours pass. Finally they reach a point midway between the two original figures and the transaction is over; but it has taken days to accomplish.

The women of Kabylie are sold at an early age, sometimes at twelve or thirteen years. Once they leave their paternal roof for the harem of their purchaser their days of pleasure are over and they face a life-long slavery of hard work.

The one redeeming factor in the sale of the women in Kabylie is that they are sold only as wives.

In Asia Minor, where the many scattered tribes of Circassians sell their women, the morality is not so high, and the daughters of the tribes are sold to anybody as long as a high enough price is paid.

Edhem Said Bey, a Turk who was feeling acutely the servant problem in Constantinople, tells of going to Asia Minor and buying half a dozen servants. He went to the first Circassian village and asked the chief of the elders to exhibit the daughters for sale.

Fathers Assemble Girls.

In the evening fifteen to twenty girls were assembled in the town hall with their fathers. They were dressed to show themselves off to advantage.

Every man wanted as much as he could get for his daughter, and the bey had to deal with them one by one, listening to them enumerate the particular charms and abilities.

After long bargaining with the fathers the bey went to the market and bought donkeys, buffaloes and silver-mounted arms for a tenth of the price he had agreed upon for the girls. These were then presented to the fathers as payment.

When these girls are delivered they are carefully veiled and can travel anywhere with their purchasers unmolested, for in the Near East no one, not even a government official, would dare lift the veil of a Moslem woman.

WEDDED HIS SECRETARY

Congressman Benjamin Fairchild of New York found his secretary, Miss Elinor Parsons, twenty-six, such a desirable helpmate that he married her recently. The wedding was the culmination of a war-time romance when Miss Parsons came to the capitol as an employee in the ordnance department, later becoming secretary to Mr. Fairchild when he entered congress in 1919. Mr. Fairchild was a widower and lost his only child, a son, in the aviation service during the war.

1—Admiral Sir William Pakenham, commander in chief of British naval forces in North America, now visiting in Washington. 2—Armenian float which won first prize in the Raisin day pageant at Fresno, Cal. 3—General Pershing buying candy at National Capital horse show, held for the benefit of Salvation Army campaign.

Woman Sheriff Heads All Raids

First to Hold Position in United States Shirks None of Duties of Office.

FILLS OUT HUSBAND'S TERM

Mrs. McAuley Served for Years as Deputy for Her Late Husband in Michigan County—Determined to Enforce Law.

Bad Axe, Mich.—For the first time in the history of Michigan, and as far as is known in the United States, a woman has been appointed as county sheriff, and has been given full charge of the men deputies in the county.

And this woman, Mrs. Lula McAuley, is no novice at the job either, for she succeeds her husband, Donald McAuley, for many years the Huron county sheriff, and has served several years as a deputy under him. McAuley would have finished his fourth term of office next January, but caught a cold during a raid, which later turned to pneumonia and resulted in his death.

To Finish Husband's Term.

Mrs. McAuley was appointed to complete her husband's term by the unanimous consent of the Huron county probate judge, prosecutor and county clerk.

The new "sheriffess" while, she says, she is not an ardent "dry," is determined that the state and national laws be lived up to within reason, and already she has engineered and taken part in one raid among the hills of north Huron county.

She predicts that the most of her troubles will come from illicit whiskey making. Already, she says, there has been a growth in the number of cases which she has had to handle and she lays this to the report which has reached adjacent counties "that a woman is sheriff in Huron."

Takes Active Part.

Mrs. McAuley says that a woman is equipped by nature and her motherhood instincts to wield a great influence for good over any community from the sheriff's office but says that she is not inclined to run for reelection when her temporary appointment expires next January.

In the meantime she has adopted the policy of being present at every raid and arrest made. Her office staff consists of three male deputies and she admits that most of the work of making the actual arrests will devolve on them, but, she asserts, it is a sheriff's duty to be present when an arrest is made and she intends to see that this is carried out.

Mrs. McAuley admits that the sheriff's office is just as much a man's as any police commissionership in any of the big cities but hopes to fill the job satisfactorily despite her sex.

Find Mastodon's Bones in Texas.

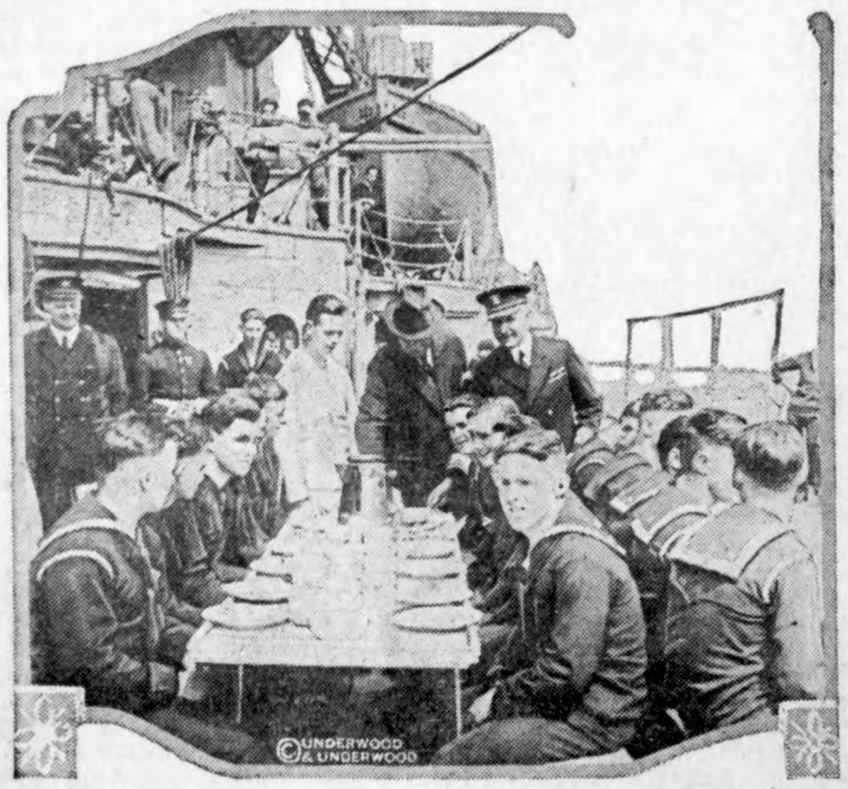
Wichita Falls, Tex.—What are believed to be fragments of a mastodon's bones have been unearthed by oil drillers in Gray county. The fragments were found imbedded in a "strata" of dry sand and are large enough to indicate they were a part of a skeleton of a prehistoric monster.

What, Indeed?

He—What does a movie hero think about?

Bo—What does he think with?

Prize Mess Crew of the Maryland



Uncle Sam's thirty-three-million-dollar battleship, the Maryland, can now boast of a wonderful mess crew—the pride of the navy. Captain D. F. Sellers each week has an inspection of the mess tables for which there are three prizes offered to the best mess crew. Keen rivalry exists between the mess squads, and George W. Sweeney of the Hotel Men's association was called upon to judge the inspection. The photograph shows the winning table.

NEWS REVIEW OF CURRENT EVENTS

Freight Rate Cut Which Will Save People $400,000,000 a Year Is Ordered.

SHOULD REVIVE BUSINESS

No Let-Up in Attack on Attorney General Daugherty—Bankers Meet in Paris to Solve International Loan Problem—Communist Outbreak in Bulgaria.

By EDWARD W. PICKARD

FOR some time President Harding has been striving to bring about a general agreement by the railways of the country to reduce freight rates materially and voluntarily, accepting the opinion of many experts that lower rates are essential to the recovery of business in the United States. He called a number of railway executives to a conference in the White House and laid the case before them, and they named a committee of their membership to co-operate with the interstate commerce commission in attempting to realize the President's wishes. This looked promising until Mr. Harding a few days later admitted that the railway chiefs had so clearly presented to him the difficulties of the situation that he was not very sanguine of success.

Then the interstate commerce commission by itself came to the rescue and on Wednesday announced a decision in accordance with which rates on nearly all classes and commodities of traffic will be reduced on July 1 by amounts equal to 10 per cent of their present levels. The chief commodities excluded from the reduction are agricultural products in all sections outside of New England, live stock and western grain and grain products. The order reaffirms the reduction of 10.5 per cent in the western hay and grain rates last fall and the cut of 10 per cent made voluntarily by the roads on agricultural products, January 1.

According to the setimates of experts, the reductions mean a saving of approximately $400,000,000 a year in the rail transportation bills of the American people. The farmers alone, they say, will benefit to the extent of some $127,000,000 a year on goods that they buy normally. The cut is expected to increase buying and thus stimulate industry and diminish unemployment. On this there is general agreement among manufacturers, merchandisers and bankers.

Many of the rail executives were not only surprised by the commission's decision, but also quite disgruntled, holding that the reduction should have been postponed until the roads had accumulated more funds through increased earnings. Others, however, admitted that the loss in freight revenue probably would be more than offset by increase in traffic.

The interstate commerce commission included in its decision the determination of 5.75 per cent as the reasonable annual return for carriers on their capital investment, as compared with the 6 per cent level previously fixed. The new figure really amounts to 6 per cent, since the federal corporation income taxes are subtracted from earnings before profits are figured.

Another part of President Harding's plan was a voluntary acceptance of a reduction of wages by the railway brotherhoods. At present there is little prospect of this, but the railway labor board is expected to make a decision soon on wage questions that have been pending before it, the finding to be based solely on evidence presented in the hearings. It is estimated by the bureau of railway economics that railway labor board orders to date are saving the roads $300,000,000 a year in reduced wages, so much of the freight reduction seems already to have been unloaded.

ATTORNEY GENERAL DAUGHERTY'S course in relation to war contract frauds and his alleged connection with the securing of Charles W. Morse's release from the Atlanta penitentiary continue to supply the "warmest" of the news from Washington. Senator Caraway of Arkansas is the most persistent of those attacking Daugherty, and the latter made the assertion that the senator was actuated to throw a screen about men guilty of war frauds. To this Caraway responded with a challenge to the attorney general daring him to bring about a congressional investigation to determine the truth of his charges. Said the Arkansan:

"I defy Daugherty to ask the senate to pass a resolution for an investigation. If he does not do it, he stands convicted before the public as the man who has entered into a corrupt agreement to defraud the government, although he is the attorney general; and if his party will not let him be investigated his party must take the responsibility for not doing it. He said certain things were true. I say when he said it that ne uttered a willful and malicious falsehood."

THE house has not yet acted on the resolution providing for a congressional investigation of war fraud charges, which was introduced by Representative Woodruff of Michigan. Senator Norris of Nebraska was quoted as saying that if the house did not speedily pass this resolution, a similar one would be introduced in the senate from the Republican side. Altogether, the situation of the attorney general is decidedly uncomfortable.

TOM WATSON, the eccentric senator from Georgia, had one of his "spells" last week and tried his best to get into a fist fight with Senator Phipps of Colorado. Watson was angry over Phipps' action in regard to certain Georgia postoffice nominations and during a session of the senate he began a furious verbal attack on the Coloradoan. They then went outside the main doorway and Watson roundly cursed Phipps, shouting: "If you will come down off that step, I'll knock your face in with my fist." Phipps, declining the challenge to combat, called a sergeant-at-arms, and the raging Watson was led away by Senator McNary.

NOTHING doing yet in the matter of a senate bill for soldiers' bonus. The Republican members of the finance committee last week found themselves evenly divided between Smoot's plan for paid-up insurance policies and McCumber's plan for certificates on which the service men could borrow. It was thought for a time that President Harding might express a preference, but he evidently was determined the senators should extricate themselves as best they might. Then the Republicans decided to call in the Democratic members of the committee to aid in drafting a bill. It was said the Democrats rather favored the McCumber plan.

THERE was a prospect last week that the German reparations crisis, due on May 31, would be averted. The allied reparations commission was considering offering Germany indefinite postponement of the ultimatum date on condition that she accept essentially the commission's full program. Such an arrangement was thought to be advisable in order to give time to the international bankers' committee, which met Thursday in Paris. Four solutions of the international loan problem were presented to the bankers at their opening session. J. P. Morgan submitted what he termed the American plan, and the others were offered by Sir Robert Kindersley, one of the governors of the Bank of England; Charles Sargent, former French undersecretary of finance and president of the Banque de l'Union Parisienne, and Dr. G. Visseringing, president of the Netherlands bank. The sessions were private and the public was not given any hint of what the plans were. However, it was understood to be the opinion of the financiers that if any loan to Germany were arranged, it must be very large, probably at least a billion dollars. It also seemed likely that it would be necessary, in that case, for Belgium to surrender partially her priority on German reparations, for Great Britain to reduce her proportion of 22 per cent of the reparations, and for France to cut down her expectations of cash payments.

PREMIER STAMBOULISKY of Bulgaria had some private conference with M. Tchitcherin of Russia when they were at Genoa, and the result appears to be that the Bulgarian government, formerly the declared opponent of bolshevism, has changed front and will line up with the soviet republic and make its international policies conform to those of Russia, Germany and Turkey. This will not only present a solid combination against the allies and the little entente, but also will have its effect on the Thracian question, for the Bulgars have always sided with the Turks against the Greeks there.

The Bulgarian communists started some kind of an uprising a few days ago and at first it was reported that they had seized the government and that King Boris was a fugitive. This was false, and it appeared the row was mainly an attempt by the communists to force the removal of Wrangel's and bolshevik Russians from the country. The rebels really did begin a march on Sofia, but the army remained loyal and drove them off.

CHARLES R. CRANE of Chicago, former American minister to China, is a great traveler but he is not likely for some time to visit France or any French possessions. Word has come from Syria that a French military court in Damascus, after a hearing by default, has found Mr. Crane guilty of inciting the recent uprising in the French mandate and sentenced him to twenty years in prison. A woman Moslem teacher who was involved in the outbreak was one of those selected by Mr. Crane to receive education at the benefit in the United States. He gave her his check for $1,000 for traveling expenses and this gave rise to the charge that the American government was subsidizing the rebels.

MICHAEL COLLINS, head of the Irish Free State provisional government, and De Valera have signed a compact regarding the coming elections, and the later seems to have got the best of it. The agreement virtually will result in the re-election of the present membership of the Dail Eireann, so that the De Valera republicans will again have nearly half the seats notwithstanding the fact that they represent less than 20 per cent of the electorate. The British government is much exercised by the situation of affairs, realizing that the treaty is in danger.

Whatever condition of temporary peace may obtain in southern Ireland, the warfare between the part of the island and Ulster has acquired new vigor, due to the outrages perpetrated by Sinn Feiners. Among these was the murder of a member of the Ulster parliament. This so enraged the Belfast government that Sinn Fein leaders—all that could be caught in the Ulster counties—were seized in surprise raids and thrown into prison. Premier Craig told parliament forcible action was demanded and he issued a regulation declaring that membership in the republican army was an offense in itself. The energetic measures did not stop the operations of the bombers and snipers.

AT LEAST one interesting fight may be expected at every convention of the American Medical association. In last week's sessions of the organization in St. Louis the contest arose over the practice of "group medicine" clinics. The committee on amendments to the constitution proposed new sections declaring against this practice, which, however, cannot be acted on for one year. Immediately afterward announcement was made of the organization of the Association of Group Clinics of North America, an independent medical association.

ANOTHER step toward the summation of the Great Lakes-St. Lawrence waterway project has been taken by the government. An announcement by the State department says it has informed Canada "that the United States government would be glad to take up with the Canadian government the negotiation of a treaty looking to the deepening of the waterways which would enable ocean-going ships to reach the Great Lakes."

THIS BOY STUDENT IS A MARVEL

At Age of Seven Well Versed in Several Sciences.

Astounds Psychologists of University of California by Answers to Binet-Simon Mentality Tests—Is Mayflower Descendant.

Los Angeles.—William Elliot Bradford, who is but seven years of age, is in the fifth grade of the Woodcrest school, and recently astounded a group of psychologists at the University of California, southern branch, by his success in answering the Stanford university revision of the Binet-Simon mentality tests.

These scientists found that topping William's seven-year-old body is a brain of a boy twice that age.

While reading a poem for the psychologists he came across the word "voluptuous." They asked him to go to a blackboard and write it. Without hesitating or stopping to look at the word twice, he went to the board and wrote the word correctly.

When the boy was two years of age he could put together the sections of a jigsaw puzzle map of the United States correctly in a few moments. But the thing which most amazed his mother, Mrs. Edith Eddy Bradford, was his memorization of the poem, "Barbara Frietchie," by Whittier, at the age of six.

The boy's favorite studies are ancient history, zoology and natural history.

Miss Jessamine Crapser, principal of the Woodcrest school, said that William is qualified mentally to enter the eighth grade.

His great, great, ever-so-great-grandfather, William Bradford, came over in the Mayflower and was the first governor of Plymouth colony.

"Eden," in the original Hebrew, means "delight."

Four-Year-Old Maine Girl Speaks Three Languages

Windham, Me.—Understanding French, Spanish and English, able to name the states of the country, cities and towns of Maine, and to give prompt answers to geographical questions, Mabel Edith Greenlaw, four, is hailed as the child prodigy of this section. She started to walk when she was seven months old. She is particular about her grammar, and does not hesitate to make corrections in the speech of those within her hearing.

El Centro, Cal.—A spectacular eruption of the mud geysers in Salt sea, near here, sent mud, smoke and steam 200 feet into the air, according to the report here of a number of persons who witnessed the phenomenon. The eruption came without warning and continued 20 minutes.

The AMERICAN LEGION

(Copy for This Department Supplied by the American Legion News Service.)

CHERISH WORLD WAR RELIC

Pillar From Altar of Church in Ruined Village of Belleau at National Headquarters.

One of the most treasured of the many World war relics being gathered at the American Legion's national headquarters, Indianapolis, Ind., is that just received from the battlefields of France. It is a pillar from the altar of a church which once stood in the ruined village of Belleau, adjacent the famed wood of that name, near Chateau-Thierry.

The wooden pillar bears honorable scars, those suffered when scores of German high-explosive shells crashed into the little church. One shell fragment all but tore the pillar in halves, but when the marines and the infantry had driven back the enemy and recaptured the town, far beneath the mass of stone and mortar the altar was found intact.

Belleau Church Pillar.

Upon returning to their devastated home the French villagers looked upon the little altar as a good omen and set about to clear up their ruined church building. Later they removed one of the altar pillars, and after appropriate ceremonies, sent it to America as the gift of appreciation of the commune of Belleau to the Yankee regiments, through their organization of the Legion. The pillar is carefully preserved at the Legion's headquarters, protected by the French and American flags.

WILL PAY THE BUCKEYE BOYS

Robert Roberts, Former Commander of Ohio Department, Will Direct Disbursement.

The payment of $25,000,000 to nearly a quarter of a million of ex-service men is the task which has been assigned to Robert R. Roberts of Youngstown, O., former vice-commander of the Ohio department of the American Legion. Mr. Roberts is director of adjusted compensation in Ohio.

A sergeant major in the Thirty-seventh division during the World war, Mr. Roberts has been employed in the Carnegie Steel mills in Youngstown. His selection by the state sinking fund commission was regarded as a victory for the American Legion, which has endeavored to keep the payment operations of the compensation law out of politics.

Ohio is paying $10 for every month's service to a maximum of $250 to all World war fighters.

"Listened In" on MacNider.

"Listening in" a thousand miles away, American Legion men at Chatfield, Minn., heard Hanford MacNider deliver an address on adjusted compensation before an audience in Pittsburgh, Pa. If the speaker had known how large his audience really was he probably would have spoken louder.

The Silent Partner.

"Does yo' take this woman for thy lawfully wedded wife?" asked the colored parson, glancing at the diminutive, watery-eyed, bow-legged bridegroom, who stood beside two hundred and ten pounds of feminine assurance.

"Ah takes nothin'," gloomily responded the bridegroom. "Ah's bein' tooked."—American Legion Weekly.

HIS ANGEL

By MOLLIE MATHER

Copyright, 1922, Western Newspaper Union.

Geoffrey, in his woolly bathrobe, kept a watch of the stair. For either up or down those stairs his good Samaritan, must go. The hall of the rooming house remaining for a time silent, Geoffrey sought the window. He was still weak and uncertain as to walking, but as it was possible that a light step might ascend that old stair while he was not there to see, he returned to his post.

He must have been in this gloomy room now, for more than two weeks. The flu had put him out of his head, so that he could not measure time.

Its interest vanished with his sudden illness. All that Geoffrey Gordon could distinctly remember was sommoning his landlady, with the confused request that the woman who cared for his room be retained to give him such care as might be necessary.

The doctor, used to calls of the friendless and unremunerative, looked the unresponsive Geoffrey over, pronounced his case grip, and departed, leaving medicine behind. It was not his affair, certainly, whether that medicine was bestowed or not.

"What's his name?" the doctor briefly asked Mrs. Simpson.

"He says it's Stinson," she replied, "George Stinson."

So the author who loved to study at close range his subjects, who wrote of people as they are—lay among those of whom he would have written, himself needy and unknown.

Across the blur of his pain came then an angel directly from heaven, to minister to him. Like a frightened child, Geoffrey Gordon realized the reassuring comfort of firm, soothing hands. Over his hot forehead the cool hands moved rhythmically, charming his pain away. And when he awoke to momentary consciousness the following morning, the faded, insufficient coverlet had been miraculously replaced by warm blankets of dainty satin bindings.

It was when he reached weak but sure convalescence that jellies and tempting small cakes and muffins found their way to the stand by the bed. The delicious cakes which he ate so hungrily brought to him a sting of mother-memory. The mother of his boyhood—gone so long, but still bitterly missed.

Geoffrey, watching the stair, knew at last why success and the many beautiful things of life still left a great lack which had never been filled.

And so, wondering, speculating, he questioned, and vainly, concerning his secret deliverer—and watched hopefully, despairingly, the stair. For the girl or woman must of course be an occupant of this dingy rooming house. And to settle this eager curiosity of his he must know her.

Many went down the stair each morning to places of employment, many came back each night. Soon Geoffrey must go away, but first he must know.

There was one lovely girl; her dark, dancing eyes sought the invalid out in his watching place.

At last in desperation the author called to the girl under pretense of asking her to forward a message to Mrs. Simpson. The girl smiled charmingly.

"Sure, I'll tell the old dame," agreed his supposed angel, "but you'd better believe it'll take her some time to get a move up here. Some weight, that old girl. Any other little thing I can do for youse?"

"No, thank you," answered Geoffrey sadly.

That night inspiration came to him—one who had so unselfishly cared for a sick stranger would naturally still be interested in his condition. The next day found him suffering an apparent collapse; his groaning might even have been heard by a sympathetic listener off the long hall. Geoffrey began his groaning directly after customary office closing time. He deducted that his Angel was among the employed. She was—and at that precise moment opening a can of pineapple for her supper.

"Dear me," murmured the Angel, "that sounds exactly like my sick man. What a pity he has no mother or sister or—wife to look after him."

She decided to take a peep into the invalid's quarters. When her wide-eyed glance revealed her former charge again prostrate, Bessie MacDonald, late of Grove Village, slipped noiselessly into George Stinson's room. She carried some of the pineapple with her. As she supposed, the patient's lips were hot and dry; thoughtfully considering, Bessie fed him the pineapple.

Furtively the patient opened his eyes.

No, she wasn't exactly pretty, nor modish at all. Her soft capably molded hand made assured, graceful movements toward his lips. Her dark brows drew together concernedly, as she bent over him. Geoffrey remembered that same dear, anxious look in his mother's face long ago. Suddenly, his eyes upon her, the girl smiled. Why, she was pretty, tenderly pretty, and the plain little frock framed her some way fittingly—as one would have one's favorite priceless picture framed.

"So I have found you at last!" said Geoffrey Gordon.

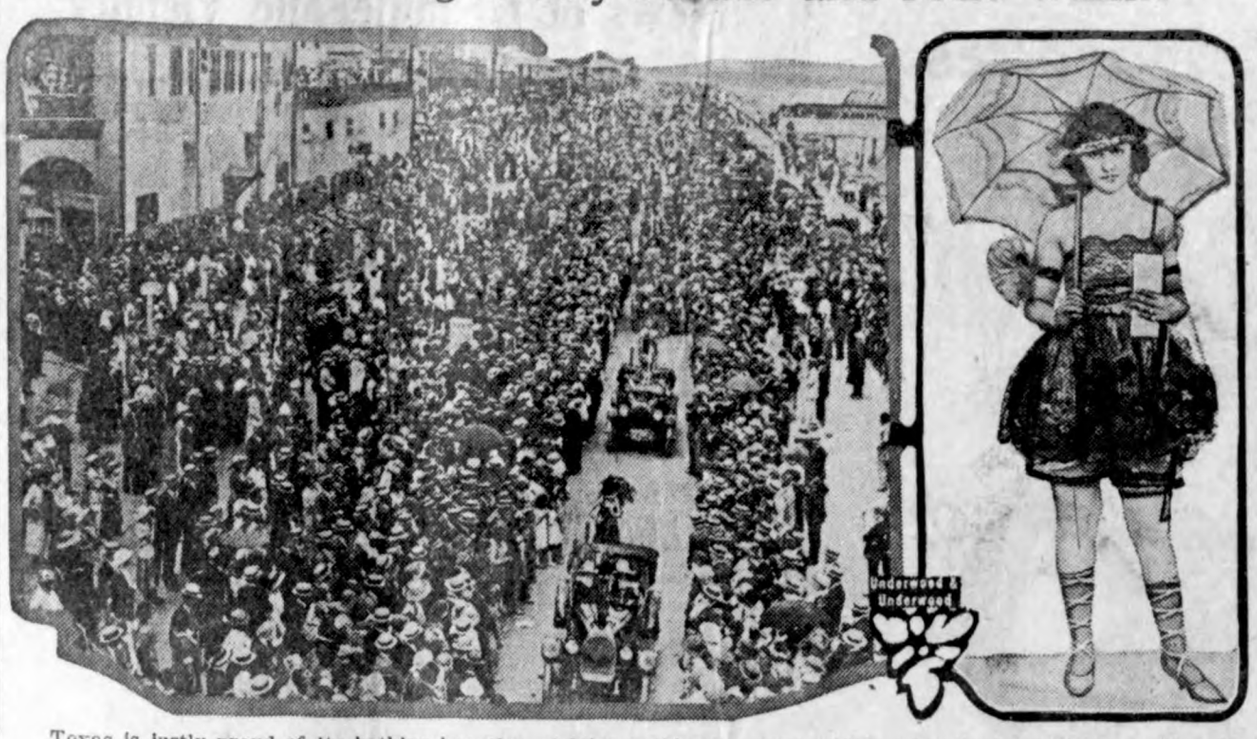
"How I have needed you, my dear!"

"I am glad to be where I am needed," answered Bessie confusedly.

"But I am going to need you always," insisted this strange patient.

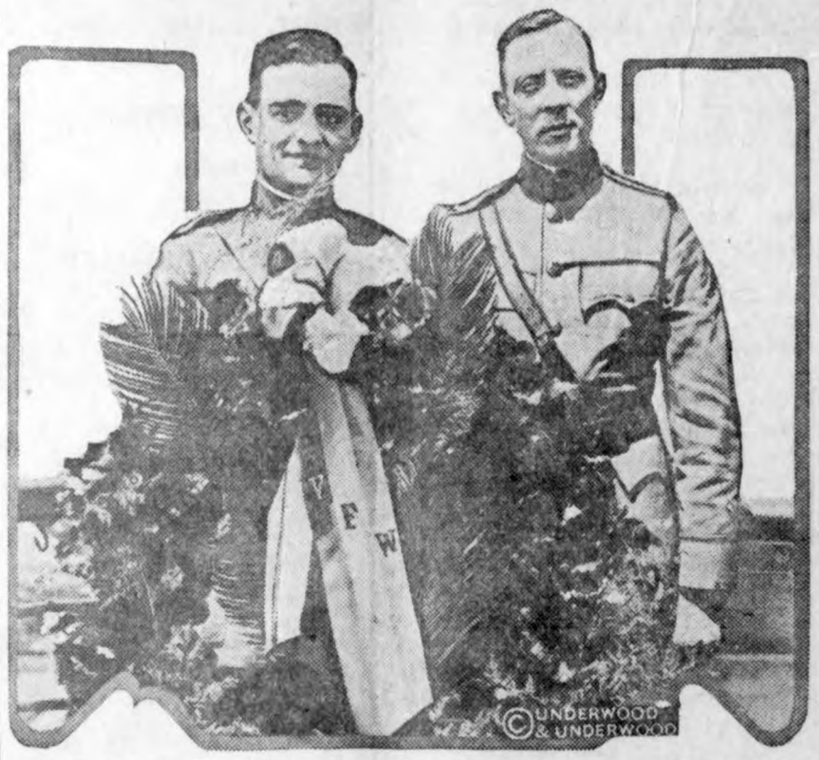
However, Bessie remained true to her word.

Galveston's Bathing Beauty Parade and Prize Winner



Texas is justly proud of its bathing beauties, yielding nothing to more widely advertised localities, and an immense crowd was out to see the parade in Galveston, here shown. Mrs. W. L. Williams, seen in the illustration, won first prize, a check for $500. She is from Houston.

Carry Wreath to France's Unknown Hero



Capt. Reuel W. Elton, adjutant general of the Veterans of Foreign Wars of the United States, and Capt. Robert S. Cain, aide-de-camp to Commander in Chief Woodside of the veterans, with the wreath which they took to Paris to lay as a Memorial day tribute upon the tomb of the Unknown Soldier of France beneath the Arc de Triomphe. The wreath is of poppies, the inter-allied memorial flower.

Explosion Wrecks Harvard Laboratory

A view of the interior of the Jefferson laboratory at Harvard university that was totally demolished by an explosion which is said to have originated in a gas or oil tank, two men were killed and many were seriously injured.

He Rescued Her and Married Her

First Naval Officer Herbert Thompson of the steamship Muskegon, his twenty-two-year-old bride, Madame Nadina Efrom Thompson, widow of an officer of the Russian White Guard, and her baby boy Eric, as they arrived in Boston the other day. Until the brawny young officer of the Muskegon came to the aid of the pretty Russian girl in the Turkish seaport of Constantinople, she had been earning a living among the theaters and cafes of the Black sea cities by dancing. She tells thrilling tales of her escape from the Bolsheviks.

ODD FREAK OF NATURE

This two-legged colt is lying in a private ward at the animal hospital, Portland, Ore. H. V. Coleburne, veterinary, is working to keep life in the body and he believes the colt will survive. Normal in every way except for the lack of forelegs, the animal was born at the Fort Rouge Dairy farm, Fort Garry, Ore.

BUT HE STRUCK OUT!

Some 40,000 enthusiasts went out to the Polo grounds in New York to see Babe Ruth in his first game after being reinstated by Commissioner Landis. And then the King of Swat struck out. The photographer caught him in the act. In the next game he began his series of home runs for the season.

Confessions.

Some men are incapable of being serious about anything—except the next meal. She is really pretty, small, exquisitely finished, with that "look-you-straight-in-the-eye" air which so many girls seem to have acquired during the war. I felt that she was thoroughly well able to take care of herself. Except, perhaps, in dress. The first night she came down in a frock which hardly reached her knees and seemed to stop short at the waist—bare arms, bare shoulders, bare back; I was quite shocked for a moment when Will came into the drawing room without knocking.—From "Confessions of a Well-Meaning Woman," by Stephen McKenna.

Sudden End of Love Affair.

I was nine and my ideal was eight. We lived in a town situated on a little lake. We had been forbidden by our parents to go in a boat, but one day I coaxed her to take a boat ride. When I walked along in the boat to get the oars I tripped over the seat board and fell headlong into the water. She sat there and laughed at me struggling in the mud and water, and my love for her ended right then and there.—Chicago Journal.

Home Town Helps

PAINT THAT MAKES OR MARS

Of Immense Importance Is the Selection of Color to Suit Style of Structure.

Just as important as a new costume as a proclamation to the world of modishness is the coat of paint that mars or makes the exterior of a home. It is a signal sign of thrift and self-respect varying just in the degree of good taste which has been employed in the selection of a color scheme which is harmonious with the home's surroundings.

No such latitude is possible in the decoration of an exterior as that which may be used upon the interior. It is not the place for the expression of personal individuality. Rather the outside of a home, observed constantly by the world, is governed by a conventionality which abhors the bizarre.

Regardless of climate, it is the style of architecture which has been employed in the home building and the nature of its surroundings which must govern to a large extent the colors chosen.

A house which is set closely among trees or shrubbery, it is asserted by those who have made a study of the problem, should never be painted green or olive, although a green shade for trimming purposes may be used. For the body of the house it is much better that colors contrasting with the background should be utilized.

If a house is low, with a tendency toward squattiness, a dark color should not be used. A lighter shade will preserve the benefit of what height the structure possesses.

SMALL GARDEN WORTH WHILE

Much Can Be Raised on Patch of Ground Which Some Might Thing Negligible.

Don't despise the little patch of ground for a vegetable garden. Even a little pocket-handkerchief-sized patch will produce something worth while. A stalwart tomato plant trained to a stake can be grown in a foot square of ground, and training a single trunk to a stake is the very best and the ideal way of growing tomatoes.

It is wasteful to allow them to sprawl over the ground in the old-fashioned way where it is impossible to gather the tomatoes without injuring the vines, and when a portion of the fruit is likely to rot from contact with the earth.

Accommodate the vegetable that can be planted closely to the size of the garden. Even a 5 by 5 patch would grow lettuce, radishes and young onions for a number of meals for a small family. A 10 by 10 garden, which is usually within the reach of anybody who has any garden room at all, will give substantial return. It wouldn't accommodate much in the way of sweet corn, potatoes or melons, but it would take care of tomatoes, peppers, radishes, young onions, carrots, a few beets, string beans or other vegetables that do not need too much room.

Ageratum for Blue Flowers.

For strengthening the garden's color forces in blue, no annual is so good as ageratum. It grows well upon almost all soils, and through a wide range of climate; for that reason many combinations with it are possible. The plants are easily grown, neat, bushy, and erect, with a continual profuse clustering of pretty bushlike flowers throughout the season. The dwarf blue sorts make fine borders and are much used where contrasting color effects are desired. For early results the seed should be sown in cold frames or boxes in the house early in the season before freezing weather is past, but for summer and fall blooms the seeds may be sown in well-prepared beds in the open after the ground stops freezing.—United States Department of Agriculture.

That Coat of Whitewash.

Whitewash is of value both as a disinfectant and also because of its color. It acts as a preservative of wooden structures, and if properly prepared is a fire retardant. A dark and gloomy cellar may be made bright and clean by the use of whitewash. Cellar steps, beams and other obstacles should be covered with whitewash, which will serve to call them to attention, thus avoiding accidents.

On small buildings about the lot as well as trees and fence posts, whitewash can be used to advantage as a means of improving their appearance and also to some extent reducing attacks from vermin.

Get Rid of Unsightly Places.

Unsightly places can often be covered with vines and hidden by flowers, if unable to be removed. At a small cost, grass and flower seeds can be purchased and even the children can help, and take great delight in planting and caring for the flowers. A few flowers will, oftentimes, transform the most unsightly yard into a perfect little paradise, which is a credit to the neighborhood and our city. If each family will improve its own yard and surroundings, the city will take care of itself.

NOTICE OF SPECIAL SCHOOL ELECTION

Public Notice is hereby given to qualified voters of the Independent School District of Klemme, in the County of Hancock, State of Iowa, that a special election of the voters of said District will be held on the 19th day of June, 1922, at the Town Hall, Klemme, Iowa, from 1 o'clock P. M. until 6 o'clock P. M., at which time there will be submitted to the voters of said District the following proposition:

> "Shall the Independent School District of Klemme, in the County of Hancock, State of Iowa, issue bonds in the sum of not to exceed $15,000 for the purpose of constructing and equipping an addition to the school house within said School District?"

at which time and place you are hereby notified to appear.

This notice is given by order of the Board of Directors of the Independent School District of Klemme, Hancock County, Iowa, pursuant to a sufficient petition in accordance with Sections 2820-d et seq. of the Supplement to the Code of Iowa, 1913, as amended, and in accordance with a resolution of said Board duly adopted on the 18th day of May, 1922.

Dated at Klemme, Iowa, this 18th day of May, 1922.

LEW LEWIS,
Secretary, Board of Directors.

Pub. M-18-25-J-1-8

NOTICE TO CONTRACTORS

Notice is hereby given that proposals for the erection of an addition to the school house in the Independent District of Klemme, Hancock County, Iowa, and for the pumbing and heating therein, will be receievd by the undersigned in Klemme, Iowa, until One o'clock P. M. June 16th, 1922, bids will be opened at 8:00 o'clock P. M. on the same date, at which time contract will be let to the lowest responsible bidder. Plans and specifications may be seen at the First National Bank. The Board reserves the right to reject any and all bids, and such bids shall be made with the understanding and condition that no contract will be made unless the voters approve the bond issue at an election called for the 19th day of June, 1922.

Dated at Klemme, Iowa,
May 23, 1922.

LEW LEWIS,
Secretary Independent
District of Klemme.

(Publish May 25, June 1-8-15.

Uncommon Sense . . .

By JOHN BLAKE

REAL COURAGE

To be feared of a thing and yet do it, is what makes the prettiest kind of a man.—Robert Louis Stevenson.

IF YOU have read "Kidnapped" you remember the quotation. It was spoken by Alan Breck after the boy, David, had stood for a minute terrified on the brink of a roaring torrent, and then, still sick with the fear of it, leaped across.

To Alan Breck, the leap meant little. It required no courage for him to make it, for he knew very little of fear. But for the boy, who did the thing he feared as he feared death, it was a real act of heroism.

The only real courage consists in doing the thing we are afraid to do. The hulking prizefighter of the John Sullivan type, who has as much imagination as a grizzly bear, is not brave. He is sure he is going to win. It takes no courage to go into a winning fight.

The bully is never brave. In fact he is always a coward. Feeling sure that his superior size will carry him through, he picks quarrels as a pleasant method of passing his time.

Put this same bully into the ring with a large hungry tiger, face him with a man who looks as if he enjoyed shooting bullies as much as the bully enjoys thrashing his physical inferiors, and all the courage oozes out of the bully.

You will never know whether you are brave or not till you find yourself in a position where you are afraid to do something that ought to be done.

If you do it, you have courage. If you shrink from it and quit, you have not.

Never mistake a physical willingness to take a chance, to attempt some dangerous thing for the kind of courage that counts.

It is not a brave but a very foolish man who walks a tight rope over Niagara falls. It is a brave man, who not wanting to die, and knowing that an operation may send him out of the world, cheerfully goes to the table, to take the one chance that may mean his continued support of his wife or his dependents.

Often the timid school boy, who fears to quarrel, and tries his best to keep his peace with his fellows, gets the name of coward. But when this same boy has to fight for what he thinks is his honor, or to save a little boy from a bully, he becomes a very dangerous fighter.

Real courage is not daunted by pain. The boy or the man who fights when he is afraid to, stops being afraid of anything, pain, or a black eye, or punishment. He fights because he has courage, and he usually wins.

There is more real courage in this world than you fancy. It is behind all great achievement. If you have it, you are fortunate. But don't be sure, either that you have or that you haven't it till you have done or refused to do something you were afraid to do.

(Copyright.)

THE ROMANCE OF WORDS

"QUARANTINE"

THE origin of a term of 40 days—a "quarantine"—as a sanitary precaution against the spread of various diseases is lost in the dim mazes of early oriental history. Forty days was the period devoted in ancient times to the burial of the dead. The spies of the Israelites spent 40 days in Canaan before they submitted the report. Jonah gave the residents of Nineweh 40 days in which to consider his prophecy and repent. Christ, Moses and Elijah each fasted for 40 days—the Christian observance of Lent being a commemoration of the most notable of these. Under William the Conqueror no man was permitted to remain in England more than 40 days without paying a tax of some kind, while under the Magna Charta it is provided that a widow shall remain 40 days in the house of her deceased husband before being allotted her dowry.

The modern sanitary adaptation of the quarantine was established by the French along the Mediterranean in order to prevent the introduction of plague from the eastern countries, but apparently the only reason for the arbitrary setting of such a "time is that it forms one of the periods resulting from a division of the lunar year by the mystic number nine.

(Copyright.)

SCHOOL DAYS

Something to Think About

By F. A. WALKER

GIVE THE BEST

TO GET the best from life you must give the best.

In whatever position you may be, there should be no reluctance to make a fair exchange in which measure for measure is given on both sides in absolute sincerity.

That you should make a fashion of doing this encourages others who are taking note of you to do likewise.

They find through experience that there comes with continued actions of this kind an inexpressible gladness which fills their hearts with friendship and lightens their countenances with sunny complacency.

There are no pleasurable experiences of this sort felt by those who are constantly complaining about the short-comings of others, forgetful all the while of their own.

You cannot feel the balmy air of spring mornings unless you go forth into the glorious outdoors and become a part of it, nor can you give to others if you have nothing to give.

That you should waste your days in ignorance of this fundamental truth underlying happiness is a deplorable error, which, as the years pass softly over you, graying your hairs and marking little lines upon your face, often becomes a burden almost too heavy for self-respect.

You cannot have the best without divorcing from your heart all forms of selfishness, egotism, jealousy, covetousness, doubt and pride.

Your kit of fine sentiments may be packed to the top, but unless you shall stoop, open the bag, take out each sentiment one by one and use them as a plumber uses his tools in daily life, the opportunity to get the best in life will never come to you.

Like diamonds, such inspirations must be cut and polished to bring out their beauty, brilliancy and worth.

High-born ideas, unless put to use at their birth, soon become rusty and of no value.

In your privacy you may fondle them and dream of the wonderful things you intend to do, but if you replace them time and again in the old worn bundle without attempting to test their value in noble work you are not making an effort to get the best, or even a portion of the best, waiting anywhere for every man and woman willing to sacrifice, help others and give the best within them.

(Copyright.)

Mother's Cook Book

"Our cares are the mothers, not only of our charities and virtues, but of our best joys and most cheering and enduring pleasures."

WHAT TO EAT

IF ONE has an old fashioned Scotch kettle with an iron cover there are so many toothsome dishes which may be prepared by cooking in it.

Chicken, the ordinary fried chicken, never tastes half so appetizing as when it is cooked in this little iron kettle, covered so tightly that all the flavors and juices are caught and stay in the delicious morsels of tender meat. Put the chicken with a little butter and sweet lard mixed into the hot kettle and stir until each piece is lightly browned, then add a tablespoonful of water, cover tightly and cook slowly, adding a tablespoonful of water occasionally as it is needed when the meat gets brown. The secret of this kind of cooking is in keeping as little water as possible to steam and cook the meat. Each piece will be moist, brown, and well cooked. The seasoning is added when the chicken has been first browned.

Parsnips.

Cook fresh hard parsnips in boiling salted water until tender. Peel and cut in halves lengthwise. In a frying pan have a tablespoonful or two of bacon or other sweet fat, lay in the parsnips, sprinkle lightly with sugar, salt and a dash of cayenne and brown on both sides.

Another way of serving parsnips is to cook them until tender, mash and drop a spoonful into a fritter batter; when coated, fry in deep fat. Serve hot with roast.

Broiled Finnan Haddie.

Soak the fish twenty minutes in warm water, drain and dry thoroughly. Brush with melted butter and broil until browned on both sides. Transfer to a hot platter on which has been poured a cupful of cream or white sauce. Set into the oven a minute to heat the cream and serve hot with baked potatoes.

Nellie Maxwell

Copyright, 1922, Western Newspaper Union.

No Inducement.

"We start you without a dollar," read the unemployed person. "Humph!" he snorted. "That's nothing. I'm that way now."—Retail Ledger, Philadelphia.

KIDDIES SIX

By Will M. Maupin

LIFE

A LITTLE grief, and much of joy
Marks every day.
A wealth of love without alloy,
Along life's way.
A little toil, a little pain,
The glint of sun, the welcome rain,
And then comes night.
A peaceful rest at set of sun,
A welcome home when work is done,
And life's all right.

A time to meet, a time to part;
Friends come and go.
Hand clasping hand, heart beats to heart,
Comes joy, comes woe.
The radiant light of clear blue skies,
The welcome gleam of children's eyes,
Make hearts grow light.
A battle won for those loved best,
And troubles faced with merry jest,
And life's all right.

(Copyright.)

Ravages of the Bookworm.

In the earliest writings we find mention of the ravages of the bookworm. Evenus, who lived about 450 B. C., is the earliest author known to write of its ravages. Horace, Ovid, Pliny, Martial and Lucian also wrote of him.

THE CHEERFUL CHERUB

I have a cinder in my eye,
A feeling that I much despise.
I s'pose I should rejoice because
I haven't one in both my eyes.

R. McCANN

ALLURING DINNER GOWNS; HAPPY MEDIUMS IN HATS

WITH a reservation in the matter of length, this handsome dinner gown undertakes to accent the modes of the season. It is made of crepe de chine and georgette, it takes advantage of the continued vogue for bead trimmings, the sleeves make the most of their opportunity to be featured. It affects the last thing in neck lines and the approved low waist line—but it is shorter than the length decreed by style arbiters. In this one particular it lags, with plenty of good company, behind the very long skirt company and takes its stand among those models that have made a compromise between one extreme and the other.

There are wonderful colors this season and women have grown courageous in using them. When considering dinner and evening frocks they may allow themselves to be daring, but for the street they refuse the reckless and have approved beige, tan, wood and other browns, green and dark blue. Gayer colors and many of them make afternoon and dinner frocks and they are elaborated with embroideries and contrasting colors in fabric combinations. When black is used it is worn over a color or brightened with vivid colors in embroidery or banded with a gay color. Light colors for evening often make use of crystal beads and the deeper tones choose beads in shades of their own color, sometimes combining them with crystals.

The gown pictured is developed in amber-colored crepe de chine and has sleeves and drop skirt of a lighter tone in georgette. The beads begin with this light tone and shade to rust color. Deep cuffs of the crepe de chine take up the unused width in the sleeves and the girdle is made of the crepe de chine.

Dinner Gown of Colored Crepe.

The chic small hat arrives early and has many devotees — midsummer brings hats with generous brims that compel our adoration, but between them stand hats that strike a happy medium. They go hand in hand with summer the length of its journey, and mirrors reflect them more often than falls to the lot of these small or large rivals; for they are the becoming and useful trimmed hats that are designed to fit in with many backgrounds.

Four hats of the character, as shown here, indicate something of the diversity to be found among them. The group leads off with a shape of black lisere faced with blue crepe and very simply trimmed with a sash of wide ribbon and a handsome ornament. It can afford to be simple for it is the possessor of most becoming lines. Nearly all faces are flattered by it. Just below it at the left is a fabric hat of a crepey material trimmed with two kinds of beads and a little ornamental stitching. Its shape suggests the poke bonnet and is best suited to youthful faces. Next is a hat made of another millinery fabric with an odd sash and hanging ends of crepe. Little pearly sea shells are set about the upturned portion of the brim. This hat has the lines that matronly wearers like.

The flower-trimmed hat with round crown that bells and flat brim is a great favorite in many braids. It is shown with a sash of picot-edged ribbon that is arranged in four loops, the two longer ones slipping through a slash in the brim.

Showing Diversity in Hats.

Julia Bottomley

COPYRIGHT BY WESTERN NEWSPAPER UNION.

Just a Little Smile

WHAT WE USUALLY FORGET

"Pretty soft for that man—doesn't have a thing to worry about."

"Who?"

"That gray-haired gentleman over there. He has all the money he'll ever need."

"Oh! Do you know him?"

"Just by reputation."

"Well, he worked steadily 40 years day and night, earning his right to rest now."

Worked Both Ways.

Hewitt—You look glum. What's the matter?

Jewett—Matter enough. I gave my wife a ticket to the town where her mother lives for a present.

Hewitt—That was nice.

Jewett—Was it? The confounded ticket was good in either direction and my wife sent it to her mother to come here on and I'm on my way to the train to meet her."

Talent Feared.

"You have not cultivated the art of oratory?"

"My constituents say they don't want an orator in my place," replied Senator Sorghum. "They're afraid the orator might be out delivering lectures when he ought to be answering mail or keeping tab on the congressional debates."

Sudden Activities.

"I understand there has been a crime wave in Crimson Gulch."

"Nothing of the kind!" protested Cactus Joe. "Our beautiful an' growin' city has suffered in reputation simply because our new sheriff got restless an' started diggin' up a lot o' gossip that nobody has been payin' attention to for years."

Interesting Specimen.

"I'm afraid our boy Josh is a loony lizard," said Farmer Corntossel.

"He ain't," replied Josh's fond mother. "He's only a plesiosaurus."

"How do you make that out?"

"I happened to see in the dictionary that 'plesiosaurus' means 'near lizard.'"

ADORABLE SCARS

"What a horrid scar George has on his forehead."

"Horrid? The idea! Why, he got that in a football game."

Legislation.

Our legislature does not pause
To heed the speechess long since spoken.
It's easier to make new laws
Than to repair the ones we've broken.

The Exhausting Ordeal.

"Do you expect to do much work if you succeed in getting re-elected?"

"I'm not sure whether I'll be able to," replied Senator Sorghum. "The campaign promises to be so nerve racking and exhausting that I may require almost the entire term of office to rest up for another one."

The Changeless Record.

"You would rather be photographed than interviewed?"

"I'm not so sure about that," answered Senator Sorghum. "If a photograph happens to present you in a disadvantageous attitude there's a chance for you to come out next day with a statement that it has been garbled."

Hard-Boiled.

"Don't you ever work?" asked the irascible citizen.

"I'm a student, sir," said the supplicant for a thin dime.

"Of what?"

"Of humanity."

"Is that so?" Well, the specimen who is just now engaging your attention is a four-minute egg. Get out."

Ironical.

Villain (laughing) — Ha, Ha! You are helpless; the old homestead belongs to me.

Hero—And where are the papers?

Villain—At the blacksmith's.

Hero—You are having them forged.

Villain—Nay, nay. I am having them filed.—Princeton Tiger.

What More Is Needed.

"But, my dear sir," protested the congressman to the applicant for a government job, you are totally unfit for the position you seek."

"And you have the heart to tell me that," replied the applicant, as he burst into tears, "when I've voted the straight party ticket all my life."

Decidedly Touching.

Will—I just saw a touching scene.

Bob—What was it?

Will—Two fat men in a 4 by 6 elevator. They touched on all sides.

formations are the most favor- but because no other method will well.

cost of preparing land for the r method is low as compared that required for most other ds if the physical conditions are able. At the same time it is usu- easible to obtain a fair crop at cost by the use of temporary rs, and after the crop is harvest- e making of permanent borders be undertaken without undoing of the previous season's work.

Slopes Are Essential.

smooth, regular surface having a in one direction of about 2.5 s to the hundred feet may be re- d as ideal for the border method rigation. It is possible to make rs on slopes one inch or less to undred feet and on steeper slopes 2 feet and more per hundred. rs have been used on slopes as as 7½ feet to the hundred feet, xtra care must then be taken to nt soil and crop erosion.

amount of water that can be d into the strip depends on the f each strip, its slope, and other tions. In narrow, short strips ead used may be reduced to half ic foot a second or from 20 to iners' inches, and in wide, long 10 cubic feet a second may be too large. A large volume of cannot be handled successfully ep slopes, but it is always pos- to divide a head between two or compartments.

l details of the construction and tion of borders are contained in ulletin, copies of which may be ree by writing to the United s Department of Agriculture, ington, D. C.

N TO AVOID GAPE WORMS

Can Be Guarded Against by utting Little Turpentine in Drinking Water.

w that warm weather is coming ape worms will soon put in an rance in certain localities. They ften be prevented by putting a rops of turpentine in each quart ter—and scattering air slaked bout the coops and runs

BIG SAVING MADE BY CULLING OUT SCRUBS

Nonproducing Fowls Eliminated From Many Flocks.

Extension Agents Explain Method of Weeding Out So Thoroughly That Poultry Raisers Soon Become Efficient.

(Prepared by the United States Department of Agriculture.)

Approximately $40,000 was saved to poultry men in Texas last year through the work of extension workers employed co-operatively by the United States Department of Agriculture and the state agricultural college. In 14 counties of Maine the saving was about $1,394.40. These sums represent the money value of culling, estimated on the feed cost of one cent a day a hen.

In Maine 15,964 hens were examined in culling demonstrations and 4,648 culls removed. In Texas about 15,-

Extension Agent Explaining Method of Culling.

000 hens were culled. That this culling was successful is shown by the following figures: 19 birds were culled from a flock of 54, and in the next seven days the culls laid only 20 eggs; 290 birds were culled from flocks totaling 846 and in the next seven days laid 26 eggs. Of the entire number of hens culled in Maine, the percentage of egg production for the entire flock was 32.3, for the hens left after culling 40.7 per cent, and for the culls 4.5 per cent.

The number of poultry owners instructed in Maine was 3,043 and in Texas 8,000, many of whom afterward culled their own flocks. The estimated savings represent only a part of the total value of this work. As a result of the demonstrations in one section in Maine, 79 persons eliminated 1,420 birds as culls, while in Texas the culling that resulted from all demonstrations was valued at $125,000.

The extension agents not only demonstrated that the non-producing hen could be eliminated but explained the method of culling so thoroughly that those present could go home and put it into practice nearly as effectively as the demonstrators themselves.

RIGHT CULTURE OF CABBAGE

Rich Soil Encourages Fast Growth, Large and Solid Heads—Chinese Variety Differs.

The history of the development of the cabbage gives the key to its culture. The richer the soil and the faster it is kept growing, the larger and solider the heads. It must be grown fast to head fast. If through lack of fertility or drought its growth is checked, there is either no real head or a loose, very inferior one, the whole strength of the plant going to develop such leaves as it had produced before the check. The Chinese cabbage is an entirely different species from the common cabbage and its brothers.

KEEP COMPOST HEAP MOIST

Arrange Pile So That Rain Will Keep Material Wet and Prevent Loss of Fertility.

"It is of the utmost importance," says the Flower Grower, "that the top of the pile be kept hollow or at least flat, so that rain will keep the material wet and prevent burning and loss of fertility. Don't let the pile get rounded on top under any circumstances, as it should absorb the rainfall and not shed it, and, therefore, the nearer level it is kept the better job of composting will result."

DETERMINING SEX OF DUCKS

Hen Always Quacks in Coarse Voice, While Drake Will Emit Sibilant Sound.

Not every one knows how to tell the sex of ducks, but it is easy. The hen duck always quacks in a coarse voice; the drake never quacks, but emits a sibilant sound, described by one woman as being "like an old man with brownkeeters." It has a "quack" sound, but is high-pitched and not so loud as the raucous quacking of the hen ducks.

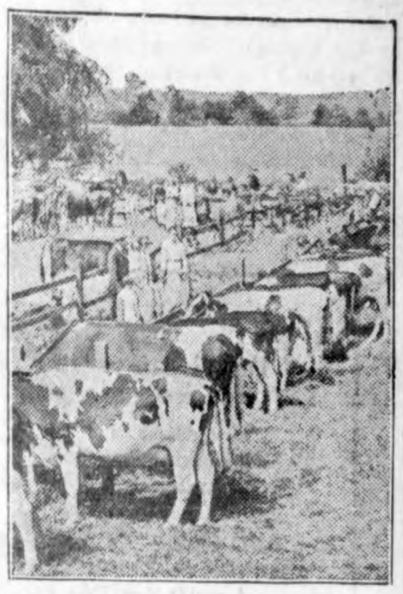
DAIRY POINTS

GIVE PUREBREDS MORE CARE

Dairyman Often Takes More Interest in High Class Stock Because of Possibilities.

(Prepared by the United States Department of Agriculture.)

There is no good reason why it should cost more to care for a good herd of purebred dairy cows than it costs to care for the same number of good grades, although farmers sometimes believe that the purebreds are more expensive to keep. However, says the United States Department of Agriculture, the dairyman often does



Purebred and Tuberculin-Tested Dairy Cows.

spend more on purebreds because he sees greater possibilities in them, and consequently takes more interest in them, feeding them better and building better barns to house them. He does not need to do this, but usually he finds that it pays him in gross returns and in net returns.

The results would have been the same, though possibly not in the same degree, if better care and feed had been given to a good grade herd. But it sometimes takes the stimulation supplied by the ownership of a few purebreds to induce a man to improve his practices.

TREATING STERILITY IN COW

Most Cases Become Chronic or Permanent Unless Properly Handled by Veterinarian.

In many herds where abortion disease is present, from five to ten per cent of the cows become sterile or barren, and most cases become chronic or permanent unless they are treated by a qualified veterinarian. Dr. W. L. Williams of the New York State Veterinary college is to be given credit for the plan of procedure in handling these cows. The treatment should not be neglected too long after the cows manifest this symptom.

A thorough examination of the patient is necessary to locate the trouble either in the uterus, ovaries or fallopian tubes, and treated accordingly. It is not uncommon for a skilled operator to restore five out of six cases to a reproductive state under favorable conditions.

Cases of long standing should be sold to the butcher, as the treatment fails to help them. A case of more than eight months' to one year's standing is very discouraging to the operator, for he realizes that functional changes have taken place in the reproductive organs that will be difficult to correct by treatment. Therefore do not delay having an animal examined and treated in the beginning of the trouble instead of waiting until it is too late. The annual loss caused by sterility would be surprisingly high if survey could be made and accurate data obtained from the cattle breeders.

RATION MUST BE ATTRACTIVE

Dairy Cow to Do Well Requires Feed Containing Proper Elements for Milk Flow.

Cows won't do well on food that isn't palatable, say the feeding men at the New York College of Agriculture at Ithaca. Not only must the dairy cow's ration contain the proper elements if she is to be "worth her keep," but it must be so attractive to her that she will eat plenty and keep up a good flow of milk.

On the other hand, say the dairymen, it isn't wise to change a ration suddenly even to make it better. A cow is a delicate milk-producing machine, and sudden changes in her food are quite likely to upset some part of the machinery, with a resulting loss of milk.

The condition of the food probably has most to do with its palatability; moldy grains or roughage don't appeal to any self-respecting cow.

COWS ON PASTURE TOO SOON

Many Owners Expect Animals to Thrive on Thin Grass—Grain Must Be Supplied.

Owners of cows usually put them out on pasture too soon, expecting the cows to get all feed necessary from scant early pastures. Until the pastures have made a good growth, cows will need about a pound of grain for every six pounds of milk as well as some dry hay.

MILK IS INDISPENSABLE IN DIET OF CHILDREN AND REQUIRES CARE

Especial Precautions as to Cleanliness on the Part of Those Who Handle Milk Are Strongly Urged.

(Prepared by the United States Department of Agriculture.)

The consumer, rather than the producer, the distributor of milk, or the manufacturer of dairy products is the person for whose use a new Farmers' Bulletin, No. 1207, Milk and Its Uses in the Home, has recently been issued by the United States Department of Agriculture. Milk is indispensable in the diet of children, because its solids are in such form that they can be easily utilized by the body, and because it is one of the best sources of the lime needed to build bone and teeth, and of vitamine A, a substance essential to health and normal growth. For adults also milk is an important supplementary food. It should be given scrupulous care in the home.

Milk and Its Uses.

Milk is an important food, because it contains proteins for tissue forming, fat and sugar for body fuel, and minerals, particularly phosphorus and lime, for building and repairing bones and other tissues. Milk is much richer in lime than most other common foods. A cupful of milk, says the bulletin, contains at least seven times as much lime as two medium sized potatoes, and nearly twenty times as much lime as two slices of white bread or four ounces of average beef. This is one of the reasons why it is such an excellent food for children for bone and tooth building.

Vitamines are recently discovered constituents of food. Relatively little is known about the nature of vitamines save that they are indispensable for normal health and growth, and that if they are left out of the diet for a long period so called "deficiency diseases" may develop. Absence of vitamine A is believed to induce rickets. Vitamine B is thought to prevent polyneuritis and beri-beri. Milk is exceptionally valuable for providing vitamine A, and supplies vitamine B in abundance. Perfectly fresh, raw milk often supplies vitamine C, but its scurvy-preventing power may be lost when it is heated or aged.

Each child should have a full quart of milk a day, if possible.

Reasons for Pasteurization.

While certified raw milk is usually the cleanest milk obtainable, it usually costs a little more than ordinary milk. Good pasteurized milk is satisfactory for children, if the juice of oranges, canned or raw tomatoes, or certain other vegetables and fruits is given to provide vitamine C. Directions for home pasteurization are given in the bulletin, together with an explanation of how bacteria get into milk, the harm they cause, and the effect of careless handling upon them.

A great many kinds of bacteria have been found in milk. Some of them cause the formation of lactic acid, which gives sour milk its characteristic flavor, while others cause milk to putrefy if allowed to stand long enough. The bacteria that causes serious diseases may also get into milk, and are sometimes spread in this way, resulting in epidemics. Especial precautions as to cleanliness on the part of those who produce and handle milk are strongly urged.

PARKER HOUSE ROLLS

Sift and mix well one and one-fourth cupfuls of white flour, four level teaspoonfuls of baking powder, three-fourths cupful of corn meal, two tablespoonfuls of sugar and one-half teaspoonful of salt. Into this chop with a knife two tablespoonfuls of butter. After the butter has been thoroughly mixed in add one beaten egg and enough milk to make a soft dough that can be easily handled. Toss the mass lightly on a floured board and roll out one-half inch thick. Cut with a large, round biscuit cutter, place a small piece of butter in the center of each round and force over until the edges meet. Brush the top of the rolls with milk, place in a buttered baking pan and bake in a quick oven for fifteen minutes. Serve hot.

WAY TO WASH HANDKERCHIEF

To Prevent Silk From Turning Yellow No Boiling Should Be Done —Dry in the Sun.

To prevent silk handkerchiefs from turning yellow when washed, no soap should be rubbed on the silk, no soda should be mixed with the water, and the handkerchiefs should on no account be boiled. A hot, thick soapy lather made with finely shredded soap should be used for cleaning the handkerchiefs, which should be thoroughly freed from all soap by rinsing in plenty of cold water and when most of the water has been pressed out they should be dried, if possible, in the sun.

PREVENT CHICKS PILING UP

One of Greatest Single Causes of Loss Among Youngsters—Sweating Is Injurious.

The greatest single source of loss among baby chicks after they have safely passed the critical first two or three weeks and are well on the road to proper development, lies in the chance of their piling up some night, smothering to death or sweating. Sweating causes them to lose their feathers and the strain involved in growing a new coat is almost certain to result in a stunted and worthless chick.

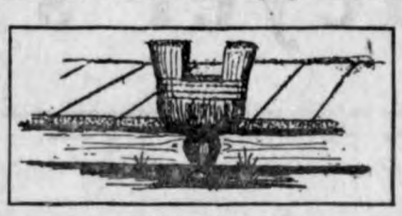
Salt Fish.

Soak salt fish in milk to freshen it for immediate use.

OLD BROOM IS MADE USEFUL

When Straws Are Cut as Shown in Illustration It Will Clean Mud Off Soles of Shoes.

There's a lot of dirt that need never be swept out of the house if provision is made for leaving it outside in the first place. For this purpose an old broom may be used; and thus it will continue its work of keeping the house



Handy Shoe Cleaner.

clean long after its straws have been worn down too short for sweeping.

Just take an old broom and cut the straws off as shown in the sketch, shorten and sharpen the handle and drive it into the ground beside the walk just outside the house. It will clean not only the soles of the shoes but the sides as well, thereby making a certain amount of sweeping unnecessary. At any rate it's worth trying.

Household Questions

Every home should possess a portable fire extinguisher.

* * *

Remove mud from black clothing by rubbing with raw potato.

* * *

A pretty way to finish the top of a flounce on a petticoat is with entwined pink and blue ribbons.

* * *

When frying entrees bread crumbs are preferable to cracker dust, because they are less soggy.

* * *

New rope may be made pliable by boiling it in water for a couple of hours. Hang in a warm room.

* * *

Wring sheets from the side rather than from the end, and the objectionable wrinkles along the selvage will be avoided.

* * *

A little benzine added to the cleansing powder when you are cleaning a copper kettle will brighten it and keep it bright longer than if omitted.

* * *

Lamp chimneys can be quickly cleaned by holding the hand over one end and putting the other end over the spout of a simmering tea kettle. Rub at once with tissue paper.

EMILY

By H. LOUIS RAYBOLD

©, 1922, by McClure Newspaper Syndicate.

"Heavens above, how sick I get of this ride!" and Emily Richmond frowned in disgust as the crowded trolley car lurched along the rails. "Week in, week out, morning and night—hanging on a strap or wedged in between others as weary as myself of the daily, deadly round of monotony!"

Then her brown eyes widened and the frown lifted as the car came to an abrupt halt at the drawbridge and Emily caught a glimpse of breakwater and sea and sails on a far horizon. It was always that way on the ride to and from the office where Emily earned good money as a skilled typist. That momentary sight of the sound caught at whatever wanderlust lived in Emily's city-raised heart.

And this morning when she was on her way to give a decided "No" to Peter William's proposal that she share his salary as assistant manager of Horton & Hastings, the company whose employees they both were, the distant blue waters particularly appealed. Oh, to get away from it all! to sail and sail and said—

Deep down somewhere in Emily's heart a tiny voice whispered: "Why not?"

The bumping of the trolley car over the bridge roused Emily to more than mere dallying with the interesting proposition. "I'll do it!" she all but cried aloud. "I'll do that very thing!"

That was how it happened that on that particular morning the office of Horton & Hastings was minus its star typist. Nor did any of the puzzled force picture Emily as she actually was—hurrying first of all to the bank and then to the station; sending a telephone message or two; buying a ticket to the neighboring big city; and, finally settling back in the train with a current magazine, a box of chocolates and a shrug of unconcerned shoulders. Peter felt sure she was ill, and kept impatient tabs on the clock until the noon hour arrived and he could telephone in privacy to Emily's boarding house.

Then when he did he turned white. "Miss Richmond," said Emily's landlady acidly, "had sent an expressman for her trunks, with never a word at the breakfast table about her plans!"

Life for Emily had become interesting at last. A modest room in a moderately priced hotel; breakfast as late as she pleased, and a varied menu to choose from; sight-seeing tours through the shops; matinees and concerts galore.

Then, oddly enough, so inconsequential a thing as a heavy downpour brought the first twinge of regret to Emily. Shut indoors through a thrifty desire to spare a new suit she had recklessly lavished half a month's salary on, she read steadily for several hours. Then impulsively she threw the book across the bed.

Love—love—love! Was there nothing else to write about? Wasn't there anything else worth while in the world?

An hour later, and Emily, driven by sheer boredom out into the storm, took refuge from the penetrating chill of sleety rain in a huge moving picture palace. Settling down in the all but absolute darkness, she gave herself up to watching, at first half-heartedly, then with more interest the picture on the screen. Strange to say, there was just a reminder of Peter in the stalwart hero. Absurd though it was, under the circumstances Emily's heart beat a trifle faster.

The story progressed, the plot thickened and resolved, and at last the heroine melted into the Peter-like hero's arms. Emily heaved a tiny sigh. At that moment, out of the darkness at her side, a masculine hand took hold of her arm.

Like a flash Emily leaped to her feet, squeezed past the unpardonably impudent person at her side with never a glance, and rushed out in the rain. Then she drew a long breath. She had heard of strangers attempting such familiarities, but had never supposed such things could happen to her. If Peter could have been there! But then it was only to lone women that a thing of that sort occurred. Suddenly Emily's eyes filled. That was what she was—"a lone woman in a strange city."

And there came to Emily a longing for the dingy old office, with Jim the office boy lounging outside the rail, and Peter working away at his desk over in the corner, and her typewriter before her. Work and companionship—why, they were worth more than shopping tours and loneliness, moving pictures and unprotectedness!

"I—I say, Emily, I didn't mean when I touched you in there—"

"Peter!" Emily could not believe her ears nor yet her eyes, although surely this man at her side was the man she hadn't wanted to marry.

"Yes, dear," said Peter shamefacedly. "Here I am. I hunted up the expressman who took your trunk and traced you to the city and found your name on the hotel register. And oh, perhaps I was unpardonably curious, but when you realize it was because I love you, Emily! Today I followed you into the theater and after a while got a seat at your side, although I kept my head turned so you would not recognize me. Then at the end your sigh was too much for me. Oh, Emily, when are you coming back to us?"

Emily slipped her arm through Peter's. "When is the next train, dear?" she asked, huskily.

PLUMBING

Tinker Shop

We have a new man in charge of our tinker shop, Mr. Art Freenmeyer who comes to us from Ellendale, Minn. He is an experienced repair man and a pleasant man to meet.

We have also remodeled our shop, added new equipment and are prepared to take care of your wants in the following--

Shoe Repairing
Vulcanizing Tires
Repairing Tubes
Sewing Machine Work
Phonograph Repairing
Old Furniture Repaired
Saws Filed and Set
Bring us your work
We are here to sevre

Special we will give you 25c reduction on the first dollar you spend in our shop during June.

Wellemeyer's

The Fruits of the Plow--

Plowing is hard, tedious labor; yet, like many other forms of toil, it is vital to our existence. And when the fruits of the plow are harvested, we are likely to forget the immense value of the instrument that broke the ground.

In life we must break the ground. If you have not yet opened one with us, an account in our Savings Department will prove an efficient plow. The little sacrifices you make today in order to save regularly will be lost sight of in later years when you are enjoying the fruits of your thrift.

State Savings Bank

Klemme Iowa

Klemme Locals

Mr. and Mrs. R. B. Ballard and son Homer and daughter Lucille, of Minneapolis, drove down here Saturday evening for a visit at the E. S. D. Kahrs home. Mrs. Ballard is a sister of Mr. Kahrs.

Mrs. Elmer Yohn of Garner was a Klemme isitor yesterday.

Sam Harvey, wife and baby, returned Tuesday morning from a two months visit with relatives and old friends at Jersey City, N. J. This is the first time Sam has been home to visit the folks since he came out here about eight years ago.

Mrs. Milje Smith is taking a vacation from her duties at the Wellemeyer store. Leota Smith is taking her place in the dry goods department during her absence.

I wish to again call attention to my candidacy for the nomination for Recorder of Hancock County. I am an ex-service man, and would greatly appreciate your support at the primaries June 5th. Oscar H. Wenck.

John Day and family intend to go to Sioux City the first of the week to be present at the commencement exercises at Morning Side College. Donald Nissen, their nephew, graduates from the college this year. Don will return to Klemme with them for a short visit.

Joe Gronsdal, that good looking chap at the Ford Garage, drove to Dolliver Monday evening to spend Decoration Day with his folks. Joe always says its the folks he goes to see, but we have our doubts about that as we were once single ourself. That excuse is getting old.

The Olaf M. Twedt Co. received a car load of enclosed Fords the fore part of the week. Chris Gram and Harold Gruetzmacher each bought a new Ford Coupe, and Herman Priebe and R. A. Jorgenson bought new Sedans. The local Ford dealers are selling lots of cars this year and are taking orders faster than they can get the cars.

Mr. Art Freemeyer, of Ellendale, is the man who makes all the noise in Wellemeyer's repair department. He started work at the Wellemeyer establishment Monday. Rather peculiar this—Art Freemeyer working for Art Wellemeyer, wouldn't be a very hard job to make poetry out of this news item.

We would say that it is slightly off season to be displaying fur overcoats as a window attraction, so we would suggest to J. P. Larsen & sons that they have their man "Happy" re-decorate their shop window and put in a few of those latest style bathing suits as hot weather is coming sometime soon. "Pat" White could rig up as a fine model for a bathing beauty.

John Etchen and Al Emerson went to Spencer today to see Parcout and Jourdon wrestle there tonight. Incidently Al will make a short visit at the home of Mr. and Mrs. Leveay where he has a grandson two months old. The men may also do a little fishing at Spirit Lake before returning home.

HANS WILLER DEFEATS MUNDON AT GARNER MONDAY NIGHT

Klemme Wrestler Easily Throws Mason Citp Grappler

At the opera house at Garner Monday night was staged a finish wrestling match between Hans Willer of this place and a wrestler by the name of Bert Mundon, of near Mason City.

The grapplers were evenly matched, if anything Mundon was some heavier than Willer. Our man Willer threw his opponent in 24 minutes for the first fall. Mundson won the second fall in 16 minutes. Willer rushed Mundson in the last round and threw him in less than 10 seconds. The match was fast from the start to the finish and was no puppy love affair but an exhibition of real wrestling as both men worked fast. Willer, however, was too fast for the Mason City man and showed a great deal of skill.

There were quit a number from here and vicinity who drove over to see the match. A good preliminary was also staged in connection with the main event. k

SCHOOL PICNIC WAS BIG EVENT

Alhough the day looked rainy Friday, a large crowd turned out to attend the annual school picnic at Koerner's grove. Everybody brought well filled baskets of good things to eat and somebody supplied the crowd with three enormous packers of three kinds of ice cream the kiddies had their eye on the latter and also some off the bigger kids as well.

At the noon hour the lunch was served in caffeteria style and long tables had been provided so that there was ample room for all.

Koerner's grove is an ideal place for picnics as there is lots of trees for shelter and shade and the grounds are well provided for amusements for the kids. There are swings, teeter-totters, a merry go round, cable slide and other things.

The High School ball team play- a pick-up bunch in the afternoon, resulting in the defeat of the latter.

All had a fine time at hhe picnic and anxiously look forward to the next celebration.

TOWN HIRES MAN TO LOOK AFTER STREETS AND OTHER Work . . .

Fred Henchen began work the first of June for the Town of Klemme as all around mon. It will be his to look after the pumping station, street work and park, and such other work as may be required of him.

The city dads have made a move in the right direction as the town is large enough that there is so many little jobs that will keep a man busy the year around and Fred is a good man for this sort of job as he will devote his entire time time to keep the town looking spick nd span.

BACHMAN MODERNIZES SHOP

Clarence Bachman is fixing his barber shop up real modern and to step into his place of business now you would not recognize the old stand First he had it repainted and repapered. Next he attacked the plumbing system and has done away with the old bassin in the center of the room and in it's place has installed two modern lavortories in ffront of each chairand under plate glass mirrors. These are connected up to a large hot water heating furnace and reserve tank so that he will have an abundance of hot water at all times. When he got thhru with all this he decided the floor was the only place that hadn't been fixedup so he had a new floor laid in the shop. In addition to the above improvements he also added a number of new barber's tools, etc. He has a real nice shop now and as good as any in this part of the country.

CARD OF THANKS

I wish to thank the voters of Hancock county for the liberal support they gave me in the election Monday. I want everyone to know that I certainly appreciate it.

MRS. CLARISSA ABEL.

DESTRUCTIVE FIRE RAZES THE COUNTRY HOME OF GEO. ULRICH

Defective Chimney Cause of Blaze

Last Thursday afternoon between 4:30 and 5:00 o'clock the house on the George Ulrich farm five miles northwest of Klemme caught fire and was burned to the ground.

Mr. and Mrs. Jimmie Wade live on the place. Mrs. Wade was in town shopping and Jimmie and his man "Bub" Ulrich were in the field working some distance from the house. The hired girl, Miss Eenhuus, was the only person at home and she did not detect the blaze until the house was well on fire as the flames started in the attic from a defective chimnep, it is thought. She hurried to the field to get the men but they were not able to combat he fire which had hen gained enormous headway so they tried to save what household goods that they could remove the easiest and succeeded in saving the piano and some furniture. Practically all their clothing was lost and the greater part of the contents of the house. The house was completely destroyed. In trying to help save some of the goods Miss Eenhuus slipped and fractured the bones in her ankle. Neighbors arriving at the scene poured water over the roof of the barn and saved it or it too might have been destroyed as the heat from the house had started the roof to smoking.

Fred Shipley came over from Woden last Thursday afternoon and was a visitor at the Times office. At the present time Fred has no occupation and so is putting in time fishing. He has been in the hotel and restaurant business at various points foi the last four years or more and he and his wife are visiting relatives at Woden.

Mrs. H. E. Wilson and son, Eugene, went to Galt last Friday for a visit with friends, returning to this city Monday. By that time Proffessor Wilson had their household goods all packed and they left for their new home at Lansing, Iowa, where Mr. Wilson will be superintendent of schools for the coming term.

The Boy Scouts have been re-organized and held their meeting in the basement of the First National Bank. Rev. Artur Gedye is their Scout Master. They want to increase their patrol and any boy wishing to join should get in touch with the scout master.

George Bergmann has taxen a position at the Gram & Coobs garage for the summer during vacation time. He will take care of te office and gas station.

We had missed Chris Mayne for several days last week and in the meantime we wondered who the strange gentleman was who came up town occassionally from his neighborhood. Then at the school picnic Friday we ran onto this stranger again and he spoke to us as though he knew us. After looking him up and down, cross-ways and from all the other angles we finally discovered that the stranger was none other than chris Mayne, and that the great change in his personal appearance was due to the fact that he had had his beard amputated and left only the mustache. Chris looks twenty years younger now.

APPPRECIATION

Here's a story puublishhed in an exchange which shows how greatly the people of a community in Kansas appreciated their editor. "In appreciation of the work of a Kansas editor for their community some citizens recently gave him a bouquet. On tthe same occasion a quartet from a local church sang a few sweet songs and a minister made a little talk. After the Ministers' talk six husky men carried the popular editor from the house and placed himtenderly in a model 1921 plumed sedan, and thhe whole town formed in parade behind the editor's expensive car. After the parade the homes serene in the thougt of having gave one bright day in the life of their local news purveyor, even if they did wait until he was dead to do it."—Ex.

WILL RIDDER NOW A MARRIED MAN

Marries Sumner, Iowa, Girl

Will Ridder, who has been working in Waterloo for the past nine years, and a son of Mr. and Mrs. August Ridder of this place, was united in marriage to Miss Sylvia Baumgardner of Sumner, Iowa, Tuesday noon.

Mr. and Mrs. August Ridder and sons Harold and Walter of this city and Mr. and Mrs. Frank Ward and son of Burt, Iowa, drove to Sumner Monday to attend the wedding which took place at noon Tuesday at that place.

The newly-weds will make their home at Waterloo. The Times wishes them a lonug, happy married life.

KLEMME STUDENTS WIN HONORS AT GARNER

Earl Josten Takes Second Place With Grade of 95.096

For theh past three years students have gone to Garner from the Klemme High School to complete heir course have each year won second place at the Garner school with high grades

This year there are twenty-three in the graduating class at Garner and are four Klemme students. Earl Josten was a close contestant for first honors at Garner school with an average grade for the four years of high school work with 95.096 per cent: the winner of the first place was Merle Kluckhohn, of Garner, who beat Earl by a very small part of a per cent, her average for the four year period being 95.3 per cent. Both of these students made a record to prowd of as such high grades for four years of high school work is seldom attained.

Fifteen of the twenty-three students at Garner also were entered on the honor roll,those having a grade of 90 per cent or above. Among the names on this honor roll will be found also that of Charles Gibbs, also of Klemme.

The average for the whole class this year is 91 per cent; and last year it was 88 per cent.

The records made by the students from the Klemme schools at Garner goes to show that educational system here is well up expections as this is the third year straight that Klemme studentss have carried away second place at Garner In 1920 class Miss Mable Waterman took second place and last year Miss Edith Haupt took second place and this year Earl Josten lost out on first place by less than one half of one per cent

We are prowd of the records made by students from Klemme schools and we hope thaht the tax payers see fit to vote the bond issue for the enlargement of the present school so that the full course of study can be installed that the stuents might remain here to finish their work.

MICKIE SAYS

Klemme Has Wide Awake Patrol Of Active Boy Scouts

Jack Wellemeyer, Scout Scribe

Before a boy, who has passed his twelfth birthday, may become a Tenderfoot Scout, he must pass tests on (1) The Scout Oath and Law, (2) Composition and History of the American Flag and (3) a Test on Knot Tying.

The Scout Law is a description of the real Scout. The Scout Oath is the boy's pledge to do his best to live up to this creed. When the Oath and Law have gotten under a boy's skin and absorbed, their effect is permanent.

There are three points in the Oath of the Scout, represented by the Scout Sign—the three fingers held up, palmn front, the thumb resting on the nail of the little finger.

"On my honor I will do my best."
1—To do my duty to God and my Country and to obey the Scout Law.
2—To help other people at all times.
3—To keep myself physically strong, mentally awake, and morally straight.

The Scout's Motto—"Be Prepared." He is expected to do "a good turn" each day.

There are twelve points in the Scout Law. Three points will be given each week.

1—A Scout is trustworthy.

A Scouts honor is to be trusted, he does not lie or cheat; you can trust him to do what he undertakes to do and do it well.

2—A Scout is loyal.

He is loyal to all to whom loyalty is due, his Scout leader, his home and parents and country.

3—A Scout is helpful.

He must be prepared at any time to save life, help injured persons, and share the home duties. He must do at least one good turn for somebody every day.

Minutes of June 5th Meeting

Meeting called to order at 8:00 P. M. by Scoutmaster Gedye.

Officers were elected for a new year.

Clarence Elder elected Patrol Leader and Harl Gimer Ass't. Patrol Leader for the Crow Patrol.

Donald Gibbs was elected Troop Bugler.

Andrew Wellemeyer was re-elected Scout Scribe for Troop 1, Klemme.

A committee was appointed for recruiting new members. Those on the committee are Harl Gimer, Clarence Elder and Andrew Wellemeyer.

Meeting night was changed from Thursday to Monday. Meetings are to start promptly at 8:00 P. M.

The weekly dues are 5 cents.

A hike was planned. Destination is the Goodell wood. Object is to pass part of the Second Degree.

Motion made and seconded that we adjourn.

Andrew Wellemeyer, Scout Scribe.

A Hike

A hike has been planned for Friday, June 9th. They are going to the woods southeast of Klemme. All Tenderfoot Scouts are going to start on their Second Class work. They are going to cook ¼ lb. of ebefsteak and two potatoes without any utensils.

Any boys, 12 years of age or over, who are not members of the Boy Scouts are invited to come along. We meet at our Club Room under the First National Bank at 9:00 A. M. Friday. Bring enough grub for two meals.

METHODIST EPISCOPAL CHURCH
Arthur B. Gedye, Pastor

Morning worship at 10:00 o'clock.
Sunday school at 11:00 o'clock.
Evening worship at 8:00 o'clock.

The attendance slat Sunday at all services was good. Come again.

Next Sunday at 10:00 A. M. the Busy Bees Sunday school class will render a short Childrens Day Program. They have charge and will be helped by other members of the Sunday school. Make it a great day on Sunday. In the afternoon a short memorial service will be held in the Klemme Cemetery in remembrance of Rev. Hans Nissen. The service will be held at the Nissen graveside to commence at 3:00 P. M.

Remember the Epworth League Convention at Algona on the 14th and 15th, and the Standard Bearers meeting on the 16th after the convention.

These meeings will be worth while, let's go!

Arthur B. Gedye, Pastor.

FIRST M. E. CHURCH
W. C. H. Bergmann, Pastor

"Remember the Sabbathday, to keep it holy." Exodus 20:8. The best and easiest way for us to carry out this Commandment of the Lord, is to worship together in the House dedicated to His service.

Morning sermon at 10:00 o'clock.
Evening sermon at 8:15 o'clock.
Sunday school at 11:00 A. M.
Epworth League at 7:30 P. M.

Mrs. Carl Suckow is the leader. Topic for study, "The Christian Adventure; Out to Every Place."

Every member is requested to be at the church at 7:00, which time has been set for the election of officers.

On Friday evening of this week, June 9, the League will hold their social in the park. All who took part in the recent contest are urged to be present at 8:00 o'clock. After a shor miscellaneous program, ice-cream and cake will be served by the "Pinks."

The monthly meeting of the Kings Herald and the Little Light Bearers will be held Sunday afternoon at 2 o'clock. Our annual Camp-meeting will be held at Garner next week beginning on Tuesday evening and closing on Sunday evening. A good program has been arranged for each of the five days. On Wednesday, Thursday, and Friday we will have with us a speaker from the Board of Sunday schools and one from the Epworth League of our Methodist church. Both men are experts in their line of work. It will pay you to hear them. On Sunday President Hillman, D. D. Pres. of Simpson College will be with us all day. You will wish to hear him.

W. C. Bergmann, Pastor.

TEN HIGHEST CREAM CHECKS

The ten highest cream checks issued to the patrons of the Klemme Co-operative Creamery for the period from May 1st to the 15th are as follows:

Albert Lassahn	$83.91
Henry Beier	$59.69
Wm. Bell	$56.69
A. C. Carpenter	$54.95
Otto Pringnitz	$53.08
Albert Johnson	$49.13
Matt Smith	$47.86
Herman Paul	$46.89
D. A. Marshall	$45.20
John Haudek	$44.56

Pounds of cream 70,399.
Pounds of butter fat 18, 569.2.
Average test 26 per cent.
Price paid per pound for B. F. .37.
Paid to patrons from May 1 to 15 $6,970.60.

V. Josten, Secretary.

How's business?, we asked at the Kluckhohn store the other day. And of course the reply was "fine". And that explained to us the why and wherefore of the new floor laid in the lobby of their store. Naturally lots of customers walking in and out of a store will wear the floor and so they had to lay a new foor as the old one was "completly shot", but as long as it is customers who wear out the floors "Kluck's" are willing to spend thhe dough for a new one.

A. C. FLINT TO BE BURIED AT GARNER THIS EVENING

Was At One Time Editor Here

The remains of A. C. Flint will arrive at Garner tonight on the evening train from the west Interment will be made immediately in the Concord Cemetery at Garner.

The death of Mr. Flint comes as a shock to his many Klemme friends. We could not get anp further particulars at this time. The Flints have been residing in South Dakota where Mr. Flint conducted a newspaper businses. He was at one time the publisher of the Klemme Times and for a time conducted the Democrat at Garner and later a paper at Palmer, Iowa.

Miss Roxanna Schaper came Wednesday from Cedar Falls where she has been attending school the past year.

Something to Think About

By F. A. WALKER

WHO WANTS TO KNOW

IF YOU are sincere in your desire to know how to achieve, how to make yourself worthy of the highest confidence and thus become competent to hold a place above the ordinary, you will lose no time in acquiring the necessary knowledge.

You will not waste a single hour in idleness or unproductive effort, the basic cause of disappointments and failure.

You will go to your task seriously with unyielding determination to win.

In your pursuit, which in a little while will have become an exhilarating pleasure, you will discover that all the men and women who are holding the prominent places did in the beginning of their careers just what you are doing.

They squandered no time in the foolish chase of rainbows, choosing instead the companionship of wise counsellors and the perusal in their spare time of instructive books, seeking truths and principles upon which they could build a substantial foundation for the erection of their lifework.

They tossed the chaff to the winds and stored with utmost prudence the golden grain.

The greatest men of today, the conspicuous leaders in the professions, the arts and the crafts, struggled hard in their youth to get a foothold upon the hills. They knew what they were seeking and never relinquished their high purpose or slackened their pace, though they often slipped and went to bed hungry.

Their experiences with the world gave them an understanding of men and affairs with a fullness impossible otherwise.

Their present wealth, power and influence are envied by the thoughtless, who sneeringly talk among themselves of "chance" and "luck," those misnomers for work and pluck.

Being envied is a high distinction.

And this is especially true when it is obvious that the real cause of envy is based on the admitted ignorance and regret of men and women who covet distinction but invariably lack courage to take a place in the front and bear the brunt of battle.

The youths of the present who want to know, who are brushing aside obstacles, who are exerting every effort to learn, will in the future be found among the foremost workers and thinkers in the world's great activities, simply because they have with their resolute hearts the spirit and faith, without which no man or woman can hope to win a glorious name.

Uncommon Sense

By JOHN BLAKE

CANNOT HOARD TIME

IN A certain time you can make a certain amount of money. You can put the money away for years later, but you can't put the time away.

Money, called by the economists frozen labor, might also be called frozen time.

But time is more than money. It can be turned into many things that can be stored away—education, cultivated taste, pleasant and profitable memories. But time itself you cannot hoard. You must use it as it passes, or it is gone forever.

Time spent in recreation is not wasted, unless you spend more than a due allowance for recreation.

But time spent in absolute idleness, or in activities that are worse than idle, is sheer criminal waste.

If you could go back over your life and gather back the hours that have never been improved, you would still have enough time to do great things.

But those hours are gone.

You can only, as Shakespeare says, "regret your dear time's waste" and resolve to waste less of it in the future.

Many men whose time had never been turned to account until they were past forty have still had enough left to accomplish great things in the world.

But these are the most sincere mourners for the years that might have been utilized.

If you will begin today to bear in mind that time cannot be hoarded, and if every hour of it is converted into something that can be hoarded, you may lay the foundation for a furtune. You will certainly lay the foundation for happiness by and by.

Count your hours, and allot each one to some task or to some profitable recreation. See that none of them slip by. They are as water through a mill, which if sent over the wheel creates valuable energy, but which spilled over the dam is gone forever.

KIDDIES SIX

By Will M. Maupin

JUNE TIME

SINGIN' o' June, when the roses blow;
Liltin' a song when the sun hangs low;
Whistlin' away
Through th' livelong day—
Singin' an' whistlin' a merry tune
To the rosiest month of them all—that's June.

Watchin' the clouds as they hasten by,
Catchin' the gleam of the bright blue sky;
Lazyin' 'round
On th' sun-kissed ground—
Hearin' th' wind through the woodland croon
Her songs to the rarest of months—that's June.

Off through th' meadows cool an' sweet,
Where th' violets bloom in their dim retreat;
Dreamin' dreams
By the purlin' streams,
As they hasten by with their rythmic rune
To the rosiest, fairest month—that's June.

Home at eve when the moon hangs low
And the sky gleams bright with a silver glow;
Just lazyin' there
In the old arm chair
A watchin' th' man who lives in the moon
And laughs at th' fairest of months—that's June.

SCHOOL DAYS

A DOUBLE EXPOSURE

The Friendly Path

By Walter L. Robinson

EVERYONE MUST PAY

EVERYONE must pay for what he gets.

There is a law of recompense which cannot be evaded or ignored.

If one prizes his happiness he must expect to pay. Eventually the bill collector will demand his toll. Unless payment is made a rough pathway lies directly ahead.

Many constantly fear the bill collector who comes and demands money toll. But he is the most harmless of all the collectors. The real collector to be feared is the one which takes the form of conscience. It is impossible to dodge this one or to frighten him off with a double-barreled gun.

Those who imagine they have ended the collector when in the form of conscience are foolishly deluded. But even though they may get some enjoyment out of life because they think they have satisfied themselves that their consciences were wrong, they can always expect another collector which takes the form of law to hound them until the debt is paid.

In this age when many fathers and mothers are worried concerning the future of their children, there is good reason to impress upon the young people the importance of being on the square—on the square with the world as well as with themselves. Too many start into their world's pathways bent on getting as much as they can—both in material value and pleasure—without paying for its worth. If parents allow boys and girls, when their characters are in the making, to get this false impression of the way best to get on, sorry days are likely to be ahead not alone for the sons and daughters and their children, but for the fathers and mothers as well.

"The law of compensation is inexorable."

Mother's Cook Book

"A fig tree looking on a fig tree becometh fruitful," says the Arabian proverb. And so it is with children; their first instructor is example.

EVERYDAY GOOD THINGS

NOW is the time to go forth and pluck the early watercress, the wholesome dandelion, the dock and poke, the new shoots of milkweed and marsh marigold or cowslips, all giving the needed zest to the food of spring.

Fresh Dandelion Salad.

Those who appreciate the value of the tender bleached heart of dandelion like it with a bit of salt without any dressing. For a salad the bleached leaves are best, but the tender green shoots, cut and mixed with a small green onion and served with French dressing is a salad not to be despised. Cut the dandelion close to the root, with all the tender green buds. Wash carefully and slice the root from the base, buds and tender leaves for, an inch above the root. These use for a fresh salad; the rest of the leaves may be cooked for greens. Another addition to this salad is a thinly sliced tomato, which adds a bit of acid and softens the bitter of the dandelion. Using mayonnaise on the fresh green dandelion is another appetizing method of serving it.

Cooked Dandelion Salad.

Cook the greens until tender, which will take two hours or more unless the greens are very young, then serve with the following salad dressing: Rub a small bowl with a cut clove of garlic, add one-half of a teaspoonful of salt, a few dashes of paprika, two tablespoonfuls of orange juice and four to five tablespoonfuls of olive oil. Whip this dressing until it is creamy, then serve on the cooked dandelions.

LIVE STOCK

PREVENT LOSS IN SHIPPING

Partitions in Stock Cars Separating Large Animals From Small Ones Is Good Idea.

(Prepared by the United States Department of Agriculture.)

A little time and labor, possibly a little money, expended in building a strong partition to separate the big animals from the small ones in a mixed carload of live stock frequently saves the shipper from a serious loss on the consignment, say specialists of the bureau of markets, United States Department of Agriculture. The smaller animals, such as hogs, lambs, goats and sheep are always in danger of injury from the larger animals, and this is especially true when the car is overcrowded.

Crippled animals mean a loss to the shipper, for they bring prices considerably below the regular market price for sound stock. Dead animals bring still less—in the case of hogs only about 50 to 75 cents per hundred pounds for grease. There is always the danger, too, of the small stock becoming bruised, through being jostled and kicked by the larger ones. Bruises make a carcass less valuable, as the meat inspectors in the slaughterhouses cut out all bruised spots. Meat thus mutilated is sold as cheaper grades, the depreciation depending upon how much cutting was necessary. The buyers in the stock yards know this, of course, and, consequently, pay less for animals that

Goats Cleaning Out Weed Patch.

show bruises or seem likely to have suffered in this way.

Buyers are afraid of bruised stock, and for this reason are suspicious of small animals arriving at the stock yards in a mixed carload where the larger animals are not partitioned off. Such injuries are difficult to detect in the live animal, but when small stock, such as calves and lambs, arrive in a badly soiled condition buyers usually suspect they have been trampled and bruised by larger animals, and as a rule the buyers play safe by paying less money for such stock.

MORE BROOD SOWS ON FARMS

Increase of 1,237,000 Over Year Ago Is Seen, Due Largely to Big Stock of Corn.

There were 12,424,000 breeding sows on farms April 1, the United States Department of Agriculture estimates. This is 1,237,000 animals more than on the same date in 1921 and represents an increase of 11.1 per cent.

The large corn crop last year and the unusually large farm stocks of corn are given as the explanation of the large increase in breeding sows this spring. Corn was worth more as pork than as corn, and hogs were needed to eat the corn.

The number of hogs is quickly responsive to the general economic situation, the department points out. In April 1918, the number of breeding sows was 9.5 per cent more than on the same date in 1917, due to high hog prices as a result of war conditions. The figures on April, 1920, show a decline of 10 per cent for the year ended on that date. The reason for this was that the price of corn was relatively too high to encourage the feeding of hogs.

FINE FORAGE CROPS FOR PIGS

Rape Is Rich in Protein, While Alfalfa Will Carry More Animals Per Acre.

Rape is rich in protein, and is almost equal to alfalfa as a forage crop for pigs. The chief advantage to alfalfa lies in the fact that it will generally carry more pigs per acre, and does not need to be reseeded each year.

Make Land Pay More.

Purebred live stock on every farm would go far toward making high-priced land pay 6 per cent net on its value.

Have Purebred Females Too.

Of course the purebred sire is the first step, but there's no good argument against purebred females in live-stock improvement.

Take Care of Animals.

Take good care of the animals now and they will take care of you later.

DAIRY

WEIGHING MILK FOR MARKET

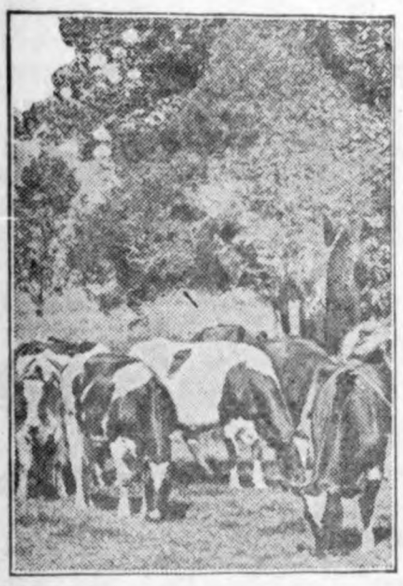
Less Trouble Between Producers and Dealers If Records Are Kept at Both Ends of Line.

(Prepared by the United States Department of Agriculture.)

Producers who ship milk to city distributors have voiced frequent complaints because of the disparity between their figures on the quantity of milk shipped and those of the dealers on the quantity received. In order to locate the cause of complaint by studying the actual loss between the country shipping point and the city plant the United States Department of Agriculture made an investigation on the Baltimore market. Records kept on more than 1,100 cans showed that the loss between the country station and the city plant was less than 1 per cent. The loss on trains, probably due to spilling, was only 0.19 per cent; and from the city railroad platform to the plant it was 0.55 per cent.

However, it was found that when the milk was weighed in the city plant there was a shortage of 2.56 per cent on the amount shipped according to can measure in the country. Of this shortage, 0.74 per cent was due to actual losses, while 1.82 per cent was the difference between can measure and weight. This is easily accounted for by the fact that cans become dented and battered, which decreases their holding capacity.

In a former investigation by the department an even greater discrep-



What Part of Your Milk Check Represents Profit.

ancy was found between can measure and weight, the difference being over 3 per cent. It would seem that there would be less trouble between producers and dealers if the milk were weighed at both ends of the line.

PROVIDE PLENTY OF WATER

Cows Must Have Abundant Supply in Summer and Winter for Profitable Milk Production.

Successful dairy farmers find that it pays to provide plenty of good, clean, cool water for milk cows. Eighty-seven per cent of milk is water, as is nearly three-fourths of a cow's body. Experimental data show that the amount of water required by cows is in direct proportion to the amount of milk produced. In the summer, the average cow will require nearly three pounds of water for every pound of milk she produces. In one experiment a cow giving 27 pounds of milk drank 77 pounds of water daily. The same cow drank less than half as much when giving no milk. In all cases, it is decidedly good practice to provide an abundance of clean, fresh water, cool in the summer and warm in the winter.

KEEP MILK AND CREAM COOL

Product Will Soon Sour on Warm Spring Days Unless Promptly Placed in Tank.

As warm weather approaches, better care must be taken of the milk and cream. The can of cream must be put into a cooling tank into as cold water as possible to keep the cream cold. Unless milk and cream is cooled promptly and well it will sour during the warm spring days.

PLANT CROPS FOR COW FEED

Animals Will Not Prove Profitable Unless Properly Fed—Ensilage and Alfalfa Urged.

Dairy cows are not profitable unless fed properly. Ensilage and alfalfa hay are the best cow feeds. The canes, kaffirs, darso, feterita and corn are good row crops for the silo. If alfalfa cannot be grown, cow peas, soy beans or peanuts are leguminous crops to plant for dairy cow feeds.

Dirty Milk Dangerous.

Dirty milk is much more dangerous than dirty water, because disease germs that would starve in water multiply rapidly in milk.

Quality Counts Most.

It is not half as important how many cows you keep as what kind and how.

Feeding for Milk.

Good feeding is necessary for milk production. The Scotch say "It is by the head that the cow gives milk."

WHY AND HOW TO CULTIVATE SOIL

Of Much Importance That Roots of Various Plants Be Given Supply of Air.

MAKE PLANT FOOD AVAILABLE

Many Persons Make Mistake of Working Too Deeply and Cut Off Feeding Rootlets—Steel Rake Is Useful Tool.

(Prepared by the United States Department of Agriculture.)

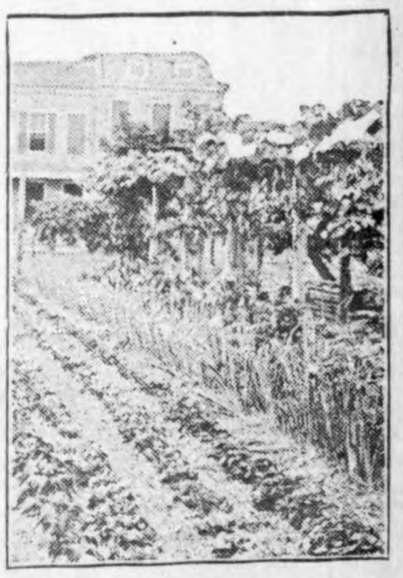
Most people have an idea that gardens are cultivated solely for the purpose of killing weeds. As a matter of fact, the killing of weeds is just one object of garden cultivation, says the United States Department of Agriculture. The roots of plants require air just the same as do the tops, and if the ground is packed or hard or is sunbaked over the surface after a beating rain, the roots cannot get air, and for that reason the plants will suffer if not cultivated. The same thing is true where the land is poorly drained and waterlogged. The water keeps out the air and the roots cannot feed the plants.

Cultivation has another object, in that it breaks up the soil particles and makes plant food available for the feeding rootlets of the plants. Many persons, however, make the mistake of cultivating too deeply, and by so doing cut off or injure the feeding rootlets and deprive the plant of its source of nourishment and support. Frequent shallow cultivation during dry weather results in the formation of a layer of fine dust which serves as a mulch or blanket to retain moisture.

Cultivating After Rains.

The soil should always be cultivated just as soon as it is sufficiently dry to be safely worked after heavy rains. If it is not cultivated, a crust forms, the surface bakes, and the crops are injured. The same will apply where irrigation is used, and it has been found best to give the soil a thorough soaking, then cultivate as soon as it is dry enough, and apply no more water until absolutely necessary.

The hoe and the steel rake are the most important tools for cultivating the small garden. On a larger scale a wheel hoe or a horse cultivator may be used to advantage. The wheel-hoe outfits are provided with a number of different attachments adapted for the different types of work to be performed. These implements have the advantage that one can go over the garden very rapidly and break up the surface of the soil in a comparatively short time. It is generally necessary, however, to follow with the hoe and the fingers to remove any weeds that have not been destroyed by the wheel cultivator. Even where horse-drawn tools are occasionally used, the greater part of the work, especially during



One Section of a Well-Planned Garden.

dry weather, may be performed by means of a common steel rake. It is not necessary to go very deeply into the soil, but merely to stir the surface.

A Tool That Helps.

A handy little tool for loosening the soil can be made from a piece of thin board 2 inches wide and 14 inches long, with one end whittled down to form a handle and the opposite end provided with three No. 6 or No. 7 wire nails. This little home-made implement can be used very soon after a rain to loosen the surface, so that any small seeds can break through.

It should be borne in mind that the time to kill weeds is when they are just coming through the ground. If allowed to become established, it is much more difficult to get rid of them than if they are taken in time. If the top 2 inches of soil is kept continuously and thoroughly loosened, there will be no serious difficulty in keeping out weeds.

SOY BEANS FIT IN ROTATION

Take Place of Oats and Are More Profitable as Cash Crop—Of Benefit to Soil.

Soy beans fit perfectly in rotation in the place of oats, making a four year rotation corn, soy beans, wheat, clover, they being more profitable than oats as a cash crop, and leaving the soil in much better shape, both as to mechanical condition and fertility, as little or no preparation for wheat is needed on land from which a crop of well cultivated soys has been mowed.

ALFALFA NOT FITTED AS CROP FOR SILAGE

Difficult to Handle and Hard to Pack Properly.

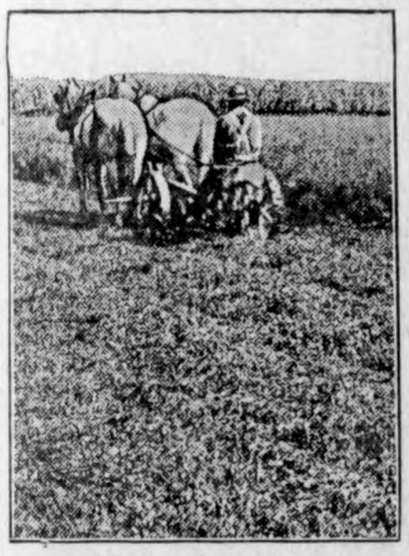
Farmer Should Be Able to Determine for Himself Whether or Not He Would Be Justified in Putting His Crop in Silo.

(Prepared by the United States Department of Agriculture.)

As a silage crop, alfalfa is not altogether a success. In fact, where other crops, well fitted for this method of preservation, can be grown profitably it is seldom advisable to use it for this purpose. One reason corn is so popular for silage is that it yields a large tonnage at one harvesting something which cannot be said of alfalfa.

Alfalfa is somewhat difficult to handle with ordinary silage machinery, and is hard to pack properly in the silo. It often becomes moldy and slimy, as do various other legumes, when put up in this way. Special care must be taken in packing this silage because of the high percentage of protein in it which causes it to putrefy instead of ferment when too much air is present.

There are times, however, when alfalfa may be made into silage, for instance when weather conditions are unfavorable for the curing of hay. Good silage may be made from partially wilted alfalfa if it is cut fine enough and well packed. If it is partly cured before running through the cutter some added water may improve the silage, but experience has shown



Cutting Alfalfa Crop.

that a "washy" silage may result if freshly cut alfalfa is put up while wet with rain. Under reasonably favorable conditions alfalfa can be made into hay at less expense than into silage.

Alfalfa and corn mixed make good silage. The corn adds the sugar and starch necessary for the right fermentation. For the same reason the mixing of sorghums or small grains with the alfalfa improves the silage. The addition of crude molasses to alfalfa also increases the chances of producing a good quality of silage. The United States Department of Agriculture has made some preliminary experiments which indicate that good silage can be made by mixing straw of any of the small grains with alfalfa, if the mixing is done as the material passes through the cutter and water is added to make it pack well.

Although alfalfa is not an ideal silage crop, it makes a nutritious silage when properly handled. With all the facts in mind, says the Department of Agriculture, the farmer should be able to judge for himself whether or not he should put his crop in the silo.

POP CORN UNCERTAIN CROP

Cost to Produce Is Considerably Higher Than Ordinary Field Corn—Average Is Low.

Pop corn grown in 1922 is not marketable until June, 1923, and is a very uncertain crop for the average farmer to grow who is not in touch with the market. The average yield on the 13,000 acres grown last year was 26 bushels per acre. It costs considerably more to produce a bushel of pop corn than a bushel of field corn and under present conditions it appears that unless a man has been growing this crop for a number of years and is reasonably sure of being able to find a good market he had better not grow it this year.

CARING FOR ASPARAGUS BED

Yield and Quality of Crop Depend Greatly on Cultivation and Fertilizer Given.

Cultivate and fertilize the asparagus bed so that the crowns may develop properly during the summer and be able to produce a heavy crop of shoots next summer. Remember that the yield and quality of the asparagus depend largely upon the treatment given the asparagus this year.

COMBATING GARDEN INSECTS

Farmer Should Provide Himself With Supply of Arsenate of Lead and Slaked Lime.

Provide yourself with some powdered arsenate of lead and air slaked lime for combating biting garden insects, such as potato bugs. Secure a small bottle of nicotine sulphate (black leaf 40) for sucking insects such as melon aphis or plant lice.

BETTER ROADS

FACTORS AFFECTING GRADING

Labor Costs, Character of Soil Graded and Time Limit on Contracts All Counted.

(Prepared by the United States Department of Agriculture.)

A great variation in the conditions under which grading for highways is done in different sections of the United States is reflected in cost data compiled by the bureau of public roads, United States Department of Agriculture, on 1,350 miles of federal-aid road. The figures cover the four-year period 1917-1921 and are based on a total of 24,500,000 yards of earth.

For the groups of states the average price per cubic yard is as follows: New England and Middle Atlantic states, $1.33; East North Central, $0.68; West North Central, $0.49; South Atlantic, $0.61; East South Central, $0.41; West South Central, $0.35; Mountain, $0.52; and Pacific states, $0.61. The general average price was $0.56.

Probably the most important factor affecting the cost was the amount of grading to be done per mile, the quantity being very small in the groups having the highest prices. In general it is noticed that where mostly old roads are rebuilt, the light work and tearing up the old pavement greatly affected the cost. The amount of fine grading or trimming required for the higher types of pavement was also a factor. Labor costs, character of soil to be graded, climatic conditions, time limit on contracts, and cost of detours for traffic also affected the cost.

While each group of states did not have the same volume of grading each year, and therefore the average figure for the whole country is not truly representative, it is interesting to note that the average cost of grading grad-

Concrete Road Designed to Take Care of Great Deal More Than Local Traffic.

ually rose from $0.49 in the first quarter of 1917 to $0.67 in the fourth quarter of 1919, and then gradually declined to $0.34 in the third quarter of 1921. It is probable that the latter figure would be somewhat higher had all of the states let work in that quarter.

FIVE BIG QUESTIONS

Are the roads in your county a credit to you, or are you ashamed of them?

Are the roads in your county wide enough for the convenient passage of cars?

Are the roads in your county marked, so that tourists from distant states have no difficulty keeping to the right road?

Are the roads in your county all-year-round roads, or only good-weather roads?

Are the roads in your county such that tourists traveling over them want to come back that way?

KENTUCKY TO BUILD ROADS

House of Representatives Approves $50,000,000 State Bond Issue Bill by Big Vote.

Kentucky, famous for several things, is now to add "good roads" to its list. The $50,000,000 state road bond issue bill has been approved by the Kentucky house of representatives by a vote of 63 to 34.

This measure provides for submitting the proposition to the voters of the state at the election next November. If it is approved the money is to be used over a period of five years. To pay off this indebtedness three kinds of taxes are pledged—a gasoline tax, a license tax and a 3-cent road tax.

It Sounds the Road.

Facts about what happens under a roadway as traffic passes over it are being obtained by the use of an ingenious device perfected by the bureau of public roads. The device is one of the new instruments developed to discover what thickness of roadbed should be constructed for heavy or light traffic on various kinds of soil.

Source of Much Trouble.

A common source of trouble to improved roads is that of poor drainage or total lack of drainage.

POULTRY

STARVE MITES IN HEN HOUSE

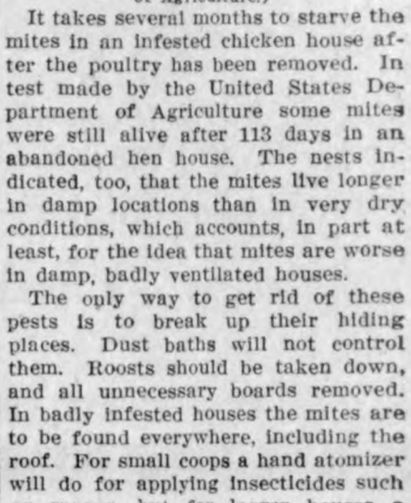
In Tests Made Parasites Were Still Alive After 113 Days in Abandoned Building.

(Prepared by the United States Department of Agriculture.)

It takes several months to starve the mites in an infested chicken house after the poultry has been removed. In test made by the United States Department of Agriculture some mites were still alive after 113 days in an abandoned hen house. The nests indicated, too, that the mites live longer in damp locations than in very dry conditions, which accounts, in part at least, for the idea that mites are worse in damp, badly ventilated houses.

The only way to get rid of these pests is to break up their hiding places. Dust baths will not control them. Roosts should be taken down, and all unnecessary boards removed. In badly infested houses the mites are to be found everywhere, including the roof. For small coops a hand atomizer will do for applying insecticides such as sprays, but for larger houses a bucket pump, knapsack sprayer, or barrel pump is desirable. A rather coarse spray should be applied from all angles, and driven thoroughly into all the cracks. The floor also should be treated, as many mites fall to the floor when roosts are being removed.

Commercial carbolineum, which consists essentially of a high-grade anthracene oil, has proved very effective against mites. The killing power of this substance, which is derived from coal tar, lasts for several months, and mites which may be inclined to come in from other buildings are repelled for a long time. This material costs, ordinarily, $1 a gallon, but as its re-



Spraying Interior of Hen House for Mites.

sults are superior to those recorded with any other material, and the treatments required are fewer, its use is strongly advised.

Crude petroleum, while not so effective as carbolineum, retains its killing power for several weeks, and in most places is very cheap. Since it does not dry into the wood so rapidly it is more likely to soil the fowls and the clothing. Both of these materials can be sprayed better if reduced with kerosene at the rate of about 1 part of kerosene to 3 parts of the other materials. Both often contain foreign particles which should be strained before the spraying is begun.

It has been found that one spraying with either of these materials often will completely eradicate the mites, but ordinarily it is advisable to make a second application in a month, and in some cases a third treatment is needed. Poultry should be kept out of the houses until the material is well dried into the wood. It is advisable to spray or paint chicken coops a few days before putting broods of young chicks into them.

AVOID CROWDING OF CHICKS

Bad Practice With Fowls of All Ages, but Especially With Very Little Fellows.

Avoid overcrowding. It is bad practice with fowls of all ages, but especially with youngsters. Chicks with mother hens or in brooders often are crowded at night. When they get out in the morning most of them take cold and this often develops into roup, which is usually fatal in the case of young chicks.

Five Poultry Factors

There are five major factors in profitable poultry production, says N. E. Chapman, poultry specialist at University farm—breeding, feeding, housing, management and care. "These are the essentials; combined they will put the poultry business on a practical business basis," he says. "A start can be made with hatching eggs, day-old chicks or a few head of breeding stock of high production. The surest way to success is to grow into the poultry business."

NOTICE OF SPECIAL SCHOOL ELECTION

Public Notice is hereby given to qualified voters of the Independent School District of Klemme, in the County of Hancock, State of Iowa, that a special election of the voters of said District will be held on the 19th day of June, 1922, at the Town Hall, Klemme, Iowa, from 1 o'clock P. M. until 6 o'clock P. M., at which time there will be submitted to the voters of said District the following proposition:

"Shall the Independent School District of Klemme, in the County of Hancock, State of Iowa, issue bonds in the sum of not to exceed $15,000 for the purpose of constructing and equipping an addition to the schoo1 house within said School District?"

at which time and place you are hereby notified to appear.

This notice is given by order of the Board of Directors of the Independent School District of Klemme, Hancock County, Iowa, pursuant to a sufficient petition in accordance with Sections 2820-d et seq. of the Supplement to the Code of Iowa, 1913, as amended, and in accordance with a resolution of said Board duly adopted on the 18th day of May, 1922.

Dated at Klemme, Iowa, this 18th day of May, 1922.

LEW LEWIS,
Secretary, Board of Directors.
Pub. M-18-25-J-1-8

NOTICE TO CONTRACTORS

Notice is hereby given that proposals for the erection of an addition to the school house in the Independent District of Klemme, Hancock County, Iowa, and for the pumbing and heating therein, will be receievd by the undersigned in Klemme, Iowa, until One o'clock P. M. June 16th, 1922, bids will be opened at 8:00 o'clock P. M. on the same date, at which time contract will be let to the lowest responsible bidder. Plans and specifications may be seen at the First National Bank. The Board reserves the right to reject any and all bids, and such bids shall be made with the understanding and condition that no contract will be made unless the voters approve the bond issue at an election called for the 19th day of June, 1922.

Dated at Klemme, Iowa,
May 23, 1922.
LEW LEWIS,
Secretary Independent
District of Klemme.
(Publish May 25, June 1-8-15.

Chas. F. Kerous has done a lot of remodeling at his home on tthe street West from the school house. Practically thhe entire interior has been remodeled and mace modern. He has also built a fine porch on the south side. The cellar was excavated to make room for a furnace and wash room. The place is not yet completed but when he has the work all finished Mr. and Mrs. Kerous will have a nice modern home. The old barn which stood at the rear of the lot has been cut down and made about into a nice garage, with room for two cars

The play, "Mr. Bob," was given by the Sophomore Class of the Klemme High Scool at the Idle Hour Theatre last Thursday evening as the last number of the lpceum course was well presentded. Each and every student who took part in this amateur production acted his or her part to perfection and the large audience was delighted with the play. Home talent plays given here the past winter have been as good as any of the so called proffessional productions staged hhere and a home talent play always brings out a big crowd.

Why Farmers Choose This Policy

Eight out of every nine policy holders of the Western Life are farmers. Why? Because this policy better protects their family; or themselves in old age.

Radio Plants to Link Continents

Those in Colombia, Cuba and Buenos Aires Expected to Be Ready This Year.

PLAN TO AVOID INTERFERENCE

All Great Systems Will Use Different Wave Lengths, World Conference Has Decided — Will Not Replace Cable.

New York. — High-power wireless stations of the Radio Corporation of America will be completed this year at Bogota Bay, Colombia, and in Cuba, and the great Buenos Aires station will be in operation in mid-1923, says E. J. Nally, president of the company, who returned a few days ago from conferences in Europe at which a working agreement was reached among the great wireless companies of England, France, Germany and America.

From any part of the United States wireless messages may be relayed speedily to Buenos Aires, South Africa, Java, Calcutta or Melbourne, when the radio building programs of the great American and European countries are completed. At present France has the most powerful station in the world in the American-built Lafayette towers near Bordeaux, but this will be superseded by the end of this year by the Port Jefferson station of the Radio corporation, which will be the most powerful station in the world. The station under construction at Ste. Assise, near Paris, will be second.

The British wireless chain connecting England with the empire will have one station comparatively close to Argentina, and that will be the station at Bathurst, in Gambia, on the extreme western point of Africa, where the continents of Africa and South America make their closest approach.

"The stations of the Radio corporation in Cuba and Colombia are practically completed," said Mr. Nally, "and are waiting on the completion of all the towers at Port Jefferson before going into service. That will take place in December. Relaying from New York to Cuba, to Bogota and then to Buenos Aires will be possible, but will be used only as an auxiliary system. When the Buenos Aires plant is completed next summer it will send to and receive from the Port Jefferson station direct."

All of the great systems will use different wave lengths and avoid interference, according to the agreement reached at the conference abroad, for the use of similar wave lengths would reduce to confusion high-power wireless communication all over the world. The British colonial chain of wireless stations is described as follows by L. W. Austin, head of the United States Radio Research Laboratory, in a communication to The Journal of the Franklin Institute:

"Unlike the plans for communicating over vast distances by means of huge stations, the imperial committee, headed by Sir Henry Norman, has recommended that stations of only moderate power be used, spaced at distances of not more than 2,000 nautical miles, the intermediate stations acting as relays for the more distant.

"There have been heated discussions in England regarding the relative merits of the high-power, long-distance transmission systems in comparison with the moderate power, intermediate relay systems. There can be no doubt that the system of intermediate stations will give by far the most reliable communication, largely on account of the small variability of signal intensity at shorter distances. And probably for government purposes, where reliability is of more importance than volume of traffic carried, the system is superior.

"The plans of France for extremely long distance communication are centered around the huge transmitting station now being completed at Ste. Assise, between Fontainbleau and Paris. This station is expected by its promoters to communicate with Saigon, Indo-China, 5,500 nautical miles; Buenos Aires, 5,950 miles, and, of course, many nearer points."

Holland is building one station at home and one in Java for communicating a distance of 6,100 miles, almost entirely overland. On the question whether radio is likely to replace the cable is transoceanic communication in the near future. Mr. Austin said:

"Frankly, I do not believe it will, and if it should it will be because the atmospheric disturbances have been practically eliminated. But even now there are certain classes of traffic which can be sent by radio much more economically and quite as satisfactorily where delays of a few hours are not objectionable. Continuous twenty-four hour service is, of course, already possible where distances are moderate. Here automatic high-speed reception is making radio a formidable rival of the wire and cable lines."

Revive Plan to Build World City at Brussels

Brussels.—The striking idea of building an "international city" at the gates of Brussels, which was first proposed to King Albert of the Belgians in 1913, has been revived and it is now proposed to erect the city and inaugurate it at the same time as the Brussels international exposition in 1930.

It is intended that the international city shall be a permanent institution, where every country will have a building in which it will display not only its manufactures and products but examples of its art and records of its social progress.

These plans were first submitted to King Albert in 1913 by Hendrick C. Anderson, an American sculptor, formerly of Newport, R. I., who then was living in Rome. Mr. Anderson was aided in preparing his plans for the ideal city by Senator Henri La Fontaine and Paul Otlet.

Army of Men Scrap Warships

New Industry Supplants Building of Fighting Vessels Along the Delaware River.

MANY AWAITING DISMANTLING

Philadelphia, Birthplace of Many Vessels, Also to Be "Graveyard" of Navy's Fighting Ships That Have Become Obsolete.

Philadelphia.—A new industry—scrapping of old warships—has sprung up along the Delaware river, where not so long ago more than 100,000 men were working feverishly to help build a "bridge of ships" across the Atlantic to check the progress of Germany in the World war.

Philadelphia, the birthplace of many of the vessels, also is to be the "graveyard" of a number of the navy's fighting craft, discarded because they have become obsolete. Later, when the scrapping program of the arms conference becomes effective, many more ships will be added to the list. Hundreds of men are engaged in turning the steel from the discarded ships into materials for the construction of buildings, tools, locomotives, automobiles and other peace-time uses.

In one Delaware river shipyard alone there are awaiting dismantling the battleships Maine, Missouri and Wisconsin, the once proud first-class cruiser Columbia, the monitors Ozark, Monterey and Tonopah and countless destroyers, Eagle boats and smaller craft.

Powerful oxyacetylene torches wielded by masked workmen are being used to cut through the 11-inch steel turret armor of the Maine, while a 125-ton crane was used to take out its 12-inch guns.

Further along the yard little obsolete submarines with paper thickness shells are being ripped apart with prosaic chisels to the accompaniment of the gatling gunlike staccato of compressed air hammers. The monitor Monterey, an improved edition of Ericsson's gallant Monitor of Civil war fame, with its surface flush deck, rapidly is being converted into billets. Its 10 and 12-inch rifles, however, still appear menacingly through the turrets of its squatty superstructure as they did in the early '90s when the vessel was one of the most powerful battle craft afloat.

"Grandfather" of Submarines.

A little submarine, A-1 Plunger, "grandfather" of the modern submarine cruiser S-41, is awaiting scrapping. Creature of the brain of J. P. Holland, the early trials of the A-1 were the subject of almost as much ridicule and scoffing as marked the first efforts of Robert Fulton and his steamboat on the Hudson river.

The most precious "junk" obtained from the ships is the copper, gun metal, navy brass, manganese bronze, lead and zinc. Complete destruction is not necessary in the case of all the craft. The hulls of some of the torpedo boats will undergo a transformation to adapt them to peaceful pursuits. This already has been done with the destroyers Truxton, Worden and Whipple, which will ply between the United States and Central America carrying cargoes of fruit.

Engined with kerosene oil burners, they will be large cargo carriers and of such light draft that they can navigate shallow rivers on high tide and lay off plantations for loading, thereby eliminating lighterage cost. Their clean lines give them great speed, which makes unnecessary the expensive refrigerating system used in slower fruit boats.

Prof. Bell Poses for Sculptor

Alexander Graham Bell, inventor of the telephone, is shown posing for the Washington sculptor, Moses Dykaar.

HEIRESS AGED 65 WEDS YOUTH

Widow of St. Louis Millionaire Marries Literary Dilettante.

Says Youngster Is Going to Be Great Man Some Day—Woman Gets One-Half Income From First Husband's $20,000,000 Estate.

St. Louis.—Announcement has just been made here of the marriage in San Diego, Cal., of Mrs. James Campbell, widow of the late president of the North American company, who was reputed the wealthiest man in St. Louis, and Henry Klas Van Heel, literary dilettante. Mrs. Van Heel is sixty-five and her husband lacks a year of being half her age. She is heir to one-half the income from her first husband's $20,000,000 estate.

It is a case of love at first sight.

"Henry and I met two years ago at Mrs. Adolphus Busch's California home," Mrs. Van Heel said, discussing their romance with reporters. "There was a mutual attraction, but I didn't think Henry loved me." She kissed her youthful husband.

Van Heel, who is a native of Holland, has the appearance of a college youth. He has a fair complexion, light hair and mustache of the hue sometimes termed "pink." His bride speaks of him as a boy.

Mrs. Van Heel said that Van Heel's singing was one of the things that attracted her to him. "He sings Dutch and German ballads," she said.

"He had been in the United States before and had returned just before the time we met," she remarked. "It seems to have been fate that we should meet.

"Henry is one of the brightest young men I ever met," she continued. "You may know there is something wonderful about him or I would not have married him.

"I shall wish to keep the name of Campbell," she added. "I shall be known as Mrs. Florence A. Campbell Van Heel."

"That's right," said the young husband, indulgently. "Keep anything you want to."

"Henry is going to be a great man some day—aren't you, dear?" Mrs. Van Heel predicted. "He expresses himself so wonderfully, and tells such thrilling stories. I am always asking him to tell me a story.

"He is going to write five hours a day, and the rest of the day we will spend together."

Pet Rat Gets Tail Mended.

San Francisco.—On the record at Emergency hospital appears the entry: "One rat retailed." Donald Myatt, thirteen, appeared at the hospital with the rat—an Egyptian jumping rat—and tearfully said a cat had "sizzed at my rat while I was holding him by the tail at a pet show and he jumped so hard the skin peeled off." His tears won a busy surgeon and the skin was sewed back on.

At the age of fifteen the Korean girl is an "old maid" if not married.

1—Mrs. James S. Sherman, widow of the former vice president, photographed in Washington where she renewed old friendships. 2—Typical distribution station, in St. Louis, for payment of Missouri's state bonus to ex-service men. 3—President Vauclain of Baldwin Locomotive company starting the "Prosperity Special" of big oil-burning locomotives from Eddystone, Pa., to southern California.

NEWS REVIEW OF CURRENT EVENTS

Wages of Rail Employees Are Reduced by Board and Big Strike May Result.

HOOVER SETS COAL PRICES

Germany Yields to Allied Ultimatum and International Bankers Plan Reparation Payments and Loans — War Fraud Investigation Begins — British Warn Ireland.

By EDWARD W. PICKARD.

ANOTHER great strike is threatened, this time of the railroad workers whose wages have been or are to be reduced by the United States railway labor board. Already the board has made public one decision cutting nearly $50,000,000 from the annual wages of the maintenance of way men, and before this reaches the reader it is almost certain another decision will have been published slashing between $50,000,000 and $75,000,000 from the yearly pay of the shopmen. Either ruling is sufficient to bring on a walkout if the men remain in their present state of mind, and still others may follow soon.

The first decision announced orders a reduction of 13.2 per cent in the prevailing pay of maintenance of way men, effective July 1. It affects about 400,000 workers, and their new wages will range from 23 to 35 cents an hour. It was signed by the three public members and the three railway members of the board. The three labor members signed a dissenting opinion, holding that the new pay does not constitute the "just and reasonable" wages guaranteed under the transportation act, and that in fact it does not represent a living wage. The majority report, however, points out that common labor on railways, even after the reduction, will be better paid than similar labor in most other industries.

Edward H. Fitzgerald, president of the railway clerks' organization, took the lead in planning for the prospective strike, inviting sixteen chiefs of rail unions to meet this week in Cincinnati. He was forestalling an expected decision by the federal board cutting the pay of the clerks, telegraphers and other smaller classes. There is a possibility that this conference will result in a defensive alliance between the railway workers and the miners. Such a compact really was formed several months ago, but failed to provide for aggressive action unless each step was approved by referendums of the various organizations involved. This lack may be supplied at the Cincinnati meeting.

The six federated shop crafts are concerned not only in wage reduction. They accuse twenty-two roads of violating the transportation act by letting out shop work to contractors not within the board's jurisdiction, and their president, B. M. Jewell, has demanded that the board assume jurisdiction in these cases and compel the railroads to restore conditions in effect previous to the alleged violations. He said that unless this were done strike ballots would be sent out, regardless of the wage issue. The board already has shown that it sympathizes with the attitude of the shopmen in this matter.

Wages of train service men are not involved in the present and immediately prospective rulings of the labor board.

UNOFFICIALLY but authoritatively it is announced that the government is taking no action to end the strike of coal miners and that it does not look for any decisive turn in affairs before the middle of June or the first of July, when the shortage in coal may begin to be felt. Secretary of Commerce Hoover, however, does not propose that the consumer shall suffer unjustly if he can prevent it. He held a conference last week with the representatives of more than 500 producers of bituminous coal whose mines are in operation in the non-union fields, and told them that he would assume personal responsibility for fixing minimum prices at the mine, in order to prevent profiteering. He asked, however, that the operators agree among themselves on fair prices in order that the anti-trust laws might not be infringed. Mr. Hoover then announced what he considered fair prices in three districts. These ranged from $2.20 to $2.60 a ton for the Alabama district; $3.50 a ton for the smokeless coal districts of West Virginia, and $3.50 a ton for the Harlan and Hazard fields of Kentucky and the southern Appalachian fields of Tennessee and Kentucky. The maximum for the Alabama district is 25 censt a ton below the final Garfield war-time scale, while the maximums proposed for the other districts are somewhat above the Garfield prices. The prices are to apply only to spot coal.

GERMANY'S reply to the ultimatum of the allied reparation commission was near enough to complete acceptance to satisfy that body, which, after a day's intensive study of the note, telegraphed to Berlin its approval of the German promises to balance the budget and to stop the issue of paper money. The commission then turned over to the committee of international bankers in session in Paris the entire question of German finances and payment of reparations. Those bankers, among whom is J. Pierpont Morgan of the United States, are now studying the questions of Germany's capacity to pay, the guarantees she can give for the series of huge loans that will be necessary, and, in connection with the latter, the possibilities involved in the Russo-German pact.

The German proposals were drawn up by Finance Minister Hermes and are not at all liked by some other members of the Wirth cabinet and many members of the reichstag. The Stinnes group especially attacked them as a surrender of sovereignty that will bring on catastrophe. The reichstag refused to pass a vote of lack of confidence in the government, but the cabinet is believed to be in a shaky condition.

Lloyd George made a statement on reparations in the house of commons in which he strongly intimated that Germany would be granted reductions, postponements and revisions when these appeared necessary, and this was greeted with cheers. France, naturally, is not pleased with developments, but is not in position to object strenuously.

SENATOR M'CUMBER'S bill for a soldier bonus was approved by the senate finance committee by a vote of 9 to 4, and he announced he would be ready to make a favorable report on the measure to the senate within a few days. He hopes to induce the senate to sidetrack the tariff debate long enough to pass the bonus bill, but as the latter does not go into effect until January 1 next, many of the Republican leaders are opposed to this idea. The Democrats will support McCumber's plan for immediate consideration of the bonus. The bill as approved by the finance committee is almost identical with the bill passed by the house. The Democrats are not satisfied with it, and Senator Smoot will try to have his insurance measure adopted as a substitute, so the debate in the senate is likely to be a long one.

INVESTIGATION of war frauds now is under way in Washington, the first of the government's series of cases, dealing with contracts for disposal of surplus lumber, having been presented to the special federal grand jury by United States Attorney Peyton Gordon. Attorney General Daugherty issued a statement saying that at no time during the grand jury investigation would any information be given out as to its activities or the names of the cases presented.

Meanwhile Senator Caraway and others continue their attack on the attorney general unflaggingly, with the avowed intention of driving him out of the cabinet because of his connection with the release of Charles W. Morse from the federal penitentiary. It is stated in Washington that President Harding has full confidence in Mr. Daugherty's honesty and integrity, which of course means that he will not ask him to retire from the cabinet.

THE AMERICAN LEGION

(Copy for This Department Supplied by the American Legion News Service.)

HOPE WARS ARE AT AN END

Statuette of Archangel Michael, Presented by General Diaz to the Legion Commander.

Wars are at an end when the Archangel Michael sheathes his sword. This is the hope expressed in the silver statuette presented by Gen. Armando Diaz, the hero of Italy, to Commander Hanford MacNider of the American Legion, and now preserved in the national trophy room of the Legion.

Replica of Famous Bronze Statue.

The statue is a replica in miniature of the great bronze statue of St. Michael that crowns the fortress of San Angelo in Rome. San Angelo is also known as Hadrian's Tomb, having been built in the Second century A. D. by the Emperor Hadrian for his mausoleum and later converted into a fortress. Twelve hundred years ago Pope Gregory dreamed he saw the Archangel about to sheath his sword, and soon afterward a great pestilence disappeared. The statue was cast to commemorate the event.

PLANS RELIEF OF AFFLICTED

President Illinois Federation of Labor Proposes Arrangement in Cooperation With Legion.

John H. Walker, president for the last eight years of the Illinois State Federation of Labor, has proposed an official arrangement between organized labor and the American Legion for the relief of the sick and wounded of the World war and their dependents. Commander MacNider of the Legion has responded to this heartily and the matter is under consideration.

Walker started work in the Illinois mines before he was ten years old and at eleven was a member of the Knights of Labor. At some time or other he has served in practically every subordinate office in the miners' organizations of Illinois.

Steel Helmet Inventor Dead.

The man who saved numberless lives through his introduction of the steel helmet in the World war died recently in Paris. He was Doctor Monprofit, a member of the chamber of deputies of France and a veteran of the French ambulance corps. Had the war continued it is very possible that the struggling armies would have gone out in steel body armor as well as helmets, for the plans of Doctor Monprofit for the use of breastplates of steel had been practically perfected at the time of the armistice. Doctor Monprofit conceived the idea of the "tin hat" while campaigning in the Balkans in 1914.

Keeping It Dark.

"Go right back and tell your boss," snared a squire in a New England town, "that he's a blinked fool, and that he's to come here right away and fix up that carpentering job and fix it right."

The apprentice vanished, and a few minutes later the boss carpenter appeared, aching for a fight.

"Do I understand," he bellowed, "that you told my apprentice that I was a blinked fool?"

"Why, yes," replied the squire, beaming. "Didn't you want him to know it?"—American Legion Weekly.

Correspondence Courses.

Correspondence courses in cavalry, infantry and artillery work is the latest thing in the War department. These courses have been established in accordance with the movement for citizen training backed by the American Legion. A national plan has been worked out for their application all over the country. Five courses of instruction are offered in each branch of the service.

TO SEND HOME TOWN PAPER

American Legion and Auxiliary Endeavoring to Supply News to Disabled Men in Hospitals.

There are 30,000 young Americans who were wounded while fighting during the World war or who have become sick following their service in field and camp, now confined to hospitals over the United States. Most of them are hundreds of thousands of miles from their home town, friends and relatives. Many of them can do nothing but read to pass away the time.

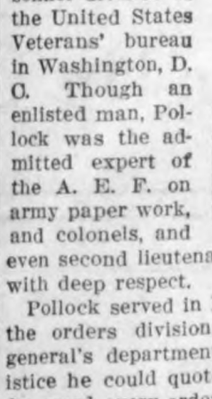
The American Legion auxiliary, composed of the wives, mothers and sisters of service men, is endeavoring to have personal, cheerful letters written to these men. Now the Legion is trying to have people in the men's home towns send the home-town newspaper to them, either every day or every week.

There are not more than five or six ex-service men from any average-sized town in hospitals, the Legion estimates, and asking newspaper editors to send free copies of their papers to their home-town boys in hospital is not asking too much, nor more than citizens would be willing to do. The Legion is forwarding to its officials in each state lists of names of men from that state in hospital, and asking that local newspaper editors send their papers to these men. Newspaper editors who are interested, the Legion announces, are asked to signify their willingness and to request lists of names of men from their towns, from national headquarters, Indianapolis, Ind.

AIDS STRANDED EX-SOLDIERS

Bill Franklin, Washington (D. C.) Post Commander, Assists Men Seeking Claim Adjustments.

Every stranded ex-soldier who drifts into Washington, D. C., in hope of getting a compensation claim adjusted, swears by Bill Franklin, local post commander of the American Legion. These men are caught in governmental red tape sometimes in the matter of their claims and go broke while waiting. Bill Franklin hunts them up and if their compensation claims have a chance of settlement they are tided over by Franklin and his unit, the Vincent B. Costello post of Washington.



Taking care of these men stands the post an average expense of over $5 a man. If men come in with hopeless claims they are helped in getting home. The District of Columbia has recently taken over a large share of this work.

EXPERT ON ARMY PAPER WORK

"The Walking Encyclopedia," Unofficial Army Title of Marion E. Pollock of A. E. F.

"The Walking Encyclopedia" is the unofficial army title of Marion E. Pollock of the A. E. F. and the American Legion, now chief of the personnel division of the United States Veterans' bureau in Washington, D. C. Though an enlisted man, Pollock was the admitted expert of the A. E. F. on army paper work, and colonels, and even second lieutenants addressed him with deep respect.

Pollock served in France as chief of the orders division of the adjutant general's department. After the armistice he could quote practically word for word every order issued from general headquarters during the war.

Carrying On With the American Legion

The famed "blue devils" of France have been chosen to occupy the Rhineland areas now being evacuated by the American forces.

* * *

To receive a compensation check for $2,500 on a $250 claim was the experience of David Phillips of Dover, O., an ex-soldier. Phillips refunded the $2,250 at once.

* * *

Japanese tenants on farms of the Yakima (Wash.) Indian reservation have been ousted in favor of service men, official Washington has informed the American Legion.

* * *

Nebraska posts of the Legion will report directly to their state headquarters by radiophone. They also project community entertainments all over the state by radio.

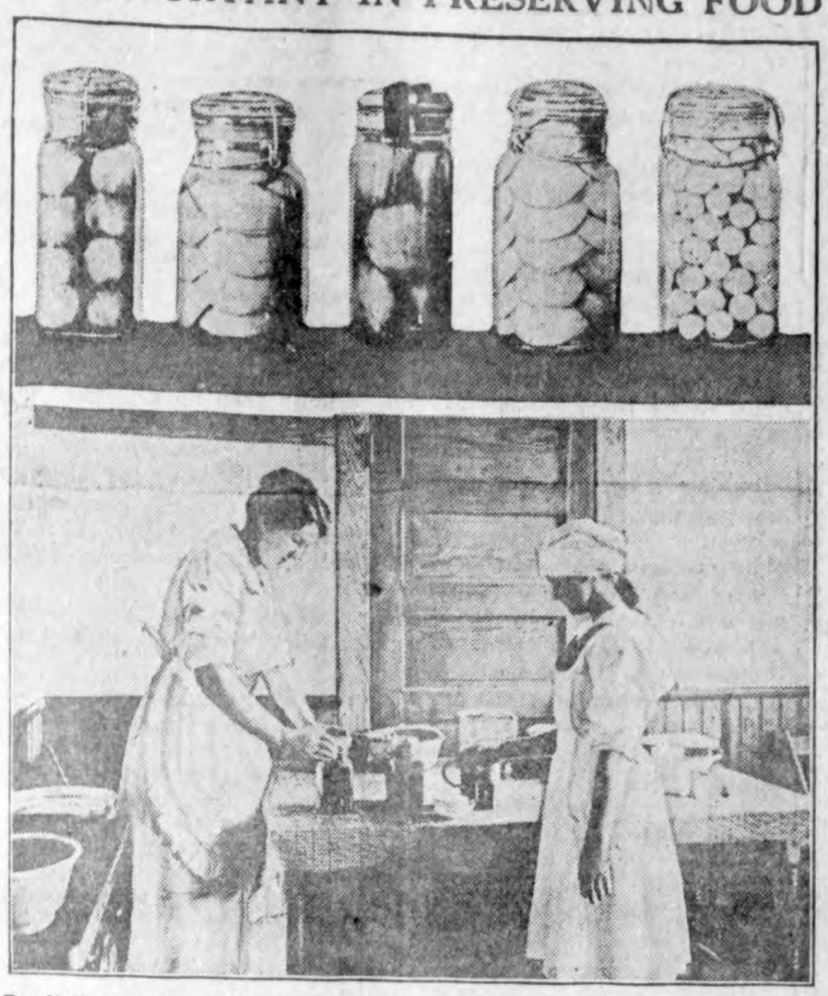
* * *

The aggregate insurance now carried by ex-soldiers on the government war risk policy amounts to $3,500,000,000, according to Charles R. Forbes, director of the United States veterans' bureau.

* * *

One year more has been decided upon by congress for the granting of medals for gallantry in the World war. Army officers contend that many deeds of valor by enlisted men have not yet been recognized.

TEMPERATURE AT CENTER OF CAN IMPORTANT IN PRESERVING FOOD



For Uniformly Good Results a Sufficient Degree of Heat Must Penetrate All Parts of Jar and Be Maintained Long Enough to Render All Micro-organisms Harmless.

(Prepared by the United States Department of Agriculture.)

In canning work one of the most important considerations is the time required for the food at the center of the container to reach the temperature of the retort or water bath in which it is being processed. United States Department of Agriculture Bulletin 956, A Study of the Factors Affecting Temperature Changes in the Container During the Canning of Fruits and Vegetables, which has just been issued, centers attention on these time-temperature relations. The purpose has been to bring out the underlying principles, rather than to lay down definite rules of procedure. The results of this experimentation are of interest to scientific workers in the field, to commercial canneries, and similar large-scale handlers of foods.

Destroys Bacteria.

Successful preservation of foods by canning is due primarily to the fact that in the processing, or cooking, the bacteria and other micro-organisms which cause spoilage are destroyed. Since the elimination of these micro-organisms is dependent upon the use of heat as a sterilizing agent, it becomes of paramount importance to know just what temperature and processing periods will destroy them. If uniformly good results are to be expected a sufficient degree of heat must penetrate to all parts of the can or jar and must be maintained long enough to render all micro-organisms harmless. Before an accurate judgment as to the proper cooking period can be found it is necessary to know how long a time is required for the heat to reach the food at the center of the container.

The mercury thermometer, if properly calibrated and standardized, has been found sufficiently accurate for practical work. A satisfactory apparatus has been devised for using the mercury thermometer to measure temperature changes at the center of the can.

The fruits and vegetables as processed in these tests fall roughly into two groups with reference to time-temperature relations. The first group consists of those fruits and vegetables, such as string beans, packed so that there is a free liquid filling the interspaces between the pieces of material. The rate of change of temperature at the center of the can in this group is very rapid. The second group consists of materials of a heavy or pasty nature that are packed in such a way that little or no convection can occur, as with corn or sweet potatoes. The rate of change of temperature in this group is very slow. Sometimes mechanical agitation is employed. Variations in the composition of the material, however, have very little effect if the consistency of the material is such that convection can occur.

Salt Has Little Effect.

Salt has very little direct effect upon the rate of change of temperature in the can. Dilute sugar solutions have only a small effect, but the concentrated solutions retard the rate of change. Solutions of starch also retard it. In 5 per cent starch the consistency becomes such that all convection is stopped and the rate of change is very slow. Other material of a viscous nature, such as protein or pectin, retards the rate of change of temperature. The retarding effect of a glass container is of more importance in the first group than in the second. Glass cools faster than tin in the air, but cannot be cooled in water.

Differences in the diameter of the container are only of importance in the processing of materials of heavy consistency such as corn. Whether the processing temperature is 100 degrees, 109 degrees, 160 degrees, or 121 degrees C., the temperature of the bath or retort is reached in the container in approximately the same time. Higher temperatures, however, break down the tissues of tomatoes, which are a striking exception to the rule. Both the single period and intermittent processes are studied in this bulletin, which is available upon application to the United States Department of Agriculture.

FISH FLAKE TIMBALES

Pick the contents of one can of fish flakes into bits with a silver fork, add fourth cupful of sifted bread crumbs from the center of a stale loaf, a fourth of a teaspoonful of paprika, two well beaten eggs and a cupful and a half of milk. Mix well, turn into buttered timbale molds or patty pans, stand these in a pan of boiling water reaching nearly to their top and bake until the centers are firm. Unmold carefully on a hot platter, decorate with sliced hard-boiled eggs and turn over all a cupful of drawn butter, cream or tomato sauce and serve at once.

SOAP NEEDED IN HOUSEHOLD

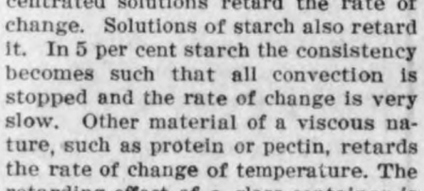
Amount May Be Cut Almost in Half by Careful Use—Keep in Dry Place If Possible.

The amount of soap required in a household may almost be cut in half by careful use. Keep a box ahead, cut bars in two, remove from the box and pile in a dry place if possible. Green soap is used up twice as fast as the seasoned bars. Never allow it to soak in a floor pail, tub or dishpan—a great but very common waste. To save soap and clean your hands, try putting clean scraps of dry toilet soap through the food chopper, using the finest plate. Mix one part of the powdered soap with four parts of cornmeal. Another good way to remove stains from the hands and to keep them soft is to use cornmeal and vinegar and rub thoroughly. Or try conserving soap by washing the hands with a tablespoonful of cornmeal. It is gritty enough to remove the dirt and leaves the hands soft and white.

KEEPS KITCHEN SINK CLEAN

Stiff Bristled Brush, Like One Illustrated, and Good Soap Are Big Factors.

There is a piece of modern equipment that one needs to be scouring constantly if it is to appear spick and span at all times—that is the kitchen sink. With a good friction soap and stiff bristled brush like the accompanying illustration the difficulty of the task is removed, and a well-cleaned sink is the result.



Assures Spick and Span Sink.

All Around the House

Scrambeld eggs are delicious served with asparagus.

* * *

Bread sponge that sets the least bit too long may be sour.

* * *

When lard has been spilled on wood dash cold water on to prevent the grease from soaking in.

* * *

To keep sandwiches fresh wring out a napkin in hot water, wrap them in it and put in a cool place.

* * *

When cutting material on the bias it is the part of wisdom to lay the goods smoothly on a sewing table. Pin, if necessary, so as to avoid any danger from slipping or pulling.

For Bathing or Swimming; Hats for Midsummer Wear

THE summer girl and the rest of womankind will answer the call of the water this year in bathing suits that differ greatly from each other in materials and style. Their story begins with a short introductory chapter, calling attention to such simple and practical stuff as checked and plain gingham, playing the unfamiliar role of bathing dress. But it soon quits cotton and moves to woolen fabrics, where it lingers longest, since the great majority of manufactured bathing suits are made of wool. Finally the story takes up silks, where beauty of material, decorative features and clever construction occupy the thoughts of designers who deal with such inspiring things as taffeta, silk jersey and moire.

Sprightly taffeta makes pretty suits trimmed with narrow plaited frills of checked silk, and black moire embroidered with white braid is a new arrival.

To midsummer belong the loveliest hats of the year and we look to see millinery reach its apex of beauty while June still smiles in the skies. We are far from being disappointed this season. It seems that designers have outdone themselves and have spread before the admiring feminine world hats that are adorable. And "spread" is the right word, for hats grow wide brimmed as the sun travels north. Milliners revel in the airy braids and fabrics that warrant this width of brim—the laces, crepes, organdies and hair braids that allow the sunlight to filter through them as through summer foliage. Colors are exquisite and combinations of them, in pastel shades, are fascinating. To cap the climax soft feathers and many flowers are held in high regard.

Regulation Swimming Suits.

Four models, as shown here, reveal a little of the picturesque mode. The lovely hat at the top may be imagined with brim of georgette or organdie and a soft braid crown to match in color. It is lovely in any of the season's favored colors—as orchid, apricot, brown—with roses banked across the back and narrow ribbons making a sash falling in loops and ends at the side. Below it, a black hair-braid hat invites one of those huge, work-room-made roses of millinery fabrics. In this case georgette makes it and the soft coil and flange that finish the brim edge. Color is a matter of individual choice. At the left a fabric hat of crepe in white depends for trimming upon white silk tubing that falls like a cascade from the back, where two ivory pins are placed, and below it a delightful white felt hat has a brim suggestive of wings with soft white feathers curling over it.

Group of Pretty Midsummer Hats.

MRS. ALBERT LASSAHN DIED IN MASON CITY HOSPITAL SUNDAY

Funeral Services Being Held Today

The body of Mrs. Albert Lassahn was brought back from Mason City Sunday night following her death at 7:00 o'clock in a hospital from an operation, from which she failed to recover.

We understand that funeral services will be held from the Reform Church north of Klemme and will be conducted by Rev. Schmidt.. Theh body will be laid at rest by the side of the son brought home about two years ago from a cantonment in Colorado. Relatives from Michigan and Dakta have arrived to attend the funeral.

The family are old residents and live on the C. H. Weigmann farm northwest of Klemme. A number of children and husband mourn the passing of Mrs. Lassahn. The sympathy of the community is extended to them in their sorrow.

NOTICE TO CONTRACTORS

Notice is hereby given that proposals for the erection of an addition to the school house in the Independent District of Klemme, Hancock County, Iowa, and for the pumbing and heating therein, will be receievd by the undersigned in Klemme, Iowa, until One o'clock P. M. June 16th, 1922, bids will be opened at 8:00 o'clock P. M. on the same date, at which time contract will be let to the lowest responsible bidder. Plans and specifications may be seen at the First National Bank. The Board reserves the right to reject any and all bids, and such bids shall be made with the understanding and condition that no contract will be made unless the voters approve the bond issue at an election called for the 19th day of June, 1922.

Dated at Klemme, Iowa,
May 23, 1922.
LEW LEWIS,
Secretary Independent
District of Klemme.
(Publish May 25, June 1-8-15.

NOTICE OF APPOINTMENT OF EXECUTOR

Notice is Hereby Given, That the undersigned has been duly appointed and qualified as Executor of the Estate of Daniel Webner, Sr.. late of Hancock County, State of Iowa, deceased. All persons indebted to the estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned, for allowance.

Daed June 7th, A. D. 1922.
DANIEL WEBNER, Jr.,
J. 8-15-22 Executor.

Miss Elsie Henschen and Aaron Greimann were at Britt last week Thursday to attend the carnival.

I wish to thank all the voters who were so loyal to me in the recent primary election, and for the support and help they gave me. E. P. Hanson.

This vicinity was visited by a nice rain Monday evening. Some hail accompanied the rain and some of hail were as large around as a silver dollar but did no damage as no wind came with it. The rain was worth many dollors to the community.

J. E. Baumgartner and family returned Tuesday evening from Clear Lake where they have been since last Friday, spending the time at the Keraus cottage, enjoying the bathing and fishing. The Baumgartner family are packing their household goods as they expect to leave town the latter part of the week and will perhaps locate at Mason City.

Good Example.

Aunt Polly was milking in the cow lot, and her politically excited son found her there. "Maw, you're a Democrat, ain't you?" he asked. She made no answer, but he persisted: "Say, maw, ain't you a good Democrat?" Finally she said, emphatically: "I hain't nothin'. I'm a woman milkin' a cow. You go in the house and shut up!"

LET'S ALL VOTE!

All Voters, both men and women, in Klemme Independent School District, should get out and vote on next oMnday afternoon.

At this Special Election, the School Board is asking your permission to spend $15,000.00 for enlarging and equipping our schools.

The Board is unanimously in favor of this improvement, and they honestly feel that it is best for our community to make this expenditure at this time, and they recommend that you vote yes on this proposition.

But, whether you are for or against the improvement, it is your duty to vote.

And the Board asks that ALL Voters express themselves at the Polls June 19th, between the hours of 1:00 and 6:00 P. M.

F. A. ARNOLD, Pres.

Boy Scout Corner

Jack Wellemeyer, Scout Scribe

The Scout Law—(continued)

4—A Scout is Friendly. ____.

He is a friend to all and a brother to every other Scout.

5—A Scout is Courteous

He is polite to all, especially to women, children, old people and the weak and helpless. He must not take pay for being helpful or courteous.

6—A Scout is Kind

He is a friend to animals. He will not kill nor hurt any living creature needlessly, but will strive to save and protect all harmless life.

When a Scout has served a month as a Tenderfoot, he may prepare for his Second Class tests, which are ten in number. The Klemme Scouts are now preparing themselves in these requirements. No part of the Scout program is military in any way. The object of the program is embodied in the Scout Oath.

Minutes of June 12 Meeting

Meeting called to order at 8:15.

Meeting was held at Scoutmaster Gedye's home on account of the storm.

Purpose of the meeting was to select a color for our neckerchiefs, to order a troop and United States flag and to make plans for a float for the Fourth of July.

Dues were paid.

Motion made and seconded that we adjourn.

Andrew Wellemeyer, Troop Scribe.

Our Hike

Oh Boy! Our hike was a grand success.

On Friday morning at 9:00 o'clock we started for the Goodell Woods 5 miles south of town. We reached our destination about 11:00 o'clock. Our first task was to start our fires and cook our two potatoes and ¼ lb of beefsteak without any utensils. We put about ¼ inch of mud around the potatoes and dropped them in our ashes. We fried our meat on a stone or broiled it on a stick. We all passed this test and the test of starting the fire with not more than two matches. Next thing on the program was to catch some fish for supper. Some bullheads, pumpkin seeds and one large redhorse were caught. These were strung up and we went in for a swim. In three-quarters of an hour we came out and layed around until 4:00 o'clock when we went in for another swim. At 4:30 we got out and began supper. Someone was sent for the fish and lo, and behold, all the insides were eaten out of them by turtles. Well, that spoiled the fun of eating them. We ate what we had brought from home. We then cleaned the camp up and started for home. We got home at eight o'clock. I'll say we had fun!

Those who were on the hike and who passed the tests are: Patrol Leader Clarence Elder; Ass't. Patrol Leader Harl Gimer; Troop Bugler Donald Gibbs; Vernon Turgeson, John Fuller; Clifford Gimer (Harl's cousin) and Troop Scribe Andrew Wellemeyer.

Of course Scoutmaster Gedye was along.

More Tests

On Monday evening the following Scouts passed the Scout Pace Test: Harl Gimer and Frank Gibbs. On Tuesday evening Scouts Donald Gibbs, Vernon Turgeson and Andrew Wellemeyer passed this test. The Scout Pace is 50 steps running and alternate with 50 steps walking. To pass this test you have to go a mile in 12 minutes. You are allowed 30 seconds on each side of 12. On Monday evening several scouts made it in 11 minutes. They ran again on Tuesday.

The Ladies Aid of the Methodist Episcopal church met at the home of Mrs. John Johnson east of town last Thursday afternoon. We know the "eats" were fine as we got out there just in time for a "hand-out." George Platt also succeeded in timing his drive to get there for the big feed.

We had given "Happy" Johnson up as missing, but the wondereing boy has returned and is again safely installed behind the counter at Larsen's. Happy has been spending a few days on the farm in the vicinity of Spencer. Funny, ain't it now, when school is out and all the kids and school marms take a vacation, "Happy" suddenly conceives of the idea that hke also needs a vacation.

"Hootch" was nearly spilled all over the streets of Klemme just the other day. Now some will smack their lips with old remembrances when they read thus far but we must stick to the facts as the Hootch in this case is nothing more nor less than the dog owned by M. O. Barr. Hootch got in front of his master's "Universal" car the other day and locked horns with the critter but Hootch came near getting a free pass to the happy hunting ground as the sudden shock nearly spilled Hootch all over the street.

About the only man around this man's town who literally has "bees in his bonnet" is Postmaster John Waterman. John has lots of bees but he manages to keep them from buzzing in the vicinity of his bonnet. He drove over to a farm near Kanawha last Thursday to attend the bee demonstration given by a special man from Ames. A demonstration was also held near Britt. John says that anyone interested in bees would gain a lot of knowledge by attending these demonstrations. We would perhaps gain a few bumps by attending a honey factory demonstration but the bumps we would get would not be bumps of knowledge—they would be the kind of bumps bees produce when they set down on a stretch of bare hide and give a sudden kick with a hind leg.

Origin of Pensions.

The practice of pensioning or insuring sick and wounded soldiers is said to have been started in England by Oliver Cromwell.

School Addition Bond Issue To Be Voted On Monday

WHO IS SECOND RICHEST MAN?

(Silas Bent in New York Times)

Every once in so often it is asserted that Secretary Mellon is the second richest man in the United States. It is taken for granted that John D. Rockfeller is the wealthiest despite his son's modest protest that the oil king really isn't worth a billion, the figure usually tacked to his name, and in somewhat the same way despite Mellom's disclaimer of distintion as runner-up of fortune so colossal—"Realy, I am a poor man, comparatively." he has been quoted as saying—a popular belief in the report persists.

On the basis of taxable income, Mellon is comparatively poor. Rated on this basis alone, Henry Ford is unquestionably the richest man in the world, not excepting Hugo Stinnes, John D. Rockfeller, George F. Baker, chairman of the board of the First National bank in New York, and Mrs. E. H. Harriman, widow of the railroad magnate, probably trail in the order named; and on that basis Mellon is not much better than any one score of American multimillionaires.

But as a matter of real wealth, the secretary of the treasurer probably ranks easily among the topmost ten; for taxable income is indeed a poor thing whereby to compute fortune nowadays. High income surtaxes operate in similiar fashion to take their toll of productive industries, while they drive investment capital into exempt securities. Mayor James Couzens, of Detroit, for instance, makes no bones of the fact that the greater part of his wealth, estimated at $35,000,000, is in tax exempt bonds; and the estate of the late Jacob H. Schiff was found to be largely of the same character. The federal tax gatherer has lean picking in such circumstances. But Henry Ford's wealth (with the exception of semistatic investments in mines and forests, the reservoirs of his raw material) is devoted almost wholly to production. He is the Abouden Adhem of the tax roles. His name leads all the rest.

George F. Baker is a director of the New York Central and affiliated lines, the Erie, the West Shore, the Reading and many oter railroads; of the Pullman monopoly, the United States Steel Corportion, Consolidated Gas, the Mutial Life and other big corportions. It may be presumed that his income, at least from his vast transportation holdings, is ranked second to Rockfeller—but then the financial world looks askance at the success of Henry Ford, who is subordinate where bankers re concerned.

There is no secret about Ford,s taxes. He himself is authority for the statement that he paid Uncle Sam $76,000,000 in taxes last year. He didn,t say that a large slice of this merely passed through his hands as intermediary between a million or more purchasers of Ford automobiles and the treasury. He has a news sense which the best newspaper men may well envy, and he is a sure-shot page one marksman. So he merely dropped this imposing figure into a pleased reminiscence of the time seventeen years ago when he could,nt get credit for a Thanksgiving giving chicken. It was great publicity stuff.

Mrs. Henry Ludeke, and little son Paul William, returned home last Thursday morning after a few days spent visiting at the home of Mrs. Ludeke's parents, sisters and brothers and other relatives and friends at Bascobel, Wisconsin. Mrs. Ludeke also attended the graduation of a sister from the Plattesville Normal School. Miss Esther Greene accompanied them to Klemme as she expects to spend the summer here.

George Wellemeyer, of Ocheyedan, Iowa, was visiting his brother, Arthur and family here a short time last Thursday evening and on Friday morning. George came to this vicinity to attend the burial of A. C. Flint at Garner last Thursday evening. George is running a newspaper at Ocheyedan and is doing a good business.

THE SCHOOL ELECTION MONDAY SHOULD DRAW BIG VOTE

Women Urged To Come Out To Vote On Monday afternoon beginning

at one o'clock, the polls will open at the City Hall and the school board urges each and every voter in the Klemme School District to come out and give their decision on the following proposition:

"Shall the Independent School District of Klemme, in the County of Hancock, State of Iowa, issue bonds in the sum of not to exceed $15,000, for the purpose of construct ing and equipping an addition to the school house within said District?"

We feel that the improvement is absolutely neccessary and that the school board are very conservative in their demands at this time. Of course a new school building would be a nice thing to have but Klemme cannot afford to spend sixty or perhaps seventy thousand dollars for a new building. Some towns have literally hung themselves in debt by going wild over a new school house far beyond their means of paying for it and are suffering as a result. With the proposed addition to the Klemme schools, which will not exceed thhe $15,00, it will practically give us a new and much larger school, adequate in size and convenience to take care of our needs for a number of years. The school system here at the present time is undesirable due to the fact that the building is too small to care for more than eleven grades. Twelve grades are an absolute neccessity and our school will never be up to standard until twelve grades are installed and of course that means that the building must be enlarged and modernized to care for the extra course of study. It is plain that the improvement is needed there.

An auditorium will be constructed in the new addition and will also answer the purpose of a gymnasium. Some might remark that "studetns should not be sent to school to play in a gymnasium. Alright, a fair enough stab but easily answered. In order for a student to have the advantageso f playing in basketball, baseball, tennis or other games in the school, their grades must average a certain percent. The student will study harder in order to get the grades up to the required athletic stanard. The best schools where high grades are in evidence are also the schools where athletics are very actvie. An auditorium in the school where all school entertainments, and programs can be given, as well as school parties, public gatherings, is a neccessity as all will agree that the proper place for school gatherings and entertainments is in the school building where the students can be under full supervision of the superintendent and the teachers.

With the new addition and with twelve grades installed the school will no longer need to go to the expense of sending students to other schools to finish the prescribed high school course. That item alone is quite a saving.

The building at present is in need of extensive repairs and these must be made some time in the near future regardless of whether or not the bond issue carries. It is said a new roof is needed, a new chimney must be built, the ventilating system is not large enough to care for the crowded condition of the building, a fire escape must be provided as the present building is considered dangerous in case fire broke out suddenly. These things must be done sometime and will mean quite an expense but they will not make the building any larger, nor will they make any relief in the crowded condition of the school. nor will it give the desired twelve grade course of study. The only way we can see is that it will just add more expense and get nowhere. But if the bond issue carries, which it should, the money put into the building in repairs will not be wasted but all will go toward making a bigger and a better school that will be large enough to take care of our needs for years to come.

Think it over, the bond issue that the school board is asking for is indeed conservative. The largest taxpayers in the community are in favor of the bond issue. Do your duty and vote as you think is right.

Fierce Battle With Smugglers

Customs Guard Has Desperate Fight With Rum Runners on Mexican Border.

WIFE TELLS OF ENCOUNTER

Knives and Pistols Were Used in Battle in Brush on the Banks of the Rio Grande—Automobile Is Riddled.

Hidalgo, Tex.—One of the most desperate single-handed encounters which ever took place between a United States customs officer and a gang of Mexican smugglers on the Rio Grande border fell to the lot of Dick McConnell, a government river guard here, a few nights ago. McConnell, accompanied by his wife and two little daughters, was riding in an automobile along the Rio Grande, near town. Leaving the car, McConnell started toward the river bank. He had gone but a short distance when he was fired upon from ambush.

A bullet knocked off his hat. He rushed toward the spot from which the bullets were coming. He returned the fire as he ran into the brush and there came upon the two Mexicans. On of them grabbed him by the back of neck and a scuffle ensued, during which he received knife wounds and had his pistol holster cut to pieces. He drew a small gun, which he carried in the holster under his shirt, and fired at his assailant, whom he killed, and the body fell into the rapidly rising Rio Grande.

Mrs. McConnell, who was in the car at the time of the attack, gave the following account:

Wife's Account.

"I and the children were in the back seat of the car when we drove up near the river bank, near the small boat ferry landing. As my husband got out of the car and started to go down the bank there came a flash of a gun, almost in his face, and his hat fell off and something struck the car. Dick jumped back, pulled his automatic and began to shoot. Again and again came the flash and something struck the car again. The children and I could see the man who was shooting at my husband backing down under the bank and my husband walking toward him, shooting.

"They both disappeared under the bank when we heard a noise like men fighting or struggling. I was getting nervous and did not know what to do. We heard three more shots and I heard some one yell out in Mexican. Shortly after my husband came to the top of the bank holding his hands to his face and told me to drive to Deputy Collector J. R. Clark's house and bring him and also a lantern. I drove as fast as I could and returned with Clark and the lantern.

"We found my husband's hat near the car with a bullet hole in the top of the crown. On the river bank we picked up a long-bladed knife. Lying partly in the water was a felt hat with three bullets in it. Near the boat was a sack containing seventeen quarts of tequila.

"Upon returning to the car we found where three bullets had pierced the cowl, one of which passed through and hit the steering wheel, breaking a part of it off. One of the bullets piercing the cowl, but spending its force against the iron dash, was picked up by Deputy Collector Clark and was said to be from a .45. The other hit the side of the cowl and glanced off."

WILL BUILD AERIAL HARBOR

Corporation at Gothenburg, Sweden, Prepares Plans for Joint Municipal Field.

Gothenburg, Sweden. — This city, with its extensive marine shipping facilities and its new free port, is now preparing to build an aerial harbor. It will have all the facilities required by sky pilots, an up-to-date service department and the latest conveniences for landing and taking off.

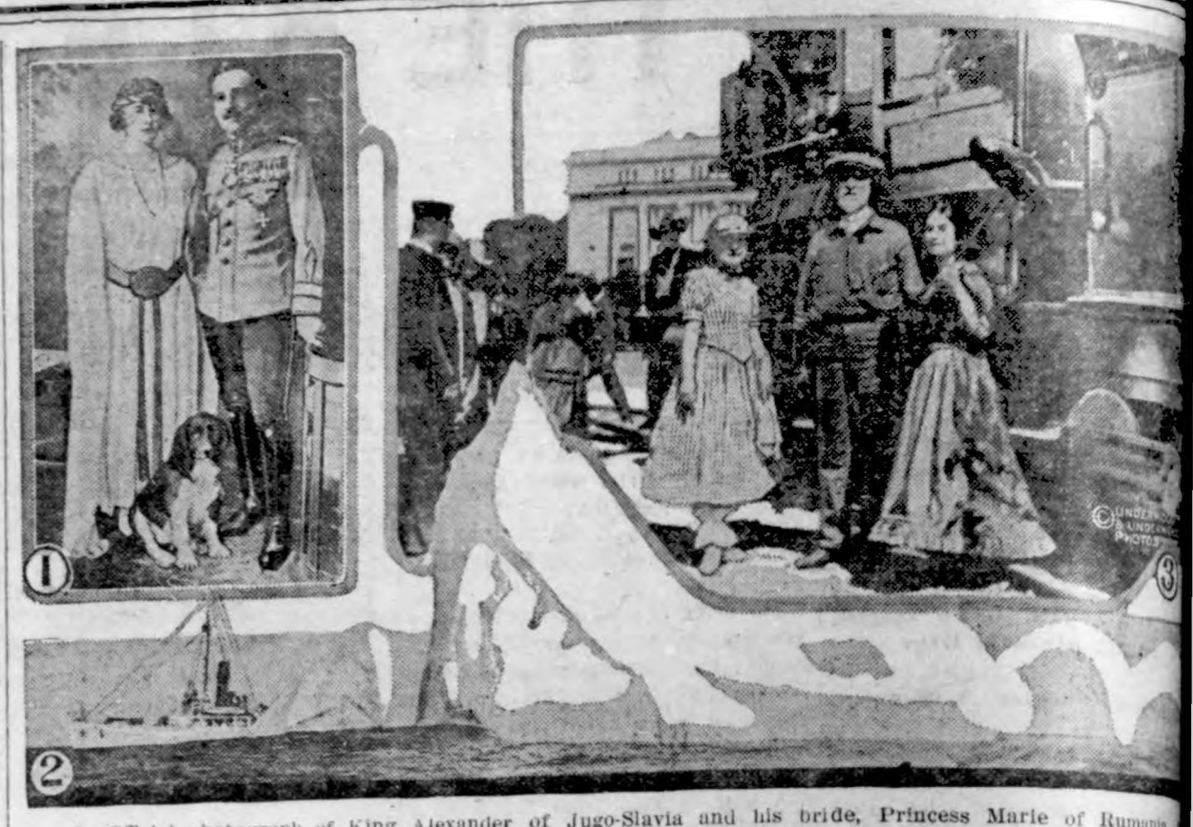
A corporation has been formed to build the air station and operate it in conjunction with the city authorities of Gothenburg. It is proposed that the city shall have the privilege of buying the company's shares in the enterprise after ten years and thus take over full control of the air port.

Youth Made a Minister.

Reading, Pa.—Converted at eight years, preaching for the last two years at his home at Pottstown and ordained a minister recently at the age of sixteen is the remarkable record of Ira Bechtel, one of the new ministers accepted today at the annual conference of the Holiness Christian church, meeting at Birdsboro.

$63,000,000 a Month for Amusement in America

Washington, D. C.—Approximately $63,000,000 is spent in America each month for amusement, according to the Treasury department. Movies, theaters, circuses and amusement parks are receiving the money. Last year it was $79,000,000 a month.



1—Official photograph of King Alexander of Jugo-Slavia and his bride, Princess Marie of Rumania. Picture taken from a coast guard cutter 1,000 miles off the North American coast, illustrating work of those sels in charting and broadcasting the positions of icebergs. 3—California's first locomotive and its engineer, E. Lonergan, at the Days of '49 celebration in Sacramento.

Airplane Search for Grain Pests

Remarkable Survey Being Conducted in Texas by U. S. Agricultural Department.

RUST SPORE BEING SOUGHT

Annual Loss in Wheat Alone Due to Stem Rust Is Estimated at 64,000,000 Bushels—Mexico Believed to Be Source of Spore.

San Antonio, Tex.—One of the most remarkable surveys ever made under the direction of the United States Department of Agriculture is now in progress in Texas. It is that of searching the air for the spore that causes rust on growing wheat and oats.

It is estimated that the annual loss in wheat alone due to stem rust is approximately 64,000,000 bushels. It is the theory of some agricultural scientists that the source of the spore which causes this enormous loss is in Mexico or perhaps South America and that it drifts through the air to the wheat fields of Texas, Oklahoma, Kansas and other states.

Airplane Search in Progress.

During the last two weeks an airplane search for the spores has been made at high altitudes above San Antonio. For this purpose an airplane from Kelly field is used, with Lieut. T. R. Booker as pilot and Wallace Butler as scientist.

Armed with a "spore trap" Mr. Butler has made six exposures at varying altitudes on each aerial journey. These plates have been sent to the office of cereal investigation for examination. Thus far no reports have been given out of the findings.

Anyone who walks through an oat field in this part of the state now will come out with his shoes covered with a yellowish powder which has brushed off from the innumerable little yellow leaves.

This powder any farmer will tell one is rust, in this case the leaf rust of oats. Every little yellow spot on the leaf is a pustule of leaf rust, each pustule being made up of from one to several thousand tiny seed bodies or spores which are pushed up through the epidermis of the leaf from a sort of root structure or mass of threads which are growing within the leaf. These threads are very minute and can be seen only by the aid of the microscope. The spores which are borne in such multitudes on the ends of little branches from these threads are also microscopic in size. The powder on the shoes after a trip through the oat field consists of millions of these spores.

Dew Helps.

When one of these spores falls on a drop of dew or other moisture on a leaf of oats it soon sends out a little root-like projection which, curling around this way and that, finds its way into the breathing pore or opening in the epidermis of the leaf and so gets into the leaf tissues. In due time it becomes the mass of threads which again send up the mass of spores, and so the process is repeated with favorable weather conditions about every two weeks.

Miner Has Three Wives; Says They All Proposed

Freeland, Pa.—Unable to furnish $1,000 bail on a bigamy charge brought by three women who said Michael Merko, Sandy Run miner, had married them, Merko was taken to jail.

"When a girl asks a fellow to marry her, what can he do?" he asked.

"No man with red blood in his veins will refuse to marry a girl when she asks him to do so."

Field Artillery Back From Germany

Here are some of the troops of the first division of the Sixth field artillery arriving at New York from Germany on the transport Cambrai. Inserted is a portrait of Lieutenant Colonel Brevans, their commander.

NEWS REVIEW OF CURRENT EVENTS

Railway Shopmen Taking Strike Vote Because Their Pay Is Cut $60,000,000.

WALKOUT MAY BE AVOIDED

Supreme Court Deals Organized Labor Severe Blow—France's Refusal to Reduce Reparation Blocks German Loan Plans—Radical Republicans Win Victory in Iowa Primary Election.

By EDWARD W. PICKARD

ABOUT $60,000,000 having been lopped off their yearly pay by the federal railway labor board, the railroad shopmen are taking a vote returnable on June 30, on the question of accepting the reduction or going on strike. The maintenance of way men, whose annual wages were cut some $50,000,000, also are taking a strike vote.

Thus, apparently, the country faces a strike, probably effective in the middle of July, that might come near to tying up its rail transportation. But there is hope that it will not eventuate. An affirmative strike vote and an actual strike are different things, and the vote is but seldom used only as a weapon in the hands of union officials in negotiating. Railroad executives profess to believe that the men will not even vote to strike. A committee of six rail presidents issued the following statement:

"There is no talk of strike among the men," the statement says. "The disturbing statements are prepared by leaders of the unions, whose viewpoint has been distorted by months of efforts before the board to resist the inevitable downward trend of wages. The employees are in the main sincerely interested in taking care of their jobs and their homes, and few employees in any industry have more good reasons for doing so.

"The records show that the proposed scale of wages for the classes of employees involved in the two wage reduction orders already issued practically would restore the scale in effect at the end of federal control in 1920, which carried an increase for these employees of 119 per cent over the wages paid in 1916. The cost of living, as shown by the Department of Labor for March, 1922, was 42 per cent above 1916."

On the other hand, B. M. Jewell, head of the railroad employees' department of the American Federation of Labor, says: "The new wages do not permit a minimum living wage, and they are wholly at variance with the saving wage championed by President Harding and Secretary of Labor Davis." Mr. Jewell and other union chiefs who were in conference in Cincinnati predicted that unions with a membership of 1,200,000 would vote to strike.

Just as in the last previous wage decision by the board, the three labor members dissented, and this time they were especially vigorous in their dissenting opinion.

While the rulings of the railway labor board are professedly being made quite without regard to the rulings of the interstate commerce committee in the matter of rates, the two cannot be disconnected in the public mind, and the railway executives also couple them, naturally.

UNION labor received what it considers another body blow last week in the decision of the United States Supreme court in the Colorado coal mine case. The United Mine Workers of America and certain individuals had appealed from a decision by the United States District court of Arkansas, approved by the Circuit Court of Appeals, holding them guilty of violating the Sherman antitrust act during a strike in 1914, and imposing damages of $200,000, which was trebled under the antitrust law. The opinion of the United States Supreme court, read by Chief Justice Taft, in effect sets aside the damages, finding the acts which caused the destruction of property were not incited for the purpose of restraining interstate commerce. But the court also held that labor organizations, even though not incorporated, are not only suable, but are amenable to the Sherman antitrust law, and under it may be prosecuted for restraint of interstate commerce.

Samuel Gompers, as might be expected, denounced this decision bitterly, saying that it set a precedent under which capital "can impose any condition on the working people of the country, and they would not dare resist." He declared he believed congress and the people of the United States would repudiate the ruling, and continued: "The court has, for the first time in the history of federal legislation, laid down the principle that a voluntary corporation is liable for damages by any act of one or a group of its members, no matter how far unrelated they may be in distance or supervision."

Unless it is nullified by congressional legislation, this decision of the highest court in the land will powerfully and widely affect the future relations of union organizations with employers and with the general public.

BRITISH, Italian and Belgian members of the reparations commission voted to enlarge the international committee of bankers that was trying to adjust Germany's financial affairs and to permit it to make its own inquiry into Germany's capacity to pay, ignoring the London schedule. America's unofficial delegate, Roland W. Boyden, though he could not vote, stated that he considered the reparations demanded—$33,000,000,000—to be too high. France's representative, however, voted in the negative. This created a tense situation, for although a unanimous vote is necessary for the reparations commission to reduce the sum demanded from Germany, until 1926 only a majority vote is needed to give Germany a partial or full moratorium.

The bankers, recognizing that unanimity does not exist among the nations that would be expected to participate in the immense loans they were planning for Germany, decided to give up all idea of an international loan, and so reported to the reparations commission.

Premier Poincare and President Millerand—who, it may be said, are backed up completely by their government—asked a special meeting of the commission, and to it the statement was made that France denied the right of other allies to reduce the French claim on Germany since the amount of reparations has been fixed and apportioned; and that the French government would not consider reduction of the reparations unless the war debts were reduced proportionately. The latter proposition, of course, would put the matter up to the United States, which up to the present has shown no disposition to scale down the vast amounts owed her by other nations. Meanwhile there hangs over Europe the menace of independent action by France against Germany.

EXASPERATED by the continual and increasing warfare in Ireland between the Sinn Feiners and the Ulster folk, the British government has undertaken to resume control of the situation. Large reinforcements were sent to the troops already in the island and vigorous attacks were made on the republicans who infested the border and regions adjacent. The British used airplanes and small war vessels with telling effect. The Free State leaders and the British government are discussing changes in the Irish constitution which the latter demands, and both sides are awaiting the Dail elections, which come on June 16. It has been surmised that the De Valera faction might win more seats because of the bitter feeling aroused by the fighting, and indeed it was intimated that the fighting was instigated for that purpose.

SOVIET Russia, having failed to frighten the rest of the world into giving it large credits, has resumed its old uncompromising attitude. Foreign Minister Tchitcherin, who says he is not going to the conference at The Hague, declares Russia will not recede one step from its May 11 [illegible] randum, which disrupted the [illegible] confab. It will make no more [illegible] sions, he asserts, and rejects [illegible] ica's demands for additional [illegible] tees as the price of recognition. [illegible] said America would recognize [illegible] tility of her policy, and then [illegible] into an attack on Charles R. Cra[illegible] others whom he accused of [illegible] the counter-revolutionary move[illegible]

Persistent reports come from [illegible] near Russia to the effect that [illegible] Lenin is a desperately sick man. [illegible] physicians have issued a bulletin [illegible] ing that he suffered an acute [illegible] of gastritis, which affected his [illegible] and heart, but that he is now [illegible] on the road to recovery.

THE cabinet in Japan has re[illegible] owing to opposition in the [illegible] ment. But the privy council [illegible] cided that this does not affect [illegible] treaties and agreements signed [illegible] Washington conference, these be[illegible] ternational in character and [illegible] the sphere affected by a [illegible] change.

ALEXANDER, king of Jugo[illegible] and Princess Marie of R[illegible] were married Thursday in B[illegible] in the presence of representat[illegible] nearly every nation in the world. [illegible] affair was marked by all the [illegible] and display of medieval times. [illegible] ceremony in the ancient Byzan[illegible] thedral was followed by a gre[illegible] cession of quaintly clad depu[illegible] from the provinces, with wa[illegible] floats and pageants. Ordinar[illegible] marriage of royal personages [illegible] only passing interest in these [illegible] but this one is of more import[illegible] that by it are linked the dynas[illegible] three Balkan countries. It se[illegible] strengthen the little entente, a[illegible] sibly to lessen the danger of [illegible] wars in that long turbulent part [illegible] old world.

PROGRESSIVES in the Re[illegible] party scored another victo[illegible] week in the nomination of Col. [illegible] W. Brookhart for United State[illegible] tor from Iowa. Really this wa[illegible] umph for the radicals, for Br[illegible] is rated as more than a prog[illegible] He is a former soldier and a [illegible] residing in Washington, Ia. [illegible] necessary for him to obtain [illegible] cent of the primary vote to ob[illegible] nomination independent of the [illegible] convention. He got 41 per cent. [illegible] man McCormick of the Rep[illegible] senatorial campaign committee [illegible] the committee "will join the [illegible] committee and the Republican [illegible] committee in Iowa to assure [illegible] tion of Colonel Brookhart. [illegible] Brookhart bears the reputation [illegible] citizen of high purpose and hig[illegible] age and had a fine record of [illegible] during the war."

AT LAST the senate has [illegible] the soldiers' bonus bill, re[illegible] by the finance committee. [illegible] McCumber's accompanying [illegible] placed the probable cost to the [illegible] government at $3,845,659,48[illegible] over a period of 43 years fr[illegible] January 1. The estimate is b[illegible] the theory that 75 per cent [illegible] 4,458,199 veterans who would [illegible] gible for compensation would [illegible] adjusted service certificate[illegible] 22½ per cent farm, home a[illegible] settlement aid, and 2½ per c[illegible] tional training aid.

With reference to financing [illegible] islation, Senator McCumber's [illegible] said it was hoped that the [illegible] in governmental expenditures [illegible] payment of interest on the [illegible] foreign obligations would be [illegible] to obviate the imposition of [illegible] taxation.

LILLIAN RUSSELL—Mrs. [illegible] ander P. Moore of Pitts[illegible] dead. For years she was the [illegible] American stage beauty, but [illegible] more than that. She was a [illegible] light opera singer, the helpful [illegible] loved friend of many in and [illegible] profession, a good newspaper [illegible] and a devoted and hard [illegible] patriot in time of war. In re[illegible] of her services to the coun[illegible] the war she was buried with [illegible] honors, and a detachment of [illegible] stood watch over her casket [illegible] held the rating of gunner's [illegible] the United States navy. [illegible] the most gracious figures in [illegible] life thus has passed away.

THIS CURFEW HITS PARENTS ALSO

Held Guilty With Children in Violation of Ordinance.

City "Dads" of South Dakota City Believe Parents Are Largely to Blame for Children Running About Streets at Night.

Sioux Falls, S. D.—The city of Lemmon, S. D., has one of the most unique curfew ordinances in existence anywhere in the United States. The parents are held equally guilty with the children for violations of the curfew.

The ordinance provides that boys and girls under seventeen years of age must be off the streets and at home after 9:30 o'clock each evening. If they are on the streets or other public places after that hour they must be accompanied by their parents or some authorized guardian.

The city "Dads" believe that parents are largely to blame for their children running about the streets at unseemly hours of the night, and therefore placed a provision in the ordinance making the parents responsible with the children for violations of the provisions of the ordinance.

Some of the parents who have been in the habit of permitting their children to remain away from home until quite late at night have regarded the ordinance as of no interest to them, and as a result when their children were found running at large after 9:30 o'clock at night the parents themselves were required to appear in court and explain why their children were not required by the parents to be home by 9:30 o'clock.

At one time several parents were in court on the charge of permitting their children to violate the curfew ordinance, and in each case a small fine was imposed, with the admonition that further violations by their children would subject them to heavier fines.

The city authorities now have given notice that the curfew ordinance means just what it says and that it will continue to be strictly enforced, regardless of whose children may be affected and that neglectful parents will be taken into court no matter how prominent they may be in the community.

ALBANIA HAS NO PUBLIC DEBT

Occupies Unique Position Among European Nations—Monetary System Based on Gold Deposits.

Genoa.—Happy Albania is the term which has been applied to that country, for it is stated that it occupies the unique position among European nations of being the only country which has no national debt and has a gold monetary system.

Mehedi Frasheri, the head of the Albanian delegation to the conference here, in an interview indicated that all would be well with his country, "if only we are left in peace for a little while."

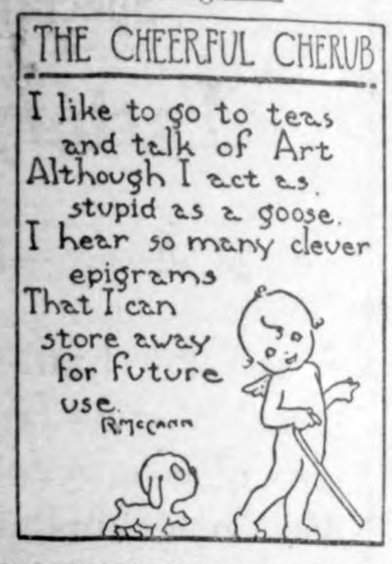
THE CHEERFUL CHERUB



KIDDIES SIX

By Will M. Maupin

A PROBLEM WORTH WHILE

HE HAS tackled divers questions
With assurance great to view,
From preserving our digestions,
Up to how big game pursue.
He has done work literary
With an air of honest pride,
And has writ in manner cheery
All about race suicide.

Of canals and arbitration,
And of income taxes, too;
Of the freight glut situation
And the right course to pursue
To make railroads come to center,
Or to back up old Monroe—
To be brief he is a Mentor
Knowing all that men can know.

But he has his limitations
Just like any other man.
He can't solve some situations
'Cause no human mortal can.
Vainly would he wilt his collar
If he faced the problem great
How to make a single dollar
Feed and clothe a bunch of eight.

There are forty different types of buoys used at sea, each of which has a meaning of its own.

Uncommon Sense . . .

By JOHN BLAKE

ENJOY THE GAME

GENTLEMEN who play golf will tell you that the man who tries too hard never does very well at it.

Incidentally, he never gets any fun out of the game.

There are many parallels between golf and life, which is doubtless the reason that so many people are devoted to it.

Golf, of course, is a game, and only a game. Yet there are many of its followers who can see only the advantage of winning, and who come in sour and ill-tempered if they lose.

Others, while they try to win, get just as much fun out of it if they lose. And they never stamp on their clubs or throw them away, or swear at the caddies.

It is very important to win in anything. But it is more important to get your allowance of fun out of it as you go along.

Sitting wheezily in any rich man's club you will find old gentlemen who wanted to win more than anything else, and who did win fortunes, but lost their health and their happiness in the effort. And, with all their money, you can set them down as losers.

There is good sportsmanship in all human effort. There are things the good sportsman will not do, even to win. One of them is cheating; another is becoming so absorbed in the pursuit of victory that he forgets everything else as he goes along.

John Burroughs, who probably never had more than the necessities of life in all his existence, got full measure of enjoyment that was denied to many who made a thousand times as much money. Incidentally, he was a very successful man, for he added to the sum of human knowledge.

Win if you can. Get a fortune if you can. Money means independence, and the ability to do good in the world.

But never forget that there is enjoyment as well as trouble in life, and that if you are not too intent on winning what the world calls success, you will be happier as you go along, and stand just as good a chance of making your life worth while, and the world better off because you lived in it.

Asiatic Peoples.

Alpine people are frankly Asiatic. They originally come from the Pamir uplands. Half of the Alpine types of the present world, the Turkoman, the Turkish or Tartar, the Armenian and the Levantine are still natives of Asia. Living men of Homo Sapiens Alpinus or the normal round-heads of France and Germany have been found in Afghanistan and Samarkand, places from whence their ancestors had never migrated.

Mother's Cook Book

"He who receives and entertains his friends, and who does not, himself, personally, give supervision to the repast which he offers them, is not worthy of having friends."

FRESH FISH

IN THE parts of the country where fish may be caught, cooked and eaten the same day, there is no more appetizing and healthful food. Fish should be cleaned and placed on ice, never leaving it until put into the oven or broiler; then the flavor will be good and the dish appetizing.

Pike, bass, pickerel and perch all abound in the fresh waters. There are any number of ways of serving them. Stuffed and baked, the pike and pickerel are excellent. The perch are usually fried until crisp and brown. They should be rolled in seasoned flour before cooking.

A meaty fish is very good boiled in acidulated water and served with cooked spinach and this sauce:

Banana Filling.

Scrape and mash two ripe bananas, add one tablespoonful of lemon juice, two tablespoonfuls of powdered sugar and one-half cupful candied orange peel. Use on yellow cake, top with whipped cream.

Creole Sauce.

Sift one can of tomatoes (a pint), season well with one teaspoonful of salt, a dash of cayenne. Add one cupful of fresh mushrooms that have been cooked in butter for five minutes. To the butter left in the pan add two tablespoonfuls of flour; stir until smooth. Add to the sauce and cook all together until thick. Add two teaspoonfuls of onion juice, one green pepper, finely chopped, and pour the whole over the boiled fish.

Convincing the Captain.

When wireless telegraphy was in its infancy there were many people who were quite skeptical as to its efficiency. One of these was the captain of a trans-Atlantic liner. It happened that on one voyage Signor Marconi was one of his passengers. One evening the captain turned to the great inventor and asked him: "Do you really believe in wireless telegraphy?" Signor Marconi smiled and replied: "Now, captain, just you send a telegram to your wife, and tell her to telegraph from Poldu, and you will receive her reply when in mid-Atlantic." "This I did," related the captain, "and, sure enough, my wife telegraphed to me. I was quite convinced that 'wireless' was genuine!"

Motor Improvements.

"Gasoline becomes more evil-smelling every year."

"I think," commented Mr. Chuggins, thoughtfully, "they must be conducting some experiments to save motor fuel."

"Gas is not more inflammable because it's malodorous."

"No. The idea evidently is to get the gas so obnoxious that the old fliv will hop out on its own account and try to run away from it."

NOTICE TO CONTRACTORS

For the construction of Drainage improvement known and designated as Drainage District No. 21, Hancock County, Iowa.

Notice is hereby given that the Board of Supervisors of Hancock County, will meet at the Court House in Garner, Iowa, on the 28th day of June A. D. 1922, at 2:00 o'clock P. M. to let to the lowest responsible bidder the contract for the work of construction for the drain in the proposed Drainage Improvement known and designated as Drainage District No. 21, of Hancock County, Iowa, said work to be let in sections specifying the work to be done and the time fixed for the commencement and completion of the same to-wit:

Section 1

Main Line 1350' 16" 5.80
1 Bulkhead 5 cubic yards
1 Brick Catch Basin with cover
800 Common Brick
Average haul about one mile.

All tile must pass the specifications for standard drain tile of the American Society for Testing Materials, tile in sizes 8" and above to be not less than 2' long.

The specifications state that where running sand is encountered, sewer pipe with joints caulked in jute shall be used and the bids must state the price in case such construction is used.

Work to be commenced thirty days from date of letting of Contract. Contract will be completed by September 1, 1922.

All the tile to be delivered at the ditch side subject to inspection and to be delivered only as ordered by the Construction Engineer.

Whenever the tile improvement is layed in existing ditches the average depth will be computed from the natural surface of the ground and the contractor will be required to backfill the trenches to the height of the natural surface of the ground so that the existing ditch will be completely filled.

All ditches and drains to be constructed in all respects in accordance with the plat, profile, and specifications of the District filed by the Engineer in the Auditor's office subject only to such changes and alterations as may be made as provided by law.

Sealed bids will be received at the office of the County Auditor of Hancock County, Iowa, up to one o'clock noon of the 28th day of June, 1922.

The price must be stated in the bid in figures, and permission will not be granted for the withdrawal or amendment of any bid after once presented.

All bids must be made at a fixed price per station of 100 feet for each size tile and also a fixed price for section complete in all respects including intakes and headwall and must also include the schedule of overdepth adopted by the Board of Supervisors of Hancock County and on file in the Auditor's Office for possible overdepth or underdepth beyond the average depth specified.

Bids will be received on any or all sections, for the tile alone, for construction work alone, or for both tile and construction.

The Board will at their discretion let the work as a whole or in sections to the lowest responsible bidder, reserving the right to reject any or all bids and also the right to adjourn time of awarding contract is reserved.

Each bid must be accompanied by a cash deposit or certified check in a sum equal to ten percent of the total amount of bid, as a guarantee of the good faith of the bidder.

ALL BIDS NOT MADE IN CONFORMANCE TO THE ABOVE REQUIREMENT WILL BE REJECTED.

The party to whom any contract is being awarded will be required to attend at the office of the Auditor of Hancock County, Iowa, within ten days after said award and execute a contract thereby agreeing to all provisions, terms, and conditions thereof and shall also file with the County Auditor a bond subject to his approval for a sum equal to twenty-five percent of the amount of the bid and in case the party to whom any work is awarded fails to enter into this contract and furnish bond within ten days as herein required. The deposit of such party shall thereupon become forfeited to Hancock County Drainage District No. 21, together with all rights under said award.

The deposit of the unsuccessful bidders will be returned to them within twenty-four hours after demand, and the deposit of the successful bidders will be returned to them upon their executing the contract and filing with the County Auditor the bond as herein required.

By order of the Board of Supervisors.

Dated at Garner, Iowa, this 7th day of June, 1922.

CHRIS JACOBS,
County Auditor.

Average haul about 2 miles from Miller, Iowa.

All tile must pass the specifications for standard drain tile of the American Society for Testing Materials, tile in sizes 8" and above to be not less than 2' long.

Cement tile will be allowed only in sizes 14" and above.

The specifications state that where running sand is encountered, sewer pipe with joints caulked in jute shall be used and the bids must state the price in case such construction is used.

Work to be commenced thirty days from date of letting of Contract. Contract will be completed by August 1, 1923.

All the tile to be delivered at the ditch side subject to inspection and to be delivered only as ordered by the Construction Engineer.

Whenever the tile improvement is layed in existing ditches the average depth will be computed from the natural surface of the ground and the contractor will be required to backfill the trenches to the height of the natural surface of the ground so that the existing ditch will be completely filled.

All ditches and drains to be constructed in all respects in the accordance with the plat, profile, and specifications of the District filed by the Engineer in the Auditor's Office subject only to such changes and alterations as may be made as provided by law.

Sealed bids will be received at the office of the County Auditor of Hancock County, Iowa, up to one o'clock P. M. on day of letting.

The price must be stated in the bid in figures, and permission will not be granted for the withdrawal or amendment of any bid after once presented.

All bids must be made at a fixed price per station of 100 feet for each size tile and also a fixed price for section complete in all respects including intakes and headwall and must also include the schedule of overdepth adopted by the Board of Supervisors of Hancock County and on file in the Auditor's Office for possible overdepth or underdepth beyond the average depth specified.

Bids will be received on any or all sections, for the tile alone, for construction work alone, or for both tile and construction.

The Board will at their discretion let the work as a whole or in sections to the lowest responsible bidder, reserving the right to reject any or all bids and also the right to adjourn time of awarding contract is reserved.

Each bid must be accompanied by a cash deposit or certified check in a sum equal to ten percent of the total amount of bid, as a guarantee of the good faith of the bidder.

ALL BIDS NOT MADE IN CONFORMANCE TO THE ABOVE REQUIREMENT WILL BE REJECTED.

The party to whom any contract is being awarded will be required to attend at the office of the Auditor of Hancock County, Iowa, within ten days after said award and execute a contract thereby agreeing to all provisions, terms, and conditions thereof and shall also file with the County Auditor a bond subject to his approval for a sum equal to twenty-five percent of the amount of the bid and in case the party to whom any work is awarded fails to enter into this contract and furnish bond within ten days as herein required. The deposit of such party shall thereupon become forfeited to Hancock County Drainage District No. 7, together with all rights under said award.

The deposit of the unsuccessful bidders will be returned to them within twenty-four hours after demand, and the deposit of the successfull bidders will be returned to them upon their executing the contract and filing with the County Auditor the bond as herein required.

By order of the Board of Supervisors.

Dated at Garner, Iowa, this 7th day of June, 1922.

CHRIS JACOBS,
County Auditor.

(SEAL) Pub. June 15-22

Mrs. Matson, of Goodell was a caller here yesterday.

Mrs. Howard Doyle and Miss Mildred Smith, were Belmond visitors yesterday.

Mr. and Mrs. J. B. Johnson from near Stilson, were Klemme visitors yesterday.

Mr. and Mrs. John Dominy from Goodell, accompanied by a niece and a nephew, were Klemme callers on Wednesday of this week.

A number of men, membres of the Ell Township Reform church, met at the church last Thursday and cleaned up the church grounds, put a new fence around the cemetery, and also making the grounds larger. They spent a great deal of time but the grounds look better.

Dreaming of Writing.

To dream that you write with a pen denotes good luck; with a quill, loss of health; with a stick, firmness of purpose; with a pencil, warns you of secret enemies. To dream of writing a letter foretells good news; a bill, an accusation.

Why Farmers Choose This Policy

Eight out of every nine policy holders of the Western Life are farmers. Why? Because this policy better protects their family, or themselves in old age.

ISSUED ONLY BY WESTERN LIFE INSURANCE CO. THE FARMER'S SPECIAL OUT OF THE WEST COMES THE BEST DES MOINES IOWA

Pays a cash monthly income from sixty years on. Double indemnity for accidental death. Pays your premium should you become permanently disabled. Provides lower premium each succeeding year, or cash dividend coupons. Every policy protected by securities deposited with the State. Let me tell you all about this special policy which gives you more than ordinary insurance.

Wraps for Summer Trips; Knitted Accessories

THE least showy and conspicuous of our friends often proves to be the best friend in need, and so it is with coats and wraps. Now that the time for summer journeyings is here, ask the unexperienced globe-trotter, and she will tell you to begin your outfitting with a practical, roomy coat, made of a soft, warm material, in a neutral or dark color. Whether your path leads to the mountains or the sea, the tropics or the desert, take a sturdy coat along, for you will have need of it.

One does not acquire a coat of this kind for a single journey or a single season, therefore eccentricities of style are not among its possessions. We may count on straight lines, youthful and mannish styles to be long-lived and not affected by passing whims of fashion, but entirely comfortable. Such a coat is shown at the right of the two pictured here. It is provided with capacious pockets, an ample collar and is loosely belted. Made of homespun, tweed, duvetyn and camel's-hair and similar coatings, it is the tourist's delight.

The coat at the left of the picture proclaims itself as of this season with its wide, capelike sleeves, but it is not conspicuous.

Practical Wraps for Summer Journeys.

but their usefulness does not begin or end there, unless we make "sportswear" a term of very wide application. Knitted garments, cleverly styled, appear almost everywhere. Many of them are products of wonderful looms and many of them are hand knitted—the latter having the usual prestige of handwork over machine work. Now that they are so fashionable it is well worth while to learn to knit. Women find it fascinating work, good for the nerves—and an important relief to the strain on their pocketbooks.

A novice might make a beginning in the gentle art of knitting by copying the pretty scarf of Iceland wool shown here at the right of the illustration. A fine zephyr, in any color desired, is used for it and the border of stripes in contrasting colors, may suit individual fancy.

The slip-over sweater at the left is machine-knitted and may be had in almost any color. It is a practical and youthful affair with a "V" neck, elbow sleeves, and fancy border banded with white. The collar and cuffs match the border and a narow knitted belt, having no particular business, is there because it is there, to make a pretty finish. It buttons at each side after crossing at the front.

Just at the moment many slip-over sweaters are shown in gay colors with horizontal stripes in white, or white interwoven with the color, and manufacturers are featuring sweaters in white with horizontal stripes in Navajo patterns. They are fine for sports wear. The tuxedo maintains its place for older people.

Slip-Over Sweater and Scarf.

a candidate for the position of traveling company and has much to recommend it. Where only one wrap is to be taken along for a journey or visit, it is prepared to serve for all sorts of occasions, and will prove as good a choice as any. It has a convertible collar and long girdle of the material. In beige color or tan and lined with soft satin to match it will harmonize with everything.

Already coats for fall are occupying the attention of manufacturers. They assure us that lines will continue straight and sleeves large. Even if these details are changed, the straight line, ample coats of today are a good investment. There will be no great difficulty in shaving off a little of the ampleness that Fashion approves this summer if she changes her mind by fall. Coats can't grow larger—they may become smaller.

Striding along, keeping pace with the ever-increasing disposition to outdooring, many knitted things have been added to the belongings of wom-

RASPBERRY VINEGAR IS SUPERIOR FOR MANY SALADS AND BEVERAGES

In Salads and Other Table Delicacies the Raspberry Flavor Will Be Found Very Agreeable.

(Prepared by the United States Department of Agriculture.)

An excellent vinegar may be made from raspberries which will retain indefinitely the odor and flavor if properly preserved. Experiments carried out in the bureau of chemistry of the United States Department of Agriculture, have shown that this delicious vinegar can be made in the home when the garden affords a liberal supply of this fruit.

Vinegar made from raspberries is dark in color. Samples made in the bureau of chemistry and properly bottled were found after three years to have retained not only the original degree of acidity but the odor and flavor. In salads and other table delicacies the raspberry flavor is very agreeable. A refreshing hot-weather drink can be prepared by adding a small amount of this vinegar to water, and icing and sweetening to taste.

How to Make Vinegar.

Two fermentations, the alcoholic and the acetic, are necessary in making vinegar. The method is as follows: Use ordinary straight-sided open-topped stone jars as receptacles. With the aid of a potato masher, mash up eight quarts of good, ripe raspberries of either the red or black variety. Stir thoroughly into this mash one-half cake of compressed yeast which has first been macerated in a small amount of the juice. Let jar stand in a warm place (about 75 degrees F.) and keep covered either with lid or with cheesecloth to protect from insects. Stir well every day. About one week is required to complete the alcoholic fermentation. The time needed to utilize the sugar in the berries completely may be determined by one of two methods: (1) Weigh the jar carefully each day and record the weight; when loss of weight ceases, the fermentation is complete; (2) test some of the juice with a Brix or Balling hydrometer. The reading of a juice suitable for making a satisfactory vinegar should not be less than 10. As the fermentation proceeds, this will decrease daily until it is not more than 1 or 2, which indicates that the sugar has practically all been utilized.

Action of Yeast.

The action of the yeasts on the cells makes it easy to separate the juice from the berries, squeezing it by hand through cheesecloth. The juice is then returned to the jar; and, to insure a proper acetic fermentation, a small amount of vinegar should be added as a starter. An unpasteurized vinegar is best for this purpose, but if this is not at hand, use any good vinegar in the proportion of 1 part to 4 of the fermented juice. Cover as before and allow to stand without agitation in a warm place. A scum or film will soon form. This should not me disturbed.

The acetic fermentation sometimes takes place very rapidly where berries are used. The acidity should be determined daily by withdrawing a small amount of the vinegar by means of suction through a pipette or glass tube and submitting it to a test by the use of a vinegar tester, or in the absence of this, determining by the taste when it is sufficiently acid. As soon as the vinegar reaches a proper degree of acidity (it should contain 4 per cent acetic acid), the fermenting process should be stopped. This is done by first filtering through paper or filtering-cloth, and bottling. Bottles should be well filled and sealed tightly with paraffined corks.

THINK THIS OVER

This happened at the Chicago Live Stock show. A doctor stood admiring a large, fat hog when a small boy standing by piped up, "That's my father's hog. He got the first prize."

"Wonderful," said the doctor. "Certainly a very fine hog. Then he looked at the boy. "How old are you, son?" he asked.

"I'm twelve past," said the boy.

"Why," said the doctor, you are small for a nine-year-old. What do you eat and drink?"

"Just what the rest of the folks do—bread, meat, pie, potatoes, cake and tea."

"But," queried the doctor, "don't you drink milk?"

"Naw," said the boy in a tone of disgust, "we feed milk to the hogs."

PROPER TIME TO BEAT MOTH

Brush and Clean Heavy Garments and Pack Away for Summer—Label All Packages.

Now is the time, to brush and clean and sun heavy outside garments and put them in mothproof wrappings. Wash, mend and wrap mittens, mufflers, stockings, etc. Mark all packages before putting them away; it will save time and energy later on. Clean and rearrange bureau drawers and closets. Heavy bedding which is being laid aside and is not washable may be aired, brushed, sunned and packed away for the summer.

TASTY TURNIP SOUP RECIPE

Cut Two Pounds of Vegetable Into Small Squares, Add Lard and Stir Over Hot Fire.

Take two pounds of peeled turnips, cut into small squares, place in a stewpan with four tablespoonfuls of lard, stir them over a quick fire, add a pinch of salt, one tablespoonful of flour, three pints of stock, simmer gently for one and one-half hours and pass the whole through a sieve. Put back in the stewpan and add a little seasoning. Bring to a boil and just before sending to the table add one cupful of good cream.

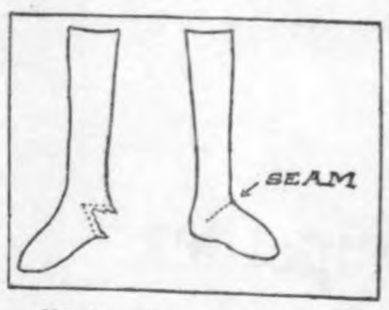
Sausage Retains Flavor.

Sausage rolled in flour and sprinkled with cold water will not break in frying and will retain the good flavor.

MEND CHILDREN'S STOCKINGS

Usefulness May Be Prolonged by Cutting Out Worn Parts, and Running a Seam.

When the children's stockings become worn at the heels, I still prolong their usefulness by cutting out the ragged part, as indicated by the dotted lines, drawing the opening together and running a seam, says a writer in the Michigan Farmer. This, of course, puts the part that was formerly the heel over the top of the foot, but the seam is at a point where no inconvenience is caused by pressure of the shoe.



Mending Children's Stockings.

OF INTEREST TO THE HOUSEWIFE

Lettuce will go further and decorate better if shredded.

* * *

Beef cooked in a fireless cooker is not salted until done.

* * *

Add a pinch of salt to eggs when whipping. It will hasten the process.

* * *

Fill cake pans nearly two-thirds full if you wish the cake to rise to the top of the pan.

* * *

When boiling a cracked egg add vinegar to the water to prevent the white from boiling out.

* * *

Tar stains should first be treated with kerosene, then the fabric washed with warm water and soap.

* * *

To clean silver, place in a deep bowl, cover with sour milk and let stand for half hour, then rinse in boiling water.

* * *

Skim the fat from the water in which chicken has been boiled and combine with your usual shortening for pie crust. It will make the crust light and flakey.

Home Town Helps

PETUNIAS BLOOM TILL FROST

Blossom One of Sweetest and Plant Is Most Prolific—Fine for Beds and Boxes.

For porch and window boxes and for gay beds which will hold their display until frost kills them, there is no annual to compete with the petunia, particularly the small-flowered bedding varieties with their myriad bloom.

There are wonderful plants with their frilled and ruffled flowers, which are more showy individually, but they lack in freedom of bloom and sheets of color and are better for individual specimens or for beds by themselves.

The bedding petunias make a solid sheet of color. Two of the finest of these, because of the purity and delicacy of their color, are Rosy Morn and Countess Ellsmere, much alike in their delicate rose, white-throated bloom, but the latter is of more rampant growth.

For window boxes three petunias inclined to trailing habits which will droop artistically over window boxes are Balcony White, Balcony Rose and Balcony Blue. There are no finer subjects for porch and window boxes than these three and their culture is simple. A packet of seeds will furnish enough petunias to decorate the windows of a fair-sized building.

They can be sown outdoors as soon as the weather is settled and transplanted very easily about a foot apart and they will soon make a solid mass. They begin to bloom when the plants are small and each inch of growth merely enlarges the blossoming surface. Cut back in the fall and potted up they make fine house plants.—National Garden Bureau.

ALIVE TO COMMUNITY SPIRIT

Few Towns and Villages Throughout the United States Not Awakened by Recent War.

It is a significant fact that the tendency in the United States today is to make the community memorial erected in honor of those who fought, a "living monument" rather than the cold symbol of bygone wars. During the recent war, every community in the United States learned and practiced the real meaning of co-operation or community service, and in many instances the people of a town or village were brought together in common fellowship and work for the first time in their experience. That community spirit ignited under the forced heat of war has flamed into such a steady light that the people do not want to see it extinguished in time of peace. As the most effective way to preserve and perpetuate this community spirit, there are hundreds of plans consummated and in the making, to have the war memorials erected assume the form of community buildings, where all of the people can meet together for music, art, and social service. Tablets, flags, war trophies and all the other mementoes of war, will be provided, but in addition, there will be facilities for public gatherings and the keeping up of that close co-operation of all the people, so successfully started during the war.

Salvia.

The scarlet sage, or scarlet salvia, is a standard bedding plant that keeps the garden bright with color until late in autumn. This plant lends itself to many uses; it makes a good pot plant, does well in window boxes, and is useful for cutting, to give color. Its commonest use, however, is as a hedge or border plant, giving long broad bands of vivid scarlet. On account of its very striking color, caution needs to be observed in using it in this way. It can be most effectively used in small clumps among or against masses of green. Seeds should be sown in window boxes or frames six weeks before the last frost and the plants set outdoors after all danger from frost is past.—United States Department of Agriculture.

Verbena.

The verbena is a low-growing annual with a creeping habit. The flowers are borne on terminal or lethal shoots which lift themselves from five to seven inches off the ground, and when grown in mass the plants will form a mat that in full bloom will give the soil the appearance of having a carpet of flowers. The colors include white, pink, scarlet, blue and purple. The length of stem and the texture of the flower are such that the verbena is of value for bouquets and table decorations. It can be used with good effect in beds, borders, mounds and window boxes.—United States Department of Agriculture.

Set Out a Fronded Palm.

The Winter Haven Chief gives the following good advice: "Don't forget that a palm set out now will be a tree in ten years. You may not live to admire its beauty, but someone else will."—Highlands County Messenger.

Oil Stock.

Mrs. Newriche—I've always wanted my husband to be done in oil.

Mrs. Newpoor—Poor John was done in oil last month and we've had to sell the car and mortgage the house.

Scraps of Humor

A NATIONAL TRAIT

"At any rate, the high cost of living is no problem in the South Sea Islands."

"It would be, if several thousand average Americans were suddenly transported to those islands and forced to live there."

"What do you mean?"

"It wouldn't be six months before somebody would corner the coconut market."

Started Early.

"You say Meddling is a born reformer?"

"Just that."

"What do you mean by a born reformer?"

"I have it on the authority of his grandmother that when he was five years old, he started a campaign in his neighborhood to abolish Mother Goose."

Careful Calculation.

"I understand you have been offered a large salary to go into motion pictures."

"I have," replied Senator Sorghum. "But I'm not going. I like to keep up with my surroundings and large as the offer seems to be it wouldn't be enough to enable me to keep the motion picture social pace."

What Is Bad Luck?

"Oh, I just bust a lookin' glass. I'm going to have seven years' bad luck."

"I don't believe that, 'cause a friend of mine bust one an' she never had no seven years' bad luck. It was only three days later she was killed in an explosion—so I wouldn't worry about it."—Life.

The Noes Have It.

His addresses having been declined by a young lady, he paid court to her sister.

"How much you resemble your sister," said he, the evening of his first call. "You have the same hair, the same forehead, and the same eyes—"

"And the same noes!" added the girl quickly.—London Telegraph.

Conservative.

"These European papers are not so enterprising as ours."

"You're right. I doubt if anybody got out an extra when America was discovered."

NOT AT THAT PRICE

Teacher—With steak at 45 cents a pound what would four pounds and a half cost?

Johnny—They wouldn't come to our house.

Polite Designation.

Old Human Nature's ways are strange
In time of stress or storm,
And every time he wants a change
He calls it a reform.

Nothing Else Afoot.

Post—New York is overcrowded with motors.

Parker—Yes, there's nothing afoot but plans for relief.—Judge.

Impossible.

"John," exclaimed the nervous woman, "there's a burglar trying to get into the flat."

"I'll get up and give him the fight of his life."

"Aren't you afraid?"

"Not a bit. Any burglar who thinks this flat can hold all three of us must be a little bit of a fellow."

The Big Difference.

"There's a vast difference in children."

"That's true. The other fellow's are always so much easier to bring up than your own."

Relaxed Now and Then.

"Now they say that Puritans were hard drinkers."

"I never thought those old boys were as austere as tradition has tried to make out."

Effective.

Neames—What do you want to send alarm clocks to savages in Uganda for?

Rudler—To help them to fight against sleeping sickness!—Answers.

Smart Child.

Small Girl (continuing argument as to bedtime)—But, mummy, how do you know the birds have gone to sleep?

Mother—Well, I expect they have.

Small Girl—Well, I don't. I believe the mummy bird has just gone into the nest and has hung up her wings and is reading to the eggs.—Punch.

An Altruist.

She—You know you would be just as happy if you didn't kiss me.

He—But do you suppose I am selfish enough to think only of myself?

POULTRY

TTENING MARKET POULTRY

t Variety of Feeds Can Be Used in Preparing Fowls—Broilers Grow Rapidly.

pared by the United States Department of Agriculture.)

e most desirable types of rations the most profitable feeding periods he different classes of poultry fat- d in packing plants are discussed Department Bulletin 1052, Rations Feeding Poultry in the Packing se, just issued by the bureau of istry of the United States De- ment of Agriculture. Since the ing of poultry has become a large stry in the United States, infor- ion of the kind contained in this etin should be of a great deal of e.

he results obtained in the experi- ts reported in this bulletin show a great variety of feeds can be d in fattening broilers, springs, sters and hens, a fortunate situa- since it permits the feeder to pt his ration to market conditions taking advantage of special prices ertain feeds and also to use feeds ilable locally. A growing bird, as a broiler or spring, requires ifferent ration than a mature hen, ch changes most of her feed into A simple ration of corn meal and termilk is about as good as any for s. Broilers fed rations containing ein concentrates, such as peanut al, coconut oil, soy-bean meal, or t scrap made appreciably better ns than those fed on corn meal and termilk. They grow rapidly and d tissue-forming feeds. Springs respond readily to rations con- ing protein concentrates.

hroughout the 14-day feeding pe- broilers continued to gain well, ch shows that this is not too long eeding period. Springs grew very idly during the first 11 days, but so rapidly, though profitably, dur- the remaining three days. Roast- gained well during the first two r-day periods, but not so well the six days. It was found that the ctice of feeding hens only six to t days is well founded. The dress- and chilling shrinkage of hens, wever, was much less than in the e of broilers, springs and roasters. ny of the ordinary cereal grains

Young Plymouth Rock Broiler.

pply the necessary carbohydrates d fats. More care is needed in se- ting feeds for protein, salts and mines. The proteins of the cereal ins are present in too small ounts and are of too poor quality produce the best results in broilers d springs unless other protein con- trates are added. Milk and cereals ke one of the most profitable ra- ns, as milk supplies mineral sub- nces, vitamines and very valuable teins. The results given in the bul- n show that peanut meal protein, well as soy-bean meal protein, is ecially valuable. The proteins of ttermilk are especially valuable, d if used in sufficiently large ounts produce very desirable re- lts. Other protein concentrates are at and fish scraps, cottonseed meal, conut meal and sesame-seed meal. Corn, wheat, oats and other grains k such mineral substances as cal- m, sodium and chlorine which wing animals require. In the ra- ns where buttermilk or skim milk used, these ingredients are fairly ll supplied. Milk also supplies vita- nes. At present the milk available poultry-fleshing purposes is largely ttermilk, fresh, condensed or pow- ed.

Those interested in the fleshing of ultry may get this bulletin by ad- ssing the Department of Agricul- e at Washington, D. C.

POULTRY NOTES

Hatch chicks early. They make good winter layers.

* * *

Baby chicks should be encouraged eat as much bulk as possible.

* * *

One of the best animal foods, both induce egg production and promote wth, is cut fresh bone.

* * *

Cold, damp land is no place for ultry; that which dries soonest af- a rain is the best land on which to se fowls.

* * *

Wheat bran is especially valuable feathering out the baby chicks, properly used, it will grow thers faster than anything else. It dvisable to keep it in the dry form ure the chicks all the time.

DAIRY HINTS

SECRETS OF DAIRY SUCCESS

Two Big Things Are Proper Care and Feed, Says Specialist of Oklahoma College.

"Two great secrets in dairying which have been the reason for the success of thousands of dairymen are proper feeding of cows and proper care of cows," says A. C. Baer, head of the Dairy Husbandry department of Oklahoma Agricultural and Mechanical college.

"Thousands of cows would be profitable and good cows if they were given a chance; if they were properly fed, housed, and cared for.

"Good feeding means to give cows enough feed to produce milk and the right kind of feed to produce milk. Most of the feed for cows ought to be grown on Oklahoma farms. Alfalfa hay is the best dairy cow feed which can be grown. Corn and sorghums, such as kafir and darso, can be grown for the silo. Ensilage on a dairy farm or any farm where dairy cows are kept provides succulent feed and is indispensable.

"Most of the grain for cow feeding can be grown on the average Oklahoma farm. A good grain mixture for milk cows is as follows: 4 parts ground oats, 3 parts bran or alfalfa meal, 3 parts ground kafir, 1 part cottonseed meal.

"A dairy cow needs about one pound of grain for three or four pounds of milk produced. Dairy cows should be fed grain individually according to the amount of milk for growth if immature, and at times to produce gain in weight.

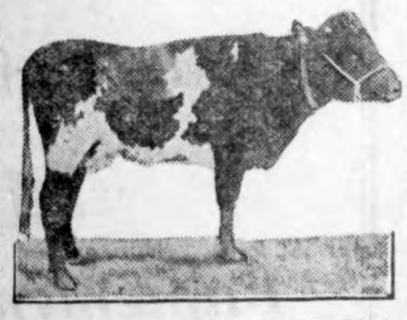
"Dairy cattle will respond to good care. Every Oklahoma farm where cows are kept should have at least a good shed to protect the cows from bad weather and cold winds. A blanket in very cold weather will pay for itself in a very short time. Every dairy cow should be cleaned and brushed regularly. It helps to keep her in better health."

DAIRY COWS RETURN PROFIT

High-Producing Animals Are Usually Most Economical in Matter of Food Consumed.

(Prepared by the United States Department of Agriculture.)

High-producing dairy cows are nearly always economical producers, says the United States Department of Agriculture in replying to an inquirer who asked for a comparison of purebred and grade cows as to economy of production. If a herd of purebred cows has greater ability to produce milk and butter fat than a herd of grades, it will return more milk and butter fat for the feed consumed. As a rule purebreds are bred for high production, and just to the extent that they are



Scrub Cows Are Not Worth Their Keep.

higher producers than the grades they may be expected to return more for the feed they use. But purebreds are not always high producers.

The ratio is not constant between the quantity of feed consumed and the quantity of milk produced. The records of cow-testing associations show that the cows that produced 10,000 pounds of milk a year ate only 55 per cent more feed than those that produced 5,000 pounds of milk a year. The cows that made 7,500 pounds of milk a year ate only 21 per cent more than those that made 5,000 pounds of milk a year. These figures are based on thousands of records.

GRAIN BOOSTED MILK FLOW

Large Increase Obtained by Minnesota Community by Feeding While on Pasture.

Twenty-one dairy herds in the Blue Earth County Cow Testing association averaged 7,120 pounds of milk and 285 pounds of butterfat per cow in 1920. Nineteen herds in the same association averaged 8,500 pounds of milk and 345 pounds of butterfat per cow in 1921. The percentage of gain in milk in 1921 over 1920 was 19.3; in butterfat, 21. The tester in charge in his annual report to University farm says:

"I attribute this gain to better care and feeding. The cows were fed a grain ration the year round, thus keeping up the production during the late summer months when it usually drops because of short pastures."

Value of Boarder Cow.

Saving $55 or $60 worth of feed for a boarder cow added to what she'll bring as dressed meat means maybe a hundred dollars in the pocket, which isn't a bad price for a cow that's no good anyhow.

Get Cow Into Shape.

In order to get the cow into the best physical shape for the calving time, it is advisable to feed her some linseed oil, a quart of the raw product per dose, as this will clean out her digestive tract.

BOYS AND GIRLS LIKE CLUB WORK

Members Pay Way Through College From Money Earned in Different Branches.

GIRLS TAKE HOME ECONOMICS

Number in Southern States Attending School on Scholarships Won Is Placed at 1,056—Alabama Women Assisting.

(Prepared by the United States Department of Agriculture.)

In 15 southern states 2,042 boys' and girls' club members last year paid all or part of their school expenses from money earned in club work. In other sections 1,344 former club members are now attending agricultural colleges, most of whom are partly paying their expenses from club-work earnings. This does not include 465 girls taking home economics in various colleges. The number of boys and girls in all the states attending high schools, normal schools, and colleges on scholarships won for club work is 1,056. These clubs are an important feature of extension work as carried on by the United States Department of Agriculture co-operating with the state agricultural colleges.

Begun Work Early.

These boys and girls did not wait until ready to go to high school or college before starting their club work and savings. Some began two, three, or more years before, or, as one boy said, as soon as he could, meaning 10 years—the youngest age at which children are admitted to the clubs. Two girls of Mobile, Ala., with a flock of chickens, began their savings three years ago. In Georgia a number of club girls have started "go-to-college funds." They put the money realized from the sale of their club products, which are mostly fancy packs of pre-

A Pig Club Boy Preparing His Prize Winner for the Show Ring.

serves, jams, and marmalades, in the bank to their own credit. Thus far 200 Georgia girls are attending school on the proceeds from their work.

Scholarship Is Voted.

Another development from the interest shown in education by the club girls is that in Birmingham, Ala., the members of women's clubs became so much interested that they voted an annual scholarship of $200 to be lent to girls wishing to prepare for home demonstration work.

WARM RECEPTION FOR MITES

Kerosene Will Prove Efficacious in Keeping Pestiferous Little Parasites Away.

Hot weather brings the roost mites. They multiply so fast that the hen house is soon swarming with them. The egg yield then drops to almost nothing.

"The process of keeping out the mites is one of the simplest in poultry culture," says A. C. Smith, head of the poultry division at University farm. "Kerosene will do it. It is easily applied, either by a broad flat paint brush or a spray. The paint brush will save kerosene, but takes time. The spray will save time and use kerosene. Take your choice, but paint or spray the roosts and supports with kerosene before the mites put in an appearance.

"The morning is the best time, as the roosts will be dry and much of the odor will have disappeared before the hens seek the roosts. Repeat every two weeks during warm weather."

KEEP UP VEGETABLE SUPPLY

Farmer Should Not Overlook Importance of Making Successive Plantings in Garden.

Do not overlook making successive plantings of vegetables in order to keep up as steady as possible a timely fresh supply. Among such vegetables are radishes and beans. Pale snap and pole lima beans will come nearer growing a supply of green beans than the bunch beans.

SUPERIOR FARM IMPLEMENTS

Good Tools of Far More Importance Than Some Farmers Believe—Poor Ones Unsatisfactory.

Good implements are far more important in good farming than some farmers believe. It is a very hard matter to do good farming with poor or unsatisfactory farm implements. Considering their utility, farm implements are cheap.

WASH ALL MILK CANS AS SOON AS EMPTIED

Most Dealers Have Appliances for Cleaning Utensils.

Hotels, Restaurants and Others Buying Milk in Wholesale Quantities Are Particular in Giving Attention to Containers.

(Prepared by the United States Department of Agriculture.)

The milk can has the same relation to the wholesale trade as the milk bottle has to the retail trade, and it is just as important that it be washed immediately after being emptied, says the United States Department of Agriculture. Milk dealers have appliances for washing and sterilizing the cans, but this does not excuse the buyer from rinsing them before they

Sterilizing Dairy Utensils Is an Important Factor in Keeping Milk Sweet.

become sour as a result of the multiplication of bacteria in the film of milk left in the can. Cans that become foul in this way are hard to clean when they arrive at the plant.

Investigations show that hotels, restaurants, bakeries and other places which buy milk in wholesale quantities do not always give proper attention to the containers. As soon as the cans are emptied they are placed on the doorstep or left in a warm room until collected by the dealer. They return to the plant teeming with bacteria, and the mechanical washers will not always clean and sterilize them thoroughly. They must be soaked, washed by hand with a brush, and then sent to the machine washer.

Consumers can help a great deal in making it easier to maintain a safe milk supply. All that is needed is a little care at the right time, says the department.

PLAN FOR SUMMER SPRAYING

More Care and Attention Necessary Than Work in Winter—Combinations Save Time.

Summer spraying requires more care and attention than winter or dormant spraying because summer sprays must be applied after the buds or leaves are started and hence when there is danger of injuring the foliage. The common spray for the control of chewing insects is arsenate of lead, but arsenate of calcium is gaining in favor. Paris green is still used to some extent on Irish potatoes and tobacco. Nicotine sulphate, or tobacco parts, sometimes called blackleaf, is effective against plant lice. Bordeaux mixture is an effective spray when reduced to summer strength for apples, pears, grapes and other fruits.

But there are combinations for various fungus diseases and insect pests that save time and trouble and are highly recommended by practical orchardists and gardeners.

SOY BEANS AND SUDAN GRASS

Combination Makes Good Feed and May Be Handled Like Timothy —Work Land Well.

Soy beans and sudan grass seeded together at corn planting time and cut for hay when the beans are in the dough stage make good feed, and may be handled same as timothy. Moist black land is suitable for this use, and some of the alkali peat soils may be used to advantage for this crop mixture. Work the land down well, and sow broadcast about 12 pounds of sudan grass to the acre, then drill in three pecks an acre of beans. The drilling will cover the grass seed. Mammoth Yellow or Hollyrock Mongil are good soys.

SWEET CLOVER FOR PASTURE

All Types of Plant Make More or Less Undesirable Hay Because of Its Coarseness.

Under most conditions sweet clover can only be used profitably as pasture. When it is decided to use it for this purpose, the cattle should be put on it and not be allowed other pasture until they start to eat it. This will take a day or two, after which they will thrive on it. All types of this plant make a more or less undesirable hay, because it is coarse and has comparatively few leaves. For the best quality of hay, it should be cut just as it starts to blossom.

FARM LIVE STOCK

IMPORTANT WORM DISCOVERY

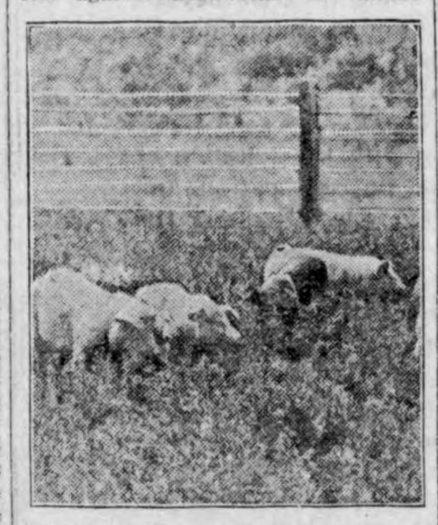
Zoologists Find That Carbon Tetrachloride Is Effective in Destroying Parasites.

(Prepared by the United States Department of Agriculture.)

The toll exacted from the live-stock industry by internal parasites such as worms is enormous, and because of this drain on the herds and flocks the zoologists of the United States Department of Agriculture keep up an unflagging search for chemicals and treatments that may be used to combat these organisms. Recently they have discovered that a certain chemical once used in medicine as an anesthetic and now used variously as a fire extinguisher, cloth cleaner, insecticide, and solvent for fats and gums, is very effective as a destroyer and expeller of intestinal worms. The name of this chemical is carbon tetrachloride.

The effectiveness of this chemical against certain round worms has been announced by the department, but what may be the most beneficial use has just been brought out by tests on animals infested with hookworms. In the case of sheep the minimum effective dose has not yet been determined, but all the doses used, from 12 cubic centimeters to 48, in each case given in two ounces of castor oil, removed all stomach worms and all hookworms. It has been equally effective for hookworm in dogs and foxes, and has been used with success against some of the various kinds of worms that infest the digestive tract of pigs.

The fact that a species of hookworm also affects man makes this discovery of the efficacy of this chemical against hookworms in various



Alfalfa Is One of the Best Forage Crops for Hogs and Animals on This Kind of Pasture Are Most Healthy.

animals of interest to medical men as well as to veterinarians and livestock growers. Medical men are now trying it out at several places as a possible cure for hookworm disease in man, and it gives promise of success. As a result of the work so far completed, scientists in the bureau of animal industry consider that this drug will prove of special value in the removal of the various kinds of blood-sucking worms in domestic animals.

FEED FOR FATTENING STEERS

Corn and Corn Silage With Cottonseed Meal and Alfalfa Favored at Iowa College.

That corn and corn silage, supplemented with cottonseed meal, alfalfa hay and salt make the best ration for fattening steers was shown to Iowa farmers recently. Steers fed this ration made substantial gains in experiments at Iowa State college and although they were ordinary steers they made $13 per head. This indicates that the feeding business, properly handled and where good-quality steers are started with, will pay the farmer a profit.

Other roughages, such as clover hay, corn stover and mixed timothy and clover hays were experimented with. The red clover ration made a good showing but the other roughages lost money.

Cottonseed meal was used to an advantage in these experiments and made a fine balancer for the ration. In speaking of the use of this protein feed for steers the animal husbandry men say that during the last 12 years it has been used in experiments at the rate of three pounds to 1,000 pounds of steer. It was fed for a period of one to six months with corn silage and good results were obtained.

Cottonseed meal, however, as a hog feed has caused some doubt as to its value due to toxic qualities but the Iowa station has found that when fed in rations where cottonseed meal is used at the rate of one part to four parts of ration no harm has resulted.

OBSTACLE IN RAISING SWINE

Round Worm Is One of Greatest Cause of Loss—Many Remedies, but Prevention Is Best.

One of the greatest obstacles encountered in hog production is the parasites which are found where hogs have been raised for a number of years. Probably the round worm is the one which is most numerous and causes the most losses. There are many worm remedies but the best cure is prevention.

GOOD ROADS

MAKE TESTS ON BATES ROAD

Has 63 Different Sections and Represents That Many Kinds of Construction.

(Prepared by the United States Department of Agriculture.)

Final series of tests on one of the largest and most comprehensive road experiments ever attempted began March 27. This road, located at Bates, Illinois, was designed and constructed by the Illinois division of highways under the direction of Clifford Older, chief highway engineer, with the bureau of public roads, United States Department of Agriculture co-operating. It is two miles long and includes 63 different sections representing as many different methods and kinds of construction, having various thicknesses of concrete, cement grout and asphalt-filled brick as well as asphalt concretes and concrete with rolled stone bases.

Since the completion of its construction in April, 1921, a corps of engineers has been kept busy making observations for effect of temperature changes, static and repeated loads and subgrade conditions, thus collecting data which when analyzed will supplement the information necessary for the rational design of roads.

The road will now be subjected to the final test, that of very heavy truck traffic, for the application of which will be used a fleet of 10 motor trucks received by the state from the surplus of the War department. At first these trucks will be lightly loaded, but as the test progresses the load will be increased until a maximum is reached giving a 12,000-pound rear wheel load. The results will show definitely the types of pavements which can be expected to support

Building a Section of Bates Road.

heavy traffic, as well as those which will not satisfy the requirements of such traffic conditions as might be expected during the next 10 or 20 years.

The careful observation of the various sections in the absence of traffic which has formed the first part of the investigation, it is expected, will enable the engineers to ascertain the structural weaknesses which cause such failures as may take place in the traffic tests.

After the experiment has been completed, this road with its broken sections replaced will form a part of Illinois federal aid project No. 13 from Springfield, Illinois, to St. Louis, Missouri.

The test will be carried on under the direction of Clifford Older, with H. F. Clemmer in direct charge of the experimental work and R. R. Benedict in charge of the trucks and maintenance. The bureau of public roads will be represented by A. T. Goldbeck and C. A. Hogentogler.

ROADS PAY DIVIDENDS

A wagon with a load of 3,000 pounds required an average draft of 108 pounds on a gravel road in dry condition, in a recent test at the Missouri College of Agriculture. The same load on a dry clay road required a draft of 321 pounds. This shows the great variation in the work done in hauling and in the size of load a team can handle, says J. C. Wooley, chairman of the agricultural engineering department, which conducted this test. The gravel roads prove their value even more completely under spring conditions. This load on the same roads after a heavy rain required a draft of 180 pounds on the gravel, and 372 pounds on the clay. This is only one of the many advantages offered by all-the-year roads.

Unnecessary Practice.

Oiling a concrete road or any properly surfaced highway is not only a nuisance to the public, but is a lamentable waste of a natural resource, says H. H. Franklin, who claims that the oiling system, a hold-over from the experimental days, is no longer necessary and should be abandoned.

Towers to Control Traffic.

Towers, erected in the middle of streets and highways for the control of traffic, were first operated in Paris in 1910.

A New Dress--

How To Get it

The Thrifty Housewife is so busy with the many duties of her Household, that after she attends to all of the Common Sewing for her family she hardly ever finds time to make that Good Dress which this worthy Dame should have for her own use.

Here-to-fore she has been rather up against it, for if she sent her money to a mail-order-house about five times out of ten they would substitute, or perhaps they would keep her waiting several weeks while they first made it up, and then when it did come, perhaps the pattern and quality of the cloth was a little disappointing and often the fit was poor. Of course, she can send it back, money will be refunded "in time," but the dear woman can't go without clothes, so she usually keeps it even though she hates the sight of that ill fitting mail-order rag.

If she takes a day and drives to the Big City, she is up against it too. She and her husband look through several Exclusive Ready-to-Wear Shops, and finally she finds a dress that can be made to fit which she thinks she would like. But Oh! the price! Three times as much as they expected to pay. But her good husband is a generous fellow and the dress is purchased.

Now, the next time you want a New Dress, dear Madam, come to Wellemeyer's —Hancock County's Largest Retail Store— and bring your troubles to our head Dressmaker, Mrs. Alva Hake.

She will help you with the selection of materials and help you choose a patern, and then she will build you a Real Dress of the Best Materials. Honest workmanship and perfect fit. Our prices are reasonable— Gingham dresses from $3.50 up, and Silk Dresses from $5.00 up, all according to the fussiness of your gown and the amount of work required. No long waiting, just three or four days, and you have your new dress complete.

We are cheaper than the City Ready-to-Wear Shops—We are quicker than the Mail-Order-Houses—We never substitute, and for Quality and Good Workmanship we beat the entire Ready-to-Wear World in Our Dressmaking Department.

Wellemeyer's

The Business Men You Know

Can you think of a man of affairs without a bank account?

Buy a Bathing Suit at Wellemeyer's and then jump in the Lake. adv

Miss Adna Church, of Garner, was visiting with Mildred Johnson Tuesday.

Moraine Hake went to Belmond Monday for a short visit with her friends.

Mr. and Mrs. Arthur Wellemeyer and children picniced at the Goodell woods Sunday.

Bert Mathews attended a Sunday School picnic at Clear Lake Tuesday evening.

Jim Trumbell and family. of Mason City, were Klemme visitors Monday.

R. F. Schneider, of Grundy Center, Iowa, was a Klemme business caller Monday afternoon.

J. N. Day and family, accompanied by Donald Nissen, returned Thursday evening from Sioux City.

Mr. and Mrs. J. N. Sprole, of Garner, were calling on Klemme friends last Friday afternoon.

Mr. and Mrs. R. A. Jorgenson were at Garner on business last Friday morning.

Miss Maude Wenck, of Garner, is visiting at the F. J. Wenck home in Klemme this week.

Miss Ethel Magner returned to Mason City Tuesday after a week's visit with Ethel Wellemeyer and her other Klemme friends.

Mr. and Mrs. Adolph Ridder and family, of Watertown, South Dakota, are isiting with Klemme friends and relatives this week.

Mr. and Mrs. Fred Shipley, of Woden, were visiting with Mr. and Mrs. Marlin Croner Sunday afternoon.

Harold and Donald Nissen left for Sioux City Sunday night after a few days visit at the J. N. Day home.

Miss Violet Stearnes, of Belmond left for her home Friday after a few days visit with Klemme relatives and friends.

The camp meeting began at the the Concord Camp Grounds near Garner Tuesday evening and are now in full swing. Quite a number from near here are in attendance.

"This Tanlac is really the first medicine I have ever taken that does what they say it will do," said J. F. Holly, Lexington, Ky. E. S. D. Kahrs. adv

The W. F. M. S. of the First Methodist church held their meeting at the home of Mrs. Elmer Arnold last Friday afternoon. All report a good time.

NOTICE—As I am taking my summer vacation my dental office will be closed from Saturday until about the 1st of July. Dr. J. L. Hesselhuus, Dentist. adv

Donald Nissen returned to Sioux City Sunday after a few days spent visiting at the J. N. Day home here. Donald graduated from Morningside College this summer. He now has a position in the Morningside State Bank as a book-keeper.

Mr. and Mrs. C. F. Keraus, Mr. Wm. Keraus and family, accompanied by Mrs. T. F. Mitchell, of Swea City, drove over to the Keraus cottage at Clear Lake Tuesday evening to enjoy a dip in the briny deep.

Mr. and Mrs. M. O. Barr drove to Webster City for a visit with friends there Sunday.

A. G. Koerner, and family, accompanied by Mr. and Mrs. Howard Doyle, drove over to the Koerner cottage at Clear Lake Saturday evening and remained until Sunday evening.

Dr. and Mrs. J. L. Hesselhuus expect to leave Saturday for Marshalltown for a couple of weeks visit with relatives and old friends there. The Doctor is taking the opportunity of enjoying his summer vacation at this time.

George L. Tessey, a well known Buffalo mechanic, said he had gained twelve pounds; his wife had gained twenty-six pounds and his daughter was gaining every day, by taking Tanlac. E. S. D. Kahrs.

Elsie Ruther from Grand Junction left last Thursday for her home after a visit with Klemme friends. The Merkel girls and Fern Ulrich drove her over to Britt to catch the train from that point.

Rev. and Mrs. Wm. Klaus, and Miss Julia Klaus, of Mason City, together with Mr. and Mrs. Irving Klaus and Milton Klaus, of Redfield, South Dakota, came to Klemme on Monday by auto and spent the day with the Wellemeyer family.

Mr. and Mrs. Carl Suckow and son; Mr. and Mrs. Ralph Ludeke and children; Mr. and Mrs. Paul Stille and children; Mr. and Mrs. Lester Stille, and Mrs. Hartzell, all drove over to Goodell woods Sunday afternoon to enjoy a picnic supper.

Mr. and Mrs. Henry Lewis and Dr. and Mrs. J. L. Hesselhuus attended a party near Goodell Tuesday evening given in honor of the newly-weds Adriant Bielefeld and wife. The bride was formerly Miss Hood.

Sam Harvey is leaving tonight for the east. He will work in a factory at Jersey City, New Jersey, which his uncle conducts. His wife and baby will remain in Klemme a few weeks longer for a visit before joining him in the eastern city.

Fred Griewe and family, of Reinbeck came Monday for a visit with relatives and friends in this vicinity and also to take in the camp meeting at Garner this week. They are taking a two week's vacation and will also go to Minnesota for a visit with the John Griewe family.

The Boy Scouts hiked to the woods southeast of Klemme last Friday. They took some tests, one of which was the cooking test. To pass this test it was necessary for hem to cook a quarter pound of steak and roast two spuds without utensils. The boys say the easiest part was the cooking, and not the eating of the scorched beef. Our office devil was among the victims, but he survived, althoug complaining of a "tummy-ache" the next day.

ns Made For Big Celeration July Fourth

EARLY ALL COMPLETED R BIG CELEBRATION

Committees Working Hard o Make It a Success

arious committees are hard formulating plans and gett- ything in readiness for the th of July Celebration to be Klemme this year.

oings will be gin in the and the first big event will rade which has been chang- o'clock, so be on hand to as it promises to be one of ever put on here. At least e floats will be in the par- ell as clowns and other fun- cters.

nty-five piece band will be all day long to furnish the d some good concerts will one at noon during the big nner at the park. And that us, we want to telll you to ur picnic dinners if possible a big crowd will be in this the Fourth that it will be le for all to get a full meal ave been practically assured e of the ladies organizations e a cafeteria dinner and a nd they can take care of a mber.

A Fast Ball Game

ba ll game has been lined een Belmond and Garner. promise you a real fast game of the teams are strenght- for the game as they will a large purse. Baseball see a real treat here the 4th all game which will be held ew ball park being laid out ngside Addition.

rse Shoe Tournament

the big attractions for a ny will be the big free for se Shoe Tournament. Ben the champion of Hancock nd who made such an ex- howing at the Iowa State fall will have charge of the ent here but will not take in the contests. The Nat- es will be observed in lay- the grounds, etc. A fast rt will be laid out. The manner of playing will be as those used in conducting and county contests. Every l play one game with each ther teams for a 21 point Teams scoring highest will first money, a prize of $5; am $2.50; hird tteam $1.50 fourth team $1.00. After rnament Ben Grieman will lan the winner, or any oth- picked for the best two out games, as an added attrac- hibition game which will be eing. The tournament will out one o'clock in the after- t the grounds will be open oon for practice and con- nyone can enter the tourn- registering on the Fourth.

edy Wrestling Match

wrestling match will take the evening between the n Middleweight of Hancock Hans Willer. who will go on with the fast Young Prehn City, claimant of the Mid- t Championship of Iowa. It ssured that these men will e mat the night of July 4th. personally talked with both tlers and they are anxious each other. They are both d well matched—they will ne of the best matches that been witnessed in this part ate. Wih these men on the ram we can assure the fans low the wrestling game, a dy match, full of thrills as nd Prehn work fast from finish. A good preliminary haps be put on in connec- the big event.

mentioned last week there lots of street sports, attrac- ncessions, etc. Further de- l be given later. The biils tain a full program of the watch for them.

ectacular Death Leap

Devil Duke" will make a n Klemme's tallest building vening. The Dare-devil will m the battlement of a build- ing blind-folded into a canvass held by twelve strong men. Should he miss the canvass he would meet certain death when striking the cement sidewalk below. He turns a complte sommesault in the air before striking the canvass.

Balloon Ascension

Something entirely new is the big paper balloon race which will take place on the main street at dark when a great number of balloons will be sent skyward at the same time Something new and something different and especially enjoyable to the children

Bowery Dance

An open air bowery dance, under canvass, a good floor and an excellent five piece orchestra will furnish plenty of amusement during th day and vening for those who delight in clean and lively dancing. This will be one of the good attractions which will draw a big crowd of young people.

Band Concerts

We have not learned which band the music committee have selected as they are dealing with a number of good bands and one of the best will be selectd for the day. The band is scheduled to give a noon entertainmnt, possibly a concert in the afternoon and also a concert in the evenig at sevn o'clock, as wll as furnishing music throughout the day as required.

Watch For The Bills

In a few days, as soon as all the various committees have given us their full report the Times Print Shop will get out the big bills giving the entire day's attraction. Watch for hem—they will be posted in all the nearby towns.

Make your plans to celebrate the Fourth in Klemme— a good time is assured.

MRS. W. C. SCMIDT PASSED AWAY WEDNESDAY AFTERNOON IN KLEMME

Was A Victim of Diphtheria

Mrs. William C. Schmidt passed away late Wednesday afternoon after a few days severe illness suffering from diphtheria.

As this was a contagious disease case it was neccessary to make burial at once and so her remains were laid at rest in the Klemme Cemetery Wednesday evening.

A memorial service will be conducted at the Reform Church Sunday morning by Rev. Depping in her remembrance.

The obituary will be published in next week's issue of the Times.

The bereaved father and the children have the sympathy of the entire community in their sorrow.

RABIES REPORTED BY A FARMER IN MADISON CO.

—Winterset, Ia., June 21.—

Following an outbreak of rabies a heard of cattle here County Attorney L. Percival has ordered all dogs in the townshiq killed or restrained. The outbreak occured on the farm of H. B. McCall in the southern part of the county.

The county attorney said that a head of one the affected animals had been sent to the State University at Iowa City and the official there had pronounced the case one of rabies.

McCall said that one of his cattle had been acting queerly for some time. He did not think anything of it until a few days ago, when a veterinarian was called and an animal killed and the head sent to Iowa City for inspection.

WITHIN AN INCH

Pat was the man who did all the odd jobs about the place, and owing to petty thieving, his employer instructed him to get a good yard dog.

Pat was out all day and in the evening landed home with a dachshund

"What on earth have you brought along, Pat?" queried his employer.

"Well, sir," said Pat, "he's the nearest I could get to a yard; he's two feet elivin inches long."—Minneapolis Tribune.

CELEBRATE IN KLEMME

Klemme will celebrate July Fourth this year and a cordial invitation is extended to all to spend the entire day in Klemme.

There will be something doing all day and amusement has been provided for both the old and the young.

A big Industrial Parade of Floats will take place at ten o'clock and from that time on the day will be crowded with events.

Bring your picnic dinners and let your family enjoy themselves at the shady park and eat during the noon band concert.

Fast ball game, exciting street sports, a big horse shoe tournament, open air dancing day and night, wrestling match, fun all the time.

Bring your family and friends, Klemme extends a royal welcome to all.

IOWA'S BEAUTY SPOT

Piloot Knob, one North Iowa's strongest claims for distinction in natural beauties , is one of the strongest arguments advanced by nature admirers of Iowa in the "See Iowa First" campaign. The Knob was the destination of the Conservation and Nature Study department of the Women's Civic league picnickers this week.

Unlike any other spot in Iowa there is no finer view anywhere. It's altitude is only about 1500 feet and approximately 300 feet above the valley which it overlooks. It is situated about four miles east of Forest City, near the county line road which separates Winnebago and Hancock counties.

Standing on the top of Pilot Knob one feels that he is on the very top of Iowa, and according to geologic lore it is literally true, for it is part of the eastern moraine of the Wisconson drift.

From the top of the Knob a larger area of fertile land may be seen than from any where else on this earth. It is a panorama of weath-producing land that makes one proud of Iowa. The view in every direction is limited only by the short range of human vision. With a good glass one may overlook 10 railroad stations and the valley of Lime Creek for miles.

Within the park area of the Knob there are other mounds of less altitude and amoung these hills a small lake nestles so like a brooding bird on its nest that many fail to find it. It has abrupt shores and no outlet unless the water is very high. It is bordered by a variety of native trees and shrubs, where thesly vireco builds her nest. Aquatic fowls frequent the waters to feed and breed in the tall grasses nearby. Rare plants and shells are found here, and the lotus lily in full bloom at this time moves gently to and fro with the passing wind.

Dead Man's Lake it is called, but it is a gem in Nature's diadem, placed there when the grinding mill of God ceased in these parts.

Within the park are trees native of this region—walnut, ash, basswood, wild cherry, burr oak, Jack oak, red oak and others. In addition to these there is a nice grove of white oaks, found nowhere else in this region.

The rare species of pond lily and the white oak grove were two of the great inducements used in acquiring the Knob for a state park, which it now is.

The Knob was used as a gathering place of many Indians of various tribes in years past and once a year under the leadership of the chief they walked before sun rise to the top of the mound and greeting the rising sun chanted a refrain, "I-o-wa, I-o-wa," meaning "beautiful." Here on the mound was then held the great Indian Council.—Mason City Globe-Gazette.

Nobody knows why frogs croak but probably for the same reason that men croak.

MABEL NISSEN HIGH SCHOLAR

Was Awarded Medals For Citizenship and Scholarship

Mabel Nissen, daughter of Mr. and Mrs. George Nissen, received the high scholarship medal offered by O. C. Cobb to the student getting the highst average in all subjects for four years of high school work. Her average for the period was 96.6, which ranks amoung the best in the history of the school.

Miss Nissen also received the citizenship Medal awarded by the Knights of Pythias to the student receiving the highest average in American history and Ecounies. Her average was 97 3 this also being among the highest averages in these subjects which a local senior student ever secured. This is the first time that one student has ever been awarded both medals

These medals were awarded to Miss Nissen at the commencement exercises Friday night.

Edna Beurer as been awarded the silver medal given by the Knights of Pythias to th girl in the junior high school receiving the highest average in American history and civics for the year. Her average was 98.

Dillon Evers has been awarded the bronze medal given by the Knights of Pythias to the boy in the junior high school receiving the highest average in American history and civics during thhe year. His average was 95.

17 YEAR LOCUST COMING

Brood five of the 17 year locust, which appeared the last time in Iowa in 1905, are scheduled to repeat their visit the latter part of June, according to the Iowa Stae College entomologists.

The locusts usually appear in immense swarms and their shrill cries can be heard for some distance. They live but a short time, the females laying their eggs in the bark of the smaller twigs and branches of trees. The female slits open thhe bark with her sharp ovipositer and age to the young trees.

A BEAUTIFUL THOUGHT

Not only the currency but the heads in Russia need deflation.

Voters Defeat Bond Issue At Election Monday

FORD TURNES OUT SIX MILLIONTH MOTOR

Next One Comes Through Five and One-Third Seconds Later.

Ford motor number 6,000,000 was lifted from the assembly line in the Highland Park Ford Plant at 9:14 a. m. May 10. Just Five and one-third seconds later numder 6,000,001 was finished.

The unuasily heavy demand for Ford cars and trucks at the present time has necessitated the building of 5,400 motors daily. Those are shipped in carload lots to the various Ford assembling plants throughout the United States.

The first model "T" Ford motor was completed on October 1, 1903; number 1,000,000 left the assefbly line December 10, 1915; and numbei 5,000,000 came through May 23, 1921.

Although the Ford Motor Company turned out a number of different models prior to 1903, the present numbering system began with the model "T".

SUNDAY DANCES DOOMED

The movement to curb the decration of the Sabbtah day is spreading throught the state and gaining considerable momentum.

The World War has been responpublic are being aroused as to the demoralizing conditions that are prevailing and are bent on "swinging the pendulum backwards.

On some things we assume a liberal attitude not a staunch advocate of sumptuary laws. We never beleived there was a neccersity for flagrant violations of the moral code and statutes governing the proper observance of Sunday.

Those who indulge in dancing ought to be able to have their wants satisfied in six days of the week without calling Sunday to their rescue.

Sunday dancing is one of, if not the worst evil, in the breaking of the Sabbath Code. Its influence in demoralizing and a menace to g ood morals and a clean life.

The Federated Lutheran Brotherhood of Cerro Gordo, in session at Mason City last Tuesday appointed a committee consisting of E. W. Shilling and Rev. C. A. A. Jensen to lodge complaints against the continuation of the Sunday dances at Bayside. The county attorney has no other alternative but to enforce the provisions of the law and if he does his duty, Sunday dances at Bayside will soon be a thing of the past We await developements.

Clear Lake Mirror.

—T—

COAL AND OIL FOUND

Banker T. H. Thompson Owns the Land That Promises Big Returns

Uu in the north end of Winnebago county, there is a flurry over the discovery of coal and oil, and an expert geologist who is on the job holds out great hope to the people of that territory. Here is where this matter is brought close to home for us. The farm whereupon this coal and oil is supposed to be located is owned by our friend Banker Thos. H. Tompson of Miller. Mr. Thompson's holdings are located not far from the little town of Vinge. According to the reports from there, some thirty odd years ago, the presence of coal and oil was proven beyond any doubt, but at no time since until the present did people become sufficiently interested in the matter to spend money to acertain to what extent the deposits exised In digging a well on the farm that Thompson now ownes some years ago, crude oil was apparent at the depth of about twenty-five feet This the geologist claims was forced up from a depth of hundreds of feet through crevices in the rock formations below. If drilling another well in the same section. a vein of coal from 4 to 7 feet in deph was struck. Our friend "Tommy" may yet be a coal baron and a competitor of John D. —Garner Leader

LOSES OUT BY 35 VOTES

Sentiment Seems to be For New School Building Rather Than To Remodel Old Building

The special school election held at the city hall Monday to vote on the $15,000 bond issue, brought out a goodly number of voters, both the men and the women.

The proposition was downed by 35 votes.

Many had hoped that the voters would accept the bond issue so that the school could be enlarged to take care of the full twelve grades but this plan will now have to be abandoned.

For A New Building

Many who were apposed to the bond issue claimed that they were not in favor of spending any more money to repair and enlarge the old school building, but that if the proposition of voting for a new building had been submitted that they would support the move. In a way it is perhaps a good enough idea but we are of the opinion that it is merely a "stall' and that if the proposition were really submitted that it would also be downed. But of course no one can tell the sentiment of the entire community and such a thing might carry.

Klemme needs a better school we will all admitt and something must be done before so very long as the present school is inadequate to care for the growing needs of the community, and so if it is a new school that the people want the sooner the proposition is submitted to the voers he better it will be.

We would not at all be surprised if a petition were circulated within a few months asking the board to give the people a chance at voting on a new school house proposition, we hope so at least. Klemme has a wonderful town—outside of the present school and this alone gives us a black eye to people who otherwise would move here and make Klemme their home. but when a town has a poor school there is no object for a family to move here to educate their children. Understand, our school system is fine as far as it goes, we always have good teachers and our students make good records, but, as there are only eleven grades the school is not up to standard and the full course of study cannot be installed.

If its a new building you want lets get down to brass tacks and vote it in!

NOTICE

A meeting of the Farmers Elevator Stockholders will be held at the Idle Hour theatre July 1st at 2:00 P. M. This is the Annual Meeting for the election of officers and distribution of dividend checks. Every member is urged to be present.

METHODIST EPISCOPAL CHURCH

Arthur B. Gedye, Pastor

We were glad to see you last Sunday, come again. Some familiar faces were missed, don't let the hot weather get you; it's God's weather. Thank him for it and come and worship the Giver of All.

The W. F. M. S. met this week on Thursday at the home of Mrs. Tom Nelson, Jr.

Religion ought to be a man's chief concern; its the only thing you can take with you when you leave the things of this world. Jesus said, "Seek ye First the Kingdom." The Kingdom is here now; and all that will be left when this world caeses to be will be the Kingdom. "Be a Kingdom citizen." Jesus shall reign yes and is reigning in many hearts. Let Him reign in yours, give Him the right of way.

Arthur B. Gedye, Pastor.

Spare the rod and spank the child. After the heat of the battle is over a man often wonders why there was a battle.

Crying over spiled milk may make an impression that will prevent you from spilling more milk.

Finds Clues to "Lost Atlantis"

Englishman's Discoveries Renew Interest in Story of Plato's Submerged Continent.

TAPESTRIES LIKE PHARAOH'S

Believes Indians of San Blas Hinterland Are Survivors of Race Which Inhabited Atlantis—Had Narrow Escapes.

Colon, Panama.—The Lost Atlantis has bobbed up again, this time in Panama. An Englishman, Mitchell-Hedges, recently made a two days' journey into the mountains of the San Blas hinterland, and came back with his suspicions that the Chasquanaqua Indians are the survivors of the once proud inhabitants of Plato's submerged continent.

He brought the suspicions in the shape of tapestries with designs so much like those of Pharaoh's wives that he must have the experts of the British museum and of all the world to pronounce upon them. Incidentally he put President Harding's name on the map in the shape of a "new" mountain, some 3,000 feet high; King George got another of similar altitude, and Doctor Porras a whole range.

The explorer had the usual narrow escapes from imminent death by sea and land, and has set tongues wagging about the likelihood of the isthmus being the tail-end or head-end of the Atlantean continent.

Both Sides of the Case.

Although an American ethnologist, William H. Babcock, has buried Atlantis for the last of many times in his present book, "Legendary Islands of the Atlantic," published by the American Geographical society, this latest resurrection is likely to stir the protagonists of the missing link between Gibraltar and Panama to life again also.

The biggest friend of the long-lost isle is a German, Herr Prof. Frobenius of Berlin, who traversed much of West Africa to see if there were not some leavings of the lost there, and he professed to be quite convinced that there are. Professor Weiner of Harvard, from a study of the similarities of plants and animals of Africa and South America, inclines to the hypothesis that the sons of Ham once passed dry-shod from the Senegal to the Amazon, or vice versa.

It is understood that if Hercules had not gotten home-sick when he had the job of holding up Mount Atlas for a while he might have beaten Columbus by some 4,000 years, and that too, by walking over to Colon, but the Greek explorer had enough of it with that little job around Morocco, so he set up his pillars and went home to his wife, thereby leaving dissension among antiquarians for 50 centuries.

Tapestries in Evidence.

Mitchell-Hedges comes as the climax of a number of explorers who have been dipping into the San Blas problem, and maybe he has the key. He has the advantage of the labors of many predecessors in his task. He has the tapestries, and they look like the work of the Hebrew children who made clothes for Rameses—or maybe, he says, they are like Aztec work. At any rate they are like the work of other people than mere Indians; and how could those mountaineers get those designs except by having them handed down from the folks who crossed the sea when it wasn't any sea at all?

Moreover, the men in the mountains wore great big earrings of solid gold. Who taught them to dig for gold? The problem is truly formidable, and one may watch the ethnological journals now with interest.

HANDY MAN OF CAPITOL

Must Pay $10 to Enter Germany

Foreign Office Now Charges Same as United States Would Tax Entrants.

VEXATIONS BESET TRAVELERS

American Tourist Who Crosses Europe Must Be Prepared to Pay $10 to Cross Every Frontier—Resorts Are Crowded.

Berlin.—The German foreign office is now charging foreign visitors to Germany the same amount for passport visas that the respective governments of their countries ask of Germans. Because exchange fluctuates so rapidly the foreign office fixes the number of marks the foreigner must pay anew each month. This means that, while Austrians can now enter Germany on paying the equivalent of 15 cents, Americans must be prepared to pay at least $10 to cross every frontier, and if one should have failed to have fulfilled formalities he is burdened with absurdly heavy fines.

Traveler Objects.

A recent traveler coming from Italy to Munich by way of the Austrian strip of territory through Salzberg was asked by the Austrian authorities to pay the equivalent of $20 for their little rubber stamp. Objecting to paying this amount, the traveler finally induced the authorities to reduce the amount to the customary $10.

Difficulties by both Polish and German governments in crossing Prussia and the Danzig neck of Polish territory will continue to take the pleasure out of travel and to hamper business in this corner of the world. Both states demand full sets of special visas and the universal $10 payment of Americans. The Poles rarely hesitate in the corridor to turn out all who fail to observe this letter of the law, whatever their nationality is.

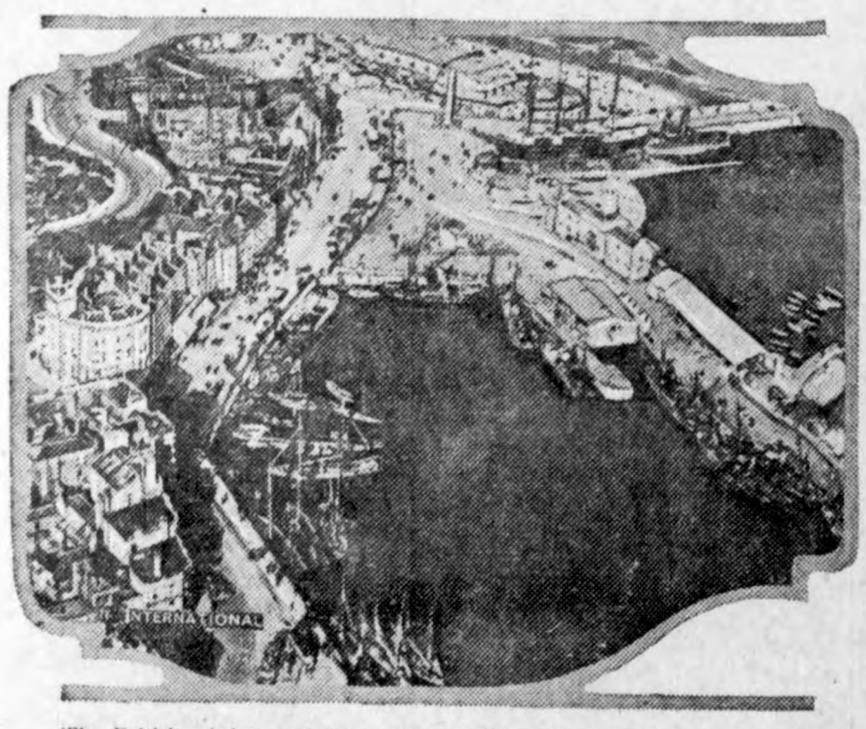
Now that reparations, railroad and other international commissions are meeting it is time that another one meets and determines ways to eliminate petty vexations to travel.

German summer resorts, and especially bathing beaches, will be particularly overcrowded this summer, according to the statements which German hotel proprietors make. They are trying to keep as wide a range of prices as possible for all sizes of pocketbooks, but the steady increase now in cost of living is forcing all prices skyward. The range for rooms in the smaller bathing places today extends from 100 to 800 marks, and for Americans from a half again to double this amount, or in other words from 75 cents to $5.

Ordinarily the German hotels and pensions made pension rates. Now, owing to the wide fluctuations in food prices, they give a price for rooms and leave the amount they charge for meals open.

It is possible at most of the summer resorts to secure three and four rooms with kitchen at prices around 12,000 to 20,000 marks, or in dollars from $400 to $700 for the entire three months' season.

Here Is a Fine Harbor for Sale



The British ministry of transport is looking for a purchaser of the harbor of Ramsgate. This semi-developed harbor is not needed by the ministry for governmental shipping, and as a result has been put on the market. The Ramsgate corporation, representing the township, has the matter under consideration but probably will be unable to undertake the purchase because of the immense financial investment necessary for further developments. The photograph shows Ramsgate harbor and part of the town.

REMOVE TUMOR FROM BRAIN

New York Girl Expects to Have Sight Restored After Unusual Operation.

New York.—An operation described by surgeons as "quite remarkable" has been performed at Ann May hospital, Spring Lake, N. J. Dr. K. Winfield Ney of New York, chief of the neurological-surgical division of the United States army medical corps, removed a tumor from the region of the pituitary gland of the brain of Miss Marian Vogel of Asbury Park. The girl is the daughter of Mr. and Mrs. Otto Vogel.

The tumor was the size of a small walnut. To reach it an opening was made in the skull and the left lobe of the brain was lifted. Miss Vogel was on the operating table for several hours, during which a blood transfusion was necessary. The tumor had caused partial blindness. A complete recovery is expected.

NEWS REVIEW OF CURRENT EVENTS

Big Row Over Sale of Liquor on Vessels Controlled by the Shipping Board.

DRYS AND WETS BOTH ANGRY

Controversy May Hamper Ship Subsidy Legislation—European Experts Meet at The Hague—Russia Is Recalcitrant—American Federation of Labor in Convention.

By EDWARD W. PICKARD

"BIGGEST bootlegger in the world" is what they are calling Uncle Sam these days—and just because alcoholic beverages are sold on passenger vessels owned and controlled by the government, outside the three-mile limit.

The storm of controversy, which has its center in Washington, is amusing to the people generally, but it is a mighty serious affair for Chairman Lasker and the other members of the United States shipping board, who are trying to compete with the passenger liners of other nations. And it is likely to be equally serious for those who favor and are trying to pass ship subsidy legislation.

Prohibition, like politics, makes strange bedfellows. United in the attack on Chairman Lasker's policy are the Anti-Saloon league, the dry leaders in congress, the Association Against Prohibition and such eminent wets as the men of the Busch family, brewers of St. Louis. The Busch men, indeed, started the row by letters written while on a shipping board vessel on which drinks were sold, openly and at moderate prices. Their wail, of course, is directed against a policy that prevents their brewing and selling beer while it permits the selling of German and English beer on government-owned ships. The Association Against Prohibition insists that the Volstead act be enforced to the limit, in the hope and expectation that it will thus be proved so unpopular that it will be rescinded. Wayne B. Wheeler, counsel for the Anti-Saloon league, reiterates the league's position concerning the three-mile limit, holding that liquor cannot legally be sold on American vessels anywhere; but he says the Busch attack is "simply an effort to discredit prohibition and create sentiment for the sale of beer," and he thinks the shipping board can take care of itself. Prohibition Commissioner Haynes admits there has been a difference of opinion as to whether the Volstead act applies to vessels outside the three-mile limit. That is does not so apply is held by counsel for the shipping board, according to Mr. Lasker, and he adds:

"Both from the standpoint of legal right and from the standpoint of the life and security of our national merchant marine the shipping board has permitted, and will continue to permit, the serving of liquor on its ships, so long as foreign ships are allowed to enter and depart from our shores exercising that privilege."

IN CONGRESS the results of the controversy may be more serious because, as has been said already, the ship subsidy legislation is likely to get mixed up in the tangle. Senator Willis of Ohio, Republican, and one of the most ardent dry leaders, said it was about time for the "prohibition navy" to turn its guns on the American merchant marine, and that the ship subsidy bill about to come up offered an excellent and timely legislative vehicle for action to end the sale of liquor on ships operated by the government.

Senator Jones of Washington, who is just as arid as Senator Willis, but who is also chairman of the commerce committee, made energetic protest against the Ohican's proposal. He declared that the prohibition issue would complicate seriously the ship subsidy legislation and imperil its success. This is also the opinion of leading Democrats in the lower house, therefore they are gleefully getting ready to offer amendments to the subsidy measure providing that subsidies shall not be paid to shipowners who sell liquor on American ships outside the three-mile limit.

So long as Mr. Lasker is able to maintain his position—that an American ship is not American territory after it passes the three mile limit—thousands of thirsty and grateful Americans will patronize the shipping board vessels. If and when he is driven from that position, the thirsty American travelers will transfer their patronage to ships that fly some other flag than the Stars and Stripes.

PRESIDENT HARDING is so insistent on the passage of the ship subsidy bill, which has been re-drafted by the house committee on merchant marine, that he has warned congress its failure in this respect will certainly lead him to call an immediate extraordinary session. The President has also let congress know that in his opinion the tariff is the most important matter before it, and that it should have undivided attention until it is disposed of. Then, and not until then, he thinks the soldiers' bonus bill should be taken up. McCumber and other senators who are pushing the bonus legislation showed a disposition to disregard this advice from the White House and went ahead with plans for sidetracking the tariff in favor of the bonus this week. They believe the latter measure can be put through without a long debate.

FLAG DAY was observed generally throughout the country and among the celebrations was one especially worthy of note. This was in historic Fort McHenry where was unveiled the monument erected by congress to Francis Scott Key, author of the "Star Spangled Banner." The handsome shaft stands near the spot where floated the Flag while Key was writing his immortal lines. President Harding delivered a graceful dedicatory address.

ONCE more the European experts are gathered together to determine the best method of dealing with Russia and accomplishing the regeneration of the nations suffering from the effects of the World war. This time they are at The Hague, and for the present no representatives of Russia and of Germany are admitted. When a plan has been settled on, the soviet government will be asked to send delegates to take part in pourparlers, beginning June 26.

First the attitudes of Great Britain and France must be harmonized. At present these are diametrically opposed. The British want Europe to forget the war; to do away with international debts; to conciliate the vanquished states and make concessions to them; to jolly soviet Russia; and generally to base the new Europe largely on economic interests and compel the smaller states to enter into agreements accordingly. The French, as desirous as the British for peace and stable conditions, believe the war cannot be forgotten; and that international obligations should be fulfilled as far as possible. They want the new order maintained by physical force and the alliances re-enforced and gradually extended to include all of Europe. As for Russia, they insist, as they did at Genoa, that suitable guarantees must be supplied by the soviet government, and the memorandum of May 11 withdrawn before official relations are renewed.

It is probable that a proposal will be made to Russia that a commission be permitted to investigate economic condition there. If they maintain their present attitude, this will likely be rejected. The bolshevik leaders are quite unyielding, asserting that their attitude at The Hague will be the same as at Genoa, and that the only possible concessions to foreign capital will be on the basis of the recently enacted laws governing private property. Their publicity man, Karl Radek, said the conference at The Hague would prove a hindrance rather than a help, and continued:

"If we are not to consider the declarations of Hoover and Hughes and the memorandum of Poincare as empty threats, what they ask before the pourparlers with Russia is Russia's withdrawal of the memorandum of May 11 in which the principal position of Russia was expressed.

COURT TRAINS HAVE APPEARED

Economy No Longer Keynote in British Court Functions.

Only Two Yards, However, Necessary to Gain Sanction of British Rulers—Fashionable Dressmakers Happy Again.

London.—Economy is no longer to be the keynote of court functions at Buckingham palace. No more "economy courts," as they were called, are to be held. These were established by their majesties after the war to set fashionable society a much needed example in curbing extravagance.

The seal of royal approval again has been bestowed on court trains. Indeed, no woman can be presented at court who does not wear one. Of course, as a man the lord chamberlain cannot presume to be an expert on fashionable feminine dress, but it is one of his many official duties to lay down the rules and regulations to which women must conform at the most exalted of court functions.

That is one of the things for which he is paid $15,000 a year. He has to be a peer, besides, to qualify for the exalted office which is accounted among the political plums that the prime minister has to give away. The present lord chamberlain is in the top class of the peerage. He is the duke of Atholl.

By restoring the court train he has earned the blessings of the fashionable dressmakers. But they would have lengthened their blessings if he had lengthened the trains. Before the war three yards was their regulation length, while Queen Victoria didn't consider four yards too long. By the new regulations they need be only two yards in length and should not extend more than nineteen inches from the heel of the wearer when standing.

To walk backward before royalty in a train three yards long without getting tangled up in it, imposes a severe tax on the agility and skill of not a few socially ambitious women. Queen Mary is a very kind woman, and she would naturally wish to spare her sex making exhibitions of themselves. Hence she was in favor of the shorter length for trains.

American-Made Cheese Now Invading Switzerland

Washington.—Switzerland, the home of the cheese, is being invaded by the American product, according to a report from Consul Murphy at Lucerne, the Commerce department announced recently.

Constant improvement of American types of Swiss cheese, he said, has had much to do with their introduction into Switzerland and other new markets and the Swiss cheese has had to make room for its foreign relative.

BUTTER MAKES HIGH SCORE.

Competion Grade 93.

65 Percent of Entries in Monthly

Sixty-five of the entries in the monthly state butter scoring contest, held this month at Dyersville, scored 93 percent or better. Fifty seven tubs of butter were entered and37 tubs averaged better than 93 percent.

The contest in the whole milk division wa won by Otto Wenger, buttermaker at Strawberry Point with a score of 95½. E. A. Bollman of McGregor won the gathered cream class with 95 points.

A growing interest in the monthly contest is reported by A. W. Rudnick. Iowa State College extension and others interested in the diary industry, as well as buttermakers, Mr. Rudnick.

Four hundred and fifty-two students received degrees or certificates at the fifty-first Iowa state College Commencement last week.

A fool expects gratitude — a wise man, cash.

Geese Are Attracted by City and Captured

Lemoore, Cal.—Attracted by the street lights shining through the dense fog, thousands of wild geese took refuge on the city streets, their cries keeping residents awake the greater part of the night. Street cleaners ran home for guns and killed a number of the birds. People living in the downtown district said hundreds of the birds were sitting on the pavements while the air was alive with them. Late merrymakers added hunting to their sport.

FIRST GERMAN SKYSCRAPER

City of Hamburg to Have 16-Story Building—More Expected to Follow.

Hamburg, Germany.—The first skyscraper in Germany will soon be constructed in the old business section of Hamburg. It will be sixteen stories high, topping the highest building in Germany at this time by five stories.

Architects believe the construction of this building will institute the era of skyscrapers in Germany, and expect to see a number of similar buildings go up within the next few years.

Unusual difficulties must be overcome. The city water plant is equipped to furnish water to the eleventh story, and this brought up the question of fire danger and insurance, as well as the probability of financial loss in view of difficulties in renting offices on the five higher floors.

Despite these difficulties the promoters have secured permission to erect the structure, "provided the building does not destroy the architectural symmetry" of the streets.

TAKING BABY FOR AIRING

A typical Indian servant girl carrying her young charge in the popular Indian fashion, the baby carriage being still unknown in La Paz, Bolivia.

INDIAN TERROR NOW TAMED

Woman Now Greets "Agency People" With Kiss Instead of Tomahawk —Wants Auto.

Eufala, Okla. — Civilization gets them all; the old wild reservation Indians are fast passing.

One of the last of the old regime has just shown the devitalizing effects of the white man's habits.

Ellen Perryman, full-blood Creek woman, who was one of the principal leaders of the famous Snake uprising of the Creeks, has conferred with Indian agency officials at Muskogee in regard to the purchase of a "fliver."

She has now lost all of her animosity toward the "agency people," against whom she fought so fiercely. Instead of greeting them with a tomahawk, as she did in the days of the rebellion, she recently planted a resounding kiss on the cheeks of several of them—much to their embarrassment—and her husband, who accompanied her, seemed not to mind this caprice of his spouse in the least.

Ellen now lives on a farm in McIntosh county, and is contented and peaceful, it is said.

HARVARD ENTRANTS ARE FIT

Examinations This Year Show Young Men Are Remarkably Free From Bodily Ills.

Cambridge, Mass.—Young men entering Harvard this year were remarkably free from serious physical defects, Dr. Rogers I. Lee, professor of hygiene, found in examination, it was announced recently. Less than 1 per cent of the men examined were found to have neglected teeth, poor eyesight or enlarged, diseased tonsils.

Dr. Lee attributed the freedom from physical defects "to the thoroughness of the physical examinations of the schools, and to the intelligent interest of the laity in matters that concern the health of their children."

About 48 per cent of the freshmen and 54 per cent of the men entering the business school said they smoked.

NOTICE TO CONTRACTORS

For the construction of Drainage improvement known and designated as Drainage District No. 21, Hancock County, Iowa.

Notice is hereby given that the Board of Supervisors of Hancock County, will meet at the Court House in Garner, Iowa, on the 28th day of June A. D. 1922, at 2:00 o'clock P. M. to let to the lowest responsible bidder the contract for the work of construction for the drain in the proposed Drainage Improvement known and designated as Drainage District No. 21, of Hancock County, Iowa, said work to be let in sections specifying the work to be done and the time fixed for the commencement and completion of the same to-wit:

Section 1

Main Line 1350' 16" 5.80
1 Bulkhead 5 cubic yards
1 Brick Catch Basin with cover
800 Common Brick
Average haul about one mile.

All tile must pass the specifications for standard drain tile of the American Society for Testing Materials, tile in sizes 8" and above to be not less than 2' long.

The specifications state that where running sand is encountered, sewer pipe with joints caulked in jute shall be used and the bids must state the price in case such construction is used.

Work to be commenced thirty days from date of letting of Contract. Contract will be completed by September 1, 1922.

All the tile to be delivered at the ditch side subject to inspection and to be delivered only as ordered by the Construction Engineer.

Whenever the tile improvement is layed in existing ditches the average depth will be computed from the natural surface of the ground and the contractor will be required to backfill the trenches to the height of the natural surface of the ground so that the existing ditch will be completely filled.

All ditches and drains to be constructed in all respects in accordance with the plat, profile, and specifications of the District filed by the Engineer in the Auditor's office subject only to such changes and alterations as may be made as provided by law.

Sealed bids will be received at the office of the County Auditor of Hancock County, Iowa, up to one o'clock noon of the 28th day of June, 1922.

The price must be stated in the bid in figures, and permission will not be granted for the withdrawal or amendment of any bid after once presented.

All bids must be made at a fixed price per station of 100 feet for each size tile and also a fixed price for section complete in all respects including intakes and headwall and must also include the schedule of overdepth adopted by the Board of Supervisors of Hancock County and on file in the Auditor's Office for possible overdepth or underdepth beyond the average depth specified.

Bids will be received on any or all sections, for the tile alone, for construction work alone, or for both tile and construction.

The Board will at their discretion let the work as a whole or in sections to the lowest responsible bidder, reserving the right to reject any or all bids and also the right to adjourn time of awarding contract is reserved.

Each bid must be accompanied by a cash deposit or certified check in a sum equal to ten percent of the total amount of bid, as a guarantee of the good faith of the bidder.

ALL BIDS NOT MADE IN CONFORMANCE TO THE ABOVE REQUIREMENT WILL BE REJECTED.

The party to whom any contract is being awarded will be required to attend at the office of the Auditor of Hancock County, Iowa, within ten days after said award and execute a contract thereby agreeing to all provisions, terms, and conditions thereof and shall also file with the County Auditor a bond subject to his approval for a sum equal to twenty-five percent of the amount of the bid and in case the party to whom any work is awarded fails to enter into this contract and furnish bond within ten days as herein required. The deposit of such party shall thereupon become forfeited to Hancock County Drainage District No. 21, together with all rights under said award.

The deposit of the unsuccessful bidders will be returned to them within twenty-four hours after demand, and the deposit of the successful bidders will be returned to them upon their executing the contract and filing with the County Auditor the bond as herein required.

By order of the Board of Supervisors.

Dated at Garner, Iowa, this 7th day of June, 1922.

CHRIS JACOBS,
County Auditor.

FAIRIES

By IRENE BEERS

©, 1921, by McClure Newspaper Syndicate.

"So the fire fairies found the lost prince, and he and the forgotten princess were married and lived happily ever after. Now kiss me, Betty Lou, and let nurse put you to bed."

Betty Lou did so, reflecting that Aunt Louise was a most unsatisfactory storyteller of late. She would pause and stare into the fire as though she saw the fire fairies themselves, quite oblivious of her small niece. During the progress of being undressed and put to bed, Betty Lou recalled the joyous times she used to have with Aunt Louise—special trips to the wonderland of dolls, jars of barley candy and the jolliest automobile rides. Of course, those were mostly in Mr. Harrison's roadster, when tucked in between him and Aunt Louise, the car tore over miles of country road. And once there had been a picnic! Betty Lou sighed rapturously over the memory of it, and, sighing, fell asleep.

Meanwhile, Louise Birch, the best beloved aunt, sat frowning at the blue and red fire fairies, dancing impudently over the crumbling log.

"And they lived happily ever after," she murmured. "Yes, I will write to Wallie and put it in the fire. At least it will be a safety valve for my feelings. He'll never see it, so I'll just write exactly as I feel! It is seven weeks today that it happened. Surely he must have known there was some reason why I didn't keep that engagement—only he's too stubborn to ask for an explanation!" She reached back to the table for her writing case. "I'll write a couple of letters first and save Wallie's till last."

It was late when at last a letter, whimsically addressed to Wallace in care of the fire fairies, lay sealed on the little pile of letters, and Louise rose to crush a piece of paper to enliven the fire. It may have been the semi-darkness of the fire-lit room, or the blinding tears in her brown eyes, or perhaps the fire fairies themselves that saved Wallace's letter from the flames. At any rate, when she reached down a fumbling hand and, with a bitter little laugh, tossed a letter on the leaping fire, the envelope was addressed to Mrs. Lawrence Curtis and made no mention of fire fairies.

"Kind of a post-mortem for Wallie," she managed between sobs, and without a glance at the other letters, she went wearily to bed, determined to rout all thought of Wallace from her mind.

Mother forbade Betty Lou to so much as tip-toe into Aunt Louise's room. The home of the fire fairies of Aunt Louise's stories drew her over to the fireplace. There stood the big armchair where she and Aunt Louise had sat when the latter told of the adventures of the forgotten princess—and lying on the cushion was a little pile of letters, all sealed and addressed, waiting for stamps.

"Guess Aunt Louise wants these mailed," remarked Betty, fingering them curiously. "She'd let me stick the stamps on and put 'em in the box if she was awake. P'haps they're awful important. I'd better mail 'em."

"Now what do you think of that!" she expostulated as she laboriously deciphered "To Wallace, in care of the Fire Fairies." "Aunt Louise does believe in fairies. I told Billy so! Fire fairies don't bother with mail. The postman brings letters. She must have forgotten—Oh, goody, goody! I'll write the address myself. I can print 'most as good as Billy 'n he's nine."

Without further ado, she plumped down on the floor, and with many wrinklings of her small forehead she printed the well-known address, for Wallace lived right next door, except now, in the summer, when he was at the seashore. Now that Betty Lou considered, it seemed funny that he had not been to see them all summer, and it was September now. He used to spend lots of time at their house, and once she had heard nurse tell cook that she guessed Mr. Wallace was Miss Louise's beau.

Betty Lou mentioned this at the table, and mother replied that she must not mention Mr. Wallace while Aunt Louise was there.

The next night there was no "good night" story for Betty Lou. Aunt Louise seemed to have forgotten all about the fire fairies, although she had entrusted them with a very important letter. But, as Betty Lou could have assured you, the fire fairies never forget if you believe in them. They fly up the chimney, abroad in the world and bring you your heart's desire. Didn't Betty Lou have a new fairy tale book with colored pictures? Hadn't Aunt Louise kissed her small niece and told her that fairies really lived? For that afternoon Betty Lou had seen Mr. Wallace race up the drive and catching Aunt Louise in his arms, kiss her. And wasn't she to call him "Uncle Wally?"

"Guess you'll be flower girl, sure enough," said nurse to the radiant Betty Lou—and went out, leaving her to dream of the fire fairies.

Limiting the Sorrow.

"Did you never say anything you were sorry for?"

"No," answered Senator Sorghum. "I admit that I have been compelled to repudiate something I said. But that only left me in a position to be sorry for the chap who said I said it."

paratus that can be recommended for public use in laboratories and hospitals.

The bureau investigated the properties and possibilities of molybdenum, of which the United States possesses the largest known deposits, although the country is relatively poor in high-grade deposits of some other important alloying elements used in alloy structural steels, such as automobile steels. The bureau conducted studies directed toward devising means for utilizing extensive deposits of low-grade iron ores that cannot be smelted profitably by present methods. These studies included investigations of the low-grade iron ores of the Birmingham (Ala.) district, the manganiferous iron ores of the Lake Superior district, and the iron and steel situation in the Pacific Coast states.

The cost of production of zinc, with the standard retort process, is now so high that it endangers the position of zinc as a cheap metal. Plans have been formulated for an investigation of proposed methods for the electrothermic metallurgy of zinc, with a view to increasing the recovery of metal and lowering production costs. The results of an investigation regarding the losses of mines in the tailings of zinc metals in the Wisconsin district indicate that the use of concentrating tables of a certain type will greatly increase recovery. It is estimated that this practice would have added about $1,000,000 annually to the value of zinc output in this district, had it been in operation in 1917. Important results in the utilization of the low-grade and complex ores of copper, lead, silver and zinc, which constitute a great problem in the mineral development of Utah, Colorado and other Rocky mountain states, are promised by the utilization of the chloride volatilization process. The sulphur dioxide leaching of porphyry copper ores of Arizona holds the promise of important developments for the mineral industry of the Southwest.

Recovery of Coal From Refuse.

As about one-quarter of the bituminous coal produced in the United States is used in industrial power plants, the waste of unburned coal and coke in the ashes from boiler plants has been investigated by the bureau. It has been possible to recover the greater part of the unburned fuel by washing the ashes on a concentrating table. As the result of a study of coal washing problems in the state of Washington, one mine has built a table washing plant to treat a pile of refuse amounting to more than one million tons, estimated to contain 200,000 tons of recoverable coal of coking quality.

The bureau conducted studies regarding the use of liquid oxygen as an explosive. In co-operation with the Department of Agriculture an investigation was made of the use of cellulose from corn cobs in the manufacture of dynamite. Investigations were conducted to determine the best and safest conditions for the industrial use of 13,000,000 pounds of picric acid, held as a surplus by the War department. During the year the bureau called attention to the danger in using certain low-grade foreign detonators, which had been coming into the country in large numbers.

A universal gas mask has been developed by the bureau for protecting the wearer against all poisonous gas not exceeding 2 or 3 per cent concentration in air where a safety lamp will burn. A fireman's gas mask for the use of train crews in railroad tunnels was devised. Investigations made in connection with the problem of ventilation of vehicular tunnels showed that from 20 to 30 per cent of the heat of the gasoline used as a fuel for automobile engines is lost in the form of unburned gases in the exhaust, due to improper carburetor setting.

Investigations at the ceramic experiment station at Columbus, Ohio, indicate that some American clays will yield products closely approaching the English china clay. At the same station it has been demonstrated that better graphite crucibles can be made with the use of domestic bonding clay than have hitherto been made with imported clays.

Classifying Export Coals.

During the year the bureau, in cooperation with three of the largest seaboard coal exchanges, developed scientific systems of classifying export coals into pools by systematic sampling and analysis to supersede the arbitrary classifications used in war time. Further progress was made in the investigation for preparing and utilizing lignite, which constitutes the greater part of the nation's fuel resources.

The bureau completed work on preparation and analysis of special alloy steels for the navy. A comprehensive report on recent developments in electric brass melting was finished.

Methods for preparing caustic magnesia were investigated, which determined that high-grade magnesia can be made from some varieties of magnesite hitherto believed to be unsuitable for this purpose. The bureau investigated dolomite as a substitute for the more costly magnesite in preparing refractories, and demonstrated that there can be obtained from Ohio dolomite a product superior in magnesia content to imported Canadian magnesite.

More experimental work on mining explosives, with reference to increased safety and efficiency, was performed. Plans were initiated for an international conference on the standardization of mine rescue apparatus. Methods for reducing losses of anthracite in mining operations were studied. Timbering methods for metal mines were instigated.

In the course of the year the bureau trained 12,525 miners in rescue and first-aid methods, the largest number so trained in any fiscal year since the beginning of the training work.

OIL EVAPORATION CAUSES BIG LOSS

Represents About 3 Per Cent of Total Gasoline Production of Country.

IS VALUED AT $26,840,000

Report of the United States Bureau of Mines Tells of Many Other Investigations Made During Last Year.

Washington.—Investigations conducted by the United States bureau of mines, in the course of a special effort to aid the mineral industries to reestablish themselves on a safe basis to meet the renewed foreign competition and the changed conditions of supply and demand of the post-war period, point the way to the possible saving of vast sums through the application of improved methods in the production of various mineral materials, according to H. Foster Bain, director, in his annual report, just made to the secretary of the interior.

An investigation of losses of crude oil through evaporation in storage and in transportation, conducted during the year by the bureau, disclosed losses of startling magnitude. It was found that in the few days in which crude oil is stored on the lease before being taken by the pipe line, the aggregate loss per year from evaporation amounts to about 122,000,000 gallons of gasoline in the mid-continent field alone. This has a value, at 22 cents a gallon, of $26,840,000, and represents about 3 per cent of the total gasoline produced in the United States from all fields and all sources. The bureau found that a large percentage of this loss could be prevented by the use of efficient equipment.

The bureau of mines has pointed out the considerable losses which have resulted from the failure of many refineries to recover gasoline from condensed still vapors. The significance of this investigation is shown by the fact that one refinery in the mid-continent field is now recovering from still vapors approximately 400 barrels of gasoline daily which, before the installation of this equipment, was either lost or burned as fuel under the boilers and stills. The value of fractionating towers at petroleum refineries, by means of which some companies have increased the yield of gasoline from crude oil by as much as 5 per cent, or 16½ per cent of the total, is now generally recognized.

Low-Pressure Waste.

Large quantities of gas are now being wasted in the Osage Nation in Oklahoma because of low-pressure conditions, and the bureau of mines is investigating the feasibility of utilizing this waste gas by the use of low-pressure burners for oil-field boilers. The demand of the export market for "sweet" gasoline led to the development of a process for treating gasoline to remove the objectionable sulphur compounds, by which treatment some grades of American gasoline heretofore objectionable were made suitable for export.

Under the arrangement by which supervision of the drilling and production of oil and gas on the public lands is vested in the bureau of mines, the bureau has supervision of about 100 producing oil properties, which are producing at the rate of about 12,000,000 barrels of oil per annum. Even at the present reduced price of oil, the government royalty from this should total perhaps $2,000,000 per annum. A special process, devised at the San Francisco station of the bureau, for cracking heavy oils and tars promises the recovery of large yields of gasoline and other lighter products, hitherto regarded as unrecoverable. Investigations made by the bureau in Colorado and Utah indicate that the oil-shale deposits of the Rocky mountain states contain a potential fuel supply of almost unequaled importance.

The experimental helium plant at Petrolia, Texas, conducted under the authority of the army and navy helium board, was in operation during the year at various times, and helium was produced for short periods. A study of the practicability of storing this rare and noninflammable gas in mine workings was made at the bureau's experimental coal mine at Bruceton, Pa. At the cryogenic or low-temperature laboratory in Washington, D. C., liquid air in quantity is now being produced. The primary object of this laboratory is to investigate gases and liquids at low temperatures, with special reference to the separation of helium from natural gas. Field investigations of possible supplies of helium in natural gas were completed during the year, every known gas field in the United States having been tested. Results were markedly successful, as they have shown that this country contains the largest supply of helium-bearing natural gas in the world.

Scrap Losses Investigated.

An investigation of scrap losses in aluminum alloy foundry practice showed that the annual losses in the United States amount to $1,200,000, and that universal adoption of methods recommended by the bureau of mines would probably result in a saving of about $600,000 per annum. Melting losses in this industry, which are largely preventable, aggregate about $3,000,000 yearly. A new method was devised to simplify the collection of radium emanation from radium salts. Experiments are now in progress to perfect the process and to develop ap-

MAKE OUR STORE YOUR—

July Fourth Headquarters

Men

When "togging out" for the Grand and Glorious Fourth, remember that we carry a full line of—

Dress Shirts Collars Ties Hats Caps Socks Belts
Shoes Oxfords Underwear Hankerchiefs

Ladies

Of Course you all know that we have a full line of DRESS GOODS, SILKS, Silk Hosiery, Shoes, Oxfords, and in fact anything you may need for a cool, delighful Fourth of July Dress for the big occasion.

Children

We always have a full line of Shoes, Oxfords, stockings, rompers, hats, caps, etc., for the boys and girls.

Groceries

Always fresh and the very best. You can ind many special articles here for the Fourth to make that big dinner more appetizing and attractive for your company on the big day.

Novelties

Better buy your supply of Fire-Crackers, Fire-Works, and Fourth of July Novelties at our store now. Stock up from our nice selection of goods.

Ladies Rest Room

We especially invite the ladies and the children to come to our store on the Fourth to rest up and care for the children. We will have accomodations for the ladies and children at our store and invite all to make use of our rest department on that day; we will have plenty of comfortable chairs for all; and couches for the children to sleep on.

G. W. Kluckhohn & Sons

Spend the Fourth in Klemme—We welcome you to Our Store.

The Glorious 4th

Will Soon Be Here And

Klemme is Going to Celebrate!

So now it ts time to plan what you are going to wear.

We can furnish the men with fancy Shirts, Socks, Oxfords, Straw Hats Caps and Ties.

Ladies, get a new dress for the occasion, Organdies in all shades, Ginghams, Voiles, etc., that are very suitable.

We will also have on hand Fire Crackers for the Kiddies, Cold drinkes for every body.

At The Place That's Always Busy

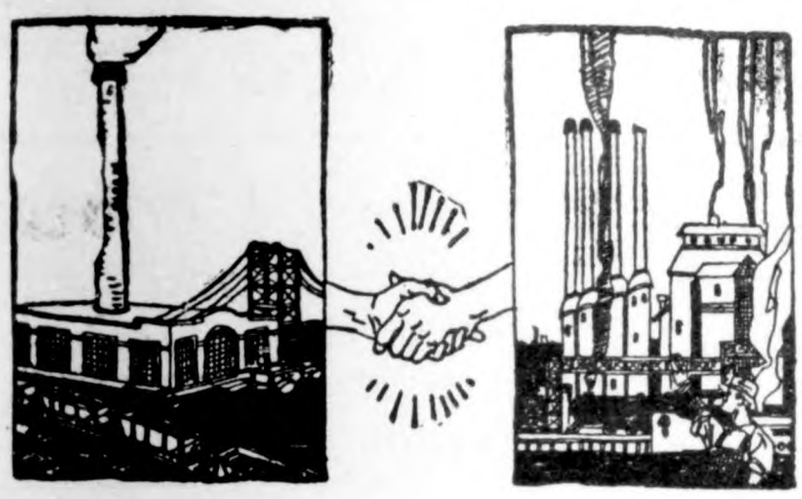
Keep this Card in Sight, so When Meeting Iowa Cars You Can Locate Counties.



Building for the Future

In its determination to continue rendering a maximum service to the customers of this community, the Iowa Falls Electric Co. is mindful of the fact that its customers will need electricity in continually increasing quantities as the years go by.

The Iowa Falls Electric Co. interprets efficient service to this community to mean the generatiug of a vast amount of energy for the customer whenever and in as large a quantity as demanded. The comprehensive distribution system maintained by this company makes this possible. For the company has brought into play every unit of its entire organization, from the mamoth power plants and high tension lines to the distriburion systems in each locality.

As the need for increased facilities becomes apparent, the general managers of this company expand its activities, not merely to meet the immediate need but always to keep a step ahead.

It is this anticipatory service which has made this company a leader in its field and service certain.

Iowa Falls Electric Co.

H. F. KELLOG, Manager

PROVING A THEORY

By MYRA A. WINGATE

©, 1921, by McClure Newspaper Syndicate.

"Jimmy Waite," said Peg, solemnly, "I've decided to marry Miss Henderson to Mr. Browne."

Her next-door neighbor sat down on the piazza railing, regarding her in stunned silence.

"Miss Henderson is too splendid to spend her life in a schoolroom and Mr. Browne is perfectly fine. They've boarded here for ages.

"How the mischief will you do it?" asked Jimmie.

"There are two ways," she exclaimed. "Propinquity—nearness, you know—"

Jimmy promptly moved along the piazza rail.

"Jimmy Waite!"

He moved away slightly, teasing pretty Peggy with mischievous eyes.

"And mental suggestion," finished the girl.

"What do I do?" asked Jimmy.

"Suggest to Mr. Browne. I will to Sara, and I'll manage the propinquity," planned Peggy thoughtfully.

"Marvelous! But I seldom see Browne."

"W-e-ll," pondered she. "You might drop in at the drug store to walk home with me once a week, and talk to Mr. Browne while you waited."

"So I might," observed the young man brightly. "Only once a week? Oh, all right."

She whisked into the house, leaving the young man to ponder the situation.

"Well, by George! 'Wasting time on the neighbors' sons.' 'Heart interest,' too. And she expects me to help with her old matrimonial agency."

He came to the piazza rendezvous a few minutes early the next night.

"I did a desperate deed today, Peg, all for love o' you," he began, with an embarrassed grin.

"Tell it, Jim. It must be worth your best efforts."

"Asked Browne what he thought about matrimony. He gave me a sort of sidewise look and I said, 'There's Miss Henderson.' He said perhaps we'd better not discuss that. I didn't dispute him."

"Jim, that was fine—so direct," said Peggy, admiringly.

"Chafing dish supper after the movies. Just we two," offered Peg.

"You're on," declared the neighbor's son. "Creamed crabmeat listens good to me."

Peggy conducted her campaign skillfully. She missed no opportunity to acquaint Miss Henderson with Mr. Browne's excellence. She sang Miss Henderson's praises to Mr. Browne. She arranged many an accidental tete-a-tete. To Jimmy's teasing she merely replied:

"The charm works gradually. I haven't lost hope yet."

"It's your turn to do a desperate deed. I've done mine. Something in the nature of a shock. I will reward you with an evening at the theater in town," said he.

"I'll do something doubly desperate," promised Peg, joyously.

Miss Henderson sat on the back piazza, marking papers. Peggy noted that the metal rubbish container was empty of all save a scrap of cloth and a pair of old shoes.

"The fire can't possibly do any harm, and a little propinquity may do a great deal of good," argued the wicked one.

She scratched a match and dropped it in.

"Oh, Sara," she called. "This rubbish is smoldering. I'm going to call Mr. Browne."

Miss Henderson had taken a hasty look at the rubbish container, drawn a pail of water at the outside tap, and, just as Mr. Browne rounded the corner, launched it with all her might at the big box.

Mr. Browne was in time to receive a large share of it. The rest quenched the feeble blaze.

Miss Henderson, still holding the pail, faced Mr. Browne, his clothes dripping water.

"Mr. Browne," she gasped. "What will you say to me and what can I say to you?"

Mr. Browne's mouth opened, and without his own volition, uttered these astonishing words:

"I've a great mind to ask you to marry me."

"Very well," said Sara, coolly. "Why don't you?"

"'Behold how great a matter a little fire kindleth,'" quoted Peggy to Jimmy, who had just reached the corner. "Time to fade away, Jim. The charm is working."

Her cheeks were pink, her eyes dancing. The charm touched Jimmy, too.

"Peg," he stammered, "I've been as slow as Browne, but I thought you understood. I've always loved you."

"Jim, are you going to propose?" asked Peggy. The seriousness in her eyes belied the flippancy of the words.

"Yes, I am," he answered stoutly.

"Then let's go down by the river. I'd rather receive a proposal by the river than by a rubbish bin."

Jimmy eyed her suspiciously.

"You look as satisfied as the cat that stole the cream," he told her with a sudden relapse to the manners of the neighbor's son. "What have you been doing?"

"Merely proving a theory—twice," answered Peg, demurely.

He Always Needs Improvement.

Every wife thinks she can improve upon the training her husband's mother gave him.

"It's All Right But"--

Talk to some young men about saving money and they will say, "It's all right but." You needn't ask them to finish the sentence. They mean "But there is never anything left over."

As a remedy we are suggesting to young men hat they deqosit a minimum of 10 per cent of their weekly earnings in a saving account before spending a dollar for better. Svae 10 per cent anyway.
anything else. Twenty per cent would be

First National Bank
"The Bank for Everybody'.'

KIN

By MOLLIE MATHER

Copyright, 1921, Western Newspaper Union.

Big Jim Bond sank forlornly back in his chair on the hotel veranda. He was very lonesome. Back in the Western country from which he had come people were more friendly, less cautious and critical concerning acquaintance with a stranger. Jim had hoped to find pleasant companionship in the summer hotel, which was, his new employer in the city told him, like a one-family hotel.

"Every one knows every one else who goes there," Mr. Bayard said. "They meet year after year. They'll take you in."

But they had not taken Jim in. Perhaps his evident lack of prosperity may have been accountable for this.

Things had gone badly with him since his return from war, his old position acceptably filled by another, his mother's home left desolate. Jim could no longer bear to remain alone in the dearly familiar place, so he traveled East, and Mr. Barnes had given him a chance in his business office. This was Jim's vacation. There was one very pretty girl that he would like to have met, that is, she was exactly Jim's idea of "pretty."

Jim watched her go every morning with magazine and writing material to a green retreat overhanging the lake. Sometimes he followed for the mere pleasure of looking into her face. But the girl never smiled even though he had persuaded Mrs. Hardy, his table companion at the hotel, to introduce him.

Jim was really becoming miserable over it all; for this one girl persisted in his thoughts night and day as no other had done before. Not even Mollie Bain, sweetheart of the past, who had carelessly deserted him for the affection of another, while he, Jim, had been fighting so desperately for his country.

The men of the place seemed self-centered, completely satisfied in their own chosen groups. Weary of his loneliness, big Jim tried the friendliness of the old ladies, habitues of the hotel, who had gossiped away many summers on its wide verandas. Their aloof condescension was more chilling than the forbidding attitude of the others.

It was the girl alone by her strange magnetic charm that held him there in discomfort. He tried the extravagance of newly ordered clothing in an effort to get recognition; it was no help at all. Jim was, it seemed, a quite unnecessary factor.

"They are all snobs," he told himself hotly, "and I am a fool for my pains where the girl is concerned."

Loving desperation had driven him to her side one day, and at the encouragement of her smile he had been emboldened to invite her for a drive. The girl's smile vanished with her prompt refusal. She was Bently's daughter, he was informed—Bently, president of the Country club; his wife, the most dignifiedly aloof rocker of the veranda.

He might as well go back to the crowded indifferent city, Jim told himself; there was no hope of companionship here. When Mr. Barnes came down for a week-end and took him under his wing, the Westerner hoped for better times, but with Mr. Barnes' return to the city his own isolation continued. And then Jim Bond slipped down a steep brambly path and broke his leg. It was so painful at first he realized only in his confusion that he was being cared for in his own room in the hotel, a kindly and confident physician bestowing courage with his directions.

It was twilight when, as he sat gazing wistfully down toward the beach, the door opened to admit an elderly veranda lady. She bore in her hands a dish.

"We all like fruit to nibble on, when we are sitting quiet," she said.

Jim was amazed at the warmth of her smile. Later, one of the immaculate men stopped in.

"Heard you'd had some hard luck," the man remarked. "Brought you in a book I've been reading. Guess it will hold your attention for a while."

Jim leaned back on his pillow with a grateful sigh. He was astonished to find two tears, not wholly caused by pain, stealing down his cheeks. "I must have been almighty homesick for human companionship," he murmured.

A woman stood in the doorway; it was Mrs. Bently. "You poor boy!" she sympathetically exclaimed. She placed her hand on his forehead in a motherly caress.

"I heard," said Jim haltingly, "that the people of this hotel were all like one common family; I never had a chance to realize—till now."

Mrs. Bently laughed comfortably. "Sometimes," she said, "it's a touch of suffering that makes the whole world kin."

And then the Westerner caught his breath; he had to, something was strangely the matter with his heart action. The girl—the one girl—entered his room as calmly as if her coming were no miracle at all. She carried some papers under her arm, and a rose in her hand.

"I'm your last visitor," she announced cheerfully, "but not, I hope, the least." Her mother smiled and stood aside while big Jim put out his hand. He could not speak. The girl, placing her own within it, seemed to understand. For here, at last, was Jim's best kinship of all.

POULTRY

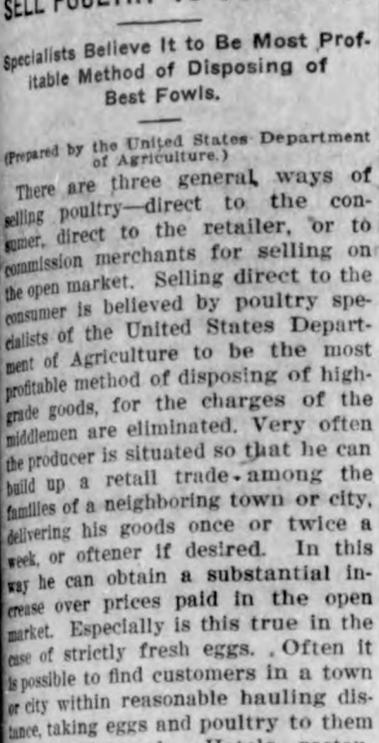
SELL POULTRY TO CONSUMER

Specialists Believe It to Be Most Profitable Method of Disposing of Best Fowls.

(Prepared by the United States Department of Agriculture.)

There are three general ways of selling poultry—direct to the consumer, direct to the retailer, or to commission merchants for selling on the open market. Selling direct to the consumer is believed by poultry specialists of the United States Department of Agriculture to be the most profitable method of disposing of high-grade goods, for the charges of the middlemen are eliminated. Very often the producer is situated so that he can build up a retail trade among the families of a neighboring town or city, delivering his goods once or twice a week, or oftener if desired. In this way he can obtain a substantial increase over prices paid in the open market. Especially is this true in the case of strictly fresh eggs. Often it is possible to find customers in a town or city within reasonable hauling distance, taking eggs and poultry to them at regular intervals. Hotels, restaurants and clubs are good customers which can be supplied in this way by contract.

Often there are grocery and provision dealers catering to a select trade to whom the producer can sell regular supplies of eggs and poultry. Of course, the simplest way to sell produce is through the commission merchant. It does away with expense



Plucked and Ready for Consumer.

and trouble of private trades, but the returns usually are not so large, except when dealing with certain commission houses that have built up a fine trade along certain lines. The Department of Agriculture has several bulletins covering the subject of marketing poultry. Farmers' Bulletin 830, Shipping Eggs by Parcel Post, may be had free upon application to the division of publications; Farmers' Bulletin 528, Hints to Poultry Raisers, 5 cents; Department Bulletin 561, Feed Cost of Egg Production, price 10 cents, may be ordered of the superintendent of documents, government printing office, Washington.

BOWEL TROUBLE IN POULTRY

One Good Way to Prevent Ailments Is Not to Feed Anything Solid for Seventy-Two Hours.

"To prevent white diarrhea and bowel trouble, chicks should not be fed any solid feeds for at least 72 hours after hatching," says Harry Tumbleton, head of the poultry department of Oklahoma A. and M. college. "During this period, however, they should receive sour, skim milk when taken from the incubator, and this should be kept before them all the time. In addition to the milk they should receive some fine sand which acts as a grit.

"When beginning to feed solid feeds, feeding should be little and often. A commercial chick feed scattered in a finely cut litter accompanied with some rolled oats or johnny cake or a mixture of these feeds with hard-boiled eggs makes a very good feed for starting young chicks. Care should be taken not to overfeed them."

Bumble Foot Remedy

This trouble is an abscess on the bottom of the foot caused by a splinter in the foot or jumping off a high roost. If the roosts are at fault they should be remedied.

Tie a cord tightly around the leg above the foot to control the flow of blood. Open the abscess and thoroughly clean out the core. Disinfect in a dilute solution of tincture of iodine, after which apply a generous dressing of carbolated vaseline and bandage. In two days repeat the dressing of iodine and carbolated vaseline.

FARM ANIMALS

BLACK COLOR IS HEREDITARY

Feeding and Management of Sheep Have Nothing to Do With Appearance of Black Lambs.

(Prepared by the United States Department of Agriculture.)

The appearance of black lambs in a flock made up entirely of white sheep has been for ages, and is still, a cause for wonder and the basis of superstitions. But the study of the laws of breeding and heredity has explained the reasons for the sporadic appearance of these off-color specimens. In a letter to a farmer who reported 25 black lambs from a flock of 175 purebred Shropshire ewes, all white, and who considered certain feeds the cause, the United States Department of Agriculture gives a clear statement of the principles involved.

Feeding and management of sheep, says Dr. Sewall Wright, specialist in animal genetics, have nothing to do with the appearance of black lambs. The black color is hereditary even though it may be transmitted by ordinary white sheep. The black color in such a case is what is called a recessive character. White sheep which transmit this character at all transmit black in 50 per cent of their reproductive cells (ova in the case of ewes and spermatozoa in the case of rams) and white in the remaining 50 per cent. Thus, such white sheep mated with blacks (which can only transmit black) produce 50 per cent black lambs and 50 per cent white. All of these white lambs can transmit black.

White sheep which transmit only white, mated with blacks, produce only white lambs, but all of these lambs can transmit black. When both ewe and ram are white, but both transmit black, about 25 per cent of the lambs are black, 50 per cent are white, which transmit black, while the remaining 25 per cent are true-

A Shropshire Sheep.

breeding whites. In this case it is an even chance that a given ovum will transmit black and an even chance that it will be fertilized by a male cell which transmits black, making one chance in four that both transmit black, which is necessary for the production of a black lamb.

With 25 black lambs appearing in the flock, it is indicated that about 100 of the 175 ewes transmit black, assuming that all of the rams used transmit it. If not all the rams transmit this color, then it is probable that an even larger number of ewes transmit it.

Department of Agriculture Bulletin 905, Principles of Live Stock Breeding, contains a detailed discussion of this problem. It may be obtained from the superintendent of public documents, government printing office, Washington, D. C., for 15 cents.

DRY BRAN GOOD FOR HORSES

Better for Animals Easily Purged Than Warm Mash—Easy on Digestive Apparatus.

In cases of horses that are easily purged, it is better to give dry bran than a warm mash, and good clean bran may, with benefit, always form a portion of the dry food of all sorts of young horses, as the mineral constituents will be available as bone-forming material. In most cases of illness a bran mash may with safety and benefit be given, as it does not overtax the digestive apparatus, but when there is evident irritability of the bowels, as in diarrhea, etc., it is better to give bran in a dry state than in the form of a mash.

A warm bran mash is, however, of great service to horses that are working hard and receiving a large amount of grain. It should be given on the Saturday night, or any other time when the horses are resting the following day, as it has a decidedly laxative effect on the bowels. Bran in a dry state is an astringent, but in the form of a mash it is a laxative. If given once a week it will counteract the feverish symptoms which are supposed to result from high feeding, but this should not follow if a proper system of feeding is adopted.

EXCELLENT FOR YOUNG PIGS

Pasture Supplemented by Limited Grain Allowance Is Fine—Animals Kept Thrifty.

Good pasture supplemented by a limited grain allowance is an excellent ration for young pigs. The pigs on pasture not only make cheaper gains, but the succulent feed and exercise they obtain aids in keeping them thrifty.

DAMAGE DONE TO GRAIN BY MOTHS

Insects Can Be Destroyed by Use of Heat or by Fumigation With Poisonous Gases.

CARBON DISULPHID IS BEST

By Exercising Proper Precautions Infestations in Field Can Be Reduced—Thoroughly Clean Old Bins and Granaries.

(Prepared by the United States Department of Agriculture.)

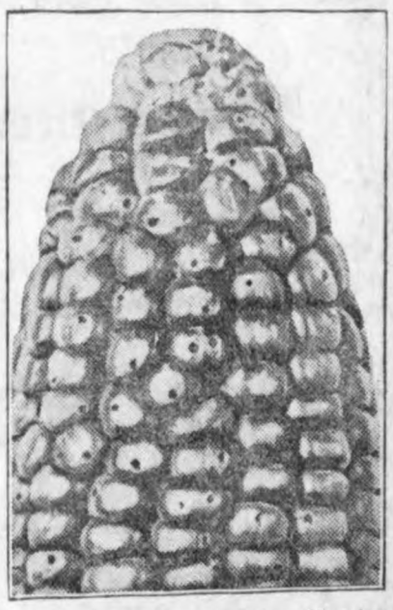
Most of the damage done by insects to grain in storage and shipment is due to four species, the granary weevil, the rice or black weevil, the lesser grain borer or Australian weevil, and the Angoumois grain moth, according to Farmers' Bulletin 1200, "Common Grain Pests," prepared by E. A. Back and R. T. Cotton and just published by the United States Department of Agriculture. Others of the 40 species or groups of species described in the bulletin can cause great damage if storage conditions are unusually favorable for their increase.

Remedial measures are mentioned only briefly in the bulletin. The insects, it is said, can be destroyed by the use of heat, or by fumigation with poisonous gases. A temperature of 120 degrees to 130 degrees, Fahrenheit, maintained for a short time, will kill all stages of grain-infesting insects, without injury to the germinating qualities of the grain. Carbon disulphid, carbon tetrachlorid and hydrocyanic-acid gas are the fumigants in most common use today in treating infested grain. Of these, carbon disulphid is the best for treating grain in the bulk, it is said. Information on this subject is contained in other publications of the department.

Prevent Infestation.

Infestation of grain in the field cannot be entirely prevented, but, by proper precautions, it can be reduced to a minimum, the bulletin points out. The first generation of insects in the maturing grain is usually small, and if the grain is cut as soon as ripe, threshed as soon as dry, and then placed in clean, deep bins, the damage from this source will be slight.

It is when the grain is left in the field long after it is ripe that serious infestation results, for the insects increase in one or two generations to enormous numbers. In the case of corn in the field, only ears damaged through carelessness in shucking, so



Tip End of Ear of Corn Showing Round Holes in Kernels Made by the Angoumois Grain Moth.

that the kernels are exposed, are subject to the attack of grain insects. Farmers should therefore, it is said, grow a variety of corn that develops a long, tight shuck.

Newly harvested small grain should not be stored unthrashed for any length of time, as in this condition it is very susceptible to infestation. If promptly thrashed and stored in deep bins, only a thin layer on top of the bin is likely to become infested. Corn may be stored in the shuck if the husk is long and tight and fully covers the tip, but all ears with loose, broken, short or damaged husks should be shucked and stored separately.

Avoid Dirty Bins.

Clean grain should never be stored in old bins, granaries or storehouses until they have been thoroughly cleaned and freed from the accumulations of waste grain and other materials harboring grain insects.

Bags of all kinds that have previously held grain should not be allowed in granaries or warehouses or be refilled until they have been sterilized or otherwise freed from insects. The use of tight cribs will keep the grain free from infestation by insects that might fly in from the outside.

Copies of the bulletin may be had free upon application to the department at Washington.

BEST DEPTH OF CULTIVATION

When Corn Is Eighteen Inches High Roots Will Meet Across 3½-Foot Row in Friable Soil.

When the stalks of corn are 18 inches high, the roots have met across a 3½-foot row in light, friable soils. Deep cultivation at this time will cut many of the roots and check the growth of the plants. A good rule to follow is to cultivate deep early in the season, and shallow later when the plants are larger.

POCKET GOPHERS ARE MENACE TO FARMERS

Neighborhood Party Plan Successful in Nebraska.

Eradication of Pests Difficult Unless All Farms in the Community Are Cleaned Up in One Campaign —Plan Outlined.

(Prepared by the United States Department of Agriculture.)

The neighborhood party idea has been successfully applied to gopher elimination in Furnas county, Nebraska, under the direction of a specialist of the biological survey and the extension agent in co-operative work of the United States Department of Agriculture and the State College of Agriculture.

The eradication of pocket gophers is very difficult unless all the farms in a district are cleaned up in one campaign. A district two or three miles long is selected by the county agent, and farmers in this district are invited to a gopher poisoning party. A full attendance is usually secured.

The morning session is given to a demonstration in cutting the bait and applying the poison. Sufficient bait is

Gopher Exterminators and a Few Victims.

prepared to supply the party for the day. In the afternoon, the party is divided into pairs, one person carrying the bait and placing it in the runways, while the other person uses a prod to locate and open the runways. The county agent or specialist spends some time with each pair, giving instructions. All the infested area represented by the farmers attending the "party" is covered and poison bait applied. In many cases a second day is required to complete the work, but all members of the party invariably stay with the job until it is finished.

In Furnas county the work has been confined to the alfalfa fields in the valley lands along three important streams, the Republican river, and the Beaver and the Sappa creeks. All last summer the farmers were constantly reminded of the importance of the work, and excellent results were obtained from the community field parties in the fall. In the campaign 2,500 acres were covered. Figuring the advantage to the farmers in being rid of pocket gophers as half a ton of alfalfa per acre, this area would mean 1,250 tons, or $10,000 saved.

GIVE YOUR BEES NEEDED AIR

Reversible Bottom Board Furnishes Either Narrow or Wide Entrance as May Be Desired.

It is too much to ask of a hard-working bee that it hang outside the hive during its hours of rest because the interior of the hive is too hot and poorly ventilated. "One remedy is to tip up the front of the hive one inch from the base board, using a tapering splinter or wedge under each side," says A. C. Burrell, extension entomologist of the Missouri College of Agriculture. "Or buy a reversible bottom board, which furnishes either narrow or wide entrance as desired. We do not advise setting the supers back a half-inch as this artificial ventilation interferes with the fanning bees. Keep your bees in a good shady location for the hot summer months."

SEVERAL DISEASES OF SOIL

Only Way to Overcome Fungous and Bacterial Ailments Is to Let Land Remain Idle.

There are several diseases of vegetables which live over in the garden soil from one year to the next, and if the same crop is planted in the same soil year after year it will be but a short time until the crop will prove a loss. These are mostly fungous and bacterial diseases and the only practical way to overcome them is to allow the land to lie idle for two or three years or to plant a crop which is immune to the disease.

SCATTER MANURE ON FIELDS

Not Advisable to Permit Escape of Gases and Plant Food—Haul Away Often.

Different farmers have different ways and means of caring for their barnyard manures, but suffice it to say, do not let it become exposed to the rain nor the sun; if possible, keep it piled up in order to prevent the escape of gases which are rich in plant food; as often as practicable, haul the manure to the fields, scatter and immediately plow it under.

IMPROVED ROADS

WAR MATERIAL DISTRIBUTED

Steady Surplus Supply Being Sent to Various States by Bureau of Public Roads.

(Prepared by the United States Department of Agriculture.)

A steady supply of surplus war material suitable for highway construction is being distributed to the states by the bureau of public roads, United States Department of Agriculture, which acts as a clearing house. A force of about 275 persons is kept in the field taking inventories and preparing material for shipment.

Lists of material available are sent to each state highway department, and a period of 30 days allowed for the submission of requisitions. The material is allotted to the state on the same basis as monetary federal aid for road construction, a value being placed on each item and a record kept of the total value received by each state. Up to February 1 of this year the value of the material thus distributed amounted to $126,000,000, of which $90,000,000 represented the value of motor vehicles and parts.

Recently an inventory was taken of about $40,000,000 worth of material at Camp Grant, Rockford, Ill., part of which will be retained by the War department and the remainder, suitable for road work, soon will be available for distribution. The work is being rushed, so that the material may be used for road work early in the season and the camp cleaned up by August 1.

Other surplus war materials recently received for distribution and located at Schenectady, N. Y.; Watertown, Mass., and Dover, N. J., include 200 carloads of brick, about half of

A Federal-Aid Concrete Road in Minnesota.

which is suitable for highway paving; 5,000,000 pounds of nails, 1,000,000 pounds of staples, 1,000,000 square feet of concrete reinforcing mesh, 200,000 monkey wrenches and 133 carloads of picks and pick handles.

MUD AS A DEFECT

A West Virginia educator at the National Education association conference was asked what he regarded as the greatest defect in American education, and he said in his district it was mud. Bad roads can be the greatest defect in any community. They can be the greatest defect in education, when they do not permit the regular attendance of children in school. They can be the greatest defect in farming, when they do not permit the moving of crops. They can be the greatest defect in any kind of activity, when they prevent the communication needed.

A bad road is a bad road whether it is a bad street car system, a bad steam road or a mud road in the country.

GRAVEL ROADS ARE HELPFUL

Farmers of Massac County, Illinois, Are Not Bothered Much by Muddy Weather.

Muddy weather doesn't bother the farmers in Massac county, Illinois, very much, because there are over 300 miles of gravel roads in the county, and each year their mileage grows larger. The cost of graveling roads in Massac county is not very great because the gravel is taken right out of the hills along the Ohio river. Some mine waste is used for road-making. In either case the farmers have a good road to market.

Builders Attend School.

In Wisconsin highway builders attend school where construction plans are discussed with a view of bringing about better understanding of the road problem and its solution. Among the attendants are: State, county, town, village and city road officials, contractors, foremen, patrolmen, roller operators and other road workers.

Many Good Road Advocates.

Throughout the United States there are no fewer than 30,000,000 people who are advocates of good roads.

DAIRY

CO-OPERATIVE BULL SOCIETY

Saunders County, Nebraska, Winner of Offer by Breeder of Purebred Cattle.

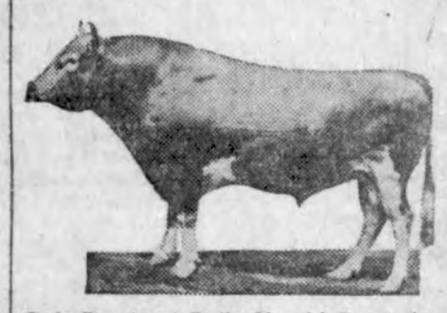
(Prepared by the United States Department of Agriculture.)

The bull offered by a breeder of purebred cattle near Lincoln to the first co-operative bull association to be organized in Nebraska was won by Saunders county, where an association has been formed, through the efforts of the county agent and a state dairy extension specialist, assisted by a field man of the United States Department of Agriculture.

As in other associations of this character, the members will be arranged in several groups or blocks, those in each block having about the same total number of cows and all using the same bull. This association has five blocks to start with, and as many more are planned. The separate blocks do not own the bulls, but the animals are joint property of the association, and every two years they are shifted from one block to another.

It is planned to have a novel feature in this association. The blocks will be arranged in two or more circuits, each circuit made up of three or more blocks, and paying for the bulls it uses and owning them; the biennial exchange of bulls will also be confined to the circuit; but there will be one set of officers and board of directors for the whole association, the secretary-treasurer keeping record of the receipts and obligations of each circuit. The circuit system seems to combine the advantages of small associations and a large association all in one.

When the Saunders County Bull association is ready for business, it will be given the prize bull. The association will have to pay for its other bulls, but it can well afford to do so, for this method of co-operation has been found highly profitable in many other parts of the country. Its advantages are: (1) Providing high-class bulls at low expense, and thus proving the character of the dairy herds; (2) keeping proved bulls in service



Only Purebred Bulls Should Be at the Head of Any Herd.

for many years; and (3) making financial interest and public sentiment combine to sweep a community entirely clean of inferior sires.

The United States Department of Agriculture has given a good deal of effort to the introduction of co-operative bull associations, and stands ready to supply information thereon to anyone desiring it.

ABNORMAL TASTES IN MILK

There Are Several Factors That Impart Peculiar Flavor Besides Grazing Crops.

There are a number of plants which when eaten by the dairy cow, will transmit an unusual taste to her milk. Some of them are fed to her injudiciously by the dairymen, and others are eaten by the animal while grazing. Plants known to possess such properties are beet and turnip tops when fed in large quantities; excessive feeding of chopped roots; garlic, rape, lupines, orchids, kale, rutabagas, chicory, sorrel and pasturage on areas which have been inundated.

There are many other factors sometimes responsible for a peculiar taste in milk, such as improper sterilization of utensils, spoiled foods, brewers' grains, potato slops, fish meal, rape cake, flaxseed meal, poor straw, and, occasionally, medicinal agents administered to the animal.

CARING FOR SPRING CALVES

Necessary That Youngsters Be Kept Thrifty and Free From Disease and Sickness.

The good dairy calves born this spring are needed as milk cows two years from now, so the dairyman should do his part by giving these animals a chance to live and develop. Spring calves are usually harder to raise than fall calves, and since the dairyman has less time usually during this busy season to care for the calves, it is very necessary that the attention given be that most needed to keep them thrifty and free from disease and sickness.

Salt Improves Appetite.

Salt improves the calf's appetite, so keep a box with clean salt in a sheltered place where the calf may eat of it freely.

Keep Youngsters Separated.

Never allow the calves or yearlings to run with the herd.

Satisfactory Cow Ration.

It is quite difficult to make a really satisfactory ration for dairy cows without using either clover or alfalfa

NOTICE TO CONTRACTORS

For the construction of Drainage improvement known and designated as Drainage District No. 7, Hancock County, Iowa.

Notice is hereby given that the Board of Supervisors of Hancock County, will meet at the Court House in Garner, Iowa, on the 28th day of June, A. D. 1922, at 1:00 o'clock P. M. to let to the lowest responsible bidder the contract for the work of construction of the drains in Sec. 10 in the Drainage Improvement known and designated as Drainage District No. 7, of Hancock County, Iowa, said work to be let in sections specifying the work to be done and the time fixed for the commencement and completion of the same to-wit:

Average haul about 2 miles from Miller, Iowa.

All tile must pass the specifications for standard drain tile of the American Society for Testing Materials, tile in sizes 8" and above to be not less than 2' long.

Cement tile will be allowed only in sizes 14" and above.

The specifications state that where running sand is encountered, sewer pipe with joints caulked in jute shall be used and the bids must state the price in case such construction is used.

Work to be commenced thirty days from date of letting of Contract. Contract will be completed by August 1, 1923.

All the tile to be delivered at the ditch side subject to inspection and to be delivered only as ordered by the Construction Engineer.

Whenever the tile improvement is layed in existing ditches the average depth will be computed from the natural surface of the ground and the contractor will be required to backfill the trenches to the height of the natural surface of the ground so that the existing ditch will be completely filled.

All ditches and drains to be constructed in all respects in the accordance with the plat, profile, and specifications of the District filed by the Engineer in the Auditor's Office subject only to such changes and alterations as may be made as provided by law.

Sealed bids will be received at the office of the County Auditor of Hancock County, Iowa, up to one o'clock P. M. on day of letting.

The price must be stated in the bid in figures, and permission will not be granted for the withdrawal or amendment of any bid after once presented.

All bids must be made at a fixed price per station of 100 feet for each size tile and also a fixed price for section complete in all respects including intakes and headwall and must also include the schedule of overdepth adopted by the Board of Supervisors of Hancock County and on file in the Auditor's Office for possible overdepth or underdepth beyond the average depth specified.

Bids will be received on any or all sections, for the tile alone, for construction work alone, or for both tile and construction.

The Board will at their discretion let the work as a whole or in sections to the lowest responsible bidder, reserving the right to reject any or all bids and also the right to adjourn time of awarding contract is reserved.

Each bid must be accompanied by a cash deposit or certified check in a sum equal to ten percent of the total amount of bid, as a guarantee of the good faith of the bidder.

ALL BIDS NOT MADE IN CONFORMANCE TO THE ABOVE REQUIREMENT WILL BE REJECTED.

The party to whom any contract is being awarded will be required to attend at the office of the Auditor of Hancock County, Iowa, within ten days after said award and execute a contract thereby agreeing to all provisions, terms, and conditions thereof and shall also file with the County Auditor a bond subject to his approval for a sum equal to twenty-five percent of the amount of the bid and in case the party to whom any work is awarded fails to enter into this contract and furnish bond within ten days as herein required. The deposit of such party shall thereupon become forfeited to Hancock County Drainage District No. 7, together with all rights under said award.

The deposit of the unsuccessful bidders will be returned to them within twenty-four hours after demand, and the deposit of the successfull bidders will be returned to them upon their executing the contract and filing with the County Auditor the bond as herein required.

By order of the Board of Supervisors.

Dated at Garner, Iowa, this 7th day of June, 1922.

CHRIS JACOBS,
County Auditor.

R. A. Jorgenson and family drove to Iowa Falls Sunday to spend the day with the M. O. Hocum family. The Hocum's like their new location and Mart has a good business as he is running the chief coal retail station there.

The Missionary Society held a big surprise party on Mrs. J. E. Baumgartner at the J. N. Day home last week Thursday evening. They presented Mrs. Baumgartner with a remembrance of her loyal serice to the organization. The Baumgartner's left Friday for Clear Lake where they will remain for a few weeks to enjoy the summer resort and then they will move to Mason City.

If a man has a hard time keeping his head out of water it is time to get out of the deep waer.

CHANCE OF A LIFETIME

The occupants of the parlor car of the limited were startled by the abrubt appearance of two masked bandits.

T'row up yer hands!" commanded the bigger of the two. "We're gonna rob all the gents and kiss all the gals.

"No, pardner," remonstrated the smaller one, gallantly. We'll rob the gents. but we'll leave the ladies alone."

"Mind your own busines young fellow," snapped a female passenger of uncertain age. "The big man is robbing the train." —American Legion Weekly.

Dreaming of Writing.

To dream that you write with a pen denotes good luck; with a quill, loss of health; with a stick, firmness of purpose; with a pencil, warns you of secret enemies. To dream of writing a letter foretells good news; a bill, an accusation.

Happiness Not All.

There is in man a higher than love of happiness; he can do without happiness and instead thereof find blessedness.—Carlyle.

For Your July 4th and Picnic Dinner

—Take advantage of the fine line we carry in cold meats, etc. You can make your July 4th and Picnic Dinners and Suppers an easy and delightful preparation by selecting some of the following suggestions as a part of the meal:—

Cold Meats

Boiled Ham	Minced Ham	Pressed Ham
Veal Loaf	Dried Beef	Bologna
Summer Sausage	Frankfurters	Sardines
Potted Meat	Pickled Pigs Feet, Hearts and Tongues.	

Cheese

Pimento Cheese — Cream Cheese — Brick Cheese

Limburger Cheese in the new 15c Packages, very nice cheese.

Miscellaneous

Olives	Pickles	Peanut Butter
Salad Dressing	Jellies	Pork & Beans, Etc.

We are the Picnickers' Headquarters. Always a nice selection of the very best in meats, etc. here.

he Eagle Will Scream Here On July Fourth

ANS ALL COMPLETED OR BIG JULY 4th HERE!

nd The Day In Klemme And You Will Have A Good Enjoyable Time

eports from the many July Committees who have been d at work the past week are y favorable for a grand old ebration for July 4th in this this year.

Everything has all been ar- ged, the "eagle will scream" Klemme with an extra loud wk on the Fourth. Come y and stay late is the advice hand out to our readers this k, as there will be something g every minute of the day there will be amusement for as well as young.

ll the old "bunk" has been inated from the program, what is advertised will be he program as far as is con- lable by the committees in rge. The amusements will lean an full of interest. The mittees have worked hard to good clean sports and attrac- s on the program.

Baseball Game

whirl-wind of a fast game xpected between Garner and mond as both towns have a good team this year and game is sure to make a big with the baseball fans and a crowd is expected at the new mond in Morningside addit- on the Fourth.

Wrestling Match

s we stated last week a real stling match will be staged the eening of the 4th in a open air pavillion between s Willer of this city and the ular wrestler of Mason City, ng Prehn. Both men have n wanting to get at each oth- or some time and wrestling s can consider it fortunate they will be brought togeth here the Fourth. If you are nting to see some fast and er mat work this match will nish you with plenty of good lls as both are well matched good fast workers. "Billy" ober, well known to many of wrestling fans, will be here eferee the match. Good pre- inaries will be a part of the gram.

Horse Shoe Tournament

he Horse Shoe Pitching Con- to be staged here the 4th, causing a lot of comment al- dy and we look for many fast ms to enter that day. It is e to all and there will be no rance fees; just simply re- er with Ben Grieman and he enter your team. A clay rt will be constructed so the hing conditions will be ideal.

See The Program

e cannot take the time or ce to enumerate all the big tures of the day so call your ention to the program which be found in another place his issue of the Times.

GONA GIRL WILL TEACH IN ALASKA

LGONA, June 28—Miss Lulu rton, daughter of Mr. and Mrs. E. Norton, has been elected an ructor in the primary grades of schools at Ketchikan, Alaska. s Norton expects to be at her of duty by Aug. 20. Ketchi- is located in the southern part laska and Miss Norton's brother Edmonds, resides there.

WORK PROGRESSING ON WILSON HIGHWAY GRADE

Big Hill Now A Thing Of The Past; Nearly Level Road Now

The gangs of men at work on the Wilson Highway between Klemme and Goodell are making rapid progress. The big hill just south of the old river bridge south of this place has been cut down and the dirt hauled into the big hollow on this side so that the road now is practically level. The grade across the old river hollow is now about eight or ten feet high and about twenty feet wide on top, using dynamie to blast out the old trees and shrubs. I will be a fine road when all completed. They are also putting in new cement bridges over the river and old slough.

Work has also been done on the highway south of Goodell as the grade has been raised and widened.

Another crew is at work putting in a new bridge about two miles south of Garner near the Greiman farm. To drive north from Klemme the autoist should go straight north of the Reform church north of Klemme about three miles as the road is blocked after one turns east from the church to go north again.

The road north of the church just mentioned has also been graded up and made wider, although it is not a primary road.

The entire Highway between here and Garner is being tiled on both sides of the road. Many sections of the tiling has been completed at this time.

EPWORTH LEAGUE COLUMN

The local chapter of the Epworth League had two delegates present at the annual Sunday School and Epworth League Convention which was held at the Camp Grounds two weeks ago. There were eighty-two delegates present. representing a large number of towns and it was a wonderful convention. Our delegates will give their report on July 16th, in connection with a literary program.

The Annual election of officers was held on June 11th. The new officers are:

President, Earl Josten.
1st Vice- Pres., Genea Schuldt.
2nd Vice-Pres. Marie Blank.
3rd Vice Pres., Minnie Lenz,
4th Vice Pres., Minnie Lau.
Secretary., Fred Arnold.
Treasurer, Harold Ptersen
Pinaoist, Glenna Gruetzmacher.
Libraians, Wayne Lemke, and Vernon Turgeson.

We were indeed pleased to see so many present at the Social on the Church lawn three weeks ago. There were about ninety present. Would'nt it be great to hae that many at our meeting on Sunday night We are planning a "union social" for the Klemme and Liberty Leagues, to be held at Liberty. More about this later.

This is the beginning of a new League year. Let's make it the most successful one that has ever been experienced by the local chapter!

The membership list is being revised, and we are doing all in our power to maintain a real, live Epworth League organization. Let's boost the E. L.!

There will be no devotional meeting next Sunday evening, on account of the Children's Day program to be given on that evening. However, don't forget the Literary program a week later, on the 16th.

The dates for Annual Epworth League Institute at Lake Okoboji are July 17 to 23. An institute of this kind is about the best thing that could possibly happen to any young person. The Klemme chapter should be well represented at Okoboji, and we are planning to send as large a delegation as possible. Any information desired will be glad ly furnished by your pastor or your League President. Let's go to the Institute!

Spend the Fourth in Klemme

Iowa Makes Money On Cigaret Tax And License

FALSE REPORT OUT MUST BE STOPPED

No Contagious Diseases In This City and No Quarantines

Some gossipping old hen has started the report that there are eight families under quarantine in Klemme for contagious diseases. The report has no foundation whatever and the story is a base, damaging lie of the worst kind. It is a malicious report at this time when Klemme is planning a celebration and the report must be stopped at once or a certain gossiping old lady from a nearby town is going to get herself in some serious sort of trouble as the character who started the report is known almot to a csertainity.

It is true that one family was under quarantine for diphktheria but the quarantine has been lifted and they are at liberty at this time and there were no other cases and are none at this time.

You can safely come to Klemme on July 4th or at any other time without fear of contracting a disease. We are as healthy in Klemme as any other city in the state.

Discard half of the rumor and brand the other fifty per cent as a base, low down dirty lie and you have the facts of the matter in this case.

GIRL BADLY HURT IN AUTO ACCIDENT FRIDAY NIGHT WHEN CAR TIPS

Accident Happened When Trying To Pass Load of Hay

Quite a serious auto accident happened west of town near the John Woods farm last Fridey night

A number of young people were having a dance out west of town on that evening and two young men, Emil Neuhring and Bert Johnson, who works for Henry Neuhring, drove to town in a Ford runabout to get Miss Mary Erdman, a relative of the Neuhring family and who has been working at the hotel in Klemme for a few weeks. It was when on their way out to the dance that they tried to pass a wagon load of hay that the accident took place. The driver of the car misjudged the distance to the ditch and in going past the wagon the car tipped over, severely injuring Miss Erdman. She was badly cut about the face and several of her front teeth were knocked out in the crash and she also received bruises about the head and body. The young men escaped with but a few minor injuries. The injured girl was rushed to Klemme where she was given surgical attention by local doctors who had to take a number of stitches to close the gashes.

Miss Erdman's mother resides in Chicago and the young lady has been in this vicinity but a short time.

She is reported to be getting along well a this time.

The car was quite badly broken up.

BOY IS INJURED IN BAD EXPLOSION SUNAY

Britt Boy Who Hti Dynamite Cap With Stone Liable To Lose One Eye

Just because 16 year old John, son of Mrs. E. Teder. of Britt, wanted to hear a dynamite cap make a lot of noise Sunday afternoon may now mean the loss of one eye. The lad tried to explode the cap by hitting it with a rock when in company with some other boys found the cap which had been bought last spring with dynamite for blasting rocks on the farm. John placed the cap on a rock and then hit it with another rock and the terrific explosion blew up fragments of rock which struck him in the face, a piece of rock lodging in his right eye and he also received other wounds in the face and about the body. He was rushed to a Mason City hospital to have the injured eye tended to but it is very doubtful if the eye can be saved.

$600,000 TO IOWA IN CIGARET TAXES

Average From New Source Of Revenue Is $2,000 Each Day Of Year

DES MOINES, June 28,—Six hundred thousand dollars in revenue money from the sale of cigaret stamps has been turned into the state treasurer's office since the 1st of July, 1921, according to the first annual statement now being prepared by c. c. McCoy, superintendent of the revenue department. This means that, excepting Sundays and holidays, $2,000 a day has been collected by the state through its new cigaret law. In addition, $250.000 in permit fees has been received by the cities and counties over the state.

Dealers permits are sold in three classes, $100 for dealers in cities of the first class, $75 for cities of the second class, and $50 for rural and community stores.
community stores.

Permit fees are kept by the city council, or county board of supervisors where the permit is sold. The state derives its $600,000 revenue from the sale of revenue stamps, sold at the rate of one mill for each cigaret.

Mr. McCoy's report for the first year of the cigaret reenue law will be submitted to State Treasurer W. J. Burbank, the first week in July.

SCOUT NOTES

The hike to Clear Lake on last Friday was fine. Swiming, diving, and other stunts were much enjoyed. Let's go again Scouts!

Regular meeting last Monday nite plans were laid for float for the 4th of July. Special meeting on Thursday night at headquarters to take in candidate Kermit K. Koerner.

Friday evening special meeting to carry out further plans for the 4th.

The Crow Patrol are taking their tests for the Second Class Scouts. They will soon be through and hold initiation.

Scout Law—Continued.)

7—**A Scout is Obedient**—He obeys his parents, Scoutmaster, Patrol Leader and all duly constituted authorities.

8—A Scout is Cheerful He smiles whenever he can. His obediance to to orders is prompt and cheerful. He never shurks nor grumbles at hardships.

9—A Scout is Thrifty. He does not wantonly destroy property. He works faithfully, he wastes nothing and makes the best use of his opportunities. He saves his money, and pays his own way; he is generous to those in need. He may work for pay but must not receive tips for courtesies and good turns.

"Be Prepared" is the Scout motto. Preparation is not for war, but for peace to be a good citizen of some use in the community working for the good of all.

A True Patriot—Loves God and his fellowman.

The Scouts in this city will be glad to be used.

Remember also that if your boy joins the Scouts he is under personal leadership. You may be assured that when on hikes or camping trips taht he is never left to his own resources; always under the eye and care of the Scoutmaster and his Patrol Leaders. He is governed by certain rules which he must observe or he must quit the organization. He take asn obligation to obey, if he does not want to he had better stay home with Mamma until he does. He is on his honor.

When Scouts enter the water to bathe they are under the personal supervision of the Scoutmaster; he is either in the water with the boys or in a boat supervising their sports. No fire-arms are allowed to be carried by Scouts. Fire danger is always at a minimum; all fires are put out before leaving a camping place. Scouts are istructed ever to do damage to trees, fences or other property. If a Scout Patrol camps on your property be assured they will respect your rights. If you have any complaint to make, don't knock the organization—see the Scoutmaster. all can be settled or explained.

Peak of Crime Wave Reached

American Bar Association Committee Expects Steady Drop in Unlawful Deeds.

REFORMS ARE RECOMMENDED

Respect for Law Shows Increase When Industry Picks Up—Growing Contempt for the Law Not Laid to the War Alone.

Washington.—The peak in the world-wide crime wave that followed the war has been reached, and from this time there may be expected a drop in the number of murders, holdups and similar outrages, in the opinion of the special committee appointed by the American Bar association to study the reasons for the lessening of public regard for the law.

At the same time the committee believes the crime situation, particularly in the United States, is such as to warrant reforms that would aid in the administration of justice. To this end the committee is formulating a program with a view of recommending it at the next annual meeting of the American Bar association at San Francisco in August. These in all probability will be the essential recommendations:

To Offer Suggestions.

Collection by the federal government of crime statistics, so that the extent of lawlessness may be fully known, which is not now the case, when the administration of police laws is entirely in the control of the states and their subdivisions.

Restricted sales of automatic pistols, with which the vast majority of crimes are committed, their manufacture and distribution to be largely under the control of the War department, so that pistols may be kept from the criminally inclined.

Thorough revision of the grand jury system, so that the administration of justice may be more rapid, and a change in the laws so that criminals may not take refuge behind technicalities in indictments.

Institution of some method whereby the potential criminal may be segregated, through the machinery of the criminal courts, which themselves are in need of co-ordination.

Vigorous reform in the jail system, primarily to prevent first offenders from falling in with hardened criminals, so that jails will not be so much a breeding place for crime.

Speedy enactment of a federal law to make the advocacy of a revolutinary overthrow of the United States government a crime, this intended primarily to put a stop to the propaganda being spread by those of foreign birth or of foreign parentage.

Other Reforms Asked.

In addition to these chief recommendations it is expected that the committee will advise that the states provide for the payment of criminals for their labor in prisons, so that their families may be held together and not become public charges, and that the lawyers adopt a code that they will not neglect their duties in obtaining justice because of the inability of those seeking counsel to pay the price—in other words to get to the law is a luxury only for a privileged class.

The committee held hearings in Washington in March and another series in Chicago in April. It went to the Illinois state prison at Joliet, where prisoners were interviewed. Hearings are to be continued in New York city. Among those who have appeared to give testimony, in addition to the prisoners, have been judges of criminal courts, superintendents of reformatories, criminologists, lawyers and wardens.

It is the opinion of the committee that while the war was in a large part responsible for the crime wave there are other reasons for a growing contempt for the law, chief of which is lax enforcement and the long route the criminal has to travel from the time of committing a crime until he is punished.

In the opinion of lawyers studying the situation, one of the chief factors responsible for the crime wave has been unemployment. It is for this reason the assertion is made that in all probability the peak of the crime wave has passed.

The committee believes vigorous reforms are required if there is to be a restoration of respect for the law.

WISCONSIN'S WAR HERO

Idea of Killing Opponents Old

Governments Were Maintained in That Manner in Ancient Times, Says Professor.

THINGS THAT WERE FOUND

Excavations in Egypt Disclose Some Interesting Information Regarding the System of Government of Egyptians.

London.—The idea of maintaining a government by killing off the members of the opposition is very ancient, according to Hinders Petrie, the learned professor of Egyptology at University college here. In an illustrated lecture at the college recently Professor Petrie described the latest excavations at Abydos and elsewhere in Egypt.

Ancient Tomb Explored.

He described the discovery of some tombs of the time of the First Dynasty. These were made in rows some 300 feet long and were covered by six feet of sand and rubbish. Very little stone work was found, owing to the plundering that had gone on in the past, but a number of fine alabaster jars were unearthed. There were also found 60 or 70 skeletons and 80 skulls. In most cases the body had been buried with the knees drawn up to the chest, and in the grave there had been placed small jars containing grains of wheat for the sustenance of the dead.

Among the royal tombs, said the lecturer, there was evidence that many courtiers had been killed off at one time on the death of the king. This was an excellent system of preventing unstable government, for by making sure of the safety of the king statesmen made sure of their own. The result was that the kings had very long reigns indeed. The courtiers who were killed off were stunned by a blow from a sandbag and then buried. One or two of the victims, it appeared, had not been very dexterously dealt with, for the position of their unearthed skeletons strongly suggested that they had struggled to get out of their graves after burial.

Some Finely-Carved Lions.

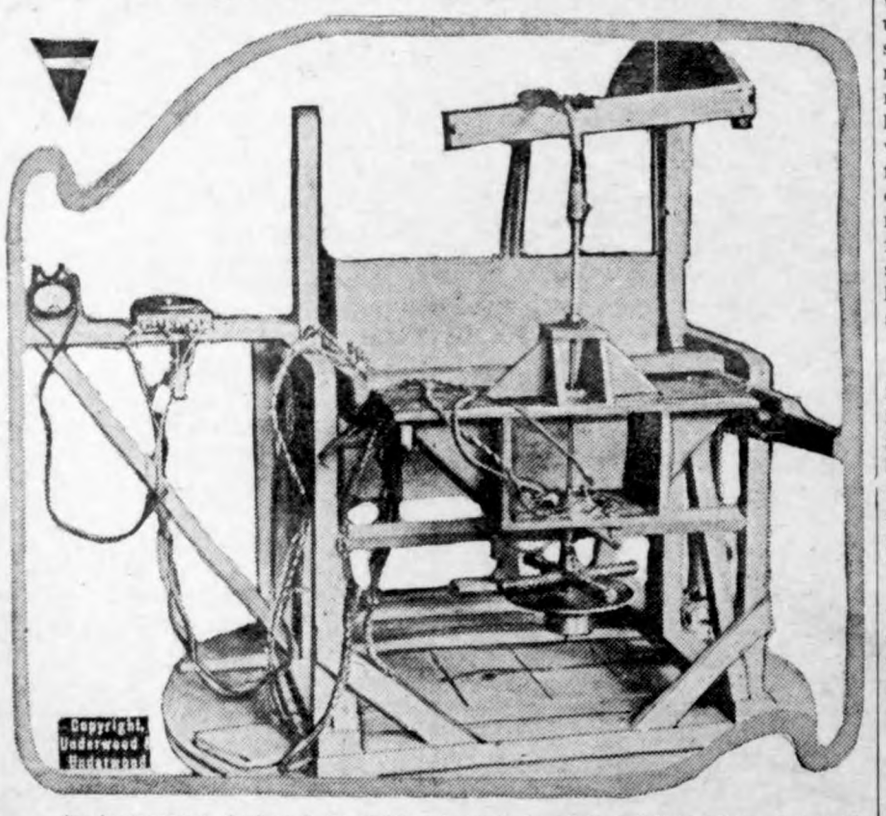
Among other discoveries were some finely-carved ivory lions, used as pieces in a game played on a circular board, a comb of ivory, many copper tools, including the earliest form of a saw (a knife with a roughly-knotched edge) and many flint implements. In one grave was found a quantity of skeletons of cats.

A photograph of great interest was that of a hermit's dwelling in a cave at the head of a fissure in a stony valley. The external view of the place exactly represented the entrance to a dug-out in a front-line trench.

Buried in Old Dress.

Macedonia, Ia.—Mrs. Eliza Keast was buried here the other day in a dress which she purchased in England 37 years ago. While on a visit to her old home in Cromwell, England, she purchased the dress, and on arrival home expressed a wish that it be her burial shroud and had been carefully kept since then.

New Airplane Compass Wins Award



An instrument designed to guide aircraft in cloud flying when the ordinary magnetic compass will not, has been developed at the United States bureau of standards by Paul R. Heyl and Lyman J. Briggs. The instrument is installed in the rear part of the airplane body and is driven by wind power. The dial and indicator are controlled by the pilot at the instrument board. The compass won the Magellanic premium awarded annually by the American Philosophical society.

NEWS REVIEW OF CURRENT EVENTS

Union Leaders Warn That They Will Order Rail Strike if Men Vote for It.

GOVERNMENT TO COMBAT IT

President Harding Gives Labor Board Full Support—Tariff Precedes Bonus in Senate—Conference on Russia at The Hague—De Valera Is Irreconcilable.

By EDWARD W. PICKARD

IF THE railway maintenance of way workers, shop men and members of other unions that are balloting on the question of a walkout, vote for a strike on July 1, the officials of the unions will sanction it. In that case the unions will find themselves in direct conflict with the government, for President Harding has let it be known that he will, to the full extent of his power, back up the federal railway labor board, whose adjustments of wages as provided by the transportation act have brought on the crisis. The President and the cabinet are keeping in close touch with the developments, and all agencies of the government will be employed to prevent a strike if possible and to render it ineffective if it does come.

The stand of the union leaders was set forth in a long statement to the labor board in which the decisions of that body were denounced and warning was given that the strike would be called if the men so voted. Ben W. Hooper, chairman of the board, replied to this with charges that the union officials had distorted and misconstrued the board's decisions in a manner to misled the men, and he cited instances of this distortion.

"A strike of railway employees," said Mr. Hooper's letter, "involving their wages, their employment and their welfare, based upon such misleading statements of this board's sentiments and declarations, would be unjust to the men and to the public."

So far as the shop crafts are concerned, one of the three reasons for desiring a strike may be removed within a few days. This is the practice of farming out shop work under the contract system. The labor board has been considering 17 complaints filed against various roads and its findings are said to be almost ready for announcement. Hearings in 30 other cases are now being held. Early in May the board decided such a case against the Indiana Harbor Belt railroad, the principles it enunciated then being, briefly, that such contracts "violate the spirit and purpose of the transportation act, and in effect set aside the wage decisions of the railroad labor board to which the carrier was a party and which the carrier put into effect."

Railway executives generally are of the opinion that, though the men probably will vote for a strike, it will not be ordered; and they say that if it is, transportation will not be seriously crippled. The train handling forces, including engineers, firemen, conductors and switchmen, are not involved in the controversy.

IN THE American Federation of Labor convention in Cincinnati a resolution was introduced calling for the repeal of the Cummins-Esch transportation act, with an amendment favoring government ownership of the railways. At the request of the rail union chiefs the resolution was laid aside. W. H. Johnston, president of the machinists, said: "Not for a single moment have we abandoned the program of government ownership. But the present administration is unfriendly to us and we thought that it would be inadvisable to press the matter at this time. Our enemies would charge that the forthcoming strike was called to force the government to take control of the railroads. We want that issue to be clean cut."

The special committee of the A. F. of L. convention appointed to consider recent United States Supreme court decisions affecting labor cases recommended amendments to the Constitution prohibiting the labor of children under 16; prohibiting the enactment of any law or the making of judicial determination which would deny the right of workers to organize, to deal collectively with their employers, to collectively withhold their labor and patronage and induce others to do so; providing that if the Supreme court decides that an act of congress is unconstitutional, or by interpretation asserts a public policy at variance with the statutory declaration of congress, then if congress by a two-thirds majority repasses the law it shall become the law of the land.

The committee also recommended that congress be urged to enact a child labor law to overcome objections raised by the Supreme court to previous laws.

ONE of the worst labor clashes in the history of Illinois occurred last week at the strip mine of the Southern Illinois Coal company in Williamson county. A gang of steam shovelers was at work there, and after President Lewis of the United Mine Workers had declared they were to be treated as "common strike breakers" they were surrounded and attacked by a crowd of striking miners armed largely with stolen weapons. The nonunion men, after a long battle, surrendered and many of them were murdered in cold blood by their captors. The number of dead is uncertain at this writing, but probably is as high as 40, and perhaps much higher. Governor Small ordered 1,000 members of the state national guard mobilized at Chicago. Though the miners quieted down somewhat after their orgy of slaughter, there was great danger of recurrence of the disorders. It is too early now to attempt to place the actual blame for the disgraceful affair.

YIELDING to the request of the administration, the Republican senators agreed to get through with the tariff before taking up the soldiers' bonus bill. Then the senate, by a vote of 51 to 22 rejected Senator Walsh's motion to sidetrack the tariff for the bonus, and, after a long wrangle, voted almost unanimously to make the bonus bill the special order of business immediately following the passage of the tariff measure. During the debate some of the Democrats severely assailed the President and the majority party for delaying the adoption of the bonus bill, but Senator Lenroot retorted that the matter of speeding it up was now in their own hands, and that if they would cease filibustering against the tariff, both measures could be passed before August 1.

Consideration of the ship subsidy bill also has been deferred, President Harding consenting to postponement until the house has sent the tariff bill to conference. When his letter to this effect was read in the house a partisan debate arose over the matter of selling liquor on American vessels. The Democrats again made it clear that they will keep this issue alive. Meanwhile the row over Chairman Lasker's policy has been temporarily quieted by the issuance of new Treasury department rulings declaring that the Volstead law does not apply on vessels outside the three mile limit.

PROVIDING for an enlisted personnel of 88,000 and carrying about $226,450,000, the naval appropriation bill was passed by the senate and sent to conference with the house. The action on the personnel is final. Amendments providing for withdrawal of American marines from Haiti, the Dominican republic and Nicaragua were defeated after long debate.

SOVIET RUSSIA, whose affairs are being considered this week by the international commission at The Hague, thinks she has so modified her economic plans that the other powers must be satisfied. According to Litvinoff, assistant commissar of foreign affairs, the all-Russian central executive committee recently has enlarged the scope of its new economic policy, making new decrees defining private property rights, regulating contracts, reintroducing lawyers and public prosecutors, and re-establishing civil law, until now the government regards the guarantee problem as practically settled.

He also says Russia is willin demobilize 50 per cent of its arm Poland, Lithuania, Latvia and thonia will reduce their armie proportion. The success of the ference at The Hague, he asse depends mainly on France, and added that if it failed, Russia h to conclude separate treaties England, Italy and other powers.

Japan's delegates to the confer have decided that France's Ru program is futile and unreason and now it looks as though Fr and Belgium stand alone. It ma that one or two other countries support their demand that, as a condition to discussion, Russia to recognize the rights of pr property. The British and their lowers wish to omit all discussio the principles of communism and with concrete cases.

IF IRELAND is pacified it will be with the consent and ai Eamon de Valera. Though beate the Dail Eireann elections by a siderable majority, he still persis his implacable opposition to the t which establishes the Irish Free S and he declares he does not be the Dail will pass the new Irish stitution in its present form, w he says is "well composed in a parts and peculiarly fitted to the in view, the degradation of people." He adds that it woul clude from public service and tically disenfranchise every hone publican.

Directly connected with the trouble was the assassination in don on Thursday of Field Marsha Henry Wilson, late chief of the perial general staff of the B army. He retired from this post February and was elected a me of parliament from an Ulster dis He also was appointed military viser to the Ulster government was a leader in plans for pacific He was shot to death by two m

BETTER, perhaps, are the pros for pacification and unificatio China. Acting as an agent of P dent Li Yuan-hung, General Chen possession of Canton, defeating troops of Sun Yat Sen, who later taken prisoner and held on a Ch cruiser. Chen set up a provis government pledged to support central government at Pekin, an cided that Doctor Sun should be mitted to resign. President Li formally invited Sun to go to Pe and assist him in reorganizing general government. Meanwhile eral Chang, the defeated Manch leader, and General Wu signed armistice. Of course there is s lot of fighting going on in China Kiangsi province some ten thou of Wu's troops mutinied, killed t natives and started on a march to Nanchang. British and American boats hurried to the protection o eigners in that region.

APPROVAL was given to the treaty with the United Stat the Japanese privy council and le of ratification will soon be receiv Washington. The other treatie the Washington conference wi ratified early in July, accordi advices from Tokio.

J. MORTON HOWELL of Ohi the distinction of being the American minister to Egypt. He nominated by President Harding promptly confirmed by the senate selection of Mr. Howell for this tion would seem to be especially as he has been the American matic agent and consul gener the land of the Pharaohs.

SENATOR FRANK KELLOGG nominated for another term b Republicans, and his opponen the Minnesota fall campaign be the first woman ever nomi by a major party for a in the upper house. She is Anna Dickie Olesen, winne the Democratic primaries. She her nearest competitor, T Meighen, by several thousand Mrs. Olesen was one of the M floor managers in the Democrati vention of 1920. Another woman came to the front in that conve Mrs. Isetta Jewell Brown of Wes ginia, announces her candidac the senate subject to the Demo primaries of August 1.

THIS DECKHAND HAS HAD ENOUGH

Quits His Job Cuddling Boa Constrictors on Ship.

Walking Deck With Seasick Gibbons and Valeting Elephants and Other Products of Jungle Abjured by Seaman.

New York.—Johann Schultz, a thoroughly American citizen of German birth, quit his job as deckhand on the steamship Hansa, which recently arrived at Pier 86, North river. He said he would take his chances in a poor labor market rather than spend another day on a ship carrying eight elephants, seven baboons (man-killing, of course), twenty-five assorted snakes—boa constrictors, pythons, anacondas, hooded cobras and Senegambian ham varmints; 100 non-man-killing apes, 150 birds, including parrots, love birds and three long-legged fowl of the genus Kagus from Burma.

"I'm tired of valeting elephants," said Mr. Schultz. "I had to cuddle boa constrictors in my arms and croon them to sleep at night, and I've had enough of it. You don't know what life on the bounding wave is until you've had to walk the deck with a seasick gibbon or calm the fears of a bull cobra. Yes, you may announce that Jack Schultz has quit the sea game, and add that any one who wants a man to take tender care of his or her geranium beds or yearns to engage a mild-mannered watchman might do worse than to look me up."

The Hansa's cargo of jungleers are consigned to Louis Ruhe, dealer in such merchandise.

According to Mr. Ruhe's representative at the pier, Louis J. Beck, the long-legged fowls of the genus Kagus are the first of their kind to arrive in America. Mr. Beck and Andrew Myers, another representative of Mr. Ruhe, say that Albert Meems, a mighty hunter, corralled the menagerie in the Burmese jungles. It took him more than a year to do it, they say.

Sheriff's Honor System Lost Him Five Prisoners

Sheriff Seth Orndorff, of El Paso, Tex., changed his mind about the honor system after an experiment lasting four hours.

Twelve prisoners without shackles were taken from the jail to work on a road, with the promise that, if they worked well without guards, they would be pardoned before their time was up. Five prisoners escaped before noon, and the experiment was called off.

Historic Tree Cut down.

Middletown, N. Y.—The historic cottonwood tree at Goshen, near here, which was used as a gallows for the execution of Claudius Smith, tory, bandit and murderer, 143 years ago, was cut down recently owing to its unsafe condition. The tree has been protected at great expense by the village for many years.

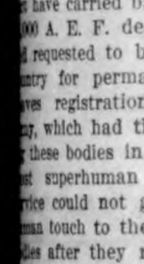
The AMERICAN LEGION

(Matter for This Department Supplied by the American Legion News Service.)

DDY OF AMERICAN LEGION

ester Jones of Washington, D. C., Founder of the Movement Back in 1919.

Lester Jones of Washington, D. because he was the founder of the American Legion movement in America, was called the "daddy" of the organization back in 1919 and the title has stayed with him ever since.



Mr. Jones was one of a handful of veterans who met in Washington, March 7, 9, and formed what was known as John J. Pershing post of World r Veterans. Later, when the sev- l societies of those who had fought the World war combined under name of the American Legion, Jones was made commander of newly-formed George Washington t No. 1. When the department of District of Columbia was formed, was made departmental com- nder.

egionnaire Jones was an enlisted n with the District of Columbia tional Guard prior to the World r. During the war he rose from vate to colonel, taking all the des.

ganization Participated in Services at Final Interment of Men Brought Home.

rmy transports in which many of m went across eager for the con- have carried back the last of the 00 A. E. F. dead, those relatives d requested to be returned to this ntry for permanent burial. The es registration service of the y, which had the work of return- these bodies in charge, did an al- st superhuman task. But this rice could not give the comradely man touch to the handling of these dies after they reached the United tes that seemed due them.

No organization was so well suited perform the last rights of honor respect for these soldier dead as the American Legion. The men of Legion took upon themselves the igation. Forty ship loads of bodies me to eastern ports during a period two and a half years. It was not ways possible to have an elaborate rvice, because the arrivals were too quent, but in every instance there s at least a prayer by a chaplain the Protestant, Catholic or Jewish ith, an address by a prominent citi- or army officer and a rifle salute. A number of times, however, the rvices were noteworthy. President rding delivered an address at rvices arranged by the Legion, May 1921, when the Princess Matoika rved with 451 bodies. General rshing and Senator Lodge spoke en the Somme and the Wheaton ar- ed, July 10, 1921, with 7,000 dead. e last cargo of bodies arrived in ooklyn, in April, 1922, on the Cam- ia. On that occasion, the body of ivate Charles W. Graves, Company One-hundred and Seventeenth in- ntry, Thirteenth division, was borne a caisson through the streets, lined th silent throngs, to the army base. here simple ceremonies marked the se of the last public demonstration r America's returned dead.

AN TOWARD BERLIN IN 1918

arence De Mar, Winner of 25-Mile American Marathon Race, Interested in Boy Scouts.

Clarence H. DeMar of Melrose, ass., winner of the 25-mile American arathon race, t some of his durance as a ng-distance nner while run- ng toward Ber- in 1918, and e undoubtedly quired a good al of his agil- y and sureness f foot while dging Fritz's sition. De Mar ished fourth in long-distance race between the men the A. E. F. and the other allied tions in the Pershing stadium in ris.

His chief interest, however, does seem to be in racing, but in the lfare of a troop of boy scouts of hich he has been in charge for sev- al years.

Ten Years to Displace the Blue.

It will require about ten years to ace all French troops in khaki de- ite the efforts of the higher council war to equip all branches of the ench army in uniforms of that lor. The horizon blue and steel oth on hand must be used up it will take ten years to do it, e ministry of war declares.

KNOWS MEN BY NICKNAMES

Legion's National Adjutant Has Acquaintanceship Among Members of the 11,000 Posts.

There is one magnificent difference, among others, between the American Legion of today and that Legion of C. Julius Caesar's day. No one in the latter outfit knew more than a cohort or two of private soldiers and ordinary officers by their first names. The American Legion has a man who knows thousands of his Legionnaires by their favorite nicknames. But Caesar's hosts didn't have any national adjutants to speak of.

Legion posts are established in practically every community in the United States and Legionnaires have carried their flag into 20 foreign countries. In every one of these far-flung 11,000 posts there are one or more men who know Lemuel Bolles. Mr. Bolles, then, knows them. Ever since the Legion was organized in France Mr. Bolles has been identified with it. Since its first convention in Minneapolis in 1919 he has been national adjutant, and as such he has met personally or corresponded with thousands of Legion men and women. His duties have taken him into almost all the 48 states during these three years, and he receives a thousand or so letters each week. He has, without doubt, the largest personal acquaintance with men of arms ever enjoyed by any individual since armies were invented.

Mr. Bolles was born in Minneapolis, grew up on the ranges of the Dakotas and was established in Seattle, Wash., when he entered active service for the World war. He began his military career as a private in a National Guard company. Overseas he served as a colonel on the general staff of the First army corps, and was decorated with the Legion of Honor of France.

PLAQUE TO AMERICAN LEGION

Bronze Souvenir Is Presented to Organization by Le Journal, the Paris Newspaper.

A beautiful bronze souvenir, presented by Le Journal of Paris, the newspaper which carried the first news of the Yanks' activities along the front four and five years ago, to the American Legion, composed of

Bronze Souvenir From France.

those same Yanks, has just been installed in the new trophy room at Legion headquarters.

The plaque is made from the bronze that was used in the manufacture of the famous French seventy-fives which helped saved Paris during the war. The inscription on the shield says, "To the American Legion: in remembrance of its dead and appreciation for its members. With memories and with hope!"

Carrying On With the American Legion

"Main street" has been lifted out of the mud by the American Legion post of Bristow, Neb. The post assembled 80 men and 30 teams and graveled the well-known thoroughfare in two days.

* * *

It is the aim of the Legion to carry the news to all ex-soldiers that they can still reinstate their war-risk insurance policies with all war-time advantages. This can be done up to March 3, 1926.

* * *

American Legion men of Hibbing, Minn., have endowed a bed in their local hospital and in the Legion hospital at Rochester to provide emergency treatment for their sick and wounded comrades.

* * *

Payment of old debts takes the lead in the spending of the state compensation allowance received by the ex-soldiers of Ohio, according to a poll taken by the American Legion. Savings deposits make the second largest item.

Marconi Hopes to Get Message From Mars

William Marconi, the Italian radio wizard, photographed in the radio room of his yacht Elettra, on which he has just crossed the Atlantic. It is with the elaborate outfit here shown that Marconi hopes to receive messages which he suspects the inhabitants of Mars are trying to send to the earth.

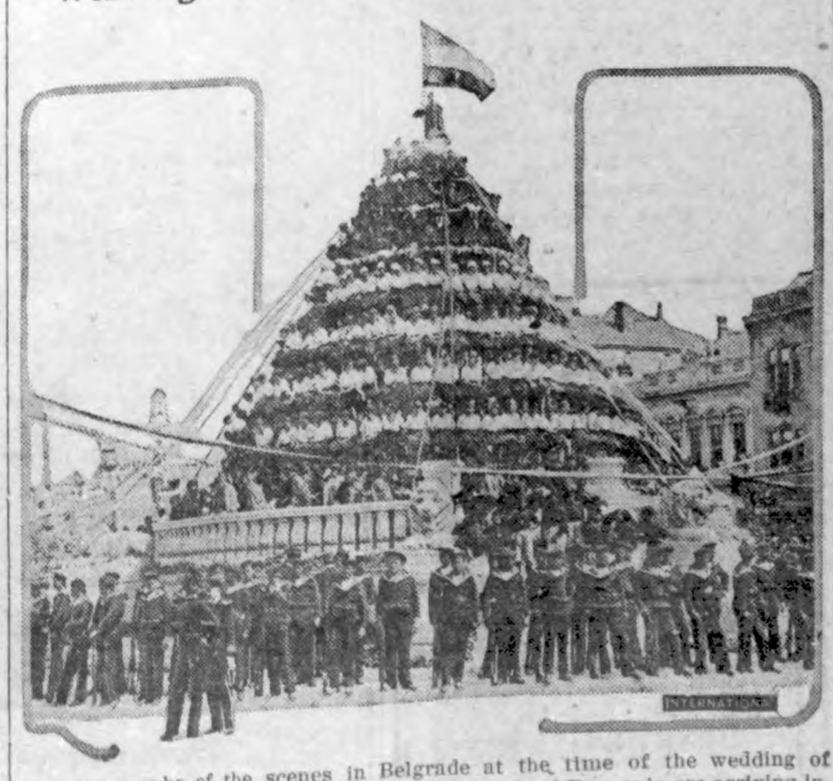
King of Rome's Cradle Given to Paris

A gift of the city of Vienna to the city of Paris, the cradle of the king of Rome, is on exhibition in Paris, after having been in the possession of Vienna for many years. The cradle was carved for the infant king of Rome, Napoleon's son by his second wife, the Archduchess Maria Louisa of Austria.

Telling of Cheyenne Frontier Days

"Miss Wyoming," otherwise Miss Helen Bonham, famous cowgirl "trademark" of Cheyenne Frontier Days, the West's great roundup of cowboy sports which comes in July.

Waiting for the Royal Bridal Couple



Photographs of the scenes in Belgrade at the time of the wedding of King Alexander of Jugo-Slavia and Princess Marie of Rumania are arriving in this country. This one shows a cone-shaped stand filled with girl guides and boy scouts awaiting the procession to the church.

EMPEROR WITH NO EMPIRE

In his seclusion in the forbidden city in Pekin it has been very difficult to obtain photographs of the deposed Chinese emperor, whose throne was taken from him before he had a chance to reign. This is a very recent photograph and shows the young realmless monarch as he appears today, in his silk palace robes. His name is Pu Yi, but his imperial name is Hsuan Tung, which has the grandiloquent meaning of "legislating universally." Most people are accustomed to think of him as still a child, but, as this picture shows, he is now fully developed into manhood, being about eighteen years old.

HARDING PEACE MEDAL

First samples of the President Harding medal are on exhibition at the United States treasury. The medal completes a series of presidential peace medals commemorating every executive from Washington down to Harding. The design is the work of George T. Morgan, an engraver of the Philadelphia mint, who has been in the service since 1876.

Fought in Napoleonic Wars.

The oldest man in the whole world is claimed by Poland which in this present form, is among the youngest countries in Europe. John Krasinski, the last survivor of the Napoleonic armies, fought 110 years ago, in the battle of Borodino. Aged twenty-two then, he therefore today counts the venerable number of 132 years. Taken prisoner by the Russians—not in the World war but during Napoleon's Moscow retreat—Krasinski settled down in Russia and fought in the Crimea. Last year his "young wife," as he calls her, died at the age of ninety-eight. Having then learned that the Polish government was making grants of land to veterans, Krasinski bethought himself of his original nationality, and as his excellent claim to be a veteran could not well be denied, the old man is today busy tilling land in the province of Posen.

How It Worked.

"Mamma, what's this?" asked a little four-year-old, picking up a calendar her father had brought home.

"It's a calendar, dear. It's something by which we tell the time of the year or month or week."

The little one turned it over carefully for a minute or two. "Mamma," she inquired anxiously, "where do you wind it up?"—Boston Transcript.

Home Town Helps

SPLENDID FOR THE GARDEN

Flower Known as "Painted Tongue" Will Well Repay Time and Trouble Bestowed on It.

No more gorgeous bed for August and September and until the hard frost comes in October can be planted than one of the Painted Tongue, Salpiglossis, the flower with the veins of gold. This annual is one of the most beautiful of the summer flowers and is not often met with, although florists are using it very largely for cut flowers the last two years; its gorgeous, purple, maroon, scarlet, rose and bronze shades, all with veins showing a glint of gold, a metallic shimmer found in no other flower, making a brilliant display when cut.

The improved forms show a great increase in size over the older forms and resemble the finer petunias in general appearance, although the blooms are more trumpet shaped than those of the petunia. The Painted Tongue is a native of Chili.

One reason for the rare appearance of the Painted Tongue in the garden is that many people have tried to grow it and have had difficulty. It should not be coddled. Planted indoors to get an early start, they have a disappointing habit of dying off inexplica-

SALPIGLOSSIS - AN ATTRACTIVE ANNUAL BEAUTIFULLY VEINED WITH GLINT OF GOLD.

The Painted Tongue.

bly after they are transplanted into their beds, leaving blank spots and ruining the appearance. Too much coddling is the trouble. They should be raised outdoors. It is best to wait until May and plant them in the open. The seed is fine and germinates quickly and should be scattered thinly where the plants are to stand and thinned to 15 inches apart. A pinch of seed scattered at 14-inch intervals would solve the problem, thinning to the healthiest plants in the colony. They can be transplanted successfully if moved with a good ball of dirt so the roots are not disturbed too much.

Their growth is surprisingly slow at the start and they seem to have decided to stand still. It may take them a month or more to reach a height of three inches, but after that they start a sprint if the weather is warm and by August will reach a height of from 2 feet to 30 inches.

They need a rich soil and it is well to allow two or three plants to stand in each little colony to select the sturdiest as even with this care some of them are likely to give up the ghost. They resent any check in growth which is one reason why they stand transplanting badly. Give them liberal cultivation and plenty of water and you will have a wonderful sheet of bloom.

The Orderly Country Town.

The ordinary country town can not expect to present a fine appearance as the result of having many costly edifices. It may have some handsome buildings, but it usually cannot invest any great amount in expensive architecture and building materials. It has to acquire a pleasing appearance in other ways largely by a scrupulous care of its business buildings, homes and streets, with the patient effort to beautify the same.

Property that is kept in perfect repair has a finish and trimness about it that counts more than costly architecture. You see many towns where a great deal has been spent on ornate and elaborate buildings, but where the streets are not kept clean, and where many people still tolerate disorderly conditions. A place like that looks far inferior to many simply built country towns which are carefully maintained.—Louisville (Texas) Enterprise.

Reminder of "Cattle Lifting."

A singular natural curiosity located in the valley of the Annan in Scotland is what is known as the Devil's Beef-tub. It is in the form of a hollow or basin, surrounded by high hills which make it so secluded a spot that a large number of persons can conceal themselves in it and remain unseen by others in the immediate neighborhood. In ancient times it was frequently used as a hiding place for stolen cattle, and it is this fact which has given it its name.

Morning sermon at 10:00 A. M.
Sunday School at 11:00 A. M.

The postponed Childrens Day program will be given in the evening beginning at 7:30 o'clock.

Midweek prayer meeting at the home of Brother Aug. Lenz on the 6th of July.

Because of the Fourth of July Celebration on Tuesday, the Chorus practice will take place on Monday evening. Please remember the change in time.

You are invited to these meetings.

W. C. Bergmann, Pastor.

TO COVER LARGER TERRITORY

Owing to the growth of the Chambers Music House of Mason City, they have added to their present line of Pianos and phonographs the Stein way and Lyon & Healey Pianos and Players. There are but few musical people who are not familiar with these two well known lines and it will be an advantage to local people to see and select their instruments from their store. They extend a cordial invitation to every one interested in music to visit their store at 29 E. State St., Mason City, Iowa and ry these wonderful instruments. (advertisement.)

ADVISE POISON FOR FIELD PEST

Squirls and Mice Can be Killed With Strychnine Mixture

Ground squirrels, gray squirrels and field mice, which annually cause much damage to Iowa crops, may be eradicated by feeding them poisoned grain, according to the farm crops department of the Iowa State College.

The poison is a strychnine mixture prepared by mixing one ounce of powdered strychnine and one ounce of baking soda—this being poured into three fourths pint of thin, hot starch paste. To this one-fourth pint of corn syrup and one tablespoonful of glycerine are added. After the preparation has been stirred one-eighth ounce of saccharine should be added. The bait should be allowed to stand for a time before using.

One quart of the poisoned bait is enough to rid the farm of the squirrels from 50 holes. It should be placed in small amounts on smooth ground in front of fhe entrance to the holes. The farm crop experts say that for the best results. it should not be placed in the holes or on loose dirt.

Mice will get the mixture more raadily if it is put in sheltered places where mice harbour.

All utensils used in mixing the poison should be kept away from the children and livestock.

HIGH PATRONS AT THE LOCAL CREAMERY

The patrons who received $50.00 or over from May 16th to May 30 from the Klemme Co-Operative Cr. Co. are:—

H. C. Beiers	$109.74

GOODELL NEWS NOTES

Mr. and Mrs. Sylvestar Cashman, and Carrol and Mrs. Tom Cashman, came from Polo, Ill., Saturday night via auto.

Jay Griggs and family, accompanied by E. A. Strasburg and family, and Margaret Kearney took picnic dinner at Cornelia Sunday.

A large crowd attended the dance here Friday night.

Mr. and Mrs. Hemingway were at Williams Sunday visiting.

Mrs. Frank Clark went to the Hampton hopsital for treatment, last week.

Jay Griggs and daughter, Mae, accompanied by Carl Engeseth and daughter Adelaide, spent the greater part of last week at Elm Bend Cottage at Ventura.

NOTICE

A meeting of the Farmers Elevator stockholders will be held at the Idle Hour theatre July 1st at 2:00 P. M. This is the annual meeting for the election of officers and distribution of dividend checks. Every member is urged to be present.

COAL SITUATION NOT FAVORABLE

Manager Kellogg, Iowa Falls Electric Co., Thinks Price Will Advance Till Strike Ends

The people in this locality seem to show very little concern over the existing coal strike, and in the fact that the situation is practically the same as when he strike was called. The only interest they seem to have in the matter is whether they will be able to get coal for domestic purposes during the coming winter, and they seem to beleive that the matter will be settled before that ime. They apparenly do not realize that the matter is of the greatest importance to them especially if they are being furnished with electric current for lighting and heating purposes by the Iowa Falls Electric company and other similar companies.

A representative of this paper called on H. F. Kellogg, manager of the Iowa Falls Electric company, who made the following statement in regard to the local conditions: "You remember that at the time the strike was called our company made a state ment which appeared in this paper in regard to the supply of coal then on hand at Iowa Falls. A short time ago we made a new inventory of the coal on hand and found that on June 1 we had in storage at Iowa Falls about 1,855 tons. This is about a three months' supply at our present rate of consumption. As there seems to be no chance of an immediate settlement of the strike we beleived that it was not wise to deplete our sock of sorage coal, so went into the market and bought whatever coal we could find that was suitable for our purposes. We were able to buy ten cars of Kentucky screenings, the first of which has just been delivered. This coal cost the company $2.50 per ton more than the coal which we had in storage, but we preferred to pay the advanced price and thereby be assured that we can furnish service for at least a month longer than we could by using our storage coal. We are now in a position to assure our customers that we will be able to furnish service until Oct. 1, and it is our intention to continue to purchase coal so that we will not be obliged to close down in the event that no settlement of the tsrike is agreed upon.

The price of coal is advancing daily and he amount that is offered is very limited, and this is being bought as rapidly as offers are made. In spite of the fact that there has been a slight reduction in freight rates which will become operative on June 1. the coal which we will buy will be at an advanced price. The decrease in frieght rates will amount to about forty cents per ton, but the advance in price of coal will more than offset this saing. It is my opinion that the price of coal will continue to advance until the strike is settled. All of the coal that is being offered is from the Kentucky and Virginia fields and the freight rates are much higher than what we had been paying on Illinois and Iowa coal. There is no juestion that we will be obliged to shoulder a considerable loss in buying coal under present conditions but we feel that we owe it to our customers to furnish service as long as it is possible to do so."—Adv.

BIG CELEBRATION

Bayside Amusement Park, Clear Lake, Iowa

4th OF JULY

Let's go. Lots of fun for all, 25 piece Band, Fireworks. Free Acts, Dancing, Base Ball and everything that goes to make a real celebration. Come and have a good time. adv

Famous Building Intertwined With Country's History

Rich in Noble Memories

A building of serenity and symmetry, of fine amplitude, a gracious, alluring building, rich in noble memories, yet touched also with a living sweetness; such is the beautiful old State house in Philadelphia, often referred to as Independence hall. And it stood here, and was even then a building of age and dignity, when Sir Walter Scott said to Washington Irving, with a tolerant condescension which he meant to be flattering, "The vast aboriginal trees that have sheltered the Indians before the intrusion of the white man, are the monuments and antiquities of your country!" Scott was quite ignorant of the fact that America had architecture; to him, our country had merely trees, although this building, and some other American buildings, were richer in beauty and in noble association than quite a number of those in his own land of which he wrote with such enthusiasm.

Scott was deeply impressed by the thought of our illimitable forests. He longed to see one, as Dickens longed to see an American prairie. And had Scott come over here, and had he seen not only a forest but this State house, his imagination would have been fired, and he might have written a great novel about America, rich in details of the Revolutionary leaders, with the picturesque John Hancock, in scarlet coat and cocked hat with black cockade, entering this building to preside at the signing of the Declaration. . . .

Beautiful in Many Ways.

The State house, "Independence Hall," was planned in 1729 and completed, except as to wing and tower, five years later; quite old enough, one sees, to satisfy even a Walter Scott! But it must not be thought that it is beautiful or interesting principally on account of age. Age adds to a beautiful building the salt and savor of time, the romantic patina, literal or metaphorical, that comes with the decades. But this State house is beautiful in itself; it was beautiful when it was young and new; it will remain beautiful as long as it stands, with its traditions growing more interesting with time. After all, Philadelphia was the largest and richest Colonial city of Great Britain, and so it was natural that a fine administrative structure should be built here. And it was put up in the same period which saw the construction of two other admirable state houses, that of Boston (not the stately pillared building of the present time, but the delightful ancient state house), and the charming State house of Annapolis. All three are lessons in good taste, in positive beauty. And the Philadelphia structure is the finest of the three. . . .

The State house is a beautiful building, alike in its mass effects and in its smallest details, in the views of it from the exterior or in rooms within. Its facade is exactly centered, and similarly winged and arcaded at right and left. It is beautiful and it is balanced.

Viewed From the Outside.

Seen from Independence square, which is a large open space, stone paved, with intervening surfaces of grass and fair-sized trees, it is a towered building of time-mellowed brick, with white window stones, with smallish pillared doorway beneath a tower built outside the lines of the main building, and, over this doorway, a splendid Palladian window. Above are cornicings, and a fetching, bulging, bow-fronted window, and above this is a clock-tower, square at the bottom and rising in eight-sided diminutions to a six-sided narrow pinnacle which is topped by a trident-like weathervane of gilt.

Enter beneath the triple Palladian window, with its heavy muntins, and passing by the foot of the finest stairs in America, you enter a broad and brick-paved central hall; and there comes the sense of a glory of white, with touches of mahogany and darkish green.

The rooms are serenely beautiful; they are dignified, large and light; there are pillars and pilasters, there are charming cornices, there are panels; in every direction one sees beautiful corners or vistas or entranceways. The views through the arches of the room of the Supreme court, into and across the Hall of the Signing, defined by those three pilastered arches, is astonishingly effective.

At the foot of the wonderful stairs now stands the Liberty bell, upon which may still be read the Bible verse which long before the Revolution was cast upon it by its makers: "Proclaim liberty throughout all the land, upon all the inhabitants thereof."

Problem Before People.

There is abundant room for improvement, but the point is that improvement consists for the most part in adherence to the original plan, or at most in slight changes or modifications, such as have been made from time to time—not all of which, by the way, have proved to be wise. The problem is one of applying sound and well-tried principles to life, removing obstacles to the efficient working of tested machinery, and realizing in thought and act the noblest ideals. From this point of view, the attitude of Americans should be appreciative and grateful, rather than critical. To turn for light from America to Russia is very like turning from Christianity to voodooism. To judge America or Americanism by the worst features of our national life, or by our failures, is much as it would be to judge Christianity by the lives of those who, professing a belief in it, have been traitors to it. There is much to alarm and dishearten, but there is also much to cheer and give hope, and abundant reason and ground for faith. So we of all people ought to be able to "greet the unseen with a cheer." We are facing not the twilight with its shadows, but the glories of the dawn. Therefore, the American is, as well he may be, the most hopeful of the sons of men.

Many Lovely Vistas.

The stair mounts, ramp by ramp, within the great tower; a broad stair with broad treads and low risers; and on the second floor, as on the first, there are everywhere long and lovely vistas of distinction. And on the second floor is a great banqueting hall, entered through a delicately bell-flowered doorway topped by a beautiful fanlight, occupying the entire length of the building; and at each end of the great room is a broad fireplace, with the intent that the two shall flicker at each other with fineness of effect. . . .

A tang of especial distinction is given to the admirable Chestnut street face of the State house by the unusually high keystones, of marble, which center the brick above each of the ample windows and rise into a band of dark gray marble that extends across the entire one hundred and seven feet of the building's front; and by a line, above this band, of nine panels of marble, beneath the windows of the second floor. The quoins on the corners, and the fine wooden cornice and balustrade, add still further distinction; and in all it is a noble and distinguished building, rich in noble and distinguished memories. —Robert Shackleton in "The Book of Philadelphia."

Not a Meaningless Document.

It is the fashion among some today to belittle the Declaration of Independence as a meaningless document, as a mere gesture which those who framed and signed it did not intend to be followed with deeds. Nothing is more false. Nor is it true that in the essentials the evolution of the United States has departed from the ideal that was in that paper given expression. Those who signed the Declaration knew perfectly well that they could not create a nation by a mere stroke of the pen and were aware of the tremendous difficulties ahead, not merely those of liberation, but those of construction and organization. They knew that they were but taking the first step and that in the long journey there would be departures from the straight path.

Crowd Listening to the Late Senator Knox Deliver Independence Day Address, at Independence Hall, Last Year

Something to Think About

By F. A. WALKER

THE MASTERFUL MIND

WHEN a perplexing task confronts you, the very thought of which upsets your poise and seems to paralyze your mental and physical faculties, by all means keep cool.

You cannot by any other manner master the situation.

By mastering yourself, composing your tingling nerves and going at the work in an orderly fashion, you will find that however serious were your apprehensions, or your fears of getting through on time, there was really nothing to be flustered at at all.

A moment of quiet, decisive thought at such times is usually all that is really needed, but the difficulty with most persons is, the mustering of the moment to do their bidding.

The average mind has an inclination to jump and dance in circles and to become so agitated that anything approaching tranquility appears to be entirely out of the question.

Matter for the time being overwhelms mind, breaks it into a thousand atoms with provoking spitefulness and leaves thought in utter dismay.

The housewife knows how true this is, when at dinner time her happy-go-lucky spouse walks in at the front door with several old college chums, and calmly announces that they have come to dine with him, forgetting until he put his key in the lock that it was the cook's afternoon out.

In the flurry that follows everything goes wrong.

Had the husband in the beginning given thought of the cookless kitchen, all embarrassment could have been avoided.

Your desk may confront you with hundreds of letters requiring immediate personal attention.

If you have a masterful mind, you will proceed to make haste slowly, and dispose of the work in half of the time it would take a man to complete the work whose self-control had deserted him.

The masterful mind is one of the figures in the combination that opens the lock on the world's treasure box, in which repose success, honor, fame, wealth, and power, each one more easily attained by the man or woman of composure, than by those persons who upon the slightest provocation become ill-tempered, excited and hysterical.

You can never hope to lead, direct and control others except by the magnetic power of the masterful mind, acquired only by mastering self, after long seasons of trial.

Uncommon Sense

By JOHN BLAKE

EDISON'S QUESTIONS

A BACKGROUND of general knowledge is useful, and, in some measure necessary.

But storing up in your mind a mass of knowledge which can be found by ready reference to books, merely means overloading.

The young man who could answer all the questions Mr. Edison recently laid down as a test for applicants for positions, would be a young man with a very remarkable memory. But that would be all.

The fact that he could answer the questions would be no proof whatever of his ability.

Abraham Lincoln or Gladstone could not have answered a quarter of them—not even of those whose answers were known in his time.

Neither could many another man who has been of conspicuous service to the world.

There is so much to know in the world that no man with any purpose in life has time to know much of it.

If he knows, say, 75 per cent of all there is to know about his immediate profession, and has a fair amount of general information besides, he is a well-educated man.

But even well-educated men are not necessarily capable.

It is not what you put into your brain, but what you get out of it that counts.

A scrub cow eats twice as much as a Jersey or Guernsey, but she does not give half as good milk.

The processes of your brain do not depend on masses of information but on the quality of the information, especially of that which applies particularly to your own business.

Mr. Edison's test would probably have barred from his institution Alexander Graham Bell, the Wright brothers, Lloyd George and Charles M. Schwab. But all these men did fairly well with the knowledge they had of their own lines of endeavor.

Your memory will be serviceable to you if you do not load it up with things that books can carry just as easily.

Read history, study languages if you can, get general information, but at the same time teach your mind to work. The general information will be pleasant to have and useful now and then. But the special information will be what wins the race for you.

Kiddies Six

By Will M. Maupin

THE BRIGHT SIDE

THINGS a-lookin' rather blue?
All the world a bit askew?
Then, my friend, it's up to you
Just to hustle out and do
Something worth the while.
Wipe the tears from out your eye;
Things will get worse if you cry;
Seek the paths where roses lie;
There is every reason why
You should wear a smile.

Though the clouds are dark to view
Still behind the sky is blue,
And the sun will soon shine thro
With his golden gleam on you
If you work away.
Though the day be dark and drea
What's the use to quake and fear
Wipe away that idle tear,
Look to see the dawning clear
Of a brighter day.

Locked within their icy tomb
Are the flowers of springtime's bloo
In good time they'll light the gloom
Scent the air with sweet perfume
As you trudge along.
Life is always what it's made,
Why should you, then, be dismayed
Keep on going, unafraid,
Every doubt can be allayed
With a cheerful song.

Keep on working with a will;
Tackle e'en the steepest hill;
Bid each doubt and fear be still
And each day with duty fill—
Duty nobly done.
Try again if once you fail;
At one ill-success don't rail;
Bravely face life's fiercest gale
Don't sit down and weep and wa
Thus success is won.

(Copyright.)

SCHOOL DAYS

Mother's Cook Book

One of the chief causes of financial pressure in modern life is the failure of some girls and women to realize that money does not fall, like the dew, gently from heaven.

GOOD THINGS FOR THE TABLE

TAKE one cupful each of flour and milk, one-half cupful of corn meal, one-fourth cupful of sugar, one tablespoonful of butter and two teaspoonfuls of baking powder. Sift the flour, baking powder and corn meal together. Cream the butter, add the sugar, then the flour and milk alternately. Beat well and bake in hot, well-buttered gem pans.

Chocolate Wafers.

Take one cupful each of molasses and brown sugar, one-half cupful each of butter, lard and grated chocolate, one teaspoonful of soda, dissolved in one-fourth of a cupful of boiling water, one teaspoonful of vanilla and flour to make a stiff dough. Form in balls about the size of a hickory nut, flatten slightly and place well apart on a baking sheet. Bake in a moderate oven.

Endive and Prune Salad.

Wash and wipe the leaves of one head of endive and put them on a salad dish. Stone one and one-half cupfuls prunes, which have been simmered until tender in the water in which they were soaked over night. Add the prunes to the endive. For the dressing mix four tablespoonfuls of olive oil, two tablespoonfuls of lemon juice, one-half teaspoonful of salt, one-half teaspoonful of paprika and a dash of cayenne. Pour this over the salad. Mix and serve.

Cherry Bread.

Take two quarts of sweet cherries, one and one-half tablespoonfuls of sugar, a piece of butter the size of a walnut (or two tablespoonfuls), one teaspoonful of salt and cornmeal to make a soft dough. Bake in a well-greased pan and serve cold.

Nellie Maxwell

Copyright, 1922, Western Newspaper Union

WHY?

ARE THERE MORE BALD MEN THAN WOMEN

BALDNESS, or loss of hair, is usually caused by lack of care for the hair or scalp. Although the majority of people do not realize it, it is as necessary for the hair to have sufficient air and good circulation of the blood as it is for the body. Both must "breathe" and both must be supplied with blood to carry off impurities. In the case of the hair, the blood is, of course, supplied through the tiny veins which are situated around the roots of the hair and any tight band around the upper por of the head will cut off this circula and cause the hair to die and fall

The construction of men's hat such that they press rather tig upon the forehead and the bul portion of the head at the rear, impeding free circulation of the b —a condition with which a wo does not have to contend, on acc of the fact that she wears hats w fit less snugly. Again, a woman's is so constructed that it permit the free circulation of air between hat and the scalp. The connection tween a man's hat and his baldne clear from the fact that there are few men who are entirely bald. of them have a fringe around the and the lower portion of the bac the head, parts of which are not ered by their hats.

Another cause which contrib much to the difference in baldnes tween the sexes is the care w women take of their hair, when pared to the casual manner in w men apply a hair-brush once or t a day.

ROAD BUILDING

STRUMENT TO TEST SOILS

Means of Modern Apparatus It Is Possible to Obtain Most Valuable Information.

repared by the United States Department of Agriculture.)

An instrument for testing soils on ich roads are to be built has been ised by the bureau of public roads the United States Department of riculture. It consists of a metal k resting on the soil and support- a cylinder into which shot can be ured. The apparatus is held in sition vertically by means of a od, at the top of which is mounted small dial that tells to one-thous- th of an inch how far the disk ks into the soil as shot is poured o the cylinder. By means of the rument it is possible to get in- rmation as to how the soil will act wet weather.

The kind of soil beneath a road sur- e has a great deal to do with how will stand up under modern traffic, engineers look upon this as an im- tant consideration in determining kind of road to be built. This is firmed by a number of instances ere two sections of the same road ve been built in exactly the same nner and subjected to the same ffic but on different types of soil. e section has lasted well while the er has broken up in a manner that only be explained by a lack of porting power of the soil beneath road.

The bureau has for some time been estigating this question along vari-

walk-Ashland (Ohio) Road Before and After Given Needed Improvement.

lines both in the field and in the oratory, studying the characteris- of different soils and experiment- with means to keep down the sture content of the soil and thus rease its bearing power. The latest elopment has been the new device.

LMS SHOW ROAD BUILDING

nes Depicting Actual Construction of Various Types of Highways Are Displayed.

Close-ups of the activities of the eau of public roads are contained two films released, "Building Bi- minous roads," and "Mixed Asphalt vements." The new films show how cle Sam, who has become the rld's greatest road builder through Federal-aid road act, makes use of minous materials in the construc- n of the Nation's highways.

"Building Bituminous Roads" deals ectly with the surface treated and etration macadam type of bitum- ous roads.

"Mixed Asphalt Pavements" em- ces the construction of asphaltic ncrete and sheet asphalt roads, and ries the audience from the paving nt, where the materials are mixed, the completed highway, open for ffic. Scenes depicting the actual nstruction of the various types of ds were made under the direction skilled engineers of the bureau of blic roads, United States Depart- nt of Agriculture, and are designed nstruct the layman as well as the gineer in modern road-building prac- e. Several animated close-ups aphically depict the details of con- ruction.

OAD BUILDING IN KENTUCKY

e First State to Conceive Idea of Highway Construction in the United States.

"In 1821 the people of Kentucky in- ugurated the first state road build- g policy ever conceived in these ited States," according to Edward Jordan of the highways committee the National Automobile Chamber commerce, speaking recently at the iversity of Kentucky.

Long Alaskan Highway.

An automobile highway, available tourists, has been completed in ska, covering a distance of 276 les, from Valdez to Fairbanks. The nic attractions along this highway said to be marvelous, because of ntains, dense forests, and the wil- life of the surrounding regions.

Good Roads Organization.

The American Road Builders' Asso- ation is the oldest and largest or- nization for good roads in the Uni ates.

POULTRY

FIXED EGG-LAYING RATIONS

Poultry Keeper Should Determine on Feeds Best Suited to Conditions and Prices.

(Prepared by the United States Department of Agriculture.)

All the following rations have been used with good results at the experimental farm at Beltsville, Md., conducted by the United States Department of Agriculture, but the poultryman should choose the ration best adapted to local conditions and prices. Feeds not included here may be added or substituted on the basis of their comparative analysis, provided the meat scrap or animal-protein feeds are not replaced by cottonseed meal or other high vegetable-protein feeds. All changes in the feed should be made gradually, as sudden changes may decrease egg production materially.

Ration No. 1, Mash.—16 lbs. cornmeal, 6½ lbs. meat scrap, 1 lb. bran, 1 lb. middlings. Scratch mixture: 1 lb. cracked corn, 1 lb. wheat, 1 lb. oats.

Ration No. 2, Mash.—2 lbs. cornmeal or barley meal, 1 lb. bran, 1 lb. middlings, 1 lb. meat or fish scrap. Scratch mixture: 2 lbs. cracked corn, 1 lb. oats, 1 lb. wheat or barley.

Ration No. 3, Mash.—3 lbs. cornmeal, 1 lb. meat scrap. Scratch mixture: 2 lbs. cracked corn, 1 lb. oats.

Ration No. 4, Mash.—9 lbs. cornmeal, 5 lbs. middlings, 4 lbs. bran, 2 lbs. cottonseed meal or gluten meal, 2 lbs. meat scrap, 2 per cent bone meal. Scratch mixture: 2 lbs. cracked corn, 1 lb. wheat, 1 lb. oats, 1 lb. barley.

Young Plymouth Rock.

Ration No. 5, Mash.—1 lb. cornmeal, 1 lb. bran, ¾ lb. meat scrap, 1 lb. middlings, 1 lb. ground oats. Scratch mixture: 2 lbs. cracked corn, 1 lb. wheat, 1 lb. oats, 1 lb. barley.

Ration No. 6, Mash.—3 lbs. cornmeal, 1 lb. bran, 1 lb. middlings, ½ lb. meat scrap. Scratch mixture: 2 lbs. cracked corn, 1 lb. wheat, 1 lb. oats. Feed with table scraps or cooked vegetables.

Ration No. 5 is adapted especially for yearlings or old hens of breeds inclined to get too fat, such as the Plymouth Rock, Orpington and Wyandotte. As cornmeal, fed with meat scrap, is very fattening, these two feeds are cut down in the rations.

With ration No. 6 feed all table scraps available, or vegetables at the rate of 5 pounds daily to 30 hens.

Five per cent bone meal may be used in any of these mashes, and the quantity of meat scrap reduced accordingly, or 2 per cent of bone meal may be added without changing the mashes.

FEEDS FOR BREEDING GEESE

Equal Parts of Bran, Middlings and Ground Oats Mixed With Milk Is Excellent.

A good mash for breeding geese consists of equal parts or bran, middlings and ground oats mixed with milk. This can be given in the morning. Corn should be fed at night. Breeding geese may become too fat on a diet limited to corn. Their digestive system is better adapted to mash than to whole grain. If geese become too fat it injures the hatchability of the eggs. A mash consisting of equal parts by weight of cornmeal, ground oats and bran is also recommended for geese.

POULTRY NOTES

Provide roosts and dropping boards in the henhouse.

* * *

Some method must be found of keeping the chicks comfortable.

* * *

Don't feed chicks until they're from forty-eight to seventy-two hours old.

* * *

The best care to give a sitting hen is to leave her alone—she knows her business better than most men know it.

* * *

It is a hard thing to do, but use the hatchet freely on ailing fowls. Be sure that the ailment is not a fault of the caretaker.

* * *

Bran is an excellent summer feed for mature fowls, because it is neither fattening nor heating to the fowls. There is little danger of feeding too much of it.

WATER TROUGHS EASY TO BUILD

Good Plan to Select Well Drained Site to Prevent Stock From Making Mud Holes.

ALSO PACK AND LEVEL LAND

Cement Wash Can Be Applied With Brush or Broom and Makes Smooth Surface and Also Insures Water-Tightness.

(By W. G. Kaiser, Agricultural Engineer.)

The construction of a concrete trough like that shown in the drawing is not a difficult task and any farmer can build it.

A watering trough should be placed on well drained ground, because under the best of conditions the livestock will in time make mud holes unless a platform is built, or the holes around the trough are filled in as soon as they are made. Sometimes it is advisable to put the trough on a small knoll in order that the water will quickly drain away.

The ground under the trough should not only be drained but also leveled and packed.

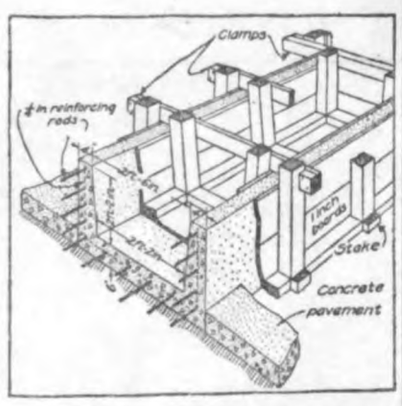
Outside Form of Trough.

The outside forms of the trough are made of one inch boards and 2 by 4-inch pieces as shown in the drawing. After these forms have been securely braced, the concrete can be deposited in the bottom to half the depth of the floor. Reinforcement consisting of ¼ inch round rods are then placed on the partly constructed floor. These rods are bent in "U" shape so that the ends will project up into the sides and reinforce the walls. All the rods are bent to the proper shape before any concrete work is started, so that they can be quickly put in and the remainder of the concrete floor placed without delay or making any joints.

The inside form which has been made previous to mixing any of the concrete is then quickly lowered in proper place and fastened to the outside forms with clamps as shown in the drawing. Speed is necessary in order that the walls can quickly be placed so there will be a strong bond between walls and floors.

Insure Water-Tightness.

In order to insure water-tightness a 1:2:3 mixture of concrete is recommended. This means 1 sack of cement to 2 cubic feet of sand and 3 cubic



When You Get This Tank Finished It Will Last as Long as You'll Probably Ever Need It.

feet of pebbles or crushed rock. The aggregates should be free from sticks, soil or foreign material. Only enough clean water should be used in mixing to make concrete of a jelly-like consistency.

As the concrete is placed it should be spaded next to the forms in order to force the larger rocks back into the mass and let the mortar work out against the forms, resulting in a smooth, dense surface.

As soon as the concrete has hardened sufficiently to be self-sustaining, the inside form is removed and the interior of the trough given a cement wash made by mixing cement and water until it is about as thick as cream. This wash can be put on with an ordinary brush or broom. The wash will make a smooth surface and insure water-tightness.

The inside of the trough is given a slope outward toward the top. This is important because if water freezes in the tank, the pressure will lift the ice and thereby prevent the formation of crack in the walls.

For a trough of the size shown in the drawing, the following materials will be needed:

Materials Required for Tank.

Outside dimensions	3 ft. 2 in. by 8 ft.
Walls	2 ft. 8 in. high, 6 in. thick
Floors	1:2:3
Concrete Mixture	1¼ cu. yd.
Volume of Concrete	

Materials Required.

Portland cement	9 sacks
Sand	¾ cu. yd.
Pebbles or broken stone	1 cu. yd.
¼-in. round steel rods	215 ft. (36½ lb.)

For each additional foot of length add to the foregoing quantities:

Portland cement	1 sack
Sand	2 cu. ft.
Pebbles or broken stone	3 cu. ft.
¼-in. round steel rods	22 ft. (3¾ lb.)

MILDEW WIPED OFF LEATHER

Damp Cloth or Soap and Warm Water Will Be Found Satisfactory —Then Oil Lightly.

When mildew has developed on leather goods it should be wiped off with a damp cloth or washed off with soap and warm water, and the leather oiled lightly with castor or neat's-foot oil and well dried afterwards. These simple methods for preventing and removing mold are satisfactory and safe.

BEEKEEPING OFFERS BIG OPPORTUNITIES

Clover Region Particularly Adapted to Industry.

Few Places in Which It Is Not Possible to Keep Honey Gatherers With Good Profit Under Proper Management.

(Prepared by the United States Department of Agriculture.)

The clover region of the United States offers splendid opportunities for beekeeping. These possibilities, together with the requirements necessary for the success of the undertaking, are discussed in a recent publication of the United States Department of Agriculture, Farmers' Bulletin 1215, Beekeeping in the Clover Region, by E. F. Phillips and George S. Demuth of the division of Bee-Culture Investigations. While not all parts of the clover region are equally good, there are few places, it is pointed out, in which it is not possible to keep bees with profit under proper management.

The typical clover region occupies the northeastern part of the United States, extending west into Minnesota and south approximately to the Ohio river and Mason and Dixon's line. It appears on the west coast in Washington and Oregon. In both east and west the region extends into Canada,

Beekeeper Should Take Pains to Get Best Strains.

some of the best portions being located north of the national boundary. Limited areas of less value are found outside these boundaries.

The opportunities for beekeeping in this region, are not being utilized as completely as in some other beekeeping regions of the country. There are vast areas of the clover region not adequately covered by bees, and also many places where, because of the methods of beekeeping practiced, the beekeepers are failing to produce the best possible crops.

Beekeeping to be profitable in this region must be conducted with all possible skill. Better methods, it is believed, will result in a greater development of the industry. Because of the presence of European foulbrood in some parts of the clover region, and especially because of the superior quality of the Italian race of bees, the beekeeper of this region will find it greatly to his advantage to keep this variety. Italian bees are able, under good management, to clean out the larvae dead of European foulbrood. Not all strains of this race are equally good for this purpose, and the beekeeper should take pains to get the best.

Copies of the bulletin may be had free upon addressing a request to the Department of Agriculture, Washington, D. C.

PROPER BALANCE TO MANURE

Some Farmers Try Little Experiment on Small Piece of Land to Find Condition.

It is a pretty good idea, and one followed by a lot of hard-headed, practical farmers, to balance the barnyard manure a little with either rock or acid phosphate. Barnyard manure is a balanced ration when it comes to plant foods for some crops. That is why some farmers try a little experiment on a half acre or so of ground just to see what their land lacks. About forty or fifty pounds of acid phosphate per ton of manure, or 400 to 500 pounds per acre, may be applied to a small part of the field, and the results will show whether it will pay to put the fertilizer on the whole field.

It makes the acid phosphate easy to apply simply to spread it evenly on the top of each spreader load of manure so that each ton of the manure will carry with it the above mentioned amount of the phosphate.

ALFALFA SEEDED IN SUMMER

Considerable Success Attained at University of Illinois in Rotation With Corn.

Considerable success has been attained in seeding alfalfa on the dairy farm at the University of Illinois where a rotation of corn for silage and alfalfa for hay are the principal crops. Fall wheat is sown after the corn is cut for the silo. The next year the wheat stubble is plowed as early as possible and a very thorough seed bed prepared. The alfalfa is seeded as soon as there is sufficient rain. About the 28th of September wheat is drilled. This gives a crop of wheat and two cuttings of alfalfa the next year.

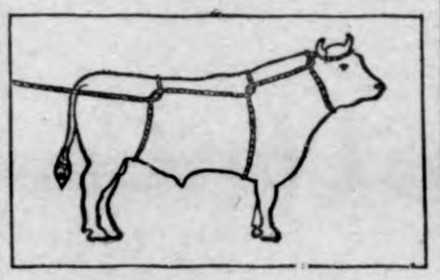
DAIRY HINTS

PLAN FOR THROWING ANIMAL

Necessary at Times to Have Cow or Bull on Ground to Perform Necessary Operations.

For performing surgical operations, dehorning, ringing or castrating, it is often necessary or desirable to throw a bull and hold him on the ground.

The accompanying sketch shows a very effective method to use in casting a cow or bull. It requires 35 or 40 feet of rope. With hornless animals the first loop will need to be around the neck instead of the horns, as illustrated. The next step is a half hitch just back of the forelegs and another in front of the hind quarters. Pulling on the main rope to the rear and toward the side on which it is desired to have the animal lie will get results. Pregnant cows should not be so thrown. Once the animal is



Effective Method in Casting Bull.

down turn its head back, nose up, with poll to the ground. A hand hold on the side of upper lip will usually enable one man to hold the animal down, another man keeping taut the casting rope.—Dairy Farmer.

ECONOMICAL FEED FOR HERD

Most Important Item That Enters In. to Cost of Milk Production—Analysis of Figures.

(Prepared by the United States Department of Agriculture.)

How to feed his herd economically and profitably is an important thing for a dairyman to know. In all sections of the country where investigations have been carried on, the United States Department of Agriculture has found that feed is the most expensive item that enters into the cost of milk production; and intelligent feeding, in either summer or winter, offers the biggest opportunity to reduce costs.

The analysis of many figures by the department shows that in Vermont the winter costs of keeping a herd were made up of 63.1 per cent feed and bedding, 17.5 per cent labor and 19.4 per cent other costs. In summer, feed and bedding represented 41.6 per cent of the total expense, labor 26.7 per cent and other costs 31.7 per cent.

In the South the costs are distributed somewhat differently. Figures obtained in Louisiana show that in winter 56 per cent of the expense is for feed and bedding, 22.4 per cent for labor and 21.6 per cent other costs. The summer costs in that region do not differ from the winter costs so much as they do in the North. The figures for summer in Louisiana show that 50.5 per cent of the total cost of milk is for feed and bedding, 26.2 per cent for labor and 23.3 per cent for other costs.

Although it is advisable for a farmer to economize wherever he can wisely do so, these figures show that the dairyman who studies feeds and feeding has an excellent opportunity to increase the profits of his dairy herd.

SOY BEANS FOR DAIRY COWS

According to Tests at Iowa Station Plant Furnishes Most Palatable Protein Feed.

Soy beans as a feed for dairy cattle have shown their value in replacing oil meal in the ration, according to a recent experiment conducted by the Iowa agricultural experiment station. Cracked soy beans, it was found, made a palatable protein feed worth one-third more than the same amount of oilmeal.

Two years' experiments were conducted with the soy beans in replacing protein supplements, and the results show that dairy farmers can produce this supplement to advantage.

BALANCED RATION IS URGED

Corn Fodder Is Not Satisfactory for Dairy Cow Because It Is Lacking in Protein.

A cow may consume large quantities of feed, and still lack the essential elements for milk production. This is why the use of a balanced ration is both economical and satisfactory. Corn fodder, fed alone, for example, is not a satisfactory feed, because the ration lacks protein, and hasn't sufficient succulence to promote a satisfactory flow of milk.

Keep Utensils Clean.

Milking machine, pails and covers should be thoroughly washed and sterilized with steam after every milking.

Milking Preparations.

In preparing the cows for milking, the same care should be used as in milking by hand. It is necessary that the teats be very clean if a clean milk is to be obtained.

Increase Dairy Profits.

Systematic feeding of good cows will increase dairy profits.

LIVE STOCK FACTS

TESTING FOR TUBERCULOSIS

Reports Show That Eradication Work Can Be Carried on Without Destroying Industry.

(Prepared by the United States Department of Agriculture.)

That testing cattle for tuberculosis and the cleaning up of infected herds are having a permanent effect in reducing the extent of the disease is shown conclusively by figures recently collected by the United States Department of Agriculture from inspectors in charge of the eradication work in various parts of the country. The inspectors were asked to supply figures on the results of three or more tests on badly diseased herds, those that had not less than 10 per cent of reactors on the first test. The first test on more than 58,000 cattle in these bad herds showed that 26 per cent had tuberculosis. Another test six months later on the same herds, from which the reactors had been removed, showed only 6.9 per cent of the disease. By another six months the percentage had gone down to 2.8. A fourth test on more than 25,000 of these cattle showed only 1.8 per cent of tuberculosis.

The reports from which these figures were taken show that under normal conditions herds very badly diseased may be established as relatively free in a short time. They also show that eradication work can be carried on without destroying the cattle industry as is sometimes

If Any of These Cows Have Tuberculosis the Hogs Following Them Are Certain to Get the Disease.

thought. Erratic results were obtained on a very few of the 1882 herds tested, the list of this class containing less than 100. Out of the 126,668 herds under observation December 1, 1921, there were only a very few that had not shown satisfactory improvement as a result of testing.

PREVENT ANIMAL DISEASES

By Taking Proper Precautionary Measures Many Ailments Could Be Thwarted.

Many of the diseases suffered by live stock on the farm could be prevented by proper precautionary measures, according to Dr. Robert Graham of the University of Illinois. Nearly all diseases to which animals succumb are preventable, he declares, and the surest way to keep your animals healthy is to adopt such health measures as will prevent them from getting sick.

The continuous use of old feed lots year after year without regard to rotation is one way to spread disease. Each class of live stock has its own peculiar ailments, which may be largely eliminated by the rotation of feed lots.

Keep yourself posted as to what diseases are prevalent in your neighborhood, and then do everything in your power to keep your own live stock from getting them.

FEEDS FOR WORKING HORSES

Mature Animals Require Starchy or Carbonaceous Rations to Furnish Needed Fuel.

The character of feed required by horses that are working is quite different from that required by young growing animals or dairy cows. Mature horses need starchy or carbonaceous feeds to furnish fuel rather than large amounts of protein. For this reason corn and timothy hay may be fed more liberally than such protein feeds as wheat and alfalfa. Oats furnish most of the protein needed, and a good rule for feeding a horse doing moderate work is given as one and one-fourth pounds of hay and three-fourths pound of grain to each hundred pounds of wheat, but horses at hard work are sometimes given as much as one and one-fourth pounds of grain.

PASTURE IS PIG ESSENTIAL

Rape, Alfalfa and Clover Are Bone and Muscle Building Feeds and Cheapen Gains.

Pasture is of course vital to the best development of pigs. Rape, alfalfa or clover should be available to the spring pigs, as these forages contain much bone and muscle-building feed, and they help to cheapen gains.

Build a Home

For Comfort Beauty and Economy

Bring happiness and comfort to your family by building a new home t his summer. The key to successful home builping lies in the selection of the right materials. See Nothern before you build-

Northern Lbr. Co.

Come In

July 4th or any other time to look at and talk over that spreader proposition.

We have better offerings than ever before in the spreader line.

The oats will soon be in the shock and you'll be in need of a good spreader so now it is time to make arrangements for one.

The repairs on that old one will cost you more than a new spreader. Think it over then come in.

Klemme Iowa

News of Klemme and Vicinity

Mr. and Mrs. Coburn, of Cornelia were Klemme visitors Saturday.

R. A. Jorgenson, and family were visiting at Garner Sunday.

SMITH The Shoe Man—Dependable Shoes, Garner. Iowa. adv

Mrs. Henry Lewis was at Garner last Friday.

Mrs. Ben Coobs was visiting Garner friends yesterday.

Mrs. Perkins, of Garner. was a visitor here last evening.

S. G. Fuller and family were up from Goodell last night.

Art Wellemeyer and family were visiting at Charles City Monday. Mr. Wellemeyer's mother lives there.

A sister of Justin Lynch came on Tuesday for a visit at his home in the country.

Richard Leckband, of Mason City, was a visitor at the home of Ye Editor Monday.

Miss Adna Church, of Garner, was an over Sunday visitor with Mildred Johnson.

Tanlac makes people strong, sturdy and well by toning up the vital organs. E. S. D. Kahrs. adv

Elmer Fuller and family came over from Clear Lake Sunday for a visit with the R. W. Elder family.

Mr. Figi and family, of Renwick, visited at the F. J. Wenck home on Monday.

Ben Katter and family of Garner were Sunday visitors at the R. W. Elder home here.

Why drag around feeling half sick and no account all the time when you can get Tanlac? E. S. D. Kahrs. adv

Mrs. Ralph Elder has been on the sick list the past week suffering with nervous trouble. She is improving nicely at this writing.

Clarence Wistey, of Clear Lake, has been spending a few days at the Ed. Jacobs home. He is a brother of Mrs. Jacobs.

Mr. and Mrs. Wes Lau, Mr. and Mrs. Howard Doyle and Miss Mildred Smithk drove to Mason City yesterday.

Mrs. Loemker, of Colesburg, Iowa, is here this week visiting at the Rev. W. C. Bergmann home. She is a sister of the Reverend.

Wellemeyer has adorned the east side of his building with a big sign, telling the world the building is the Wellemeyer Department Store.

Miss Norma Satbre, from Minneapolis, was visiting at the home of Mr. and Mrs. Ed. Jacobs last week. She is a cousin of Mrs. Jacobs.

Mr. and Mrs. Paul Grange were visiting relatives at Ruthven this week. Mrs. Grange has been there for more than a week. Paul went up Saturday to return with her.

Nick Ell came down from Mankato, Minn., Tuesday on buisness. Milvern is working for him in the garage this summer and has charge of the repair parts department.

J. N. Day and family drove over to Clear Lake Tuesday afternoon. We presume John took advantage of the large body of water for a good old plunge.

Mr. and Mrs. Chris Jacobs, of Garner, accompanied by their daughter, Mrs. C. J. Papousek, of Belmond, visited at the Ed. Jacobs home here Saturday evening.

A little rain fell here yesterday morning but not enough to even settle the dust in the roads They had a good heavy rain at Garner the same time. It seems as if all the rains are missing this locality.

Billie Keraus and family, Mr. and Mrs. C. G. Waterman made up one auto load and A. G. Koerner and family another auto load of Klemme folks who enjoyed a nice cool swim in Clear Lake last Friday evening.

One of the most noteworthy features in connection with Tanlac is the large number of men and women who have reported an astonishingly rapid increase in weight as a result of its use. E. S. D. Kahrs. adv.

John Baumgartner and family came over from Clear Lake Tuesday to pack up their household goods and shipped them by truck to Mason City where they will make their future home. We understand John is to be in b usiness there with his brother.

Wm. Schlawein and family and Carl Wille drove to Renwick Sunday for a visit at the Pete Thiel home. Mr. Thiel is a cousin of Mrs. Wm. Schlawein. Bill says they had a nice little shower down there in the afternoon which was heavy enough to settle the dust.

Mrs. Dewey Rice and baby, from Clarion, accompanied by Miss Ruth Rice, of Louisburg, Kansas. came last Thursday for a visit at the Fred Musfelt home in Klemme. Miss Rice is a sister of Dewey Rice, formerly of this city and Mrs. Rice is a daughter of Mr. and M rs. Fred Musfelt.

Marion A. Fell was here from Garner Monday to have some work done on his building here which is occupied by G. P. McCullough as a barber shop. He had the building painted another coat which has greatly improved the appearance of the building. He also had the plumbing connected up to the sewer and did other odd jobs of repairing about the building.

We have a good notion to bounce Fred Bell for the cigars as his many friends all claim that he is now a married man and that he and Miss Elsie Henschen were married at Mason City Saturday. The couple will not admiktt the fact and neither will they deny it so we are up against a stump for a write-up. We have endeavored to learn the facts but maybe when Fred reads this he will tell us whether we are wr or right. If they ae married we wish them a lot of happin and if we are wrong—well marr licenses are still on sale and can easily make this write-up tru

The buildings on the west end Main street now present an enti different appearance. The O. Twedt & Co. garage building. Etchen Bros. Pool Hall and the P. McCullough Barber Shop have been given a new coat of paint past week. All the buildings ad and so were all painted white to sent a more pleasing view. The room was also re-decorated on interior and now looks pretty n We presume they wanted to slick before the Fourth. Some of the er business houses could well af to follow the good example se the west end men which would make a better town.

Happiness Not All.

There is in man a higher than of happiness; he can do without piness and instead thereof find bles ness.—Carlyle.

For Your

July 4th

and

Picnic Dinner

—Take advantage of the fine line we carry in cold meats, etc. You can make your July 4th and Picnic Dinners and Suppers an easy and delightful preparation by selecting some of the following suggestions as a part of the meal:—

Cold Meats

Boiled Ham	Minced Ham	Pressed Ham
Veal Loaf	Dried Beef	Bologna
Summer Sausage	Frankfurters	Sardines
Potted Meat	Pickled Pigs Feet, Hearts and Tongues.	

Cheese

Pimento Cheese Cream Cheese Brick Cheese

Limburger Cheese in the new 15c Packages, very nice cheese.

Miscellaneous

Olives	Pickles	Peanut Butter
Salad Dressing	Jellies	Pork & Beans, Etc.

We are the Picnickers' Headquarters. Always a nice selection of the very best in meats, etc. here.

.METHODIST EPISCOPAL CHURCH
Arthur B. Gedye, Pastor

Morning Worship at 10:00 a. m.
Sunday School at 11:00 a. m.
Evening Worship at 8:00 p. m.

Services last Sunday were well attended. We were glad to see some new faces in the congregation and to welcome them, as well as those whose faces are more familiar. Come again folks!

The Sunday school attendance is fine; let us endeavor to be each one in his place every Sunday, everyone counts one.

A Sunday school institute is announced for Sunday, July 16th, that is a week from next Sunday. Program will be found elsewhere in this paper. We are invited to participate in the good things presented at the sessions. Our morning services will be held a ussual on that day. The evening session of the institute it is planned to hold in the Klemme Park. We shall not therefore hold service in the evening. It is hoped our people will plan to take in both afternoon and evening sessions of the institute.

You are invited to each and all of our services.

"Come thou with us and we will do thee good."

"There is welcome for the sinner,
And more graces for the good;
There is mercy with the Saviour,
There is healing in his blood.
For the love of God is broader
Than the measure of man's mind;
And the heart of the Eternal
Is most wonderfully kind."

Arthur B. Gedye, Pastor.

JOHN GERD ALBERS

John Gerd Albers was born Sept. 30 1893 in Norden Ostfriesland Germany. He was instructed in God's word and by confirmation was received into the Lutheran Church.

He was united in marriage to Miss Jantje Luebben on May 11 1873 This union was blessed with three sons, George, Lubbe and Fred, and one daughter Mrs George Pals.

Mr. Albers came to America in 1892 and made his new home at Belmond, Ia., where he was engaged in farming. Since 1904 he lived east of Klemme.

He had a slight stroke of paralysis on May 2nd and died June 30th, at 11 P. M.. His age was 78 years and nine months.

He leaves to mourn his death the aged widow, three sons one daughter and twenty-two grand children.

The funeral service was held Sunday afternoon at the Reformed Church of Klemme, conducted by the Rev. A. A. Depping, his pastor. Interment was made in the Klemme Cemetery.

We wish to extend thanks to our many friends and neighbors for the kind assistance offered during the sickness and death of our husband and father; also extending our deepest thanks for the floral offerings and words of sympathy.

Mrs. John Albers and family.

MRS. W. C. SCHMIDT

Mrs. W. C. Schmidt was born Sept. 22, 1868 at Vilang Mecklenberg, Germany.

She came with her parents to America in 1876. They made their home near Garner, Iowa.

On the twenty-fourth day of July 1891 she was joined in marriage to Mr. William C. Schmidt. This union was blessed with three sons. Albert, Fred and Herman.

Mrs. Schmidt was first a member of the Ell Township Reformed church and at the time of her death was a member of the Klemme Reformed church.

She was operated on in Mason City May 18, and returned home June 2,showing a rapid improvement of her health, but on June 15 she took sick and died on the 21st day of June She was buried the same day at 8:30 P. M. Her husband, three sons and many relatives are left to mourn her death.

SUNDAY SCHOOL INSTITUTE PROGRAM

S. S. Institute of the Fourth District of the County Association to be held a Liberty church, Sunday July 16th. Program for the day—

11:00 a. m. Devotions to be conducted by Dist. Pres., Mr. Geo. Gruetzmacher.

11:15 Address by Dr. Hutton of Des Moines—State Worker.

Music by Liberty choir.

—Intermission.

2:00 p. m. Song service and devotions led by Rev. Miller of Goodell.

2:15 Report of the State Convention by Mrs. S. B. Durant.

2:35 Music by Goodell church choir.

2:45 Address by Mr. Pollock, county President. Subject, "County Work"

3:05 Ladies Quartette, Klemme 1st M. E. Church.

3:10 Address, Dr. Hutton.

4:00 Round Table Conference, Dr. Hutton.

Evening Service at the City Park.

7:45 Song service and devotions, led by Rev. Gedye.

8:00 Address, Dr. Hutton.

Music furnished by the choir of the First Methodist church.

BOY SCOUT CORNER

Scout Laws. .(finish) .....

(10) A Scout is Brave.

He has courage to face danger in spite of fear, and to stand for the right against the coaxings of friends and defeat does not down him. or the fears and threats of enimies

(11) A Scout is Clean.

He keeps clean in body and thot, stands for clean sports, clean speech, clean habits and travels with a clean crowd.

(12) A Scout is Reverent.

He is reverent toward God. He is faithful to his religious duties. And he respects the conviction of others in matters of customs and religion.

The Klemme troop has been busy last week or two preparing for the Fourth. A new American Flag and staff has been purchased as well as an official troop flag. These will be used to decorate the Scout Headquarters under the First National Bank and for use in parades. The scouts wish to thank all those who helped them with their float on the Fourth, especially Mr. Albert Fuller who supplied the team and rack and drove for them during the parade.

Special Meeting

There will be a special meeting at headquarters at 8:00 o'clock Friday night.

Several canidates are on our list for reception into the troop.

Join up boys and be a Scout, it's worth while. We are out to help you and to help others.

FARMERS ELEVATOR REPORT A SUCCESSFUL YEAR

Gross Business Amount to $88,478

The directors and stock-holders of the Klemme Co-Operative Grain Company held their annual meeting at the Idle Hour theatre on Saturday afternoon. July 1st.

So well pleased were the stockholders with the showing made by the present board that they were retained to manage the business for another year. The men re-elected to serve for another year are H. J. Stille, Pres.; E. J. Arnold, Sec. and Treas.; and for directors Valentine Josten, C. A. Arnold, George Albers, H. R. Stromer, John C. Larsen. H. G. Miller will again act as manager for the coming year.

The net profits, above all expenses for the year from April 30th, 1921 to May 1st, 1922 was $2,223.17. Each shareholder was paid 8 per cent on the stock and the net profits were left in the business.

Manager Miller reports that during the year they shipped 127 cars of grain. The gross business he reports amounted to $88,478.38.

The elevator is making a good showing as this is their first year in business.

BABE BORN DURING FLIGHT IN PLANE; FIRST IN HISTORY

PARIS, July 5—Madame Georges Breyer, a French woman of Lyons, achieved the distinction of being the first woman to give birth to a child in an airplane.

Madame Breyer was at a remote seashore resort in southern Italy, where she felt the first warnings of nature. She immediately chartered an airplane for Naples and when 40 miles south of that city, 6,000 feet over the Mediterranean, she gave birth to the child.

Steadying the plane, the pilot drifted slowly to earth and landed near a tourist hotel, where first aid was given. Both the son and mother are doing nicely.

The child will be christened Guynemer in honor of the famous French aviator during the war. The mother has purchased the airplane as a sovenir.

The question of the nationality of the child is not disputed as the laws of France specify that a child takes his father's name regardless of the place of birth.

Parade Pictures Wanted!

We noticed a number of people taking pictures of the Parade at our July 4th Celebration. I will buy one each of every picture of this celebration which is fairly good.

ARTHUR WELLEMEYER.

AUTO THIEVES ARE BUSY

Buick Belonging to F. A. Gabrielson of Crystal Lake Stolen Sunday Night. .No Clews Left.

If the parties who stole the F. A. Gabrielson auto at Crystal Lake, Sunday night last, knew how close at hand was the law, they would have entered upon their job with fear and trembling. At about 3:30 o'clock Sunday morning, Sheriff E. P. Hanson who with his family is camping at Crystal Lake, heard someone trying to start a car, and they seemed to have a great deal of difficulty in getting the gears to mesh. Mrs. Hanson was awakened by the same disturbance, and Sheriff Peck remarked to her that who ever the party was must be either trying out a strange car or was drunk. Cars pass through town at all hours of the night and there was no reason why 'the law' should get out and trail this one, but Peck says that somehow there was a lurking suspicion that something would be heard from this particular one. He inquired of Chris Gilstrap and others the next morning if their car was in it's accustomed place. and as everything appeared to be fair, he left Crystal Lake and came to his office in Garner. That forenoon, Mr. Gabrielson called him on the phone and informed that his Buick was missing. Thus far, no clew to the stolen Buick is forthcoming. However in searching about the Lake, a Velie sedan, which had been stolen from the private garage of Dr. Melling of Webster City, was found in the woods near Deer Park. This car had been damaged to such an extent that it could no longer be piloted. Without doubt, the fellows who stole the Gabrielson auto deserted the Velie at Crystal Lake. The Velie was stolen Wendnesday of last week. The Gabrielson car was insured.

—The Garner Leader.

THREE ACCUSED OF AUTO THEFT TAKEN TO CRYSTAL LAKE

CRYSTAL LAKE, July 5— Three young men accused of stealing the automobile of F. A. Gabrielson last week will be brought here from Algona today for preliminary hearing before Justice of the Peace H. T. Rose. They were captured at Des Moines, the car they were driving being filled with goods alleged to have been stolen at Algona. The names of the three have not been learned here.

Suggestions for your Picnic Dinner

This is just thc time of year when you most enjoy picnic dinner and suppers in the woods or the lake. We have everything in the cold meat line to make it more easy to plan.

Here's a good list:

Minced Ham Pressed Ham
Meat Loaf Potted Ham
Pickles and Olives
Cream, Brick and Limburger Cheese
Pork and Beans

Try any of the above for cold suppers or picnic lunches on a hot day.

The Klemme Meat Market

Would You

Make Life Happier?

There are many ways in which the laborer can live happier --a chearful home, books, pictures, music - - - all contribute their share to happiness.

Each has its price of course but there is none beyond the reach of systematic saving.

Making life happier is realy the true purpose of a saving account. A growing account will make it so. Have you one?

OF ANCIENT DAYS

Much Is Told in Collection of Old Documents.

Legal Papers Recovered by Investigators Reveal Life of People During Early Christian Era.

What is described as one of the most important collections of ancient documents yet discovered, consisting of more than 100 legal papers dating from the reigns of the Roman emperors Augustus, Tiberius, Caligula and Claudius, has been brought to Ann Arbor by Prof. Francis W. Kelsey of the University of Michigan. Professor Kelsey spent some time in Egypt in search of records. The collection is held to be important because it reveals the life of people during the early Christian era.

The records obtained by Professor Kelsey constitute a part of the files of a record office in or near Tebtunis, Egypt, and were discovered four months ago. They are written on papyrus and are chiefly in Greek, a few being Demotic. They are believed to have been covered with sand soon after the record office fell and with few exceptions are preserved perfectly.

The earliest record is dated 7 A. D. and bears the signature of a woman who agreed not to bring claim against her brothers. Another record, of the same period, is a contract of common law marriage.

Among other records are contracts of sale covering both personal and real property, including lands, vineyards and houses. There also are leases, agreements regarding loans, a contract of indemnity, receipts for wages, a receipt for dowry, official orders, petitions to public officials, tax receipts, documents relating to transferring ownership of slaves and part of a registry of deeds.

What is held to be the most important record is in the form of a roll, more than seven feet long and written on both sides. It is said to be a perfect example of an ancient book or scroll of the kind mentioned in the Bible, particularly in the Book of Revelations.

The scroll, dated 42 A. D., contains on one side abstracts of a number of contracts and on the other is a registry of the contracts, written in the record office of the second year of Emperor Claudius.

Between ten and fifteen years will be required to decipher all of the records and to explain them in their relation to Roman history, according to Professor Kelsey. The university professor asserted there could be no question as to the authenticity of the records.

Another collection brought to the university by the professor includes a papyrus book of twelve leaves, in which are written the incantations and formulas used by a master magician. There are charms and curses for various occasions, one being a love charm. In the prayers God and the angels are invoked as well as the pagan deities of Egypt.

"Survival of the Fittest."

Samuel Eliot Morison, author of "The Maritime History of Massachusetts," comes of New England seafaring stock, about which many deep-sea tales might be told. According to a family tradition, two of Mr. Morison's ancestors were shipmates on a brigantine which was wrecked in the Pacific ocean toward the end of the Eighteenth century. The crew had to row almost a thousand miles in a small boat before they reached land, with the usual accompaniment of drawing lots to see who would furnish the meals. One of Mr. Morison's ancestors perished; the other survived, and on reaching home two years later found that his daughter had married the victim's son. The two families remained on the best of terms, but it was considered poor form to refer to the "survival of the fittest" in the family circle. Mr. Morison did not tell this incident in his "Maritime History," as he did not expect anyone to believe it.

FIRST M. E. CHURCH
W. C. H. Bergmann, Pastor

Services are as follows:
Morning sermon at 10:00 A. M.
Epworth League at 7:30 o'clock
King's Herald's meeting at 2 o'clock
Evening sermon at 8:15 o'clock
Chorus practice Tuesday evening at 7:00 sharp.
Midweek prayer meeting Thursday evening at the home of Mr. Edward Schaffer.

Miss. Susie Kreutziger, a Deaconess from Cincinnati, Ohio, will be with us all day Sunday and will speak at both the morning and evening meeting. Also to the children in the afternoon. She will have a message for all. Come out to hear her.

The loyal workers class will give a special offering next Sunday morning for the Christian Orphanage at Council Bluffs, Ia. All members should have a part in this.

Sunday July the 16th will be a great day for the people of this Community. A District Convention will be held in the Liberty Church, Six Sunday Schools will take part in this convention. The Rev. Dr. Hutton of Des Moines, State Sunday School worker will be with us all day and speak three times. At the Liberty Church, at 11 o'clock and again at the same place at 3:00 o'clock. In the evening the meeting will be held in the City park, if weather permits, and Dr. Hutton will speak at 8:00 o'clock.

Each and every one interested in Sunday School work and studyies should be present at these meetings to hear what Dr. Hutton has to say. Bring your dinners and stay 'or the afternoon meeting.

W. C. Bergmann, Pastor.

Church Bells.

The Angelus bell, always rung thrice a day, takes its name from the first words of the prayer. In Tuscany a bell is rung an hour before the evening Angelus, or Ave bell, and is intended to remind its hearers to say the creed. The De Profundi bell sounds one hour after the Ave. In Italy on Friday afternoon at 3 o'clock thirty-three strokes are sounded in many churches and convents in memory of Christ's death at the age of 33. The custom probably is followed elsewhere.

OLDER THAN NEW ORLEANS

Ancient Records Show That Town of Natchitoches Has a Right to Claim Earliest Settlement.

Early in the history of Louisiana there was a spirited rivalry between the French and Spaniards as to which nation should occupy the region between the Red and Sabine rivers. About the close of the Seventeenth century the Spaniards established a post at Adayes (or Adaise), on the east side of the Sabine, and in 1714 Governor Cadillas sent Juchereau de St. Denis to establish a post at some point on the Red river. Martin, the historian, says that the expedition of St. Denis was "for the double purpose of finding a vent for Crozat's goods and checking the advances of the Spaniards, who were preparing to form settlements in the neighborhood of Natchitoches." St. Denis left a few settlers at Natchitoches, but it was not until 1717 that a permanent fort was erected there, which makes Natchitoches a little older than New Orleans. Dumont describes this fort as "a square palisade, where a little garrison was kept as a barrier against the Spaniards." A Catholic mission was established about the same time. The people, few in numbers, were not able to employ a resident priest, and for some years they were attended by Father Margil and other missionaries. Father Stanislaus came in 1765, and the humble mission developed into the cathedral church of St. Francis, which today is one of the historical Catholic landmarks of the nation. During the French and Spanish domination Natchitoches was an important trading post. The Spaniards from the west of the Sabine would come back with pack mules heavily laden with peltries, dried buffalo tongues, silver from the Mexican mines, etc., to exchange for dry goods and other necessaries. In 1824 Isaac Wright began running a steamboat between Natchitoches and the settlements further down the river, and this added to the importance of the town as a commercial center. With the establishment of Shreveport and the advent of the railroads some of the trade was diverted from Natchitoches, but being located in one of the richest sections of the state the town has continued to prosper.

When in 1884, the general assembly provided for the establishment of a State Normal school, the location of the school was thrown open to general competition, and the most liberal inducements were offered by Natchitoches. The parish and city of Natchitoches purchased and donated to the state 100 acres of land, including a good building which had formerly belonged to the nuns of the Sacred Heart.

Trapdoor in Wooden Leg Used for a Bank

Harrison, N. J.—Philip Schetzer refused to pay his check of 70 cents after eating a meal in a restaurant. He hadn't been locked up long in a near-by police station when a friend of his limped in to bail him out and was told it would cost him $25.

"One moment, please," the newcomer replied. Whereupon, he rolled up one trouser leg, disclosing a wooden leg, opened a trapdoor therein, and took out a roll of bills containing $1,000, handed over $25, and restored the balance to its hiding place. Schetzer paid the 70 cents when arraigned in court.

SOUND THE OCEAN

Scientific Investigation Is Now Going On.

Strong Probability That the Wonders of the Deep Will Be Revealed Very Shortly.

Difficulties encountered in deep-sea sounding are disclosed by a marine engineer writing in the London (England) Daily Mail.

Deep-sea sounding of late years, he says, has become a very exact science. When a ship is thousands of miles from land the real work begins. To sink a lead to a quite shallow depth is the easiest thing in the world. But when it comes to working in miles, sailors are brought up against a very different problem.

Even today nobody knows exactly where the greatest depth exists, for the simple reason that no instrument at present invented can reach the bottom in the deepest parts. A theory accredited by scientists is that below a certain depth solid matter refuses to sink, because the pressure of the water is so great that specific gravity is overcome.

It is widely held that when ships sink in the deepest parts of the ocean they never reach bottom, but float about suspended in the water at a depth below which their weight is not sufficient to take them. The greatest depth which has been sounded up to the present is just over five miles. But it is thought that parts of the ocean are perhaps four times as deep.

In this branch of nautical service wonderful instruments are used. Attached to the leads of the sounders, which weigh seventy pounds and are suspended on piano wire, are specially constructed cups, which close automatically and bring up samples of the ocean's bed. They are provided with a dial, upon which the depth touched by the leads is at once recorded, and are in use in all ocean-going cable ships, which must of necessity determine of what the ocean bed consists.

Time after time ships working in far seas have seen no record of solid matter reached by reading the sounder dial, because the leads are not sufficiently heavy to reach bottom.

All records may very soon be broken by the Shackleton expedition to the Antarctic. The grab-sinker which they will use can be employed at a depth of seven miles. What will be found nobody can say. All existing theories may be exploded, but it is certain that some interesting data will be forthcoming.

Naturally, deep-sea sounding is essential from many points. Fog is the seaman's enemy. Soundings must be taken to avoid disaster. Formerly the leads used were smeared with tallow. Many interesting specimens were brought to the surface, but nothing is known of the flora and the fauna that exists at great depths. Hence the constant attempts to discover better sounding apparatus.

New Popularity for Dickens.

Since the war there has been a widespread revival in England and elsewhere of the need for Dickens. Thrilling adventure, wild dangers, hairbreadth escapes, the roar of guns and all the pharaphernalia of battle are no longer welcome—people want to read of happiness in their homes of bittery memory. The British papers for a year past have seldom been without a quotation from the master's works—there is always in them a sentence or two that illuminatingly touches the occurrence of the hour. Apt quotations from Dickens are extremely common in the mouths of the high court judges of England, no less than in those of the magistrates of minor courts. There was a smile of delight when a case was called in the court of kings bench not long ago, Dombey & Sons vs. Smith, and Mr. H. F. Dickens, K. C., announced himself as representing Dombey & Sons (London tailors). The judge naturally commented: "I congratulate you, Mr. Dickens, that the old firm still flourishes."

Use for Forest Waste.

Many persons at one time or another have been struck with the waste of material that is permitted in American forests as compared with the care of Europeans, as a rule, to make use of every last twig that falls. Worth noting, therefore, is the news item from the Pacific coast which shows that fallen timber in some of the forests out that way is to be used extensively in the manufacture of grape stakes for California vineyards. One order for these stakes will require, we are told, 100 freight cars for its transportation, but the best thing about it is that it will reclaim cedar trunks that have been on the ground for years. The difficulty about such reclamation in general is not so much in finding "down stuff" that is sound enough to be useful as it is in discovering a use that will make recovery profitable.

"Pardon Me."

Noontime is a busy time in the fancy work department. A young girl, receiving her package, tried to slip out gracefully but failed. Having bumped into some one she murmured, "Pardon me." No one moved or scowled at her and, wonderingly, she turned to find, much to her companion's amusement, that she was being polite to a dignified figure in an attractive pink apron, marked $1.98.—Indianapolis News.

FEDERAL HUNTER GETS BIG BEAR

Bags Enormous Brute on Reservation of Moqui Indians in Arizona.

BECOMES KILLER OF STOCK

Government Hunters Have Orders Not to Molest Black Bears Unless They Kill Live Stock—Then They Are Doomed.

Washington.—When Daddy went a-hunting, according to an old nursery story, the best he cou'd do was to get a rabbit skin to wrap the Baby Bunting in, but a government hunter went a-hunting the other day and got a bear skin big enough to wrap the automobile in—and it was a seven-passenger touring car, too, that the bear skin made a top for

It happened in Arizona on the reservation of the Moqui Indians. This 900-pound brute, foresaking the wholesome habits of the ordinary black bear, turned cattle killer and stirred up anew all the black bear superstitions that the Indians ever had. When he wanted a steer for dinner or a calf for breakfast, he went out and got it, and there was no Indian hanging around to cry scat or shy a rock.

Use Fox Terriers.

Then the government hunters—those wizards of the wilds that the bureau of biological survey of the United States Department of Agriculture employs to protect the nation's live-stock interests from predatory animals—went on the job. They have all sorts of aids, those hunters—guns, traps, poison—but this time they took along a pack of wire-haired fox terriers.

Fox terriers cannot kill a bear, but —Wellington could not defeat Napoleon. All he could do was to hold him till reinforcements came. And this pack of terriers did as well as Wellington. They got on the track of the bear in the snow, near the scene of his latest steer-killing operation, and trailed him to the place where he was getting ready to "hole up" for the winter. The den was not complete and extended only a little way into the earth. The dogs blocked him in—900 pounds of bear, equal to about 40 dogs in weight— and held him there for an hour.

Government Hunter With Bear Dog and Skin of 900-Pound Black Bear.

Had Close Call.

Finally the bear made a dash for liberty—but Blucher had arrived. In fact, half of him had arrived too early. One of the hunters—there were five of them on the hunt and two had come up with the dogs—had the temerity to come very close to the mouth of the den just before Bruin made his grand rush. When the whirlwind broke, bear and dogs in a mighty mix-up, the big brute was almost on top of the hunter before he could move, and his gun was useless. The other hunter, standing to one side, got in a shot and dropped the bear only four feet from the man he had charged.

The bear fell without a struggle and rolled down the hill with all the terriers hanging on.

This was the first black bear killed by government hunters in that region for a long time. They have orders from the biological survey not to molest the black bear unless he becomes a stock killer. Indeed, it is the universal policy of the government hunters to leave the general run of wild animals alone and go after the outlaws that are destroying property.

Dig Up Wolf Tooth Necklace.

Berlin.—Necklaces of wolves' and dogs' teeth were among the relics of the early stone age reported to have just been discovered in Westphalia, near Henglarn, by scientific investigators. A stone chest containing stone vessels was unearthed.

Well Drill Is Ruined by Force of Rushing Water

Mountain Lake, Minn.—Drilling for water on the Whitehead farm near here, Anthony Wink struck a stream of such force that it spouted to a height of 40 feet. The force was so strong that it wrecked a half-ton drilling outfit. The water continues to spout in a stream reaching the second story of near-by buildings. It was the first occurrence of this kind encountered by Wink in his 30 years' experience in drilling.

DICK ACCEPTS

By JACK LAWTON

Copyright, 1921, Western Newspaper Union.

The silence of the woodland country was telling on Dick's nerves. For eight weeks the engineering job had claimed him, and the evenings in his lonely cabin became unendurable. Hungrily he yearned for human companionship.

Dallis, his assistant, was good enough in his way, but Dallis spent most of his time writing endless love letters or talking over long-distance to a far-away sweetheart. That galled Dick, too.

It was hard enough to see only rough men's faces; never to hear a feminine voice was another and greater deprivation. Dick wished that he had happened to care enough for one particular fair one in the past, to warrant a long-distance call himself. But he had not cared; and that was not his fault, but his misfortune, so he summed up matters—that was all.

The trees rustled mysterious whisperings, beyond the avenue of green stretched waters blue; the setting was like that of an old fairy tale. Dick remembered such a tale, with a highly colored illustration which had never failed to delight in childhood days.

There had been a woodland maiden in the picture, with a white frock encircled in green, and laughing blue eyes beneath the wind-blown hair. Dick smiled at the fanciful picture the scene recalled, and then bent idly to pick up a scrap of paper in his path. As idly he unfolded it, and before he fully realized, was reading a message.

"Dearest-dear," ran the note, "I am waiting for you beneath the widest spreading tree; I am dressed in white with the green sash you like. You will see me, when you drive through the opening. And, dearest-dear, the little white table is set for us two, with a vase of green boughs in the center, and there is a chocolate cake—oh, a delicious, luscious chocolate cake of the very kind you like, made with my very own hands, for my very own man. So hurry."

Dick stood staring down at the scribbled note with a boyish light of adventure in his eyes. Why not? He was far away from conventions, his days had been passed of late irksomely. Why not take advantage of the chance invitation tossed him by a kindly wind, and drive through the opening daringly to where the white-and-green-clad maid, like the one of the fairy tale, waited?

Dick knew the country like a map, but one excuse would be as good as another. And the chocolate cake! Great guns! A real home-made chocolate cake!

He retraced his steps to the cabin, and started horseback toward the wood.

She was a girl, undoubtedly, or she would not describe her white frock to her dearest-dear, as she invited him to a tryst beneath the tree.

Dick saw the "widest-spreading tree" as soon as Bob cantered through the opening; also he saw a graceful white-clad figure and vivid green sash-ends, tossed by the lake breeze. And as he came boldly nearer, there were the laughing blue eyes beneath ruffled brown hair, and a wondering, yet dimpling smile to greet him.

"Well," questioned the girl, as though she had known him all her life, "how did you get here?"

"I came," answered Dick promptly, "in response to your invitation. I found it in my path."

He handed over her letter. The girl frowned and smiled as she glanced over it.

"Old Jack is careless," she remarked. "Jack's my dog. I sent him on with it to—" She paused.

"Your dearest-dear," Dick finished for her.

"Why, yes," agreed the girl. "And Jack perhaps dropped the note, to go off on some interesting chase of his own. So you found it, by mistake."

"There is no mistake," Dick insisted. "You would not think the sending of such an invitation a mistake, if you had been buried, as I have, among these hills for two desolate months. Why, I'd travel thirty miles to hear a pleasant, companionable voice, putting all hope of the chocolate cake aside. That invitation was a charity, sent on its way by a fairy friend of mine. I—I don't know who you are; I suppose angels are likely to appear in most desolate places. But my name is Richard Boynton. I'm one of the engineers on this contract that's being put through."

The girl nodded.

"I know. I happen to have seen you at work when we motored through. You were pointed out to me," she changed her voice primly, "as a most promising young man."

She studied him thoughtfully.

"I shall cut the cake in your honor."

Through all the sweet magic of Dick's afternoon—passed one grievous thought—this witching girl of his dreams, unlike any other girl that he had known, had already found her prince, and he, Dick, though he ride through the woods forever, must, therefore, forever ride alone.

"I wonder," the girl said at last, "why dad doesn't come. He should know that tea is ready beneath the tree, even though Jack dropped my note to him on the way. Father," she remarked calmly, "is one of your high men in command. He brought me out here with him when he came to see how the work was going. Dad—is my dearest-dear."

Why the Farmer Chooses this Western Life Policy

EIGHT out of every nine policy-holders of The Western Life Insurance Company are farmers. They have protected their families, their estates and themselves in old age---with one of our

FARMER'S SPECIAL

Western Life Insurance Company — "Out of the West Comes the Best" — OF DES MOINES, IOWA

Western Life Policy with special protection to the farmer and his family has made this the popular policy with the farmers of Iowa. Is your family protected? If you were suddenly called, would there be any ready cash for them? The FARMER'S SPECIAL is "old line" life insurance, just as good as money in the bank---and you get these benefits:

Double insurance to your family if you meet with accidental death.

Your annual premiums are paid by this company should you become permanently disabled.

Your premiums grow smaller each year---when you apply the guaranteed cash coupons which we give you every year after the first.

Your policy is fully paid up after twenty years.

After you have made 15 deposits the last five annual premiums are paid by this company when you leave the guaranteed cash coupons with us.

This FARMER'S SPECIAL Policy has other benefits for you such as monthly endowments after you reach the age of 60 years---interest paid you on premiums and other advantages which we will gladly explain to you upon request.

Get a Western Life Policy---it costs you less each succeeding year you carry it---the FARMER'S SPECIAL gives you the extra benefits you would not get in ordinary old line insurance. The longer you wait, the higher the rate. Mail the coupon today for our interestine booklet "One Farmer's Experienc with Life Insurance."

Mr. and Mrs. Paul Grange returned last Thursday from their visit with relatives at Ruthven, Iowa. They were accompanied back by a niece and a nephew of Paul's. Marie and Paul Hughes, who are visiting here for a few days.

O. M. Twedt & Co. received another shipment of "Universals" last Friday. Those who are now driving the popular new cars are Mrs. Alma Louden, Walter Reed, Ing. Lauritsen and Elmer Bredlow, each a new Ford Touring; and Lee Price is sporting a new Ford roadster.

F. A. Arnold, Wm. Bachman, R. A. Jorgenson, P. M. Griesemer and John Gruetzmacher drove over to Garner last Saturday morning to attend the Hancock County Republican convention. F. A. Arnold was elected to go to the state convention and P. M. Griesemer to the district convenion.

The following out of town relatives were here to attend the John Albers funeral: Tom Lubben and family; Lubbe Lubben, Fred Yahnke and wife and H. Winters and family all of Buffalo Center; Lubbe Kohler and wife of Sheffield; and George Schmidt and wife of Hampton.

JOHN SHEETS HEADS COUNTY FAIR BOARD

Hancock County Agricultural Society Will Hold a Fair During September 1922

The depressing times seems to have somewhat discouraged most people but there are those who keep their heads above the water where they can see the blue skies of optimism. Among those is one John Sheets, of Hutchins. His enthusiasm for a county fair led to his election as president of the Hancock County Agricultural Association at a meeting of the board of Directors Saturday which time L. T. Nutty was elected secretary and given authority to appoint assistants.

The press was given authority to announce to the world that Hancock County Agricultural Associat'n hold a fair at Britt, Iowa, beginning August 29 and closing the night of September 1, 1922.

H. P. Stahr of Crystal, was appointed to audit the books. President Sheets wants every persn who has a book account against the Hancock County Agricultural Associati to mail it to him or to L. T. Nutty secretary immediately. Those closing can hand the statement of their account to one of their officers.

Another meeting of the board of directors was held Tuesday evening in order to hurry matters and get started with the work leading up to the fair.

—The Britt News.

Good Example.

Aunt Polly was milking in the cow lot, and her politically excited son found her there. "Maw, you're a Democrat, ain't you?" he asked. She made no answer, but he persisted: "Say, maw, ain't you a good Democrat?" Finally she said, emphatically: "I hain't nothin'. I'm a woman milkin' a cow. You go in the house and shut up!"

Happiness Not All.

There is in man a higher than love of happiness; he can do without happiness and instead thereof find blessedness.—Carlyle.

EARLY SETTLER OF HANCOCK COUNTY DIED SATURDAY

Lived On Old Farm 45 Years

Following an illness of only about a half hour, Mrs. Daniel Webner, Sr., of near this place passed away early last Saturday morning, at the home of her daughter, Mrs. Myron Haskins at Garner, where she had been visiting for about a week.

The news came as a shock to her many friends here as she had apparently been enjoying good health. She had not been so well, however, a few days before her death as she complained of heart trouble the night before but it was considered nothing serious by the attending physician.

Mrs. Webner was about eighty-one years old and was active both in mind and body. Her husband, Dan Webner, Sr. preceded her death by about three months. Mr. and Mrs. Webner were both pioneers of this county and had resided on the old home place east of Klemme for the past forty-five years and were among the first settlers in the county when Indians were a common sight on the prairies.

After a brief service at the Haskin home at Garner Saturday afternoon her remains were brought back to the old home, occupied by her son, Daniel, Jr. and family.

Funeral services were held at the home Sunday afternoon at 1:30 and at the Methodist church at 2:30 o'clock, conducted by her pastor, the Re. A. B. Gedye. Burial was made in the Klemme cemetery.

The obituary notice is published elsewhere in this issue.

OBITUARY

Beulah Riggins Webner the belovwife of the late Danial Webner was born Aug. 9th 1845 at Millerstown, Penn. and died Friday July 7th 1922 at the home of her daughter Mrs. Myron Haskins at Garner, at the age of 76 years and 11 months.

She was united in marriage to Daniel Webner, July 3rd, 1872, at Hampton Ia.

From Hampton the family moved to the state of Ohio, then to Floyd county Iowa engaging in farming and finially to Hancock County, Ia in 1883.

Her husband Daniel Webner passed away March 31, 1922 and was buried from this church, Sunday April 2 1922.

There were three children born to this union. Four dying in infancy. Three remaining children today mourn the so recent death of their father and mother.

Mrs. Myron Haskins of Garner. Mrs. Thomas Nelson Jr. of Avery Township and Mr. Daniel Webner Jr. residing on the home place. Also twelve grandchildren and five great grandchildren.

Services were held in the Methodist Episcopal Church conducted by the pastor, Rev. A. B. Gedye; interbeing made at the Calavary Cemet-Cemetery, Klemme, Iowa.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
ss.
Hancock County,

TO ALL WHOM IT MAY CONCERN:

YOU ARE HEREBY NOTIFYED, That an instrument of writing purporting to be the last Will and Testament of JOHN ALBERS deceased, dated Oct. 19, 1912, having been this day filed, opened and read, Monday the 14th day of August, 1922 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 10:00 o'clock A. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, July 11th, 1922.

B. E. ERWIN,
Clerk of District Court.
(Publish July 13-20-27, 1922.)

MICKIE SAYS

Reviewing A Bit Of Old National History Of Interest

ST. JOHN'S CHURCH

Graveyard Holds Tombs of Patriotic Americans, and Its Walls Echoed Henry's Immortal Words.

Visitors rarely leave Richmond before journeying across the viaduct to take a look at old St. John's church, says Vera Palmer in the Richmond (Va) Times Dispatch. It not only is a pleasure to walk in summer, to enjoy the trees and &owers, but a certain thrill must come to all who gaze on the last resting places of so many men and women who have helped to found this capital of the Old Dominion, and to stand within the historic edifice where democracy had its birth.

William Byrd gave the acre of ground for the church.

Records show that Richard Randolph, gentlemen, built the church, which is thot to have been completed June 10, 1741; 181 years ago. The structure then was 60 feet long and 20 feet wide, but in 1772 was enlarged.

It was about the time that lightning rods came into vogue when the building was enlarged, and a man is said to have called on the vestry with the idea of selling rods for the safety of the remodeled edifice. With the execption of John Enders, one of the pilliars, and senior wardthe vestry was eager to adopt the new device. But he was opposed. Having supplied most of the money for the improvements, his opinion carried, and the reason he gave was that he had enlarged the church for the worship of God and it had been duly consrecrated to him. Therefore, if the Lord wanted to destroy His church with fire, man should place no obstacle in the way.

St. John's in March, 1775, was the scene of a historic convention. called to considetr arming the colony. Then and there it was that Patrick Henry spoke the words which are so inseparably linked with his name: "Is life so dear or peace so sweet as to be purchased at the price of chain and slavery? Forbid it, Almighty God! I know not the course that others take; but as for me, give me liberty or give me death!" Thereupon the convention took steps to arm the colonies.

THE SIGNERS
(1) John Hancock.

There is one signature on the Declaration of Independence that will never fade. It is that of John Hancock of Massachuetts. In affixing signature to that immortal document, Hancock used a man's sized quill pen and plenty of ink. It is, by all odds, the boldest and plainest signature of the entire 56 names contained on it. There was no hedging about Hancock. He was heart and soul for the Declaration, and wanted all the world to know it.

John Hancock was born at Quincy, Mass., January12 1737, and died October8, 1793. After graduating from Harvard, he worked in the counting house of his uncle. who left him a large fortune. Later he became a successful merchant. In 1766 he was elected to the Massachusetts House of Representatives He was a member of the Provincial Congress at Concord, and made president of that body. In 1775 he was elected to the Continental Congress and the following year signed the Declaration. He became the first governor of Massachuetts, and with intervals of two years was annually elected to that office until he died. (No. 2 will be published next week.)

PREDICT RETURN OF IOWA'S PROSPESITY

Iowa's old time prosperity is coming back.

Farmers and live stock breeders are in a much better condition than they were in a year ago, according to a report given out by the directors in charge of the coming Iowa State Fair.

Entries in the live stock departments for the Iowa State Fair are larger by far than they have been in recent years, according to Secretary A. R. Corey. This same trend has also been evidenced in inquiries received from all parts of the state regarding exhibits of grain, fruits & garden produce to be entered at the fair. Approximately 30 counties sent collective grain exhibits to the 1921 State Fair. This number will be very much increased this year, according to present indications.

If consession reservations are an indication, the 1922 State Fair will be a record breaker. More than double the amount of space contracted for at this date last year has now bene reserved. Officials state that a good barameter of the condition of their localities and declare that this argues well for a big exposition Aug. 23 to September 1.
City Advocate.

The purpose of this hike is a good time and to pass tests.

All boys who are interested in Scouting are invited to come along.

A STRAY DOG

A boy who would take a stray dog to the city pound to be killed, for a quarter, is too mean to live himself, declares William Allen White, author, and editor of the Emporia, Kansas Gazette.

Mr. White's protest in behalf of dogs was envoked by an offer of 25 cents a head for dogs brought to the city pound by boys.

"What's the matter with this city admistration anyhow?" he inquired. "Were they never boys?" Here they are advertising to give boys 25 cents for each stray dog brought into the city pound to be killed. Doesn't the city administration know that the boy who would delibertly bring a stray dog to be killed for two-bits, ought to be killed himself? Don't they know that boys are not so hard hearted? Don't they know that the average boy would rather earn two bits mowing a lawn with a straight string of boys marching past him to the swimming hole rather than see stray dog killed. k

"The advertisement had in it the meanest inference about Emporia boy that has ever been made.

"Think of a boy who valued a quarter above the life of a dog—a stray dog— any dog on earth."
—Ex.

ANOTHER IMPORTANT CHANGE IN BUSINESS

O. M. Twedt & Co. Sell Interests To Swea City, Iowa, Man

Another important business changed hands in Klemme Monday when O. M. Twedt & Co. sold their entire interests in the Ford garage here to Mr. Albert Erickson. of Swea City, Iowa. Mr. Erickson is now in full charge of the business.

Mr. Twedt has been interested in the Ford garage here since last fall but has not been actively connected with the business as Mr. Lee Mitchel has acted as manager for the company. Messrs. Oscar Kent and Joe Gronsdal, mechanic and salesman of the company, together with Mr. Mitchel will remain in the employ of the new owner.

The old firm, O. M. Twedt & Co., have enjoyed a good business here the past year and have made a great number of friends and satisfied customers. They have conducted a good clean business and always made an especial effort to give complete satisfaction.

Mr. Albert Erickson, the new proprietor, as we stated before, comes from Swea City, and is well recommended as a good, square man to do business with. We hae personally met him and feel that he will prove o be popular with the people of this place as he appears to be a fine fellow in every respect. The business which he is taking over is not an experiment, but rather, one of the well stablished Ford agencies in northern Iowa, and we are quite confident hat he will enjoy a fine business in his territory.

Mr. Erickson is a man with a family and expects to move here shortly.

Ole, The Oracle, "Orates"

Dis old vorld ban moving
Purty fast ay say;
Dar ban plenty sunshine,
But not much making hay.

Vork five, sax short hour
Ban plenty for von day;
Everting came easy,
Everwhere big pay

People shot de money
Lak sailer full-a moon;
Dis don't last forever,
So all go blooey sune.

Ven things ban coming easy,
And de kale vor rolling in,
Dey didn't keep none of de yack
Tu fill de coal bin.

A nickel, dime or knooner,
Dey didn't lay away,
For overshoe or um-ber-ell
For this har rainy day.

It seems to me lan great dance,
Yazz busineess and all fun,
But de fiddler he got tired,
And now he wants his mon.

Now most of these birds stan round
Vid sad face lak undertaker,
And say that business skol bain shot,
And no more money maker.

But tings ant haf so bad as dis,
Ay don't hear church bells tolling;
Ay'm saying, roll right up the sleeve
And keep the old ball rolling.

Dis ban no time for dis week heart,
Or laying down on yob
An holler 'bout de hole dsm ting,
And cry and sigh and sob.

Put on a smile, ay say to yu,
And de shoulder to the veel,
And purty soon I tal yu dat
Ve can all buy autombeel.

Den money vill begin to move,
And tings skol come our vay,
For dis vork and smilin' business
Is de only ting day pay.

C. A. Fowles, Mankato, Minn.

COAL!

Did you know Millers Creek and Elkhorn Kentucky are the highest grade coal in Kentucky? Less than 3 per cent ash. You can get it at Lau's Elevator in a few days. adv

Sit in Judgment on 2-Cent Piece

British Law Lords Give Grave Consideration to Appeal of Scotsman.

WINS A FAVORABLE DECISION

May Sue Traction Company, Whose Conductor Refused to Accept Battered Coin Offered in Payment of Fare.

London.—The five law lords, constituting the house of lords, in session as the supreme court of appeals, sat around in solemn semicircle. Lord Haldane sat in the place of lord chancellor upon the woolsack, with the throne itself behind him. Lord Finlay and Lord Cave sat upon his right, Lord Dunedin and Lord Wrenbury upon his left. In the magnificent chamber, its red benches nearly empty except for a group of lawyers and officials near the entrance, the five law lords, in grave tones befitting their high function, read out their learned judgments one by one. Notable documents these, in which the five concurred in one decision, abounding in such portentous words as torts, malfeasances, condescendences and the like.

Clearly a landmark this, in the history of the development of the law of England. What grave matter was thus engaging the earnest consideration of the noble and learned lords? Surely nothing less than the fate of some great township, or the destiny of some estate of millions?

My noble and learned lords, in point of fact, were talking about a penny—a two-cent piece. It sounds better translated into American currency. My Lord Finlay seems to think something the same himself, for throughout his judgment he referred to it not as a "penny," but as a "penny piece," or "a coin." Need it be said whose penny it was; that had been carried up all the various steps of the law into the house of lords? It was a Scotsman's penny.

Conductor Refuses Penny.

Almost two years ago one John Percy climbed upon a street car in the city of Glasgow. He tendered to the conductor of the car in payment of his fare a penny which was slightly marked and indented. It was, in fact, a penny which John Percy had himself received earlier in the day from another conductor, and he determined to return it in the way by which it had come to him. The conductor, however, did not like the looks of the penny, and demanded another in its place. John Percy said it was good enough and refused to give another. An inspector was called to reinforce the conductor, and still John Percy refused.

Finally he was marched off to the police station on a charge of refusing to pay his fare. He was kept there only ten minutes, but this was long enough to fire him with determination to see justice done between himself and the Glasgow corporation, which owns the street cars.

John Percy then commenced an action against the corporation for $25,000 damages on the ground that the actions of the conductor and inspector had been injurious to his feelings and his reputation. He lost the first round of his fight in Scotland when the court of session dismissed his claim, on the ground that the corporation was not responsible for these actions of its employees.

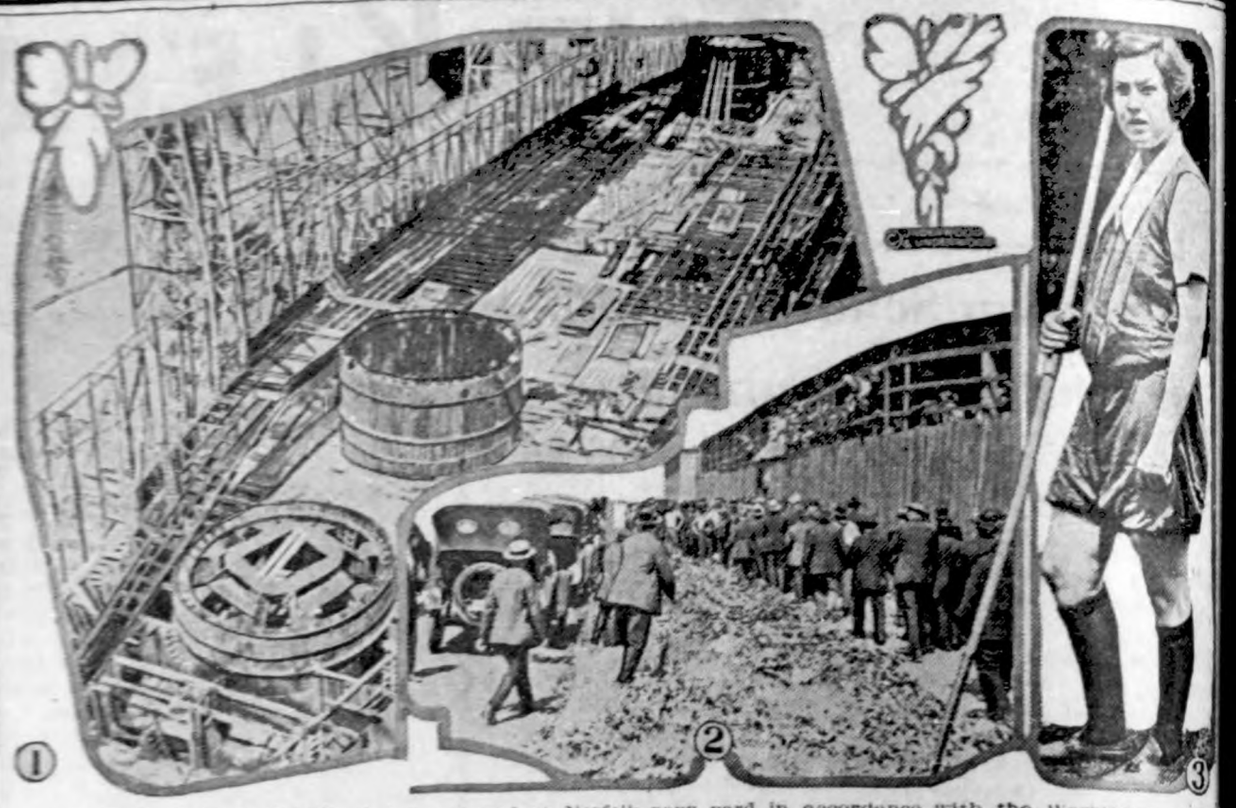
One "Bonnie" Fighter.

But John Percy is evidently what they call in Scotland a "bonnie fighter," and he carried his case up to the house of lords. He did not pay his railroad fare to London for the purpose, nor is he being put to any expense in the costly process of suing before the highest court of appeal. He has taken advantage of the legal provision which permits a poor person to set the law in motion at the state's charge if he sues in forma pauperis. And now the house of lords has decided in his favor.

Whether John Percy's penny really was good or no better than it should be is still not decided. What the law lords have ruled is that the corporation can be sued upon a mistake made by the conductor and inspector. That is enough for John Percy. It may be added, as a matter of historical interest, that of the five law lords who upheld John Percy in his fight for his two cents three are Scotsmen.—Warre B. Wells in New York Tribune.

Bees Latest Violators of the Prohibition Law

Bee bootleggers that manufacture alcohol-flavored honey are the latest violators of the Volstead act in Clatsop county, Oregon. County Agricultural Agent McMindes asserts that since so many stills have been operated in the county, quantities of fermented mash have been dumped in isolated spots and bees feed on the mash. As a result the contents of some of the hives are highly flavored, according to the county agent.



1—U. S. S. North Carolina being scrapped at Norfolk navy yard in accordance with the Washington naval treaty. 2—Striking railway shopmen at Chicago on way to mass meeting. 3—Kathryn Agar of Chicago, javelin thrower, selected to go to Olympic games in Paris.

Noah's Ark Was Only a Pyramid

This Is Theory of Doctor Getsinger Based on Years of Study and Exploration.

CHEOPS WAS NOT THE BUILDER

Animals That Went Into Ark Were Not Material but Spiritual Animals, the Animals of the Zodiac, Aries, Taurus, Etc.

Los Angeles.—Noah's Ark, built to save the human race from the flood of ancient Bible times, is still extant for all to see after 30,000 years.

This is the belief of Dr. C. E. Getsinger, Egyptologist, now visiting Los Angeles.

Doctor Getsinger's conclusion is based upon recent discoveries following 35 years' research work and intensive study. He declares that the Ark of Noah was not a ship. It was the great pyramid of Cheops in Egypt.

Recent discoveries prove that the pyramids—Noah's Ark and the others—were under the sea for thousands of years. Near the top of each of the pyramids, at the same level, is a highwater line, where a deep niche has been cut into the rock by the lashing of a long-forgotten surf. Also, the inner passages of the pyramids are thickly crusted with salt, which a chemical analysis proves to be sea salt.

Doctor Getsinger is convinced that these monuments were built thousands of years before Cheops, to whom they have been accredited. Cheops merely repaired them and caused a casing of stones to be built over them.

Mystery of the Pyramids.

And he is convinced that the pyramid stands today a living monument to an old and noble philosophy, a greater civilization than any we have since attained. That great pyramid which, together with the sphinx and the nine smaller pyramids, have for centuries exercised the wonder and astonishment of scientists, who have frankly admitted that they could not have been built upon any known possible conditions, and that we have even today no means by which the immense stones used in the construction could be transported and adjusted into their present position.

In the great pyramid there are three chambers which conform to God's directions to Noah for the building of the Ark against the coming of the great flood—"with lower, second and third stories shalt thou make it."

And these three chambers, named for the three sons of Noah, Shem, Ham and Japhet, Doctor Getsinger thinks are intended to represent the three stratas of human life and intelligence. The chamber of Shem, the lower, symbolizes the animals who have no souls. The second chamber, Ham, symbolizes human beings with souls, but of lesser intellectual and spiritual attainment. And the highest chamber, that of Japhet, symbolizes the inspired teachers—the spiritual intellectuals, souls of greater understanding.

Spiritual Animals.

The entrance which is 52 feet above the ground, Doctor Getsinger declares, was so placed that the North Star, the polar star, could shine directly into the interior from the Heavens—which it did 30,000 years ago, and after a complete cycle, so shines again today.

This Egyptologist thinks that the animals that went into the Ark were not material animals but spiritual animals, the animals of the Zodiac—Aries, the Ram; Taurus, the Bull; Cancer, the Crab; Leo, the Lion; Scorpio, the Scorpion (insects); Capricornus, the Goat; Pisces, the Fish, together with H. Gemini, the Twins; Virgo, the Virgin; Libra, the Balance; Sagittarius, the Archer, and Aquarius, the Water-Bearer.

The great flood of Noah's day did not submerge the whole of the present known world, but included only the ancient lost continent of Atlantis and Egypt. Atlantis has never reappeared, but Egypt, after 12,000 years under the sea, was resettled by immigrants from other lands, together with their animals.

Harvard Seniors on Annual Picnic

The annual picnic of the senior class of Harvard is one of the joyous events of the big university. Here are a few members of this year's class starting for the outing.

NEWS REVIEW OF CURRENT EVENTS

Maintenance of Way Men Postpone Strike and Shopmen May Return to Work.

CHANCE FOR A COMPROMISE

President Harding's Utterances on the Industrial Situation—Irish Republicans, Routed in Dublin, Still Fighting—Russia's Amazing Budget Submitted to the Hague Conference.

By EDWARD W. PICKARD.

LABOR troubles, present and prospective, continue to absorb much of the interest of the American public. The railway shopmen are out—practically all of them, according to B. M. Jewell, head of the six federated shop crafts; not nearly all of them, according to the railway executives. The maintenance of way workers, who were expected to strike last week, are still at work. E. F. Grable, president of their brotherhood, and six members of his executive council, held an all-day conference with the members of the railway labor board and then issued a statement saying they had concluded "it is not wise for our membership to leave the service of the carriers until every resource has been exhausted that affords hope of a peaceful adjustment." The chairman on each carrier is to take up at once with the management all grievances and controversies and such as cannot be adjusted are to be taken before the labor board. Pending these efforts at peaceful settlement the men are to continue work under the present wage decision of the labor board under protest.

Mr. Jewell celebrated his Fourth of July by putting forth a long statement in which he bitterly arraigned the labor board because it had "outlawed" the striking shopmen. He declared the board had outlawed itself as the friend of the unions and had "adopted a tragic attitude in attempting to compel American workers to accept a wage scale below decent living." True, the board had in effect declared the strikers outlawed and had invited recruits to fill their places, promising them protection and urging them to form a new shopmen's union within the American Federation of Labor. But in a day or two both Mr. Jewell and Chairman Hooper of the board became milder and the peace prospects brightened somewhat. The former said he was not averse to dealing "with any authorized person on any reasonable basis," and the latter issued a statement in which he undertook to show that the board was protecting the interests of the striking shopmen by advising carriers against contracting out shop work, and also wrote a letter to Mr. Jewell repudiating the charge of injustice on the part of the board and concluding:

"I am yet quite hopeful that your organization will recover their equilibrium and discern that it is vastly better for them to go along with the railroad labor board, patiently when it makes mistakes, but confidently at all times that it profoundly desires to do justice to the men, the carriers, and the public, without fear, favor or affection."

Toward the end of the week W. L. McMeniman, one of the labor members of the board, held conferences with the heads of the railway clerks and freight handlers, and it was predicted that those unions would follow the example set by the maintenance of way men.

Though most disorders last week due to the shopmen's strike were of minor importance, reports reached Washington in increasing numbers that strikers were interfering with the dispatch of the United States mails in various parts of the country. The administration is disposed and prepared to deal vigorously with any persons who hamper the movement of the mails. Postoffice inspectors were sent to all points where trouble was likely to arise, and doubtless every federal agency necessary will be used to protect the mail trains and facilitate their regular movement.

PRESIDENT HARDING'S conference of representatives of the coal mine operators and striking miners in the White House brought no immediate results, but hope of peaceful adjustment was not abandoned and the conferees agreed to get together again July 10. They know that Mr. Harding has in reserve some drastic government action if they fail to agree, though he has not revealed its exact nature.

In Kansas the coal miners who supported the program of Alexander Howatt and who, with their officials, were expelled from the United Mine Workers of America, have decided to return to work, that being the only way they could recover their autonomy and be restored to membership in the union.

IN HIS Fourth of July speech at the celebration in Marion, O., President Harding had some significant things to say of the industrial situation. For instance:

"A free American has the right to labor without any other's leave. It would be no less an abridgement to deny men the right to bargain collectively. Governments can not tolerate any class or group domination through force. It will be a sorry day when group domination is reflected in our laws. Government, and the laws which government is charged with enforcing, must be for all the people, ever aiming at the common good."

Disclaiming any note of pessimism, he asserted that the republic is secure. "Menaces do arise," he added, "but public opinion will efface them. Meanwhile government must repress them."

These of course are truisms, but it is well that they should be repeated from time to time by the voice of highest authority.

General Pershing, who also spoke at the Marion celebration, was loudly applauded when he advocated fearless use of "the strong arm of the law" in communities which "openly sympathize with ruthless murder of inoffensive people in the exercise of the right to earn a livelihood."

CAPTURE of the Four Courts building in Dublin by the troops of the Irish Free State by no means ended the bloody conflict with the republican irregulars. The latter took refuge in hotels and other buildings in O'Connell street and there continued the battle until the shells of the regulars set fire to almost every structure in that part of the street. The conflagration could not be stopped and most of the rebels surrendered. De Valera, who was with them, was said to have escaped in disguise and fled to County Wicklow. Cathal Brugha, minister of defense in the De Valera cabinet, refused to surrender and was seriously wounded. Among the prisoners was Mrs. Terence McSwiney, widow of the late lord mayor of Cork, and Rory O'Conner, commander of the irregulars. The provisional government is now putting its entire military establishment on an active service basis and has issued a proclamation calling for recruits.

The republicans are preparing for a final struggle in the vicinity of Cork. That city is in their hands and, having Skibbereen, they claim control of the entire county, as well as of Counties Kerry and West Limerick, Waterford, East Limerick and parts of Tipperary and Kilkenny.

DESPITE the vigorous action of the government in Berlin, the monarchists have been stirring up trouble in many places in Germany. These were aggravated by the anti-monarchist demonstrations that were staged on July 4 by the Democrats and Socialists. One of the incidents of the week was the attempt to assassinate Maximilian Harden, the famous editor who is so thoroughly hated by the reactionaries.

There is a movement on foot in Germany that is likely to upset the cabinet of Chancellor Wirth and result in the formation of a purely socialistic government in place of the present one, which is a coalition of minorities. To forestall this, an offer has been made to the Independent Socialists of a share in the government. The bourgeois parties fear that this would interfere with Germany's obtaining financial relief abroad.

IT LOOKS at this writing as though the conference at The Hague would come no nearer to settling the Russian problem than did that at Genoa. The soviet delegates in response to the demands of the allies submitted what they called the Russian budget, but Chairman Alphand of the commission characterized it as a "project," and the British called it "an amazing document." This budget admitted that one-fifth of the entire revenues consisted of new issues of paper rubles and undertook to show that the more rubles were printed the more valuable they became—amazing indeed. The budget figures, which were in gold rubles, were calculated on an arbitrary rate in paper rubles every three months. The allied experts were dazed by all this.

The Russians caused further dissension by putting out two questionnaires demanding to know the social positions, the professions, the revenues and the family positions of previous holders of property, bonds and securities who have claims against Russia. Though told this was practically impossible and unnecessary, Litvinoff insisted his government must have this and other information as a basis for concrete proposals for the settlement of each case. Finally a list of the private agricultural claims of French, British and Belgian nationals was presented to him, and the matter was taken under further consideration.

Representatives of large financial groups have arrived at The Hague and it may be that Litvinoff will be able to trade a lot of concessions for private credits and so carry back certain valuable results to Moscow even if the formal negotiations fall through.

WHEN the League of Nations assembly meets in September it will have a definite program for reduction of land and sea armaments. The league's commission on disarmament has been in session in Paris and has approved Lord Robert Cecil's plan providing for a general reduction of air and land forces under the supervision of the league, and for continental alliances against aggression. The commission also adopted the British scheme for extending the Washington naval accord to all nations. Objection to limiting the alliances to continents was met by a statement that no nation would be barred from aiding a country that was attacked, no matter on what continent.

SETTLEMENT of the Tacna-Arica dispute in the conference at Washington is delayed by the action of the Peruvian delegates. Chile had accepted the plan offered by Secretary Hughes, but the Peruvians have qualified their acceptance in such a way that further negotiations are necessary. Chile's attitude is explained by her spokesmen as a thoroughly conciliatory one, embracing a willingness to accept Peru's suggestion for certain minor changes in the American formula so long as the major principles laid down by Secretary Hughes are accepted by Chile are not disturbed.

DREARY tariff debates in the senate grow acrimonious occasionally, and now and then even interesting. Last Wednesday, for instance, Senator Shortridge of California found occasion to predict that a son of Harding would sit in the President's chair a good many years to come. Before he had a chance to explain that he was alluding to Mr. Harding he was interrupted by Senator King of Utah with the admission that the Californian was correct and the assertion that the son of Ohio who would occupy the White House next would be Senator Pomerene. King's fellow Democrats seem to approve the suggestion, so the Pomerene boom may be considered launched.

THE sporting event of the week was the prize fight between Johnny Leonard, lightweight champion, and Rocky Kansas in Michigan City, Ind. It was Leonard's fight all the way and in the eighth round Kansas was technically knocked out, his seconds throwing up the sponge.

WILL BE BIG AID TO SHIPS AT SEA

Marconi Announces the Invention of a Radio Searchlight.

Famous Italian Wireless Wizard Explains New Device Which He Predicts Will Rid Sea of Much of Its Terrors.

New York.—Senator Guglielmo Marconi, wonder man of wireless, announced the invention of what might be termed a radio searchlight, by means of which radio waves, which can be reflected like light waves, may be sent in a given direction in a beam instead of being scattered to all points of the compass.

The famous Italian said he believed this invention could be utilized in such a manner as to rid the sea of some of its terrors, for with a revolving reflector the transmitter would constitute a radio lighthouse, capable of flashing guiding beams nearly a hundred miles.

Addressing a joint meeting of the Institute of Radio Engineers and the American Institute of Electrical Engineers on his latest discoveries, the inventor said of the proposed radio lighthouse:

"By means of the revolving beam of electrical radiation it is possible for ships when within a certain distance to ascertain in thick weather the bearing and position of the lighthouse.

"It seems to me that it should be possible to design apparatus by means of which a ship could radiate or project a divergent beam of the short wave rays in any desired direction, which rays, if coming across a metallic object, such as another steamer, would be reflected back to a receiver on the sending ship and thereby immediately reveal the presence and bearing of the other ship in fog or thick weather."

Marconi's radio searchlight bears little resemblance to the battleship searchlight. It is rather a special arrangement of wires on towers or masts.

During his lecture Marconi exhibited pictures of reflectors resembling the weird apparatus pictured in imaginary tales of the conquest of the world by Martians. Through the use of these reflectors at both ends, clear speech was exchanged during experiments over a distance of ninety-nine miles, he announced.

Cripple Accumulates Fortune.

Allentown, Pa.—Oscar M. Schierer, fifty-five years of age, who died here the other day, leaves an estate of $50,000, accumulated through his efforts in business during the last forty years, despite the fact that during the entire time he was unable to move from his chair. Schierer, crippled from rheumatism, conducted his business and built it up to a prosperous condition, notwithstanding the handicap of his infirmity.

Formosa has a world monopoly of camphor.

THE AMERICAN LEGION

(Copy for This Department Supplied by the American Legion News Service.)

PAYS TRIBUTE TO THE SOUTH

Capt. George Shuler Passes Command of Marines in Parade to South Carolina Officer.

Proving that the Civil war formed a nation and that the sons of the Confederacy and the Union hold no malice, Capt. George K. Shuler of Lyons, N. Y., whose forebears wore the Union blue, thought that it would be most appropriate that a Southerner should take his place as commander of the marines in the parade at the unveiling of the Grant memorial. Accordingly, he selected Capt. Thomas P. Cheatham of South Carolina, whose folk fought against Grant in the struggle between the states for the honor.

Shuler had a notable record with the marines during the war. He received the Croix de Guerre, Navy medal, Distinguished Service medal and citations from Marshals Foch and Petain, General Pershing and General Lejeune.

THE SAN JACINTO DAY FLOAT

Legionnaires' Display Proves Prize-winner at the Anson (Tex.) Celebration Held April 21.

Outside of the Lone Star state, people don't do much celebrating on San Jacinto day. Down in Texas, however, the school children and everybody else take a holiday on April 21. It is the anniversary of the battle of San Jacinto, where Col. Sam Houston, with 750 soldiers, put to flight 5,000 Mexicans and took General Santa Anna and other notables of the Mexican army captive.

This year, the American Legion in all parts of Texas took part in the cel-

Legionnaires' Prize Float.

bration of Colonel Houston's victory. The Legionnaires' float in the parade at Anson took first prize for being the most decorated of the scores that were seen on San Jacinto day.

FOCH PRAISES AMERICAN WAY

Pride of France Well Pleased With Enthusiastic Welcomes Throughout the Country.

Marshal Foch of France, has given Commandant de Mierry, formerly of his staff, the task of writing the impressions of the generalissimo on his recent visit to America as the guest of the American Legion. Marshal Foch has made it a life-long rule not to write for publications of any sort. In speaking of his trip across the American continent, Marshal Foch said: "There was always the same enthusiasm, the same warmth, all through the weeks that I travelled, no matter whether we were in the West, the North, the South or the East. No matter what the weather, thousands of men, women and children were always ready with a cordial greeting." The Marshal paid an especially high tribute to the "cordiality and friendship of the American Legion," which he said, "rendered easy the journey of more than 26,000 kilometers in forty-five days."

OBSERVE LEE-GRANT BIRTHS

American Legion Requests Commemoration on Both Sides of Mason-Dixon Line.

Observances by posts of the American Legion on both sides of the Mason-Dixon line of the birthdays of Gen. Robert E. Lee and Gen. U. S. Grant have been requested by the national headquarters of the Legion. Legion posts in Northern states co-operated with the G. A. R. in the celebration of Grant's anniversary on April 27. The birthday of General Lee will be observed January 29, 1923.

The Legion's celebration of the birth of these two men, not as Northerner and Southerner, but as great Americans, will be "an effective argument that all sectionalism is buried and that the glory of the nation is the chief concern of every patriotic citizen," said Bolles, adjutant of the Legion, in charge.

TO AID DISABLED VETERANS

Col. Robert U. Patterson of Medical Division of Bureau Gives Time to the Afflicted.

After serving in seventeen expeditions in the Philippines in 1898, later going with the Cuban army of pacification, taking charge of a base hospital in England in 1917, going to the front with the British expeditionary forces and being on duty with our own famous Second division during the hardest fighting northwest of Chateau Thierry, Col. Robert U. Patterson is now back in peaceful Washington with the task of looking after the medical end of the work of the veterans' bureau.

Under the supervision of Colonel Patterson, the medical division of the bureau has been completely re-organized and is doing everything possible to alleviate the suffering of the disabled World war veterans.

Of course, he is a member of the American Legion—an ardent worker in the George Washington Post No. 1, at Washington.

SOLVED GERMAN RADIO SPEED

Operators' Ingenuity in Use of Dictaphone Aided in Intercepting Code Messages.

On a bench in the Bois de Bologne, in company with mademoiselle, or in running or crawling toward the Boche's trench, the American doughboy couldn't be equalled for speed. When it came time, however, to pass secret radio messages, where no particular danger was involved either for the sender or the receiver, the Germans seemed to be able to make it a trifle snappier.

The aforegoing is apropos of the statement that German code messages were sent so fast that radio operators of the allies, who weren't supposed to be playing, anyway, were not able to take them. It was not long, though, until what the allied operators lacked in speed they made up in ingenuity. A certain operator, by the triangulation method, found that messages were being sent from a station in Germany to another in German East Africa.

After several weeks of work, this operator took a dictaphone to his station and set the blank wax cylinder in motion at a rapid rate of speed while a German message was on its way to Africa. After the message had been "caught" in the wax cylinder the cylinder was placed on a transcribing machine and then run so slowly that the mysterious dots and dashes could be taken with ease. Later, the message was decoded and its secret known by the allies. The knowledge derived from this operator's experiment is now employed in transcribing press messages from Europe to America.

PLANS FOR THE "NEXT WAR"

Military Training Camps Association to Open School to Civilians to Prepare Officers.

If the association which Henry J. Reilly is now promoting proves as successful as the organization which he helped to form in Paris a few years ago, there will be no scarcity of competent officers for the "next war." Mr. Reilly is now working out plans for the Military Training Camps association for the training of officers. After serving as a brigadier general during the World war, he finished his overseas work by helping form the American Legion in Paris.

The military training camps are open to civilians who feel the need of regular training, regular hours and an abundance of exercise. Mr. Reilly has acquired National Service, the association's official magazine. He expects to consolidate this magazine with the Army and Navy Journal of which he is now editor.

Carrying On With the American Legion

Various units of the Auxiliary have now adopted every ward in the war hospital at Oteen, N. C. The last "orphan" ward was taken over by the women of Sitka, Alaska.

* * *

A proposed reduction in the salaries of the school teachers of Seattle, Wash., was protested at once by the American Legion there as being a bad thing for the public schools.

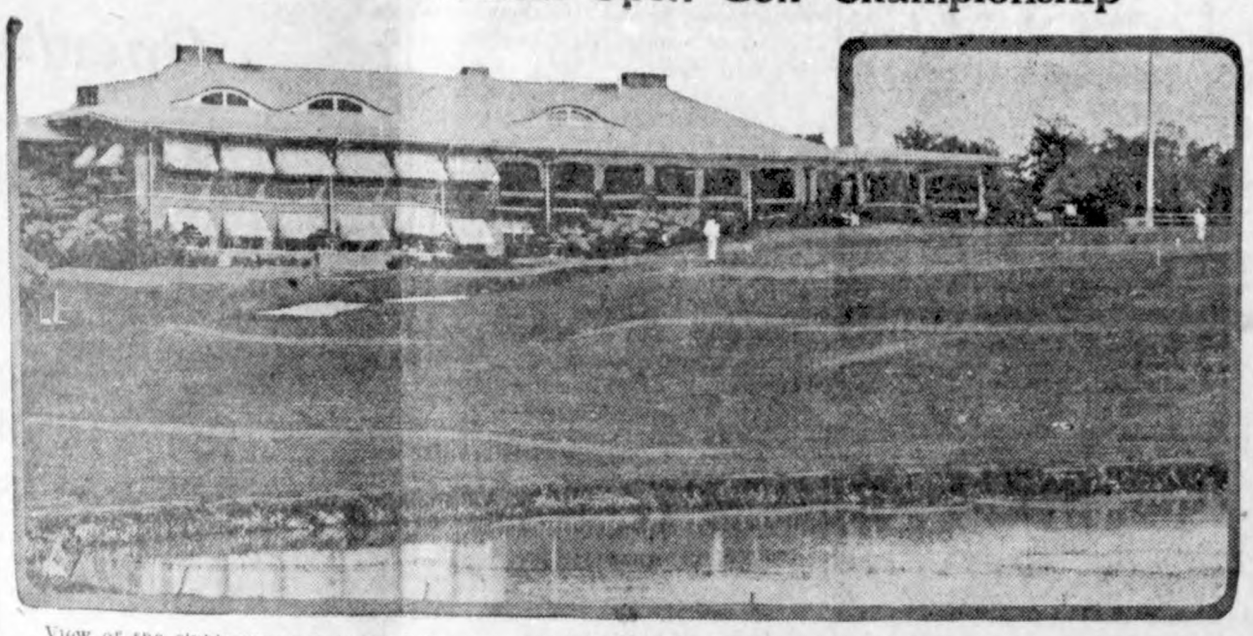
* * *

By keeping tab on alien slackers applying for naturalization, the Legion post at Spencer, Ia., has, it reports, "kept several yellow individuals from becoming American citizens."

* * *

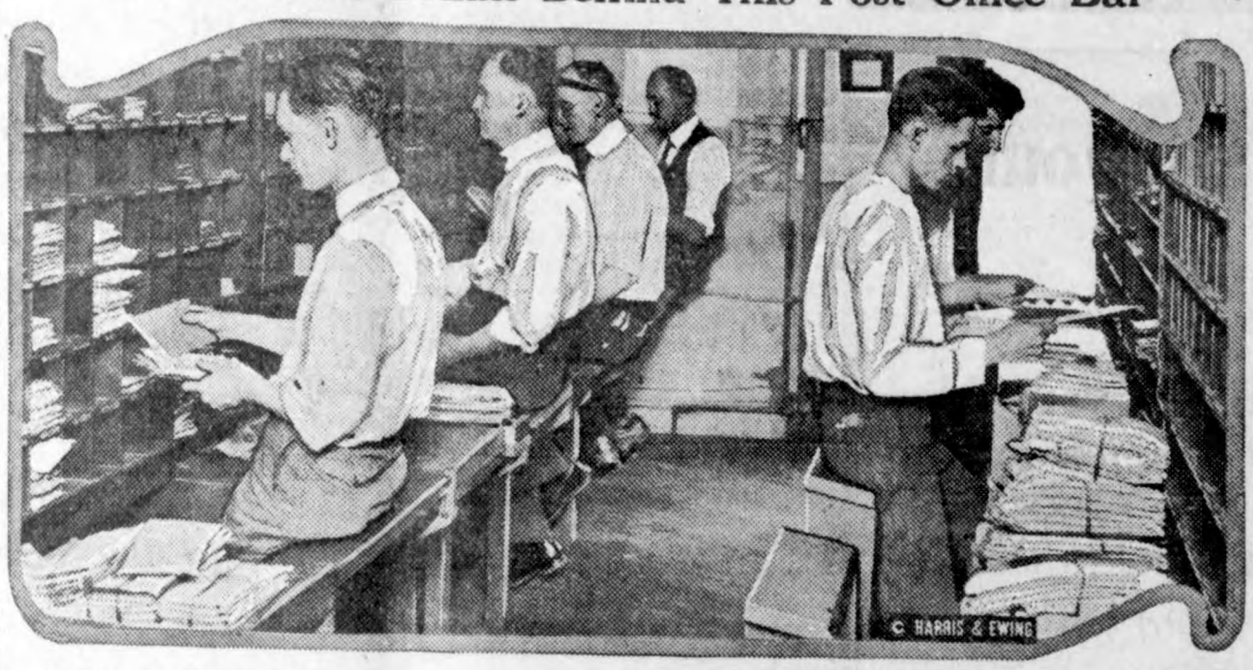
The camp for disabled ex-soldiers of Minnesota, located on the shores of Lake Minnetonka, is under the management of the American Legion and the Minneapolis Council of Social Agencies. The camp was formerly conducted through the summer season by the veterans' bureau.

Scene of the National Open Golf Championship



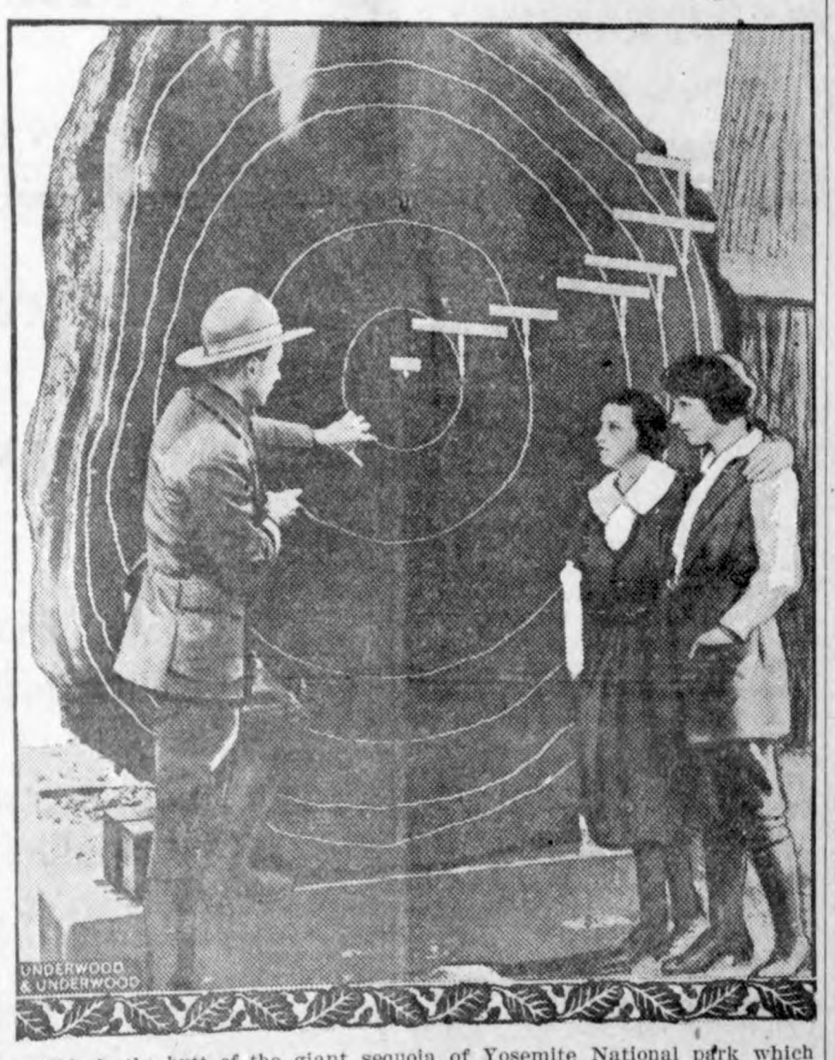
View of the clubhouse and part of the grounds of the Skokie Country club at Glencoe, a suburb of Chicago, the scene of the national open golf championship tournament participated in by several hundred of the best players of this country and Great Britain, as well as by some from other lands.

There Are No Drinks Behind This Post Office Bar



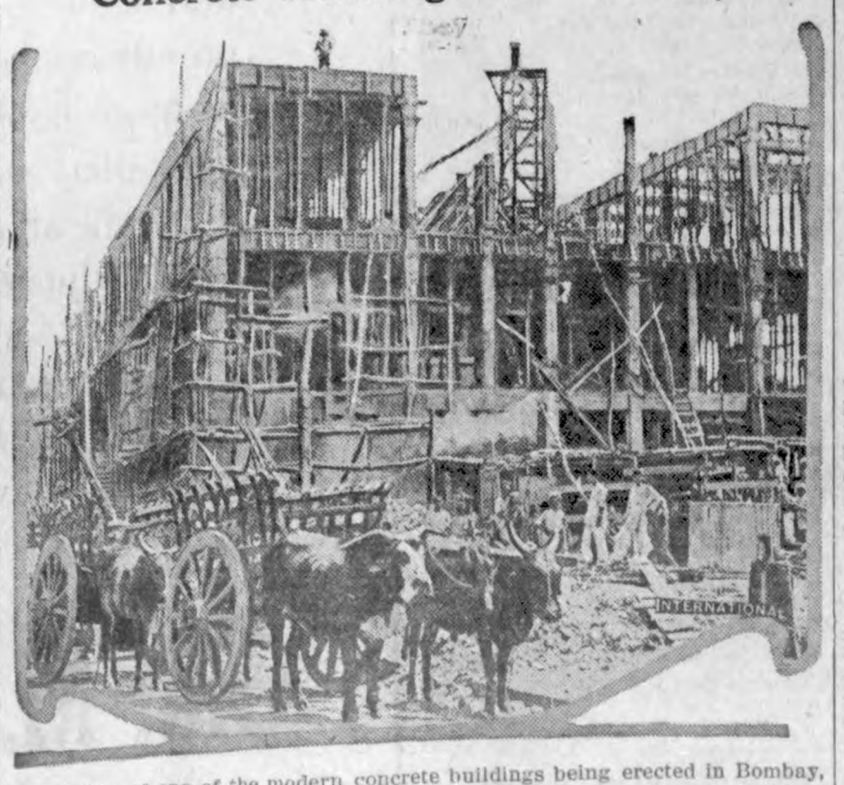
The new bar in the Washington city post office, quite different from the kind abolished by Mr. Volstead, is designed to sit on or lean against in lieu of standing constantly for eight hours while sorting mail. The rail is being tried as an experiment and if it proves successful will be installed in all large post offices.

History Recorded in Tree's Rings



This is the butt of the giant sequoia of Yosemite National park which came to an end in the prime of its life when it was felled by a storm in 1919. At that time it was only 996 years old. Some trees in Yosemite are between 3,000 and 4,000 years old. For the benefit of visitors, the park naturalist, Ansel F. Hall, has measured off on the trunk the rings which mark the years when the Battle of Hastings was fought, America was discovered, and the Declaration of Independence signed, as well as other epochal years. The space between the thumb and forefinger measures the span of the human life.

Concrete Buildings for Bombay



A view of one of the modern concrete buildings being erected in Bombay, India. When completed, these iron-beamed stone structures will stand in marked contrast to the old wooden buildings of the ancient city.

OPENING RAINIER PARK

Gov. Louis F. Hart of the state of Washington helping clear the roads at the Rainier National park near Seattle, at the opening of that park. A snow battle in June was the feature of the opening, all hands joining in the fun.

TRAP FOR DRY AGENTS

Miss Edna O'Dea of the prohibition office, bureau of internal revenue, photographed with a large bear trap which was captured by Federal Prohibition Agent D. J. Gantt near Etowah, Ga. The trap was set near a still to catch the first prohibition agent who came around.

Family Did Full War Duty.

Joseph Jacobsen, a former service man of the United States army, since failing in an army airplane at Towers, France, in May, 1918, has been in ten hospitals, four since the first of this year. Seven Jacobsen brothers served in the World war, and were contenders for the championship for the largest number of a single family in the service.

Home Town Helps

HAVE STAKE IN COMMUNITY

Home-Owning Citizens Feel Responsibility of Their Position and Govern Themselves Accordingly.

It almost goes without saying that home ownership is by far the most valuable adjunct to government and that the former is a tremendous power in stabilizing the latter. The nomad constantly desires change, because wherever he pitches his tent he considers himself to be at home. On the other hand, the responsible property owner abhors nothing so much as change, because his hearth is not one which can be moved and which would be the last thing he would wish to see affected. The classic illustration, which has been used before this by many writers, is that of Alexander's conquest of Persia; this country was a constant source of Civil war and rebellion until, acting upon the advice of one of the philosophers attached to his court, Alexander saw to it that the Persians became a nation of shopkeepers, which in turn caused them to set up permanent dwellings and ultimately to become the most peaceful and law-abiding citizens. The irresponsible cowboy was inclined in the old days to shoot-up frontier towns, since if the neighborhood became too hot for him he could simply pull up stakes and "drift" to some other part of the country; nobody to my knowledge in those days ever heard of a substantial ranchman being guilty of that sort of conduct.—Exchange.

WORK WITH DEFINITE OBJECT

Real Estate Men Have Right Idea in Their Advocacy of Zoning System for Cities.

The value and the salability of real estate depends upon what? Mostly upon the skill with which it is subdivided; upon the transportation facilities, the utilities and the street system which serve it; upon the parks and recreation facilities available to it; upon its outlook; upon the business and social wealth, and producing capacity to the community; and upon the protection given it against offensive use of neighboring property, says Jacob L. Crane Jr., zoning and city planning engineer and adviser on zoning for the Chicago Real Estate board.

The last of these factors is controlled by zoning. All the others may be controlled very largely by city planning, which deals with all of these things in a definite and comprehensive way. The real estate business, therefore, like all other business, to a large degree depends on the results of city planning, whenever it is taken up. This explains why real estate men are so vitally interested in the subject, and why they are usually the first ones to support city planning and zoning projects.

Aim to Prevent Fire Loss.

Let the city fire department be as efficient as is that of the district. There still remains much for the average citizen to do in preventing fire. After all, prevention is better than cure in this matter, as in all others. Even as modern medicine is coming around to a serious campaign throughout the nation to prevent illness, rather than cure it after it occurs, so a city may campaign strenuously to prevent fires before they break out.

The responsibility of the individual man, woman or child, therefore, is the crux of the matter. Until, through educating the public in every way possible to the necessity of such prevention, the average person is made to be always on the watch for incipient fires and actively thinking about them, a community is not true to itself along these lines.

What greater absurdity, for instance, than allowing a carelessly thrown match to set fire to a great building and then calling out half the fire-fighting equipment of a city, when the active thought of the man who threw the match might have prevented the whole thing?—Washington Star.

Schools Use Busses.

There are 12,000 schools in the United States now using busses to transport their pupils. The day of the little red schoolhouse is numbered. Consolidated or community schools are taking their place because of the increased educational facilities and standard permitted by pooling of appropriations. Better buildings, better equipment, better instruction are the immediate result. But with consolidation comes the factor of distance, so busses were the answer and this form of transportation is making good for better education.—From Federal Traffic News.

Teeth-Grinding and Adenoids.

Among 2,395 collected cases of adenoid growths, Benjamins states grinding the teeth was mentioned in 801 cases. Out of 1,791 personal cases Benjamins found: Snoring, 1,085 times; impaired of hearing, 908 times; catarrh of the upper air passages, 873 times; grinding the teeth, 618 times; aprosexia (inability to concentrate the mind), 566 times; enuresis, 462 times. Removal of the adenoids does not, however, always give relief from these symptoms.

Suggestions for your Picnic Dinner

This is just thc time of year when you most enjoy picnic dinner and suppers in the woods or the lake. We have everything in the cold meat line to make it more easy to plan.

Here's a good list:

Minced Ham — Pressed Ham
Meat Loaf — Potted Ham
Pickles and Olives
Cream, Brick and Limburger Cheese
Pork and Beans

Try any of the above for cold suppers or picnic lunches on a hot day.

PREPARED FOR THE WORST

There was turmoil on the deck, feet clattered to and fro, there came a grinding sound, and the engine seemed to stop.

The timid passenger rushed from his cabin and almost collided with the captain.

"What has happened?" he panted.

"Be prepared for the worst!" said the captain sternly.

"Wh-where are the life belts"?

"Its too late to use those," said the captain. "We've done everything we can. Now its every man for himself.

He led the timid one to the side of the deck.

"I can't! I dare'nt look!" he cried. "Tell me what has happened!"

" We're in harbor," said the captain gently. —Answers, London.

MYSTERY IN FIRE AT OLD GOODELL

Blaze Starting in Bedroom Destroyes Home While Family is Away

Goodell, July 7—The house in the old town occupied by the Floyd Ackerson family was burned to the ground while the Akersons were at Fort Dodge, and no one was supposed to have been it for three days.

William Lester, in driving past, noticed smoke at one of the upstairs windows and investigating found the upstairs was on fire which appeared to have originated from a bed. Neighbors saved most of the contents and the chemical fire engine from Goodell arrived and apparently put out the fire which however broke out again an hour or so later and totaly destroyed the building. The house was partly insured.

WHO REMEMBERS

The tandem "safety bicycle?

Church Bells.

The Angelus bell, always rung thrice a day, takes its name from the first words of the prayer. In Tuscany a bell is rung an hour before the evening Angelus, or Ave bell, and is intended to remind its hearers to say the creed. The De Profundi bell sounds one hour after the Ave. In Italy on Friday afternoon at 3 o'clock thirty-three strokes are sounded in many churches and convents in memory of Christ's death at the age of 33. The custom probably is followed elsewhere.

Opening

Announcement

I wish to announce to the people of Klemme and vicinity that I have purchased the entire Ford auto business and equipment of O. M. Twedt & Co. and am now in posession of the same.

I would like to have you call and get acquainted. I intend to conduct the business along the lines established by the old firm and assure you the same the same prompt and satisfactory service together with fair and courteous treatment. Mr. Mitchell, Mr. Kent and M. Gronsdal will remain with me in the business and to give you real service

Your futhur good will and patronage will be greatly appreciated.

Yours truly,

Albert Erickson

The Ford Garage

Farewell

Annoncement

I wish to announce that I have sold the Ford business to Mr. Albert Erickson, of Swea City, who is now in charge. You will find that Mr. Erickson is a fine man and we are sure you will like him as a business man of Klemme who will always give you a square deal

I want to take this opportunity to thank all my customers for thier liberal patronage during my busines career in Klemme which I greatly appreciate.

All those owing us an account will please call and settle at once; and those who have a credit on our books please call and settle up, as we want our books clean. If there is any unsatisfied customers we would like to have them call as we want all to feel that we want everything fairly adjusted before we leave Klemme.

Again thanking you for your favors and wishing you all good luck.

Yours truly

Olaf M. Twedt Company

GRASSHOPPERS ENDANGER CORN

Can be controlled with poison mash applied on pastures

Grass hoppers are a serious menace to corn and other crops in the southwestern part of Iowa, according to B. M. Harrison of the zoology department of the Iowa State College who has been on an inspection trip in that part of the state.

Grasshoppers are especially injurious to corn and alfalfa crops. They eat the corn leaves and notch the stalks so that the plants are easily blown down. In some places they have stripped the leaves from the sec ond growth of alfalfa.

The eggs of the insect are laid in the fall, usually in pastures. They hatch out in the spring. The method of controlling the grasshopper recommended by Mr. Harrison is a poison mash, which is scattered over the infested pastures.

The mash consists of 25 pounds of wheat bran, one pound of paris green two quarts of sorgham molasses and six lemons. The molasses, preferably of a poor quality, is mixed with a gal lon of water, and the lemons, cut up rind and all are added. This liquid is poured on the bran. The mash should be moist but not sloppy. If neccessary add additional water.

The bait is broadcasted on the field either in the evening or early in the morning. It can be applied in strips across the field rather than over the entire area. It takes from 24 to 36 hours for the bait to become effective. Chickens should be kept out of the treated fields, for the poison will kill thm. It will also endanger the lives of birds, but in cases where the grasshoppers are very thick it is the most effective way to eradicate them.

A mash made according to this formula will cover four or five acres at a cost for materials of about 40 cents per acre. If applied in strips about a rod wide, with about a rod of space between strips, it will go much further.

NEW WEEDS SPREADING

Goat Beard, Sow Thistle and European Morning Glory Make Headway

Hundreds of inquiries which have been pouring into the botony section of the Iowa State Agricultural Experiment station indicate that goat, perennial sow thistle and European morning glory are three of the most troublesome weeds in the state this summer.

Goat beard, a weed that has been seen in Iowa only recently, has been received for identification frequently this spring. It is a weed that promises to be as bad as the dandelion and closely resembles it, says Dr. L. H. Pammel, head of the botany department of the Iowa State College.

Goat beard also closely resembles the vegetable oyster, a commonly cultivated plant. It produces a head of seed much like the dandelion. altho the seeds are much larger and the hair on the end of the hair on the end of the seed is darker. It is a perennial, growing to a height of a foot. Clean cultivatin is one way to combat the weed, say botanists.

The sow thistle, a serious pest in the Dakotas, Minnesota and Canada, is found only in a few palces in Iowa. For this reason Dr. Pammel urges that every effort be made to stamp it out before it gets a foothold in the state. The plant can be recongized by its head of bright yellow flowers and its tiny toothed leaves.It spreads from creeping rootstalks which must be cultivated out of the ground and removed from the field if the weed is to be exterminated. It will ot pay to plant infested spots to crops but to keep them cleanly cultivated thruout the summer, declares Dr. Pammel.

Numerous reports have also been received by the college b tanists of the prevalence of European morning glory.

"I am afraid the spread of this weed in Iowa cannot be checked," says Dr. Pammel. "There are large fields covered with it in Carrol, Marshall and Story counties. The flowand leaves resemble the common American morning glory but are smaller. The only feasible method for extermination is clean cultivation of the soil and sowing the ground tosorgham or to sudan grass.

TABLE MANNERS

A Texas father was dining with his son in a Texas hotel, and in the course of dinner the son got into an argument with a cowboy. The cowboy called the son an offensive name, and the young fellow grabbed his knife in his fist and started around the table to be avenged.

But his father seized him by the coat-tails.

"Ain't ye got no table manners?" the old man hissed.

"But pop, ye heard what he called me, didn't ye?"

"Yes, I heard all right, but that ain't no grounds for yer forgettin' yer table manners. Put down that there knife and go at him with yer fork."— Detonator.

WHAT A MAN OWES HIS TOWN

What does a business man owe to the town in which his business is located besides the payment of taxes? Nothing, some close fisted and tight lipped business men will say. But they are not the kind of business who get the most out of life..

The business men who make the biggest success and who get the most out of life are the kind who believe they owe something more to the town in which their business is located than the mere paymeent of taxes; who believe they owe it what they can contribute of active aid in solving problems that confront their their neighbors, either social, political or commercial.

Fortunately for the towns of this country there are many able business men who, disregarding the advice of the kind of business men who say that it may cause them to lose some trade if they take sides in city affairs, are devoting considerable of their time and their talents to doing something for the general good of their town. And the number of such men is growing. The time has passed and Burt business men know it, when a merchant loses trade by getting out and boosting for an improvement. And we sincerely hope and trust that such a time will never return, or that the town may have as businessmen in the future, those who can't see any farther than the the cash drawer. —Burt Moniter.

THEY SAY

Storm Lake Register—"They say" is an introduction to an awful lot of harm. We often hear the "they say" stories on the streets or in the stores of Storm Lake, and always, if we pause and think a moment, the one telling the "they say" story nevver tells it about any members of their own family. Telling his kind of a story is an idle pastime with some people. They may not mean any harm— and yet, "they say" has done more to blacken characters and saddenhearts than any other one thing. The victim has no opportunity to combat a "they say" story, even it should as it seldom does, come to his ears. The story starts on no more authority than "they say", and with telling it grows and magnifies. Pretty soon it is is common talk, and each time it is repeated you will hear that damnable "they say" quoted as authority. There appears no way to break up this miserable thing. We wish we knew a way. But the columns of this paper are open to you, and if "they say" stories, write it out and you have a suggestin for stopping the "they say" stories, write it out and send it in.

A FEW DON'TS FOR OUR TOWN

Don't fail to sound it's praises whereever you are .

Don't make your money out of its citizens and spend it somewhere else.

Don't frown on every public improvement simply because it costs you a dollar or two.

Don't sneer at the efforts of your fellow citizens to build up the town but lend a hand yourself.

Don't talk a great deal about what should be done and remain on the back seat waiting for someone else to do it.

Don't say the public schools are a failure because your boy has been upsetting the school's dicipline and has been punished.

Don't stay at home on election day but get out and hustle for good men and good government.

Don't let a good local paper that is the town's untiring champion abandon the champion business because of lack of deserved patronage.

Don't forget to drop your dollar in the slot when the committee that is after a new enterprize comes around with the subscription list.

Don' forget that in building up the town, hearty co-operation, united endeavor and a spirit to get there are what win the day. There is no pull like a strong pull, a long pull and a pull together.—Exchange.

HOW HE'LL SPEND IT

Many Ringsted people have at times imagined what they would do with a million dollars, or even a half-million, if they should suddenly come into possession of so much wealth. John Lindley, cook for 39 years at the Beckham hotel in Texas, is soon to become owner of half-million dollars for a piece of land somebody worked off on him during slavery days, on which oil has been found. This is what John is planning to do with the money. First, there is a second hand Ford truck he has had his eye on for sometime. He will buy it. Then he is going to fix up his house, buy a new screen door, as the old one is warped, put on some fresh paint and otherwise fix up the premises. Finally, John in the bigness of his heart, is going to take care of all the kitchen help at the hotel that need a friend. It isn't often that a sensible man gets hold of a half-million. —Ringsted Dispatch.

Something to Think About

By F. A. WALKER

ROSES OR THISTLES?

DO YOU pause sometimes while journeying through the fields and along the byways of life, to consider whether you are gathering roses or thistles? The basket which you are unconsciously carrying is being filled with one or the other, which you will find when you arrive in the gloom of the gathering night and realize that your wanderings are done.

If when you stop to rest you have velvety roses to look upon you will in your delight quite forget the purpling sky and all that it foretells.

You will be happy in the thought that you have not misspent your day; glad that you chose the beautiful instead of the repulsive; grateful that you did not misdirect your energies.

There is probably scant attention bestowed by you and me to the basket upon our arm into which we are placing every hour of life something which will rise up to praise or condemn us. Our heads are silvered and our feet are tired and unsteady.

But on this occasion we cannot retrace our steps.

Shadows are all about us and the half-hidden paths we once knew so well, are unfamiliar.

We are alone with the things we have garnered.

We would like to recall sharp words, scowls and frowns we have hurled at our friends, our patient fathers and mothers—and sadly recall hot tempers and terrible tongues.

As the scales fall from our eyes, there is something of the nature of dismay that takes hold of us and fills our soul with tears.

Oh, that we might be permitted to live over again those wild, impetuous days of youth!

We would curb our spirit, hide our dislikes and give instead of pain, heaping measures of pleasure.

We would make sure that we would gather nothing but roses—nothing but the sweet, the fine and the lovely.

From those who have gone before, it is for the inexperienced starting afield, to learn wisdom, to pick the choicest flowers, and to leave the thorn, the briar and the deadly nightshade untouched.

KIDDIES SIX

By Will M. Maupin

SMILE

WHEN you think life's not worth while
Sit straight up and force a smile.
Smile and shake your head at fate—
Hit the line; don't hesitate.
Smile and say "World, howd'y do;
Here's a-looking straight at you!"
Shake yourself and force a smile—
You'll see clear sky after while.

When you meet a brother smile;
Grasp his hand walk double file.
Smile and say "Hello, old chum;
Cheer up; don't be sad and glum!"
Smile and every time you do
It pays interest to you.
Waste of time salt tears to shed—
Smile and keep on straight ahead.

In the crowded market place—
Keep a glad smile on your face.
Frown, and you give birth to doubt—
Next thing you'll be down and out.
Smile and say, "Things coming fine—
Only carload lots in mine!"
Waste of time to sigh and sob—
Smile, and stick tight to the job.

Some people have to understand
About the world's machinery;
To see things run is not much fun—
I'd rather watch the scenery.

The Friendly Path

By WALTER L. ROBINSON

MUST BE A MAN

IF A MAN would be happy he must be a Man.

Try as one may, real enjoyment cannot be gotten out of life if one follows a wrong pathway.

If a man would be satisfied with himself, he must have the proper viewpoint of what he should be. Admitting this, let us consider the opinion of D. J. Burrell as to what makes a man a Man.

"Not what a man has or what happens to him; not wealth, nor noble blood, nor crowns," says Burrell, "but the things that are in him and shining through him—his thoughts, motives, springs of action; those constitute the man."

Too few have this honest estimate in mind when they measure their own right to a place under the sun and their own right to comfort and happiness. Unfortunately humans are inclined to spend much more time thinking of what they would like to have, than in thinking what they are or what they would like to be.

"Self-preservation is the first law of Nature," it is true. But too often we find evidence that men and women place selfishness ahead of everything else. They do not understand that there is a wide difference between self-preservation and selfishness. If they do understand, they ignore the fact, for constantly, though earnestly seeking happy lives, we find them seeking worldly possessions, wordly pleasures—most of which are of the shallowest sort.

When one faces a hard-boiled burglar in the darkness of the night, he rightly protects himself by whatever means he finds at his disposal. That's a case of self-preservation, for the second-story men are usually ready to kill rather than be caught. But in the regular pathways of life no one can justify any action which is unfair to his fellowmen in order to gain something for himself. When a man stoops to underhand, dishonest methods, whether they be in buying or selling, either labor or goods, he is certain sooner or later to lose respect for himself.

No man can be happy in his own position, however exalted, if he knows that his thoughts, his actions and his heart are centered on what he hopes to get, rather than on what he hopes to do.

(Copyright.)

Uncommon Sense

By JOHN BLAKE

THE BAD START

THE average man is so constituted that a certain amount of discouragement is necessary to progress.

That is why nobody should worry about a bad start.

Get a good on if you can, of course. It will help. But remember if your start was bad, that so was the start of almost every other man whoever attained a place of any importance in the world.

General Grant got a bad start in his studies at West Point, and did so poorly in the army that he resigned.

At the outbreak of the war between the states in America, he had settled down to the business of running a yard and tannery in an obscure Illinois town.

His biographer says that he was utterly discouraged. But he wasn't. He knew that somewhere in him was a very great ability. And when he got into the war, as all young Americans on both sides did, ambition awoke in him.

Everybody knows the rest of the story.

Lloyd George is one of the few conspicuous figures in the world today who proceeded from success to success after he once got his start.

The start itself was extremely bad. It would have discouraged most men.

However, determination triumphed over poverty and lack of opportunity. The world knows the rest of that story, too.

It stands to reason that if you never have to use your muscles you will always be a weakling. And you can only use your muscles in overcoming something, whether it is a job, or your own natural inertia.

Neither can you develop your mental possibilities without overcoming obstacles, and to the poor in spirit all obstacles are discouragements.

Don't feel blue about a bad start. It ought to make you determined to atone for it, and in atoning for it you will gain strength and character.

Mother's Cook Book

"Things are seldom what they seem,
Skim milk masquerades as cream."

WHAT TO EAT

TO PREPARE Danish beefsteak, take one pound of round steak chopped, one teaspoonful of salt, one-fourth of a teaspoonful of pepper, one-fourth of a cupful of minced onion, one and one-half cupfuls of celery, three tablespoonfuls of fat and the same of flour, two cupfuls of cooked macaroni. Add salt, pepper, onions and meat, shape into small balls, fry in hot frying pan until well done. Cut celery into inch pieces, cook in salted water until tender, reserving the water for the sauce. Melt the fat, add flour and celery, water and meat balls, simmer ten minutes, add macaroni and serve hot.

Summer Curry.

Take two cupfuls of diced potato, three cupfuls of diced carrot, two cupfuls of diced turnip, two cupfuls of cooked peas, three cupfuls of milk, one tablespoonful of parsley, six tablespoonfuls each of flour and fat, one-half cupful of chopped onion, one teaspoonful of curry, one-eighth of a teaspoonful of pepper and one teaspoonful of salt. Leftover vegetables may be used. Cook the onion slowly in the fat until soft, add flour and seasonings, mix well, add the hot milk, stir and cook until smooth, then add the vegetables; heat well, turn into the serving dish, sprinkle with parsley and serve. Serve with meat.

Come-Agains.

Sift two cupfuls of flour with one-half teaspoonful of salt, and two teaspoonfuls of baking powder. Add one cupful of chopped raisins and pecans mixed in equal parts and one cupful of brown sugar. Beat one egg very light, add one-half cupful of milk and stir this into the dry ingredients. Lastly stir in two tablespoonfuls of butter. Drop by spoonfuls on a greased baking sheet, sift over them a mixture of sugar and cinnamon and bake in a quick oven.

Pretty Things that are made at Home

HOME makers and hostesses are making more and more use of paper for household decoration, as a substitute for linen and in many other ways. The list of things for which paper serves grows longer; even fancy dress costumes and millinery are made of it and recently there has been much experimenting with paper toys. Its place is established as a medium for making table decorations as lamp and candle shades, floral pieces, place cards and centerpieces. The summer hostess finds frequent use for these paper things, especially in the affairs which concern the members of the younger set.

Centerpieces, nut cups and place cards, lamp and candle shades usually reflect the time of year and the occasion. A bluebird table set, as pictured here, is recommended for a birthday table, although it is appropriate for many other occasions as well. It includes a centerpiece covered with pink rose petals and having wire handles wound with pink crepe. They intersect at the top and are tied at this point with a big bow of pink gauze ribbon. Little "bluebirds of happiness," cut from printed crepe paper, are pasted to the ends of short lengths of pink baby ribbon and suspended from the handles.

The foundation for the centerpiece is made by cutting out a circle 10 inches in diameter, from cardboard. A band of cardboard 3½ inches wide is cut long enough to go around this circle and one edge of it is fastened to the circle with short pieces of gummed cloth. The petals may be pasted or sewed to the cardboard and basket lined with pink crepe paper.

Little paper nut cups are provided with wire handles (wound with crepe paper) and covered with petals. A bluebird is poised on each handle. The place cards are supported by standards of the covered wire to which they are tied with baby ribbon and a bluebird finds his flight arrested by each of them.

The comic spoon dolls are made of picnic spoons, wire and crepe paper and dressed in any costume the hostess chooses—as in college garb for the luncheon table of a home-coming student.

Fabrics have traveled in pairs this season, and there are rumors that this vogue is to continue. Dresses and blouses, especially, reveal a happy union of two materials. Where there is not a combination of two different fabrics, there are likely to be two varieties of one fabric, or at least two contrasting colors used together. We find georgette crepe and pussy willow crepe in one frock—canton and cire crepe 'n another; taffeta, dotted swiss, the crepe weaves and many other materials have all sought the companionship of organdie as a life partner—and so mated have sailed the summer seas of fashion with great success.

It does not take thrifty seamstresses long to see the advantage in this vogue for combined materials and their wardrobes are amplified accordingly. Taking example from their rich relations, ginghams have associated themselves with organdie and voile, cotton crepe and ratine take unto themselves mates, and two old dresses become one new one or a little new goods makes it possible for last year's dress to begin life anew. The two smart costumes pictured show combinations of two materials that may be carried out in either silk or cotton goods.

For the dress at the left, cotton kasha or plain gingham or fabrics of like character can be used for the plain underdress and ratine for the sleeveless jacket. One can imagine it in white or tan, with the jacket in blue, green, yellow or red. It could be prettily developed in white crepe de chine with black canton crepe.

Black and white, in the model at the right make a distinguished dress, but almost any color with white makes an ideal midsummer costume. White organdie, voile or crepe de chine, invite any of the light-weight materials in a color to bear them company and narrow braid in the same color is chosen for decoration.

Two Smart Costumes Showing Combinations.

Fastidious Collar.

The Parisienne has suddenly remembered the nape of her neck. For a long while she has thought of this adjunct with indifference, if at all. So deeply has her attention been concentrated on the cut of the bodice that even when low-cut backs came into favor the nape of the neck did not much attract her notice, but now we have the collar which is high in front and somewhat lower in the back, and the Parisienne is rejoicing in a newly discovered charm.

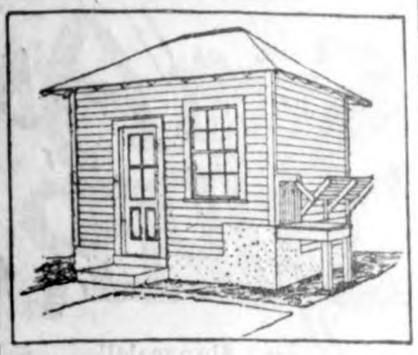
DAIRY POINTS

BEST SITE FOR MILK HOUSE

Not Good Plan to Get Them Too Near Cow Barn—Must Be Clean, Airy and Dust-Proof.

Milk houses must be clean, airy dust-proof places, free from all insects and bad odors. They should not open directly into the barn, but it is equally injudicious to build them a very great distance away from the barn. Prompt removal and quick cooling are the main points to observe in handling milk. Put the milk house on a well-drained spot and away from rubbish heaps, manure piles and fly-breeding places. The outer walls, if of concrete, should be from 6 to 8 inches thick; if of brick,



Milk House Suitable for a Ten to Twenty-Cow Dairy.

9 inches; if of tile, 8 inches; if of stone, 14 to 18 inches; and if of wood frame, 6 inches.

Authorities say that particular care should be exercised in constructing milk house floors. Concrete is by far the best material for this purpose, as it resists moisture, decay and wear. Concrete floors should be built of a base made up of one part cement, three parts sharp, clean sand and five parts stone. This base should be about five inches thick and should be covered with a top coat one inch thick made by mixing one part cement and two parts sand. The top coat should be troweled hard and smooth.

SAFEGUARDING MILK SUPPLY

Form of Ordinance Drawn to Guide Communities in Framing Practicable Law.

(Prepared by the United States Department of Agriculture.)

In properly safeguarding the milk supply of a community, the enactment of a suitable and enforceable law is usually the first step, according to a reprint of department bulletin 585, "A Guide for Formulating a Milk Ordinance," just issued by the United States Department of Agriculture. Milk, in its composition and natural qualities, is a most useful and acceptable food, but may acquire one form or another of insanitary taint on its way from the cow to the consumer; and it is not always possible to require either producers or distributors to observe all the precautions which science has shown to be necessary, unless there is a law to back them up.

The public and officials of a city realizing this need may sometimes, in their zeal to make the new regulations strict enough, go too far and insert provisions that cannot readily be enforced or adminstered. Even health department officials may not be familiar with all phases of this subject, unless they have already been engaged in the enforcement of milk regulations; and in any case, whether the city is just starting milk regulation or is revising its ordinances to bring them up to date, it is desirable to take advantage of the experience of other communities.

The United States Department of Agriculture has drawn up a form of ordinance to guide communities in framing a finished and practicable law. Copies of the bulletin may be had free upon application to the department at Washington, D. C.

IRREGULAR MILKING IS BAD

Not Only Lessens Output, but Tends to Disturb Functional Activity of Animal.

Early milking morning or evening one day and later milking morning or evening another day not only lessens the output of milk, but tends to disturb functional activity and prevents a maximum yield for the lactation period.

MIXTURE FOR YOUNG CALVES

Ground Corn, Oats, Bran and Oilmeal Is Recommended for Those Under Six Months.

For calves under six months old in good condition and having a soft, mellow hide, a mixture of 30 pounds ground corn, 30 pounds ground oats, 30 pounds bran and 10 pounds oilmeal, fed three to five pounds daily, is recommended.

Hard to Get Flow Back.

If a cow's milk flow is allowed to go down through neglect, poor feed or any other cause, it is almost impossible to get the flow back up to the first mark.

Milk Only Good Cows.

Milk more cows—but by all that's sensible, milk only good cows.

Cause of Stringy Milk.

Stringy milk does not occur frequently unless the cows drink water from stagnant pools, etc.

GOOD CURE WILL STOP HAY FIRES

Heating Process Begins as Fermentation Produced by Growth of Bacteria.

NOT MYSTERIOUS TO CHEMIST

Danger of Spontaneous Combustion Must Be Anticipated Before Feed Is Stored—Moisture Is Controlling Factor.

The risk of fire from spontaneous combustion in mows and stacks may be done away with almost entirely if hay is put up only when properly cured, says the United States Department of Agriculture. To the chemist and bacteriologist there is nothing mysterious about these fires. The heating process begins as a fermentation produced by the growth of bacteria in moist hay. When conditions are right the temperature mounts until the organisms that started the process are killed; from then on the heating is the result of chemical action—a slow oxidation when it is away from contact with the air and a rapid oxidation, or fire, when the heating area breaks through to the open air.

When one of these fires breaks out there may be time to save the live stock, unless it occurs without warning in the night, but there is small chance of saving the structure and the feed stored in it. The danger of spontaneous combustion must be anticipated before the feed is stored. Most farmers know when hay is cured properly, but because of threatening weather or for some other reason some men compromise and put in feed that still contains too much moisture, sometimes giving themselves a false sense of security by scattering salt in the mow or stack. Moisture is the controlling factor, whether it is rain that has fallen on the cut hay or water within the stems makes no difference. If the moisture content is low enough the hay will not heat to the danger point.

Alfalfa a Trouble-Maker.

Alfalfa and clover and other hays made from rather succulent plants cause the most trouble from heating, and they should be given particular care in curing. In some parts of the country where rains are frequent at haying time it is hard to get hay into ideal condition. Some farmers cure it in cocks and use canvas caps, but this is expensive in time and materials. In humid regions the danger from spontaneous combustion in mows and stacks may be lessened by the use of a box-like ventilator, a skeleton tube 12 to 15 inches square and of any length desired, depending upon the size of the mow or stack. The corners are 2 by 4 inches and the crosspieces 1 by 3 inches placed close enough together to keep the hay from falling through and blocking the air passage. Diagonal braces are placed in the box at intervals to keep it from collapsing under the weight of the hay. These ventilators are usually placed across the mow at intervals of 7 or 8 feet.

In some localities curing frames or tripods are used to hasten curing. They keep the hay loose and up off the ground so that the air may circulate freely through it.

Stirring Is Worst Thing.

When a mow or stack has become badly heated there is a strong temptation to go in and stir up the hay, but often this is the worst thing that can be done. Admitting air to the hot center of fermentation may be just the thing needed to start a fire. If air does not get in a part of the hay may be charred without starting a fire; gradually the mow cools and the only loss is the hay that has been carbonized. However, in the early stages when the hay is heating it is sometimes advisable to move hay from one mow to another or to restack. But be sure it is not too hot.

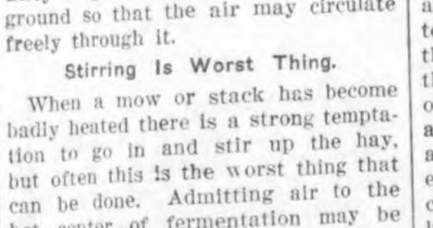
Slow combustion inside the mow can be detected by a peculiar sooty odor or by smoke that is irritating to the eyes.

Danger of spontaneous combustion is not confined to hay. It may occur in damp fodder and straw, as well as in bins of moist grain and seeds.

CABBAGE CUTTER IS USEFUL

Garden Implement Easily Made From an Old Spade—Cut Out Wedged-Shaped Portion.

A very useful cabbage cutter can be made from an old spade. In the first place, a wedge-shaped portion is cut



The Sharp Edges of the V Sever the Cabbage From Its Stalk.

from the spade, as is shown in the picture. The edges of this are then sharpened with a file.

In using the cutter, the open part is pressed against the stump of the cabbage. When this is cut through, the cabbage falls on the spade and can then be tossed into a cart.—S. Leonard Bastin in Popular Science Monthly.

THOUSANDS OF RATS DESTROYED IN TEXAS

Rodent-Control Specialists Aid Local Authorities.

Counties Divided Into Zones and Money Raised to Give to Men and Boys as Prizes for Killing Largest Number.

(Prepared by the United States Department of Agriculture.)

Six hundred and seventy thousand rats were killed in the extermination drives in Texas last year. County agents employed co-operatively by the United States Department of Agriculture, state agricultural colleges, and the counties promoted many of the campaigns with the help of members of local farm bureaus and chambers of commerce and under the general supervision of biological survey rodent control specialists.

Some counties were divided into zones and money was raised to be given as prizes to men, boys, and schools killing the largest number of rats. The county superintendent of

A Few of the Thousands of Rats Killed in Rat Extermination Campaign.

schools and school teachers assisted particularly in stimulating the interest of the pupils.

The most rats were killed in Denton county. The boy having the greatest number to his credit killed 15,000 in six weeks. In Williamson county another boy killed 909 in two weeks.

It is estimated that the rats averaged about a half a pound each, making about 167 tons of rats killed during the campaign. It is also estimated that each rat, had it lived a year, would on an average have eaten or damaged property worth $1.00, making the results of the campaign worth approximately $670,000.

SECRETS OF COOKING BACON

To Fry Until Thoroughly Delicious and Crisp, Though Unburned, Is Not Difficult.

Frying bacon so that it is thoroughly delicious and crisp, though unburned, is not such a hard thing to accomplish as has sometimes been supposed. According to the office of home economics of the United States Department of Agriculture, it makes no difference whether the cooking is fast or slow, and to keep pouring off the fat as it tries out is more work than is really necessary for a perfectly good result.

Frying bacon so that it is crisp is chiefly a matter of getting the water and excess fat out of it. In order not to burn it, one should be very careful that neither the bacon nor the fat in the pan becomes overheated. Throughout the process the fat should remain a light brown color and should not be allowed to get dark brown. It is easier to cook bacon slowly than to cook it fast, because it is easier to keep the fat a uniform pale color when one takes plenty of time for the task.

Bacon to be crisp does not need to drain while it is cooking. It can even be fried in deep fat with excellent results. After it is cooked and before it is taken from the pan it should be thoroughly drained while still hot; then it should be served at once.

REMEDY AGAINST LAWN ANTS

Entomologists Recommend Drenching Nests With Boiling Water or Using Kerosene.

To get rid of lawn ants entomologists of the United States Department of Agriculture suggest drenching the nests with boiling water or pouring in a small quantity of kerosene oil. Similar treatment may be applied to nests between or beneath paving stones. Spraying the lawn with kerosene emulsion or with very strong soap wash is also recommended. For large ant nests disulphid of carbon injected into the nest by means of an oil can or small syringe is recommended to kill the ants. The fumes of disulphid of carbon have a very disagreeble odor and are inflammable, but they are not injurious to higher animals in the open air.

FREE RANGE OF IMPORTANCE

Chicks Confined Continually in Brooder Do Not Secure Proper Amount of Exercise.

Healthy chicks are very active. Chicks that are confined in a brooder house continually are not apt to have sufficient exercise, which frequently gives rise to toe picking, feather pulling and other brooder evils. Free range gives them something to do and keeps them healthy.

POULTRY

WHITE HOLLAND IS POPULAR

While Not So Common as Bronze It Is Widely Raised—Has Many Excellent Qualities.

The white Holland turkey, while not so common as the bronze variety, is nevertheless widely raised and exceedingly popular. People who keep them long enough to get familiar with their qualities and characteristics generally prefer them to any other breed.

The origin of the white Holland is not known, according to writers on poultry, but it is believed to have been developed by breeding white birds selected from other breeds, which appear occasionally as among chickens and are classed as "sports." It seems quite certain that they did not come from Holland or the Netherlands. It has come to the front as a distinct breed since about 1890. The standard weights are, 26 lbs. for a cock; 16 lbs. for a cockerel; 16 for a hen and 10 for a pullet. At the same time any of these classes may be fattened to from three to six pounds above the weight quoted. Six months old gobblers, or cockerels, have been known

White Holland Turkey.

to weigh 16 pounds dressed for market. The flesh is white and makes fine eating.

White Holland turkeys are said to be the best layers, as a rule, among the turkey family. In some flocks the hens will not go broody or hatch; or, if they do, it will be only after the season is far advanced. Other specimens will want to sit before laying a dozen eggs and some have raised two broods in a season. One man is reported to have owned four turkey hens which laid 264 eggs during the season, while one of them raised a brood in July. Like all other breeds the white birds must have proper care and proper feed to be profitable. Colds, lice and filth and general neglect will be fatal.

MATCHED LUMBER FOR NESTS

Plan to Have as Few Cracks and Crevices as Possible, Built in Portable Sections.

When first in the poultry business we thought that nests made of scrap lumber or small boxes were satisfactory. Now we believe that the nests should be of smooth matched lumber with as few cracks and crevices as possible, says a writer in an exchange.

They must never be nailed to the sides of the wall or beneath the dropping boards, but built in portable sections, so they can be easily carried from the house for sunning and spraying.

When we used open nests in some of the houses the birds were constantly roosting on them or bothering the hens while they were laying. After several eggs had been laid in a nest another hen might decide to scratch around in the litter in that nest. This resulted in broken eggs and then it was only a short step to the egg eating habit.

The best nests are built with a small track at the rear where the hens can enter. The eggs are removed by lowering a hinged door in front. These nests are slightly darkened and the hens hardly see the eggs that are laid. There is not much scratching in the litter in a darkened nest. If a soft-shelled egg is laid and broken the danger of the hen eating it is reduced.

The egg-eating habit probably causes as much loss and discouragement as any habit or disease which troubles poultry keepers. The remedy is largely in prevention and this consists in building the right kind of nests.

POULTRY NOTES

Keep chicks out of the wet grass.

* * *

The boarder hen always jumps her board bill. Give her the crate.

* * *

Geese grow fast, and need no feed in the summer if they have a grassy run.

* * *

Filth causes more sickness than anything else. Clean up and keep things clean!

* * *

Laying hens and hens being fattened for market should not be kept in the same pen.

* * *

A cement floor is considered best for the permanent laying-house as it lasts a long time and is easily cleaned and keeps out rats.

LIVE STOCK NEWS

DECLINE IN HORSE RAISING

Decrease Since 1915 of About 60 Per Cent in Number of Stallions in Service.

(Prepared by the United States Department of Agriculture.)

If comparative figures from 14 of the leading horse-producing states can be taken as showing the tendency in all parts of the country, there has been a decrease since 1915 of about 60 per cent in the number of stallions in service in the United States. Grades, crossbreeds and scrubs have been falling behind at a greater rate than the purebreds, the latter decreasing a little less than 50 per cent. These statements are based upon a report, "Stallion Enrollment as Related to the Horse-Breeding Situation," just compiled by the United States Department of Agriculture from reports from 18 to 24 states having stallion-enrollment laws.

There has been a decrease in the total number of stallions and jacks every year since 1915, but the date of decline slackened somewhat in 1921. Fourteen states having an enrollment of 46,121 stallions in 1915, had only 18,092 in 1921, a decrease of 60.8 per cent. Of the stallions in 18 states in 1921, 74.2 per cent were purebred. In 1915, only 60 per cent were registered sires. As the numbers decrease the quality improves. Farmers are finding that it pays to raise only good horses and mules.

The number of stallions of the light breeds has been decreasing more rapidly than the number of draft stallions. The total of jacks has been increasing gradually until the last year, when there was a slight decrease. There has been a striking increase in the actual number of purebreds. The change in the ratio of jacks to stallions is a fairly accurate measure of the popularity of the mule. Twenty-nine per cent of the total number of stallions and jacks enrolled for public service in 15 states in 1921 were jacks, while in 10 states in 1915 only 9.3 per cent were jacks.

Several states have recently enacted enrollment legislation that should lead to further improvement of breeding stock and the general run of work

Purebred Stallions of Size and Quality.

stock. Pennsylvania and Indiana now permit the use of only purebred stallions and jacks for public service. They also disqualify stallions and jacks that are unsound or of such inferior type or conformation that they may prove a detriment to the horse-breeding interests of these states. Michigan, also, has passed a similar law that will become operative January 1, 1923.

A copy of the complete report on stallion enrollment may be obtained by writing to the United States Department of Agriculture, Washington, D. C.

BALANCED FEEDS MAKE MEAT

With Suitable Rations and Careful Supervision Farmer Should Make Hogs Pay.

There is no place on the farm where it will pay the farmer for keeping his weather-eye peeled, and his think-tank active, as when he is feeding his domestic animals. Balanced rations will help to turn coarse feeds into high-priced meat products, but along with balanced rations must go balanced personal supervision. With both, the farmer who can't make money raising hogs in these days has something to learn.

GIVE PIGS PLENTY EXERCISE

Animals Given Pasture Range and Plenty of Exercise Will Be sturdy and Healthy.

Pigs that are shut in small, dry yards do not do as well as those that have pasture range. A pig that has plenty of exercise may not be quite as fat as his shut-in relative but he will invariably be much sturdier and healthier.

Lack of Protein

The lack of protein causes animals to shed their hair late in the spring, and causes them to fatten slowly during the early pasture season. The feeding of straw likewise causes this condition.

Good Mixture for Lambs.

Lambs should begin to nibble at grain when about two weeks of age. A good mixture is ground corn two parts, crushed oats two parts, linseed meal one part, wheat bran one part.

DOING IT WELL

When I was busy shearing sheep I did the work so well that other shearers used to weep, and wring their hands and yell. And when I started painting pumps, so well I played the game that salary kept taking jumps whenever pay day came. Whatever chore I had to do I did it with a will, and often, when the day was thru I'd earned a dollar bill. And now I'm in my green old age, no wolf is at my door; of coin, which to be the rage, I have a good-store. My credit's good, and when I croak, the Daily News will say "He surely left a trail of smoke along life's toilsome way". The heedless fellow does his tasks in such a lazy way! And every hour he stops to ask the boss for higher pay. He has no longing to excel, to to more than earn his mon, to do his work as well as it was ever done. And every day there is a chance to to take an upward step; but trifling fellows won't advance; they have no use for pep. When I was washing Maltese cats I did the work so fine; I soaked them in the sudsy vats and hung them on the line. Whatever work I had to do, I humped on bouyant feet, and now, the journey nearly through, I live on Velvet street. —Walt Mason.

A peat bed on the Harry Sandry farm about three miles north and west of Goodell, has been on fire for several days. How it caught is a matter yet unexplained, but considerable damage has been done, and up until yesterday, the fire was still going. It is a smouldering fire, and nothing but a heavy rain will put it out. In all there are about forty acres of peat in this bed and while not all of it has been ignited, yet there is constant danger of the fire spreading. Watchmen have been constantly on the lookout. The grading gang on the Wilson Highway, brought their grader to the place Sunday, but were unable to accompolish much. A trench has been dug around a portion of the bed that is on fire and they thus hope to keep the blaize within a limited radius. In many places, the fire has reached a considerable depth and the land over, or rather under which the fire has passed, will be greatly damaged. Some claim that a fire ruins a peat land for crop purposes, others claim that it makes the land more fertile. In either event, Mr. Sandry is anxious for a heavy downpour, as that seems to be the only way of checking the fire. His neighbors have given him every possible assistance in holding the blaze in check.
—Garner Leader.

Why the Farmer Chooses this Western Life Policy

EIGHT out of every nine policy-holders of The Western Life Insurance Company are farmers. They have protected their families, their estates and themselves in old age—with one of our

FARMER'S SPECIAL

Western Life Insurance Company — "Out of the West Comes the Best" — OF DES MOINES, IOWA

Western Life Policy with special protection to the farmer and his family has made this the popular policy with the farmers of Iowa. Is your family protected? If you were suddenly called, would there be any ready cash for them? The FARMER'S SPECIAL is "old line" life insurance, just as good as money in the bank—and you get these benefits:

Double insurance to your family if you meet with accidental death.

Your annual premiums are paid by this company should you become permanently disabled.

Your premiums grow smaller each year—when you apply the guaranteed cash coupons which we give you every year after the first.

Your policy is fully paid up after twenty years.

After you have made 15 deposits the last five annual premiums are paid by this company when you leave the guaranteed cash coupons with us.

This FARMER'S SPECIAL Policy has other benefits for you such as monthly endowments after you reach the age of 60 years—interest paid you on premiums and other advantages which we will gladly explain to you upon request.

Get a Western Life Policy—it costs you less each succeeding year you carry it—the FARMER'S SPECIAL gives you the extra benefits you would not get in ordinary old line insurance. The longer you wait, the higher the rate. Mail the coupon today for our interestine booklet "One Farmer's Experiencg with Life Insurance."

There is not a single portion of the body that is not benefited by the helpful action of Tanlac. E. S. D. Kahrs. ad

You get your money's worth when you buy Tanlac, because it produces results. E. S. D. Kahrs. adv

Hollis McCullough returned to Garner Saturday after isiting a week at the home of his brother, G. P.

Mr. and Mrs. Gimer, of Abbott, Iowa, are here isiting at the home of their son, Art and family.

Mr. and Mrs. Marion Elder, from Eagle Bend, Minnesota, came Tuesday evening for a visit at the home of their son, Ralph Elder and family.

Marlin Croner and Wes Schuldt drove to Fort Dodge on business last Saturday.

Those who saw "Seven Years Bad Luck" at the Idle Hour last night say it is the funniest picture show they ever witnessed. It is being shown again tonight.

Mrs. Aravella Levea, of Spencer, came Saturday for a week's visit with her father, A. L. Emerson, and her many Klemme friends.

A. G. Koerner and family spent Monday at Clear Lake visiting the Will Koerners who have been visiting here.

Mr. and Mrs. Cooks and daughter, and grandson Algia, of Fargo, North Dakota, were visiting at the E. S. D. Kahrs home Monday.

Mr. and Mrs. D. Kahrs, of Pasadena, California came Saturday for a couple of week's visit at the home of their son, Ed. and wife.

Mr. and Mrs. Will Koerner from Minnesota came last week for a few days visit with A. G. Koerner and family, and other relatives here.

Mrs. Aug. Lau, Jr., returned from the Hampton hospital Saturday and is reported to be getting along quite well.

Mrs. W. F. Pavey and children left this morning for McGregor for a visit of a couple of weeks with Mrs Pavey's parents, Mr. and Mrs. H. Coobs.

Dr. Geo. Zinn, and his brother A. K. Zinn who was here visiting him, drove over to Sheffield Saturday A. M. or a short visit with Dr. and Mrs. E. N. Reuber.

A fine baby boy is reported at the home of Mr. and Mrs. Herman Barz, new member of the family arriving last Thursday. Herman now has three boys and one girl.

Quite a number of Klemme folks drove over to Garner Monday to see Patterson's Circus. The show was good in the afternoon but those who saw the evening performance state that it was cut rather short.

J. N. Day and family, and Mr. and Mrs. Bowen who are visiting them, drove over to Mason City last Friday for a visit with the F. E. Baumgartner family.

Willie Coobs, of McGregor, has returned to his home after spending about a week isiting at the W. F. Pavey home. He is the youngest brother of Mrs. Pavey

Rev. W. C. Bergmann and daughter, Edna, were Charles City visitors Monday. Mrs. Bergmann, who has been visiting there for several weeks returned home with them.

Mr. and Mrs. J. Jorgenson of Garner and Mr. and Mrs. J. C. Jorgenson of Winner, S. D. were isiting at the R. A. Jorgenson home Wednesday night.

Mr. and Mrs. Bowen, who have been visiting at the J. N. Day home for about a week, left Friday night for their home at Watertown, South Dakota. John took them to Forest City that evening where they took the train.

A. K. Zinn, of Battle Creek, Mich., arrived last Thursday evening from the Twin Cities enroute to Denver. He stopped off here for an over Sunday visit with his brother, Dr. Geo. Zinn. Mr. Zinn was also here about wo years ago.

Mrs. Lew Lewis enjoyed a visit from her brother, Mr. McGrady and wife of Minneapolis Monday. The McGradys were on their way to the Lake for a visit with some other relatives there.

Howard Williamson, of Fargo, N. D. was a Klemme visitor the fore part of the week. Howard is well known to some of ou readers as he was formerly a Garner boy but is now a Proffessor in the Agricultural Department of the North Dakota State College and was out in the interests of the school.

Walter Anderson returned from his trip to Denmark, ariving in this city last Friday. Walter had a fine trip and visit during the winter and spring with his relaties and many old friends. We thought perhaps he might have brought back a good looking young lady as his wife, but we guess Walter overlooked that good point.

"Bill" Anderson, the efficient butter maker at the Klemme Creamery made another of those mysterious trips to Forest City Saturday evening. This time a good looking lady droe over to get him and also returned him to his job early Monday A. M. Now Bill made some casual remark about his sister getting him, or maybe it was a cousin; anyway we hae since learned that it was somebody else's sister that gets Bill and returns him to Klemme. Bill should inform the young lady that we print beautiful wedding announcements.

Now Al Emerson, Verne Smith, Art Kuck, Jergie, and all the rest of the "expert' fishermen will hae to go way back and set down for the cake has been "took" by Lew Lewis for all time to come when it comes to freak fishing. Lew was peacefully dozing at the rier the other day when a ground hog came along and disputed Lew's right to fishing on the bank. Lew argued awhile with Mr. Groundhog and told him to fan himself away but the ground hog had different views and to complete the argument and as fishing wasn't much good anyway Lew started casting for bigger game and succeeded in hooking the ground hog in the nose and lead him to town. This is straight stuff and if Carnegie awards any medals for fishing, Lew is at least entitled to the brass cup this year.

A lot of Fairmont young ladies were taken in by a hosiery salesman last week. The salesman canvassed the town for the sale of silk hosiery, effering three pairs for five dollars. He asked the ladies to pay down $1.50 and the hose were supposed to be delivered this week. No delivery has been made and nover will be. It was simply a new skin game for getting easy money from the foolish.

Cold Pack

—The Housewife will find all of the latest conveniences for Canning and Cold Packing at this store. Following are a few timely suggestions that are very good:—

Oil Stoves

PERFECTION—Giant Superflex.

QUICK-MEAL—Oil Ranges.

SIMMONS—Oil Ranges.

If you haven't an oil range by all means get one and make good use of it during canning time—you will find some use for an oil stove nearly every day of the year. They are economical to use.

Food Cookers

CONSERVO—Food Cooker is something the modern housewife actually needs as part of her kitchen equippment. In canning season it saves time and cuts fuel bill; cooks with steam and holds 14 one quart size fruit jars. Is also handy for steam cooking meats and vegetables and you can cook an entire meal with it.

NATIONAL—Steam Pressure Cooker—is a little more elaborate and faster cooker and the latest and best on the market. Come in and let us explain the real merits of this cooker.

Special Bargains

FRUIT JARS—We are closing them out at a very low price as we are dis-continuing this line. Some real bargains.

Miscellaneous

Fruit Jar Racks; Wrenches; Paring Knives; Boilers; Etc.

lemme Girl Winner Of County In State Beauty Contest

ANCOCK CODNTY'S PRETTIEST GIRL

Miss Amalia Huenemann.

Miss Amalia Huenemann who re- des three miles north of Klemme the Wilson Highway, has been dged the prettiest girl in Hancock ounty by the judges of the Des oines Register—Iowa State Fair eauty contest. Miss Huenemann ill be presented with a handsome edal and will also represent Han- k County when the judges choose e most beautiful girl in the Tenth ongressional District. The district inners will again be judged with e winners of the other districts the state to find most beautiful l in Iowa, and the winner of the ntest for the state will be crowned een of the big Iowa State Fair in gust.

Miss Huenemann's picture appear- with a number of other county inners in last Sunday's Register. ere is hoping that she wins the dis- ict contest as well as the state. Han ck Couny raises good looking girls well as leading in many other es.

OY BEANS BECOMING BIG SEED CROP IN MIDDLE WEST

The soy bean is rapidily taking a ace as a major crop in the farming stems of the corn belt, replacing ts to a considerable extent and tak- g part of the corn acreage. Altho imarily used for forage, pasture d ensilage, the growing of seed e last few years has been a very ofitable industry. The product- n of seed has now increased to the int where the supply greatly ex- eeds the demands for planting.

County soy-beans associations, owers, county agents, and exten- on officials, notably in Illinois and diana, have concerned themselves the developement of a commercial tlet of the seed. As a result, the oduction of oil and meal from corn ll grown soy-beans seems to be de- nitely assured for the season of 22. Several mills in Indiana and oines have become interested in e possibilities of the soy bean as urce of oil and meal. Two mills Illinois have planned to use about 0,000 bushels this season, while her mills are planning on a small- cale.

Although definate figures are not ailable on the acreage of soy beans the various States, reports to the United States Department of riculture indicate large increases acreage for seed production and rage purposes throughout the rthern and Corn Belt states. The ssibilities of utilizing domestic wn beans for oil and meal no ubt had much to do with the large crease in acreage for seed. Such commercial outlet affords the grow another cash crop as corn and heat.

The varions ways in which the soy an and its products are utilized in e United Stated indicate a ready rket for the commercial product- n of soy bean seed. Soy bean oil largely used in the manufacture soaps and paints, and it is also ed in the manufacture of lards and tter substitutes, rubber substitut- , linoleum, printing ink, and as a lad oil. The cake or meal is a perior cattle feed and of high val- for human consumption.

ROCK ISLAND LAYS OFF TWO TRAINS

Local Rock Island Freights operating between Iowa Falls and Lakota are running on a new schedule since July 10th, and the new time card will continue until conditions are improved

Instead of a freight train each way each day, there is now a south bound freight Monday, Wednesday and Friday. Northbound freights go on Tuesday, Thursday and Saturday. The company claim they were forced to temporarily adopt the new time card to conserve coal and also make less maintenance work during the shopmen's strike.

LAST MUD ROAD STRETCH GOING

Gap in Mason City-Charles City Paving Closed

Charles City—The council of Nora Springs has ordered in paving to connect with the primary road on the Red Ball route from Charles City to Mason City and beyond. There is around two miles on each side of Nora Springs which is one of the two unpaved parts of the eighty-mile paved highway on the Red Ball route. Most of this new paving will be more than eighteen feet wide which is the width on the county road and curbing will be laid. This will be good news to travelors who use this highway as in winter this part of it has been particularly bad and muddy. It will make a continuous paved road from here to Mason City when completed.

MUST WALK FOR THIRTEEN YEARS

World- Walker Stops at Albia for Speech

ALBIA, IOWA.,— J. F. Belden, known all over the world as the most unique figure that ever "hoofed it" around the globe, passed through Albia.

Belden has undertaken a task that seems very near impossible. He is to travel thirteen years; walk, unless asked to ride; make all his own expenses, without working, stealing, begging or in any way advertising himself. When crossing the water he must have enough money to pay his passage. He must answer every kuestion asked him by anyone, about anything, and be able to discuss it fluently. He can never lose his temper, must never be sick more than an hour, and must start a bank account in each town of 13 cents.

He is on schedule so that if he does all of this his entire thirteen years will be taken up and he will have walked through every country in the world and every city in each country. To date Belden has kept his contract, and although fifty-one years of age, looks fit as a fiddle. He has only three more years to trav el and looks as if he could do it, and he says if he fails it will be on account of the mental srrain rather than physical endurance.

He is under contract with a research concern to whom he sends his sermons which he writes during his travels. These are sold to chautauqua speakers. The royalty from these in his thirteen years will amount to $200,000 which he can collect if he fulfills his contract, otherwise he gets nothing and the money he has already earned goes for research work.

Mr. Belden talked before a crowd here and astonished every one by his remarkable memory.

Snake Attacks Turkey

Walker, Ia. A six foot bull snake tried to swallow a setting turkey on the farm of Mason Wells near here. Sqawking of the turkey called Mr. Wells' attention to the difficulty the bird was in and he killed the snake with a club. Mr. Wells has been missing small chickens for some time and he thinks their loss can be traced to work of the snake.

MICKIE SAYS

News Gathered From All Over The State Of Iowa

Governor Kendall has announced the reappointment of Charles D Reed of Des Moines director of the state weather and crop service bureau for a term of two years.

..A land deal was made whereby W. H. Howard and Charles Reed of Farragut purchased the land known as the Clark farm which joines Mr. Read on the south and west, paying $200 per acre.

The Oosterhout farm of 160 acres, near Rock Valley, was sold for $207. 50 an acre. Two years ago this farm sold for $450 an acre. Two farms near Newkirk changed hands, the figures in each case being over $200 an acre.

The total amount of business done by the farmers' co-operative elevater at Sheffield for the past year was $147,119.75. The number of bushels of grain handled was 260,099; cars shipped, 155; cars received, 107; sacks of flour sold, 4,927; tons of coal sold, 2,540.

A bootlegger may get safely into Humboldt but he usually rids himself of something besides his dope before his departure. One man recently was fined $225 as appearance money but he hasn't yet appeared and three other fellows filled with the stuff left their car as security

Ray Dunn, young Cedar county farmer, is in the hospital dangerously cut and injured from, being run over by a hay loader on the McKarahan farm, near West Bra which he was operating in partn ship. The four horses he was driving became frightened and bolted, throwing him over back ard in front of the loader. He is paralized from neck down and badly cut besides. His condition is regarded as serious.

By eleven majority the voters of the school district voted to issue bonds amounting to $60,000 to build a new high school. The proposition carried by eleven votes. With the new high school building and the large new bridge being built, Rockford goes on the map as one of the progressive towns of the state. Rockford's normal course ranks first in Floyd county in number of pupils and highest average. The old school building will be used for grammer grades.

Taxes to be collected in Iowa this year will total$104,225,553.62, according to figures compiled by officials of the Iowa Far Bureau Federation. This is an increase of about 8 per cent over the amount collected in 1921. State taxes, including levies for the state colleges, will account for $9,982,698.36. Cities and towns will collect $13,650.607. Counties and townships will collect $31,591,808.79. And 49,000,438.47 will be raised for public schools. These figures with much additional detail were gathered by the bureau to afford a basis for reaching conclusions in regard to agitation which has been growing lately for a reduction in taxation. They do not reveal any opportunities for sweeping cuts, but suggest that much might be accompolished by the practice of economy, bureau officials said.

STATE FAIR WORTH OVER $4,000,000 THIS YEAR

DES MOINES, IOWA, Special:

More than $4,000,000 in exhibits, amusements and equipment will be represented in this year's Iowa State Fair which opens August 23 for eight days.

This is the estimate made to-day by fair officials after checking over the thousand and one features which will be displayed for the people of Iowa at the big exposition. Over 500 carloads of live stock and farm machinery, valued at several million dollars in themselves, form one of the big items.

Entertainment features for the fair run in the neighborhood of between $50,000 and $100,000 this year.

Those in charge say that Iowa's exposition will be the largest state fair from a standpoint of exhibits in America in 1922.

To tame a wild driver, hit him in the head with a brick.

Governor Kendall Issues Note Of Warning To Strikers

Scout Corner

Albert White passed his Tenderfoot Tests in the following: Knots, Composition and History of the U. S. Flag, Significence of the Scout Badge, Scout Laws, Scout Sign, the Scout Salute, Scout Motto and the Scout Oath.

Kermit Koerner passed the Compass Tets.

Scout John Fuller passed the Ax, Knife and Compass Tests.

The next meeting will be held at John Fuller's home.

Monday evening Second Class Scouts Clarence Elder and Andrew Wellemeyer made a trail for several tenderfoots to follow. Vernon Turgeson made it in 27 minutes and Donald Gibbs in 21 minutes. The required time is 25 minutes.

Friday morning at 5:00 o'clock Clarence Elder. Andrew Wellemeyer and Donald Gibbs started on a 14 mile hike to Ventura Heights as one of their first class tests.

About nine o'clock all the other Klemme Scouts started in G. W. Kluckhohn's car and when they drove into the Heights a camping sight was located and pup tents were pitched. Swiming was the big order of the day and several scouts passed their 50 yard swiming test. Some of the scouts also passed their cooking and fire-building tetss.

All the scouts had a big time at the lake Friday.

AN OLD ENGLISH BELIEF

An odd custom which brought the key and the bible together was one that used to prevail in England up to within the latter quarter of the last century. It was called "Key and Bible" and was used for the detection of thieves. A key was placed over an open bible at the words, "Whither thou goest, I will go" (Ruth 1 16) and the fingers of the person being held so to form a cross, the text was repeated. The names of the suspected persons were then pronounced in succession, and when the name of the thief was uttered, the key was supposed to jump and dance about. An instance of this method of thief-finding was brought before the magistrates at the borough petty sessions at Ludlow as late as January, 1879.

YOUTHFUL BURGLARS GET IN BAD AFTER ROBBERY

It has been definately established that the robbery of the Eagle Grove cleaning establishment last wkee was the work of young men, who had been inmates of the reformatory at Eldora and who escaped while they were playing in the band at the creamery picnic at Kanawha about ten days ago. From Eagle Grove the boys went south in a borrowed car, and got in bad again at Nevada, where they were arrested.

It seems the boys secured several hundrd dollars worth of clothing, not all of which had been disposed of and the Eagle Grove cleaning plant expects to recover these goods Clarion News.

BERG IS PAROLED AFTER SERVING 9 MONTHS OF TERM

CLARION, July,— John Berg, the Belmond banker, has been given his freedom by the state board o parole after having served less than nine months of a five year term, the limit for larceny. He was sentenced by Judge McCall last October.

He was convicted of the defalccation of funds from a Belmond bank, used by him in land speculation. He made restituution for most of the amount, which was said to be more than $50,000. Despositors in the bank lost nothing.

MUST NOT INTERFERE WITH LEGITIMATE PURSUITS

Governor Kendall Issues Warning

DES MOINES, July 16,—Governor Kendall tonight gave out for publication the following statement:

"It is reported to me tonight that in some sections of the State threats of violence are being employed to prevent men from performing certain kinds of labor. If such tactics are resorted to, they will not be tolerated in Iowa. The right of any man to quit work at his pleasure is established beyond dispute. But equally the right of any man to engage in legitimate labor is guaranteed by the constitution and laws, and he will be fully protected in the enjoyment of this right by every power which the State can command."

COAL STRIKE APPEARS TO BE COMING TO END

The coal strike may come to an end soon from all appearances of the past few days. The government has at last taken some steps to open the mines. President Harding has issued the order that all men entering the mines will be protected from violence. He has issued orders to the governors of the various mining states to invite the operators and miners to go back to work.

Some of the big mines in Pennsylvania have resumed operation according to news dispatches.

Right now the coal shortage is especially felt in the grain belt as the threshing season is now at hand.

METHODIST EPISCOPAL CHURCH

Arthur B. Gedye, Pastor

Morning Worship at 10:00 a. m.
Sunday School at 11:00 a. m.
Evening Worship at 8:00 p. m.

The S. S. Institute held their evening session in the church last Sunday evening instead of the park, owing to the rain. Dr Hutton of Des Moines was the speaker and he gave an inspirational address.

Next Sunday evening we are to have our District Superintendent Dr. Bushnell with us. Those who fail to hear him will miss a treat. Come out yourself and bring your neighbors and friends.

There was a good attendence at both church and Sunday School last Sunday. There is nothing more inspiring than a well attended religious service. Come out next Sunday and see, meet with your neighbors, your friends and your God.

Come let us worship God together.

The Little Light Bearers and King's Heralds will meet at the church on Friday afternoon at 2:30 o'clock.

Rev. A. B. Gedye, Pastor

PICK CHAMPION SPELLER

DES MOINES, IOWA, Special: Iowa's champion boy or girl speller will be decided this year at the Iowa State Fair. fi

The annual state spelling contest will be held at the fair on the morning of Wednesday, August 30th. Each county in Iowa ia to enter its champion speller to compete for the honors. The contest will be open to the general public. The fair offers $160 in this contest.

ARMLESS MAN CAN DRIVE OWN AUTO

LAWLER, July 17,—What was considered a new invention on an automobile appeared on the teersts of Lawler last week. A traveling man without arms stopped en route east on the old Military Trail drving a car. Attached to the driving wheel was four leather cups about four inches in diameter and six inches deep. The armless man placed the short stubs of his arms in the cups and guided the car. After a short stop here, he lighted his pipe, started the car and drove off.

Croesus Seen in New Roles

Godfather of the Modern Hotel and Patron Saint of Traveling Salesman.

GOLD COINS OIL WORLD TRADE

Recent Discovery of First Gold Coins Ever Minted Recalls Number of Heritages Civilization Owes to Buried Sardis.

Washington, D. C. — Introducing Croesus—godfather of the modern hotel and patron saint of the traveling salesman!

These are new roles assigned to the erstwhile richest man in the world in a bulletin from the Washington, D. C., headquarters of the National Geographic society.

"The discovery of thirty gold pieces from Croesus' mint, which were part of the first series of gold coins ever struck off, recalls one of a number of heritages which civilization owes to buried Sardis," says the bulletin.

Gold Oils World Trade.

"These new-found coins and a few other pieces already in museums signalize the Lydian inception of the gold basis for world trade—an instrumentality which lubricates international commerce to this day.

"The hotel, or the humble inn which was its forerunner, was not possible until some standardized and compact medium of exchange was available. Therefore it is not surprising that historians generally agree that the first inns, where board and lodging might be had for payment of regular fees, were established in Lydia.

"Before that time caravanseral were known. But they were evidences of eastern hospitality, set up at points where constant applications for entainment grew burdensome, and were maintained as a sort of co-operative guest room, or modern municipal lodging house.

"Now it followed further that when a man might be assured convenient abode when he traveled, and he could close a business 'deal' with a pocketful of gold rather than a herd of cattle, that the trading radius of the ancient world suddenly expanded. Men began to travel for pleasure as well as for business, in fact the Greeks already had ventured forth 'for historie and for discovery.' Thus it woud seem that not only the trade representative but the tourist and the geographer owe Croesus considerable gratitude.

"The modern man can hardly apprehend, without an effort of his imagination, how great a boon it was to the ancients of the Sixth century B. C. merely to visit another city. Important events were taking place. It was the time of Buddha and Confucius, of Solon and Cyrus, as well as Croesus, yet any high school boy of today can know more about what was going on in the world then than any one living at that time possibly could have known.

"The casual traveler was unknown. The 'stranger' was always feared and his life was in jeopardy. Traders with caravans, sailors with their cargoes, high officials with stately retinues, a few beggars and religious pilgrims—these were the only travelers of that time.

Digging for History.

"Despite these marked steps toward culture, Lydia has remained only a flash in the pan of history. Until explorers recently began digging in the dust of the land that now is a Greek mandate on the Aegean shores of Asia Minor nearly all we knew of Lydia was the rambling, but colorful story of Herodotus. And some of what we did know, it now transpires, was wrong. The tale of how Solon, when asked by Croesus to name the happiest man in the world, did not reply that Croesus was the man, as the monarch expected, but mentioned instead some humble and dutiful citizens of Athens, may persist, for its moral but has been ruled out of history.

"Lydia's wealth is thought to have been due to various minerals and principally to her trade. Her capital, Sardis, was set on a hill whose ruins even now betoken an imposing dignity. The site is sixty miles northeast of Smyrna which, in the height of Sardis' power, was a Lydian city."

Sun Hatched Chickens From Discarded Eggs

Several residents of Newville, Pa., were attracted to a dumping ground by the chirping of young chicks. Upon investigation it was found that some one, evidently a poultry breeder, had deposited a large number of eggs, supposed to be infertile, on the dump. The warm rays of the sun, coupled with the exposure to the fresh air, completed the hatch. About 75 chicks were gathered.

Parrot Tells on Poachers

Bird's Squawking and Violent Language Leads to Discovery of Evidence of Crime.

POLLY'S MORALS IN SAD STATE

Waterfront Line of Cussing in the Woods Leads Policeman to Investigate—Poachers Snare Thousands of Blackbirds.

New York.—Patrolman Daniel Burke of the Bronx motorcycle squad, combing paths that traverse the Bronx park hills for bird limers, whose activities in the woods of that section were first reported more than a month ago, discovered evidence of their activities in a patch of timber. Burke found the limbs of a dozen or more trees smeared with the bird lime. The poachers are said to have snared thousands of blackbirds.

Burke's discovery was made in a curious way. A red-headed Mexican parrot, owned by Mrs. Margaret Finsted, who lives at 446 Riverside avenue, escaped from its perch on the Finsted porch and disappeared in the forest. The parrot was sought until after dark by Theodore Finsted, son of its owner, and nearly all the members of his school class, without avail, though young Finsted reported he had heard the bird squawking.

Shrieks of Anguish.

Patrolman Burke on a motorcycle cruising through dense timber in search for the band said to be snaring birds, was attracted by shrieks of apparent anguish about 100 feet from the path he was traversing. He shouted several times in hope that an answering voice would give him the location of the trouble, but received no response and was about to resume his way when there proceeded from the woods a volley of oaths, intermingled with screams such as might have been uttered by a woman in distress. The oaths, Burke said, were delivered in a hoarse voice—apparently that of a man enraged.

Plunging into the undergrowth with drawn revolver, Burke made his way in the direction of the sounds, calling at intervals, but again finding no response, until when in the densest part of the thicket he was startled by a series of raucous screams coming from directly overhead.

"Police! Police! There's hell to pay—hell to pay—hell, hell!" howled the voice from a heavily foliaged oak. "I know you, Mike Sweeney," pursued the invisible one, repeating the latter remark several times.

Parrot Glued Fast.

Patrolman Burke ordered the supposed man in the tree to "come down o' that," but was met, he says, with a volley of abuse. He recognized some of the oaths used as waterfront talk, he says. While this torrent of bad language was proceeding Burke caught sight of its author. Mrs. Finsted's parrot was flapping its wings as it cursed, in a vain effort to break away from a limed limb upon which its feet were firmly glued.

When the parrot was returned to Mrs. Finsted with a suggestion that an effort be made to improve its morals, she said the bird was formerly owned by a waterfront saloonkeeper at Mariner's Harbor, S. I., and was purchased by her son, then in the United States navy, when the prohibition law forced its former owner out of business.

Deer Join Farm Cattle.

Marion Center, Pa.—The deer in this part of the state have little or no fear of human beings and frequently large herds approach quite closely to campers. Some days ago, while Horace Menner, of near this place, was milking, a buck and a doe came up and joined the herd of cattle. While the milker moved among the cows the deer remained and did not leave until a dog appeared on the scene.

Radio Service for the Farmers

This is W. A. Wheeler, in charge of the radio service of the Department of Agriculture, who has started a nationwide radio agricultural service which will make weather, crop and market reports available to every radio receiving set in the United States.

U. S. TO WAR ON WOOD WASTE

Government in Movement to Reduce the Timber Loss.

Through Co-operation With Forest Products Laboratory Methods Are Being Devised to Curtail Enormous Waste of Wood.

Washington.—"Only 30 per cent of the wood in a forest now gets into the form of seasoned, unplaned lumber. Of this an additional 10 to 25 per cent is lost in the process of manufacture. In extreme cases as little as three per cent of the wood in the forest may reach the finished product."

This statement is made in a booklet just issued by the Department of Agriculture, entitled Forest Products Laboratory, describing the work and aims of the experimental laboratory maintained by the forest service, in cooperation with the University of Wisconsin, at Madison, Wis.

The booklet outlines how, through investigation and experiment, the laboratory is devising and broadcasting practical commercial methods by which this enormous waste of the country's timber supply can be reduced. By reducing this waste, it is pointed out, the life of our present forests will be prolonged and the problem of growing new forests made simpler, because by preventing the waste of timber less timber will have to be grown.

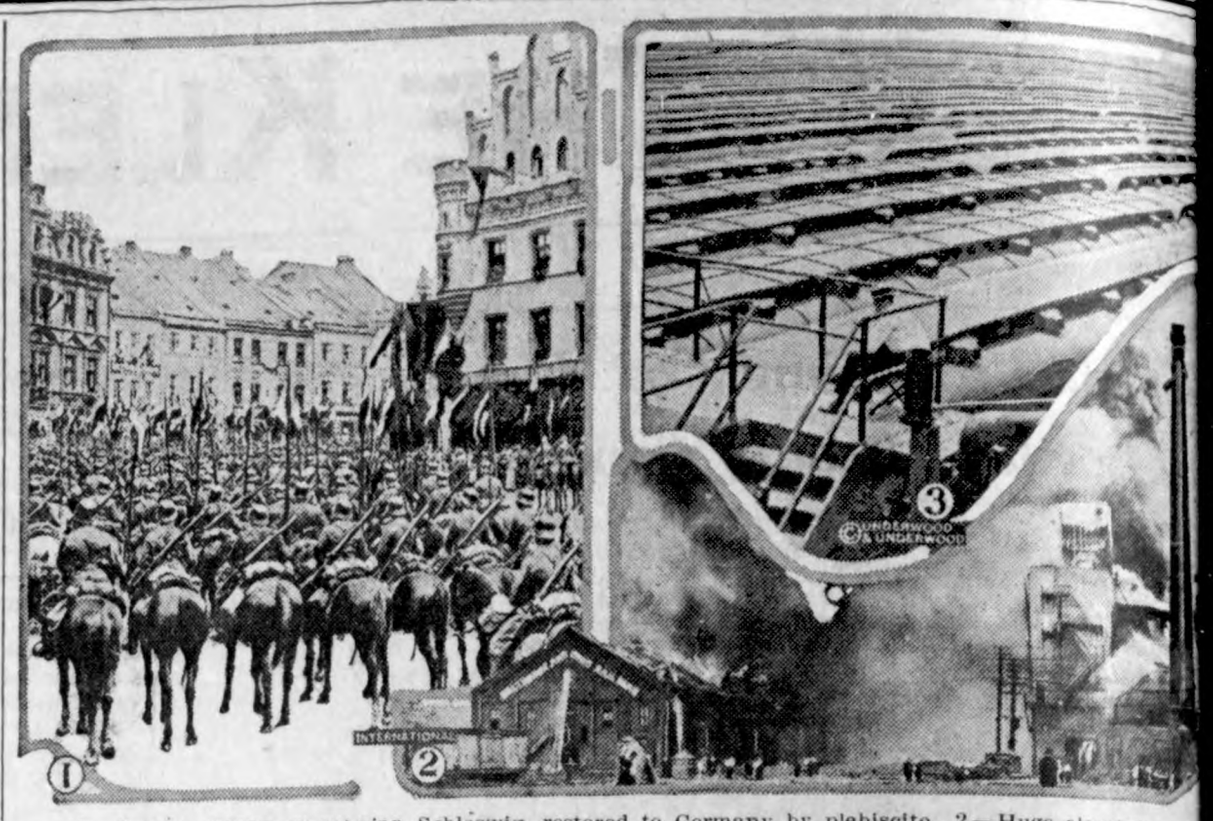
Among the various methods studied at the laboratory for decreasing waste of forest products is the treatment of woods with preservatives resisting decay. Through such treatment an annual saving of one and one-half billion board feet is estimated to be possible in the case of railroad ties alone, and the preservation of other classes of timber would, in the aggregate, greatly relieve the drain on our forests.

The forest products laboratory is a government institution; its advice and suggestions are to be had for the asking. It presents, according to the booklet, an opportunity for many manufacturers, wood users, and timber growers to supplement the information obtained by experience and hard knocks with technical data obtained through scientific research.

FINDS CURE FOR HOOKWORM

U. S. Physician Discovers Medical Value of Chemicals Used as Clothes Cleaner.

Washington.—After extended experiments, Dr. Maurice C. Hall of the Department of Agriculture announces he has discovered what he believes to be a positive cure for hookworm in a chemical known as carbon tetrachloride. The statement says his chemical, which is commonly used as a clothes cleaner, "will likely prove to be a cheap, agreeable and effective treatment for a parasite that is destroying health and reducing human efficiency in millions of people in many parts of the world, including many thousands in our Southern states."



1.—German troops re-entering Schleswig, restored to Germany by plebiscite. 2.—Huge elevators and houses in Baltimore burning, the loss being over $4,000,000. 3.—Passenger coaches tied up in Harlem New York, by the shopmen's strike.

NEWS REVIEW OF CURRENT EVENTS

Railway Executives Refuse to Enter Negotiations to End Shopmen's Strike.

PROCLAMATION BY HARDING

He Warns Against Interference With Mails and Strikers Reply—France Opposes Moratorium for Germany—Attitude of Russians Disrupts The Hague Conference.

By EDWARD W. PICKARD

STRENUOUS efforts to bring to an end the strike of railway shopmen were made last week by Chairman Hooper and his colleagues of the federal labor board, but up to the time of writing these had been entirely unsuccessful and the status of affairs did not give much hope of an early peace. Late Wednesday night the railway executives took action that in the minds of many placed on them the burden of blame for the failure of negotiations. They flatly refused to enter into a parley with B. M. Jewell, leader of the strikers, and their reasons were held by Mr. Hooper to be in the main quite insufficient. They demanded that the shopmen abandon their strike and then proceed to settle their grievances through the labor board. They declined to meet Jewell on the ground that, the men having struck in defiance of the decision and order of the board and the controlling provisions of the transportation act, "the issue thus raised is not one for consideration between the carriers and the representatives of the organized crafts on strike, except through the further orderly processes before the United States railroad labor board, as contemplated by the transportation act."

Unbiased opinion will agree with Mr. Hooper's statement that the executive gave no reason that would satisfy the public. He continued: "In so far as the declination is based on a desire to preserve the authority and dignity of the railroad labor board, it is superfluous. The labor board will endeavor to take care of itself in that regard.

The statement in the letter that 'the strike is a refusal to accept the results of the arbitration of the railroad labor board," falls a little short of accuracy. One of the questions involved in the strike is violation of the board's decisions by certain carriers. It is true nearly all of the carriers have discontinued this practice, but some of them have not."

Chairman Hooper intimated that new peace plans of the board involved appeals to the railway lines individually.

In many parts of the country, especially the Middle West, Texas, and on the Pacific coast, the disorders due to the strike became increasingly violent, and a number of men were killed. In several states the militia was called out, and in some localities, notably Bloomington, Ill., the engineers, firemen and trainmen rebelled against working under military guard. Sympathetic strikes were talked of. The leaders of the brotherhoods held several conferences and said their men would continue to operate trains up to the point where the military occupation began.

President Helt of the railway signalmen announced that his organization had postponed striking pending negotiations with the labor board which are now under way. On one Eastern road all the clerks struck.

Determined to guard federal interests, the adminiistration at Washington has been keeping close tab on the developments, and Presidenrt Harding issued a proclamation "directing all persons to refrain with all interference with the lawful efforts to maintain interstate transportation and the carrying of the United States mails." This was done after Postmaster General Work had submitted to the cabinet numerous instances of interference with the transportation of the mails and the information that a number of roads had been forced to abandon some of their mail trains. In case the proclamation were ignored, the administration laid plans for the institution of civil and criminal proceedings against individual offenders and the unions. It was understood that for the present the various states would be relied on for protection of workers and trains, but if any failed, the federal troops would be called out, and possibly soldiers and marines would be placed on the mail trains. The President is determined to back up the federal labor board to the full extent of his powers.

On Thursday, at the direction of the President, Secretary Weeks ordered troops held in readiness to protect the lines of the Missouri, Kansas and Texas road in Texas, where operations were impeded by lawlessness and violence. This was in response to an appeal from the receiver of the railway who was appointed by a United States court.

Announcement was made by the Post Office department that if every mail train should cease to run, it would continue to transport mails by motortrucks and airplanes. The department has 56 planes, and the government owns thousands of trucks belonging to various departments.

In response to the President's proclamation the executive council of the shopcrafts unions sent him a long telegram setting forth the grievances of the strikers. The labor board was, by implication, charged with partiality, and the railroads were accused of specific violations of the law and of disregarding the orders of the board. The workers, it was asserted, have been and are ready to negotiate with the railway executives and struck only as a last resort. "We respectfully insist," continued the telegram, "that no interruption of commerce or interference with the mails is caused by direct or unlawful acts of organized employees. Such interruption and interference results inevitably from attempts of railroads to operate with insufficient, incompetent and unskilled workmen."

At the close of the week all that prevented an immediate strike of the maintenance of way men was the determination of their president, E. F. Grable, to keep them at work for the present. A majority of their general chairmen had requested that they be called together to plan for a walkout. The stationary firemen and oilers decided to quit work on July 17.

CHICAGO was facing an almost complete tieup of its local transportation facilities. The surface street car men already had voted to strike against a wage reduction of 20 cents an hour, and on Thursday the employees of the elevated roads also voted for a walkout. The unions agreed on a joint policy and plan of action, and there was hope that further negotiations might avert a strike. The situation was complicated by local politics and the desire of some of the city officials that the municipality should take over the surface roads and operate them.

THUS far only partial success has been achieved by President Harding in his attempt to end the coal strike. The anthracite operators submitted what he regarded as a complete acceptance of his plan of arbitration, but the bituminous operators and the miners' union had not at this writing sent in their reply. Government officials thought both sides were evading an immediate decision with the intention of rejecting the settlement plan if public opinion seemed to approve such a course. Two conditions to the anthracite operators' acceptance were that a separate commission consider wage scales, and that the commission render its decision by August 10, they agreeing to pay in the meantime the scale of March 17.

PREMIER MACKENZIE, KING of Canada, went to Washington last week and submitted to Secretary of State Hughes an interesting and, on the face of it, a reasonable proposal. This was that the Rush-Bagot agreement between Great Britain and the United States concerning the Great Lakes and the other boundary waters between this country and Canada be modernized and made permanent. The agreement, which has stood for 105 years and is terminable on six months' notice, limits the armament on the lakes and the St. Lawrence to four vessels of not more th tons burden, each carrying no than one 18-pound gun. Mr thought this an opportune ti suggest to our government th agreement be given permanenc formal treaty. Some of the ities in Washington thought the dian prime minister was "try take a flier of his own in th armament market for politica poses."

NOTWITHSTANDING the opposition of France, it ap probable the allied reparations mission would grant Germany mal request for a moratoriu cash reparations payments, aft payment by Berlin of the $8 due on July 15. The amount w duced from $12,500,000 by the ing of Germany with $4,500,0 delivery of coal and dyes. The torium asked is for 30 month the prediction was that it wo granted on condition that the be given control of Germany's fi during that period.

The French asserted the colla the mark and the threatened fi downfall of Germany is due to th man policy of issuing unlimited and to extravagant governmen penditures, and that the grantin moratorium would not chan basic factors. They believe, in that Germany has deliberately neered her own insolvency in to obtain a reduction of the r tions bill. In Paris it was sa chamber of deputies would ove any cabinet that consented to a torium unless there was a rem of the allied debts.

GREAT BRITAIN has no int of asking that her war de America be cancelled. Premier George has decided to name gates at once who will come to ington to confer regarding the r ing of the debt in accordance the terms of the Mellon act. delegates are to have plenary ers and are to assure the U States officials that Great Britai not consider the American de involved in Europe's war debts the reparations. Gold shipmen pay the interest will begin in Au

DODGING and squirming and ing direct replies to queries, the Russian delegates t international conference at The H had, by the end of the week, br that conference just about to breaking-up point. Their efforts directed toward rupturing the so ity of the non-Russians so that might lay the blame for failu some and then enter separate tiations with others, especially British. In this they seemed to failed, for the British stood s with the French and others in th mand that the Russians recogni pre-war debts, give guarantee the credits they asked, and state nitely on what terms they woul store foreign property to its ow All this the Russians refused t and their attitude made so u further continuation of the c ence that many of the delegate ranged to start for home at onc

ALTHOUGH the Irish Free forces are successfully "mo up" the rebellious republicans disorder in the island is still such the first session of the new p ment has been postponed again August 15. By then, it is bel conditions will be normal and need be no involuntary absentee

Ulster has thrown another m wrench into the new Irish machi Premier Sir James Craig says U will not participate in the joint mission which, under the treaty to have carefully marked out frontier between the north and south. The border, as it now st is a continual source of strife.

ON THE recommendation of ators McKinley and McCo and the Illinois Bar association, ident Harding has named Jame Wilkerson of Chicago to be fe judge of the northern district o nois to succeed Judge Landis. Wilkerson has had a long care county attorney, member of the nois legislature, assistant and United States district attorney assistant to Attorney General dage of Illinois.

Something to Think About

By F. A. WALKER

RAGGED PRACTICE

FRIENDSHIP, the most sacred of all moral bonds, is never appreciated at its full worth until by some chance for snap of its golden moorings it takes fright and flies away.

In the excitement of the moment, the loss may not be keenly felt, but as the years ride by in their swift course, lines mark the face and specks of silver streak the hair, and it comes to the loser an inexplicable sense of loneliness which daily reminds him or her of the glorious sun that has set behind the purple hills.

The friendship which multiplied joys and divided sorrows is gone forever. Should you repeat this word "gone" in the night when you are alone, and again in the morning and at intervals through the day, it comes upon you with a new and terrible meaning. How gladly you would erase it, but in spite of your oft boasted strength of will, you find in your grief that you cannot do it.

Pride scores as dictator.

Like a beggar you sup on its dry crusts, and go to bed night after night with an ache in your heart and a sting in your conscience.

Yet you keep going crookedly about the byways and highways of life and continue year after year the ragged practice of unbending your neck or curving your lips with a friendly smile.

It no longer matters so much how your behavior appears to the glaring eyes of the world, so you persist stubbornly to air your pride and flout it in public places, dropping daily a little lower from the high ideals so sacred to you in the peaceful, hallowed days of friendship.

In the background of every picture depicting human unhappiness you will find an ugly blur of color quite at variance with the rules of harmony, caused by a slip of the tongue or a spurt of passionate anger between two persons, communities or nations.

If you will study the blur intently, you will find that it is the evil thing that destroys peace and strews battlefields with rivulets of blood.

If you have a true friend, give him or her the best of which pure friendship is capable of giving; or, if you have quarreled, break the truce and heaven will bless you!

KIDDIES SIX

By Will M. Maupin

DON'T WORRY!

WHEN the sun is blazing hot,
Don't worry!
When the breezes bloweth not,
Don't worry!
Think how it affects the corn;
Super crop, as sure's you're born—
Turn up smiling every morn.
Don't worry!

When the iceman brings his bill,
Don't worry!
Keep your tongue and temper still.
Don't worry!
Mind his huge outrageous toll,
Since they've got you in a hole—
Not ice, then it's for coal—
Don't worry!

Things look bad the country through?
Don't worry!
Don't help things by looking blue.
Don't worry!
Smile and just keep on your way,
Things will work out right some day,
Let nothing you dismay—
Don't worry!

Every dark cloud in your sight—
Don't worry!
Has a silver lining bright.
Don't worry!
Don't let trouble trouble you;
Just refuse to fret and stew;
Let your own good sense prove true—
Don't worry!

Grit, of course, but what of that?
Don't worry!
Will make the harvest fat.
Don't worry!
Toil today—tomorrow rest;
Nerve your nerves to stand each test,
For whatever is, is best—
Don't worry!

YOUR HAND

¶ How to Read Your Characteristics and Tendencies—the Capabilities or Weaknesses That Make for Success or Failure as Shown in Your Palm

LOSS OF MONEY

AS WE may read by various signs in the hand that the fortunate subject has acquired, or is to acquire, wealth through inheritance or through his or her own exertions, so we may read also, in the hand, the loss of wealth, after it has been possessed and enjoyed.

Inspect carefully the finger of Saturn, the middle or ring finger, near the top, for a star. If it appears plainly near the edge of the finger, it indicates loss of position and money. See also the Mount of Samoney. See also the mount of Saturn, which lies at the base of the base or beginning of the mount, a zigzag line, the same loss is indicated.

Naturally, it must be understood that these signs, as so many others in the hand, are not always perfectly clear and well-marked, and great care must be exercised in reading them, in conjunction with the other marks and signs in the hand.

The Scream of the Pipes.

It is claimed for the bagpipes, by some admirers that it is among the oldest of musical instruments. Whether or not the oldest, it is certainly the loudest of all instruments. The duke of Sutherland owns a bagpipe which figured at Prestonpans, and must, therefore, be nearly 200 years old, yet it can still be heard at a distance of eight miles.

SCHOOL DAYS

Uncommon Sense . . .

By JOHN BLAKE

TEN YEARS

TO THE boy of eight, ten years is an eternity. Ten years ago he had no existence. Ten years more and he will be a man in stature—a size that seems to him far beyond attainment.

To the boy of twenty-one, ten years, while not a lifetime, is a long stretch ahead.

At the end of the coming ten years he will be well on his way to wherever he is going, success or failure.

If he could understand just how much those ten years mean, just what can be done with them, just what they will yield if rightly cultivated, there would be far less trouble and distress in the world.

To the man of forty, ten years are the years which must not be wasted. The next ten years are his best, as far as productivity is concerned. If he has not made the last ten years count, he still has a chance with the next ten.

After that, unless he is a phenomenon, the chance will be gone. He can progress after fifty, go farther than he has ever gone, but rarely unless he is going strong on his fiftieth birthday.

Look at your remaining years as an asset. Examine the next ten of them for opportunity, and see if you can allot to each enough work to carry you at a better pace into the next decade.

Ten years wisely employed at any time after twenty ought to make a man either a success or a failure.

They may not be enough to bring a fortune, but they ought to bring habits and methods which later will insure independence.

Compare the next ten years with the last, and determine that these stretches of time, now empty and unimproved, shall be filled with achievement that is worth while.

You can put into them almost anything you choose—work, effort, thought, or idling, and time wasting.

Almost any man can be made or broken in ten years. You have at least that time before you if you are the age of the average newspaper reader.

Make up your mind that even if the last ten years counted for nothing the next ten will count for much. Make that purpose, and stick to it. And these coming ten years will be the best you have ever known.

(Copyright by John Blake.)

World's Water Power.

The total available horsepower in the world derivable from falling water is reckoned at 439,000,000. Africa leads with 190,000,000. Asia has 71,000,000. Europe is credited with 45,000,000, South America with 54,000,000 and North America with 62,000,000.

THE CHEERFUL CHERUB

I was dancing last night
with my new pumps
too loose—
I hope that the girl
never knows
As I smiled in her face
with a languorous grace
How madly I
curled up
my toes.

Mother's Cook Book

"Worry and optimism cannot travel the same road, to say nothing of going in the same company. A real good worrier is not generally sought after, either in business or social life."

FOR THE FAMILY MEAL

TO MAKE hot lunch sandwiches, chop remnants of ham fine; season and moisten with cream or melted butter and put on buttered slices of bread. Press the slices firmly together and trim them in oblongs or squares. Beat one egg, add from a cupful to a pint of milk, according to the number of sandwiches; add a little pepper and salt and dip each sandwich in the mixture, turning once or twice until well saturated. Brown delicately on both sides in a hot frying pan with a little butter. Serve at once on a hot platter, garnished with parsley or nasturtium leaves and blossoms. Sandwiches filled with jelly may be fried the same way, dusted with powdered sugar and served as dessert.

Apple Salad.

Slice tender apples thinly, leaving the skin remain if bright red. Mix with half as much finely-cut celery, chopped onion or cabbage. Add enough thick cooked salad dressing to hold the mixture together. Peanut butter may be used in place of the dressing if desired; season with salt, pepper and thin with a little vinegar and water. Serve on lettuce or in apple cups.

Hamburger Steak.

Grind round steak through the meat grinder adding a pinch of cloves, with the usual seasoning of salt and pepper and one-half of a small hot pepper rubbed to a paste (using the canned chili, though the pimentoes will do), adding tabasco sauce. Pat the meat into a flat cake and broil under a hot gas flame or over clear coals. Turn until both sides are seared, then cook more slowly until done to the center. Serve covered with melted butter and sprigs of parsley.

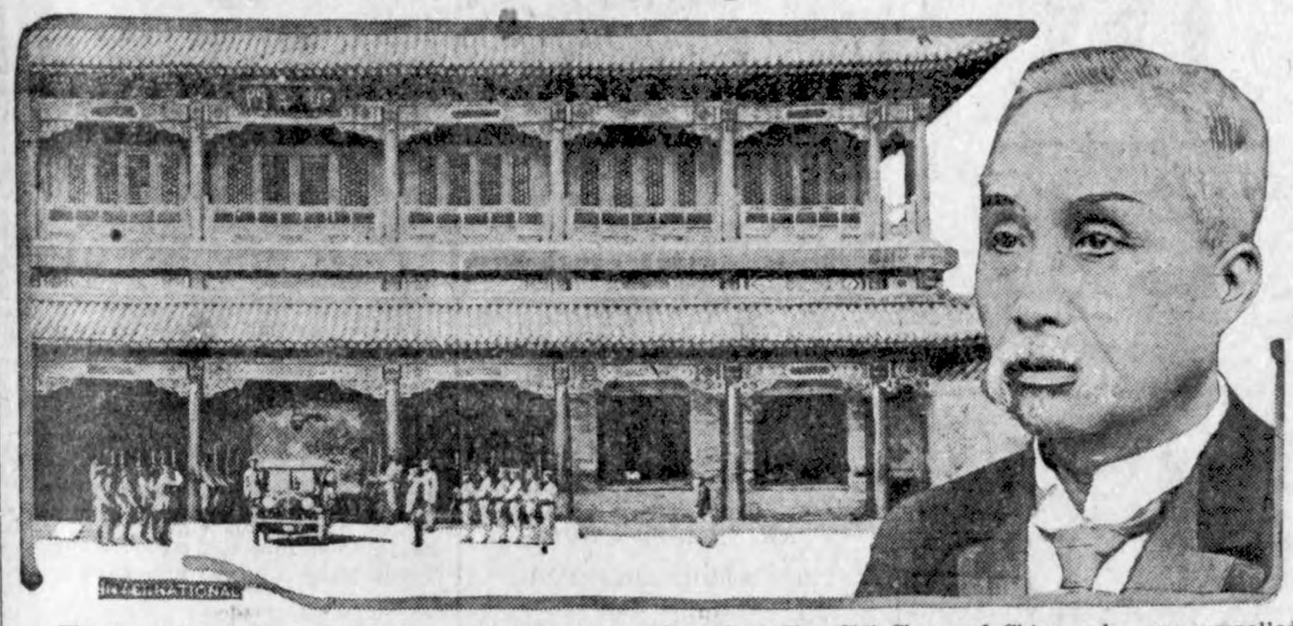
Abdication of Hsu Chih-Chang as President of China

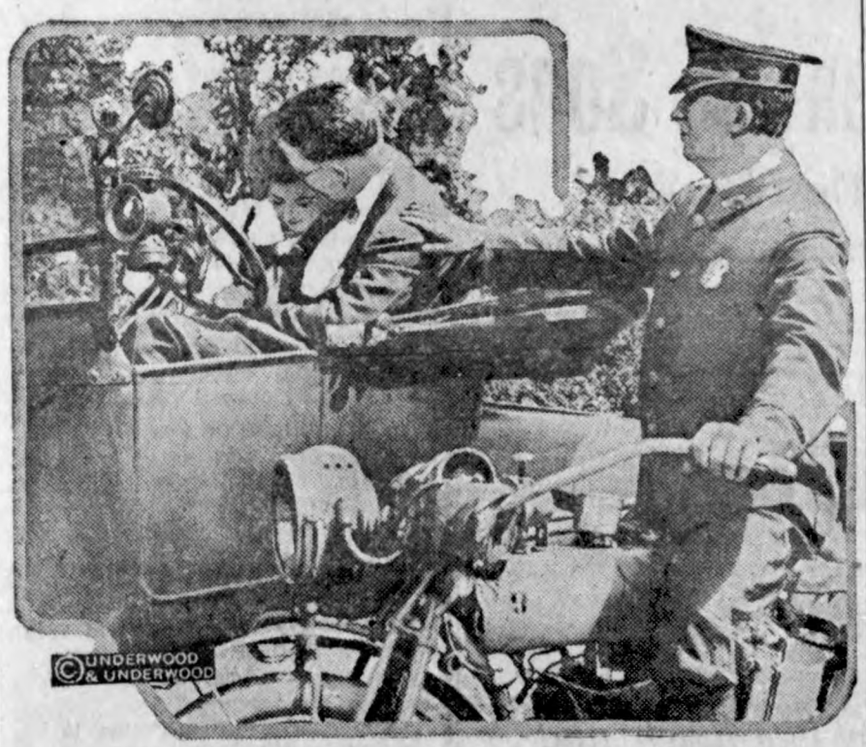


The only photograph made of the actual abdication of President Hsu Chih-Chang of China, who was compelled to vacate his office following the outbreak of Civil war. A newspaper correspondent was able to sneak around the guard after being driven from the courtyard of the Chinese Royal Palace, and make the picture of the president's car just as it was leaving with the president. Inserted is a late portrait of Hsu.

Starting the U. S. Pavilion in Rio

Scene during the ceremonies of breaking ground for the United States pavilion at the Brazilian Centennial exposition in Rio de Janeiro. Doctor Sampaio has the shovel; directly behind him is Frank Packard, the architect appointed by President Harding; at Mr. Packard's right is Ambassador Edward V. Morgan.

No More of This in Rock Creek Park



"Look here, young man, we don't allow this," says Lieutenant Carroll, chief of the U. S. park police in the District of Columbia, tapping the shoulder of the young man who has stopped in the park to give his "sweetie" a squeeze and a kiss. Blocking traffic and disorderly conduct are the charges, for which the offender pays $25 each. This is now a regular treatment for drivers who park their automobiles after dark in Rock Creek park.

Selected for the Olympic Games Team

Maybell Gilliland (left) and Elizabeth Stine, who have been selected for the Olympic games in Paris. Miss Stine is the winner of many championship broad and high jumps and Miss Gilliland is champion in the sprints and relay of Leonia (N. J.) high school.

RIVAL OF AMUNDSEN

Maj. Tryggve Gran, Norwegian adventurer, who seeks to beat Capt. Roald Amundsen to the North pole, using airplane to reach his objective. He aimed at secrecy, to bar competition, and is making his start from Spitzbergen. Gran has been in the Far-North country since early in May. His route carries him in just the opposite direction that the Amundsen party will travel.

EMPEROR VISITS FRANCE

M. Sarrault, French minister of colonies, and the emperor of Annam, snapped as the monarch left the boat at Marseilles. The two proceeded together to Paris where the ruler was given a princely greeting. The emperor heads the district sometimes known as Cochin China. He was accompanied by his young son.

Poorest Town in World.

The poorest village in the world has just been "discovered" by R. N. Davidson of Ashland, Ky., director of refugees for the Near East relief in northwestern Armenia. The village is Ermonins, located in an almost inaccessible mountain gorge ten miles from any city.

"The village, with more than 1,000 inhabitants, has not a single window nor a single chimney," said Mr. Davidson on his return to the central depot with 150 destitute orphan children from Ermonins.

Ahem!

After much squabbling over the numerous dolls which they must take to bed with them every night, Joan, age four, and Madge, age two, had been finally kissed and tucked in for the night by a tired mother.

After a half-hour's silence, shrill voices were heard in a hot debate. Mother opened the poor just in time to see Madge scoot under the cover, whereupon Joan piped, "Mother, I just can't go to sleep 'cause Madge sits up in bed and says bad words to me."

FILIPINO CUTS EIGHT WITH BOLO

Native Runs Amuck In Manila

MANILA, P. I. ——A Filipino ran amuck today in the heart of the American residental, hotel and club district, slashing and cutting eight persons with a bolo. A large crowd prusued the Filipino to the beach at Manila bay, where he jumped into the water and was lassoed by an army captain who had followed him in a boat.

There were no Americans among the frienzied bolo wielder's victims. Among the injured were a Filipino woman whose hands were cut off and who may die, a native girl 8 years old who was wounded in the back and neck and another Filipino girl of 18 who was injured when she jumped into the street from a second story window to escape her pursuer.

The man, who gave his name as Estanislo Pupoot, is 31 years old and is a native of Ilocos in the Northern Philippines. When Pupot ran from the crowd and headed for the beach Capt. Harold H. Elarth, United States infantry, jumped into a boat, prusued the man into the water and lassoed him.

Police officials say the crime is the first of its kind recorded in Manila in a number of years. They say that instances of running amuck previously had been confiued to Moros.

Vote on Bonds

HULL, IOWA,

At a meeting of the town council held here it was voted to call a special election to be held on August 14 for the purpose of voting a $20,000 bond for the extension of the present water system.

HUBBARD ELEVATOR HAYFIELD HIT

HAYFIELD July 15— Fire was discovered in the engine room of the grain elevetor owned by the Hubbard Grain Co. of Mason City at this place last evening at about 4:30 o'clock. Quick response to telephone calls by several dozen men and the use of the hand grenades and fire extinguishers and the fact that the engine room was asbestos lined inside and out, kept the fire confined there. The engine room was a total loss. No other damage was done.

There was considerable loss, although the exact amount could not be learned last night.

CANDY AND STAGES OF LOVE

The candy man is the first one to know whether Mr. Newlewed's affections are beginning to cool off. Long before his wife expects it, he is aware of it—and convinced. That is because of the candy Mr. Newlywed buys her. No longer does he come to the store asking for the very best candy and wonder for an half an hour whether she will like it in a ribboned or plain container. He walks in and askes for a pound of chocolates— "any kind!" That is the first signal.

When, several months later, he comes in and says, "She wants a box of assorted chocolates," it shows that things are in a bad way. He is merely repeating the order—and has long since ceased to buy her any candy of his own accord. New York News.

Happiness Not All.

There is in man a higher than love of happiness; he can do without happiness and instead thereof find blessedness.—Carlyle.

USEFUL SERVANT OF MANKIND

Hard to Say What the World Would Do If Deprived of Carbonic Acid Gas.

The American constitution is now in a fair way to become saturated with carbonic acid gas. Reference is not made to the document signed by the forefathers, but to the constitution that gets run down every spring and has to be perked up with cod liver oil. Well, it won't be as bad as it sounds. Carbonic acid gas is quite harmless.

It's made from coke, and it is probably the most versatile servant that mankind has. It's like those medicines that the almanacs say are good for everything. It can put a kick in your ice-cream soda, or your lemon phosphate. It's in all fire extinguishers. It's used to harden steel. It's used in making sugar, to remove the lime from the juice of the cane. It's a refrigerating agent and also is used in making bicarbonate of soda, the substance one takes for heartburn. And it forms one of the chief curative agents used in the baths at such resorts as Neaheim in Europe and Saratoga in this country.

Manufacturers of carbonic gas in this country report that they have doubled their output in the last year because of the increased demand for carbonated beverages, or "soft drinks." At present, in round numbers, carbonic acid gas enters into 375,000,000 gallons of beverages in the United States. Figuring on sixteen drinks from a gallon, you have 6,000,000,000 soft drinks as the approximate consumption a year. Sixty sodas apiece.—Chicago Journal.

MUSICAL SAW MAKES A LIVING FOR A CRIPPLE

Iowa, City, Ia., A musical hand saw makes a good living for Edward Van Valkenburg who was playing on the streets of Iowa City today before large crowds.

The genious uses a violin bow to keep up the vibrations of the saw and brings out the changing tones by moving the saw with his fingers. He plays all tunes but is especially good on airs set in a high key.

He is a cripple and claims that although he has known the musical possibilities of the saw for twenty years it was not till the accident which deprived him of his leg three years ago that he took time enough to get the practice needed to make him the musician he is today.

STOCK SHIPMENTS BEGAN TO GROW

Stock shipments from Klemme are beginning to grow again, although the season is not very early for heavy shipments. Saturday night there were six carloads of stock shipped from the Klemme yards. A. G. Lau shipped two carloads of hogs; Joe Johnson one car hogs and two cattle and Albert Schmidt one carload of hogs.

The stock buyers were pretty busy Saturday and lost out on some meals so we presume when they get real busy a little later on they will lose out on a little sleep as well as their meals.

Klemme draws hog and cattle shipments from both near and far.
It is one of the best livestock markets along the Rock Island line.

A HIGH PRICED AFFAIR

Following the marriage ceremony the bridegroom called the minister aside and inquired the price of the service.

"Well", said the minister, "you may pay me whatever its worth to you".

"Be reasonable", groaned the groom, "My bride inherits 1,000,000 on her 21st birthday. —Kansas City Star.

Same with wives as with automobiles—its not the original cost, but the upkeep.

IOWAR OATS POPULAR

Good Quality of Grain Reported By Crop Specialists

Iowar Oats, one of the varities developed by the Iowa Agricultural Experiment station, is proving more popular than ever this year and is giving good results to the farmers who are raising it, according to farm crops and soils experts of the agricultural extension service. Oats this year. they say, are of a high quality. The Iowa 105 variety is prefered by many farmers who have very rich soil because of its short stem. Iogren a variety selected by the station from the Green Russian oat, is being grown more and more in the Nothern part of the state.

MIXED PASTURE SUCCESSFUL

Sweet Clover, Red Clover and Timothy Produce Good Crop

A pasture which is a mixture of biennial white sweet clover, red clover and a little timothy is making itself popular with farmers about Roland in Story county, according to F. G. Churchill, extension specialist in Farm crops and soils at Iowa State College.

The farmers who are growing this mixed pasture say that it is able to support one cow to the acre and that the sweet clover grows luxuriantly in the lower spots of the field which tend to be alkali. When not pastured too heavily this clover can be turned under and become a big factor in improviing soil which is likely alkaline.

..This mixture is planted with oats in the spring. It is frequently pastured lightly in the fall of the first year. In the second year it furnishes a heavy pasture.

MANY COUNTIES RUN CORN TEST

Purpose to Determine Best Producing Varities

Fourty-one counties in Iowa are conducting local corn yield or variety tests under the direction of the county agents, according to F. G. Churchill, specialist in farm crops and soils with the agricultural extension service. The purpose of the tests is to discover the best producing varities in the counties.

The number of samples entered in the various tests ranges from 5 to 28

Reduce Your Production Costs

Farming, like every other business, must cut down the overhead.

Ii is not a question of being able to afford a Fordson but a question of being able to continue farming on the old too-costly basis.

The farmers problem is not all a sales problem; it is also a production problem. He must cut down the cost of production.

The Fordson does more work at a lower cost and in less time than the old hand methods.

Let us give you the proof. Write, phone, or call today

Compensation.

As gold is not made mean when
It is strengthened with alloy,
There is no grief that's greater
Than its strengthening of joy.

Agree Exactly.

Husband (newly married)—Don't you think, love, if I were to smoke it would spoil the curtains?

Wife—Ah, you are the most unselfish and thoughtful husband in the world; certainly it would.

Husband—Well, then take the curtains down.—Carolina Tar Baby.

That Accounts for It.

Customer—That veal you sent was spoilt.

Butcher—Spoilt, ma'am? I can't understand that, unless it came from itself that was petted too much."—Rita.

Woman's Way.

"It's the eternal feminine."

"Heh?"

"Even the professional fat lady wants a slim waist."

In Constant Use.

Farmer Brown—So you've got back from New York, have ye, Si? How did you feel in such a big city?

Farmer Green—I felt for my pocketbook most o' the time.

Simple.

Professor—I'm sorry to tell you, madam, that your daughter is hopeless; she has no talent."

Mrs. Lowell Brow—Huh! I thought I was paying you to give her some.

Another Kind.

Addlesley—Well, I've got to go today and face the music.

Bartholomew—What, wife home?

"No; I conduct a band!"—London Answers.

No Limit.

Maud—When we are married I must have three servants.

John—You shall have twenty-three, darling, but not all at the same time.

Kitchen Needs

ANYTHING and everything you might need for the kitchen can be found here at reasonable prices.

Cleaning powders, soaps for all purposes, scrubbing brushes, brooms, pans, cooking utensils, etc. Just say what you want and we can supply it.

We Help Make Kitchen Work Easier

BUILD A PORCH ON YOUR HOUSE!

Most of the houses built during the last 10 years have porches. Before that the average house did not have a porch. People then did not appreciate the healthfulness and the joy of the great out-doors.

If your house does not have a porch you should build one immediately. It will make your home more inviting and more enjoyable.

A porch is no longer considered a useless ornament, but a necessity that all the family will enjoy.

Come in and talk over plans for a porch with us now. eWe can give you some helpful advice for remodeling and for adding a porch to your home at a reasonable price.

Northern Lbr. Co.

SOME SMILES

Not Courting Publicity.

"What progress are you making?" asked the first "money digger."

"Our town went 'over the top,'" said the second "money digger."

"Fine! As chairman of the local committee you ought to receive a pair of cuffbuttons, a watch fob or something of that sort."

"I'm not looking for any presents. I'll be satisfied if nobody hands me a subpoena."

Research.

"What's them?" inquired Farmer Corntossel as his wife was preparing for the party.

"Those are olives."

"What are they good for?"

"Good to eat."

"What else? You can't tell me anything with a taste like that oughtn't to cure something."

A Grouch's Aversions.

"John," exclaimed the nervous woman, "I think there is a burglar in the house."

"Let him alone. There's nothing he could move out except the rubber tree and the phonograph, and if necessary I'll pay him a little something for his trouble."

The Difference.

"I made up my mind our boy Josh should have a fine education," remarked Farmer Corntossel.

"And now he shows his superior knowledge."

"No. Josh doesn't know much more than I do. The only difference is that he uses longer words."

Influential Utterances.

"Did your campaign speeches have any real influence?"

"I won't say they changed the minds of many auditors," admitted Senator Sorghum. "But I am depending on them to give me the benefit of a favorable impression on the minds of the incoming officials."

Looking Ahead.

Mr. Multirox—I can't promise you a very merry life as my wife. Me, as an old man, with one foot in the grave.

Miss Mainchance—Oh, that's all right. I'll make up for it when your other foot slips.

A MODERN IMPROVEMENT

Grandsire: In my time when a young man called on his girl she entertained him by showing him the family album. Now she shows him the family moving pictures.

Grandson: And she has to turn out all the lights to do it. And, say! You don't know what you've missed!"

Surely Not Then.

I love to hear men singing
While at their work, said Birch.
But suppose one's a mortician,
Or an usher in a church?

Taking No Chances.

Flatbush: "Hear your brother has started a restaurant?"

Bensonhurst: "Yes, he has."

"Doing well, is he?"

"Why, say, he's been so busy he's hardly had time to go out to get his meals!"

Remarkable.

"Well, wife, how do you like your new electric iron?"

"It's a wonderful device. I have been using it all day, and it irons beautifully."

"That is wonderful. The electricity was turned off today."

Paradoxical Plea.

"What evidence did the lawyer use to prove the prisoner did not hatch a plot to kill his rival?"

"Pleaded that his client couldn't hatch a plot to kill because he was too chicken-hearted."

Unaccountable.

Customer—Waiter, I don't understand about this trouser button being in my soup.

Waiter—I don't either, sir. We employ only women in the kitchen here.

The Reason for It.

"All the jokes Borely is so fond of springing on his friends he gets out of the foreign papers.

"Then it is no wonder they are so far-fetched."

Term.

"I believe in term marriage."

"Well, dearie, I wish to defer to your ideas. Let's make it for 99 years, as the leases say."

Her Point of View.

Maud—Can anything be worse than a man who will get sentimental in spite of all you can do?

Edith—Yes, a man who won't.

The Fugitive

By WILLIAM FALL

(©, 1921, Western Newspaper Union.)

Jack Wesson, federal revenue officer acting in Kentucky, pulled in his mare and coolly surveyed the heights in front of him. The trail, which wound sluggishly through the defile, disappeared into the heart of the forest, to reappear, a sinuous, winding ribbon, along the flank of the crest. There was no sign of human habitation in that rugged and abandoned land.

Yet somewhere on the mountain was the cabin of the Winters men, "moonshiners" and outlaws. And for the arrest of Charlie Winters, the youngest, Wesson held a warrant. He had set forth to bring him into Coonville. Others had held warrants, too; but Wesson, newly appointed to his post, was more reckless than they, and he had dared to ride alone into the heart of the Winters stronghold.

He reined in suddenly, for his quick eyes had caught a glimmering flash from the peak in front of him.

His weapon in his hand, Wesson leaped forward, scaled the boulders on the summit, and appeared before the door. Upon the threshold, a rifle in his hands, stood a young man. His back was turned and he was attempting to eject a stuck cartridge.

"Hands up!" yelled Wesson.

The man started, stared at him for an instant, and then, with a sudden dash, leaped across the cabin, gained the rear entrance and was away and running like a deer. Wesson followed him. He was certain that this was Charlie Winters, whose appearance had been particularly impressed upon him by his superior officer when he started on his mission.

"Looks like his sister," he had said. "You've seen that Winters girl down at the store? Her image! Don't go arresting the girl instead of him," he had laughed.

Charlie Winters had only recently returned from parts unknown, to resume his "moonshining" operations, which had been broken up by the authorities two years before. The rest of the gang was hiding somewhere across the Tennessee boundary; Charlie alone had ventured back to the cabin on the mountain.

His revolver in his hand, the young officer followed the fugitive. But, though in the pink of condition, he could not lessen the distance between himself and the young mountaineer. His hope, however, was in his superior staying powers.

But just where the crest dipped down into the valley below, the fugitive flung himself panting upon the ground, and, as Jack Wesson ran forward, held up a hand and called:

"Stop! You can't come nearer!"

Wesson did stop, from sheer surprise. For this voice was a distinct and clear woman's voice and, as he looked, he saw a strand of long, silken dark hair floating freely from below the old slouch hat.

"Miss Helen!" he gasped.

The girl sat up and laughed. "Yes, I'm Miss Helen," she said. "I reckon it's Charlie you're after."

"Where is Charlie?" he demanded, savagely, standing over her. He had often seen her in Coonville, this dark-haired and blue-eyed mountain girl, of that perfection of type which flourishes, as in its native soil, in the Kentucky hills. The sight of her, flushed with her race, her eyes alight with triumph, set his heart furiously beating, and, mingled with this new emotion, was one of anger and shame at having been outwitted.

"Charlie?" she drawled. "Oh, Charlie was in the woodshed when you came up. I reckon you won't find him now, though. Charlie is a swift runner. I reckon Charlie is swifter than me, and you couldn't catch me," she mocked.

"Then—then" he stammered.

"Now, Mr. Wesson," said the girl, soothingly, "if it hadn't been for me you'd never have reached the mountain. Charlie had a bead on you all along the trail. You've got me to thank for saving your life by this here change of parts."

"Well, I've got you, anyway," said Wesson, sullenly.

"I reckon not," she drawled.

"Why not?"

"Because," she answered, "this is Tennessee, and I reckon your territory's Kentucky."

Wesson was dumfounded. He had forgotten the warning, carefully conveyed, that the Winters cabin was designedly perched upon the border line, and that therefore he must take his captive within the cabin itself.

"You stop right where you are," said Helen. "If you lay a finger on me I'll tell the governor of Tennessee."

A light of amusement flickered in Wesson's eyes. Deliberately he stretched out his hand, found the cool, slender fingers of the girl, and held them.

"I guess the law doesn't say anything against amicable visiting between the states, does it?" he asked.

"Well," she admitted, "if you come that way, I—I guess it doesn't."

Wesson stepped forward and planted both feet firmly upon Tennessee soil.

"Nor about—this?" he asked.

And, placing his arm round her, he drew her to him and kissed her upon the lips.

"Helen," he said, "this isn't love at first sight, for I've loved you since I first saw you in Coonville. But it comes mighty near, and if I can't get Charlie—why, I reckon I'm going to get you some day."

Frocks for Midsummer; Alluring Summer Hats

PRINTED foulards and crepes, embroidered linens and crepes and printed cottons are among the fabrics that make midsummer dresses distinctive and brilliant. The crepes are naturally in the lead in these figured fabrics, simply because they are crepes and this is a crepe season. They are followed by foulards which make light cool dresses, and both these materials lend themselves to the fashionable draperies that vary the straight-line figure while they preserve the slender silhouette. Embroidered linens and crepes are even more simply designed than their printed rivals, but simplicity is characteristic of frocks made from all fabrics having large, all-over printed or embroidered figures.

Printed Foulards and Crepes Are Popular.

Costume suits make use of the same printed materials when the pattern shows figures smaller and colors a little more sedate. The printed silk is used for a long overblouse, worn with a plain, wool skirt, and a cape or, perhaps, a coat, of wool like the skirt, lined with silk like that in the blouse. But dresses insure hot weather comfort and many of them show combinations of printed and plain silks, as in the two models pictured. In the dress at the left, a refreshing affair in black and white has a bodice and girdle in white and a skirt in black and white foulard. Tan and light blue crepe make a summery combination in the frock at the right, with bodice and girdle in the plain color. The girdle is finished with long silk fringe.

Both these dresses indicate that designers are experimenting with a high-waistline and that they like to relieve and set off a figured fabric by introducing a plain one in the composition.

In July and August hats for midsummer sing the swan song of summer millinery. They are the recessional in the millinery hymn to summer that begins in southern climes, long before Easter, and ends when the first hint of autumn creeps into the air in the north. They spread wide and airy brims and bloom in the heat. Like tropic flowers, they are beautiful and short lived. A midsummer hat in autumn looks as forlorn as a fragile butterfly would in a snowstorm.

Just how alluring they are this season may be imagined by a glance at the four dress hats pictured here, in the company of one late summer tailored hat, of white satin and fringe. The group leads off with a midsummer night's dream in black georgette and lace. The shape is an exaggerated poke bonnet, covered with georgette laid in wide folds on the crown. A lacy scarf is draped over the brim falling over its edge and partly veiling the forehead and eyes. It slips off the brim and falls over the shoulder at the right side, making way for one large, full blown pond lily that eclipses even the glory of fine chantilly lace.

Lace and plaited georgette again join forces in the light, beige-colored hat at the right of the group. Very large two toned poppies in a cluster find shelter under the brim at the left side. Huge poppies also trim the crepe hat at the center with its peculiar brim (in three pieces) that widens at the sides and narrows at the front. Its brim and a soft, round crown are overlaid with an embroidered or figured crepe, with plain crepe for a brim facing. It is a model which might be successfully developed in any light color.

The last hat in the group, of white hair braid and chiffon, has a very wide brim that narrows and lifts across the front. A narrow millinery braid is stitched in a pattern over both the crown and brim. Long sprays of white blossoms and fruit wander across the hat and trail from it at the sides.

In midsummer the lace hat comes into its own and finds a perennial welcome on the part of women with educated taste in millinery. The allurement of the curtain veil has added something to its other attractions by proving itself immensely flattering to all sorts of eyes.

Alluring Hats for Midsummer.

TESTS FOR GEORGE

By LOUIS H. RAYBOLD

©, 1922, by McClure Newspaper Syndicate.

"No, mother," and Constance shook her bobbed head vigorously, "I am not going to marry George unless I am absolutely sure of myself—and him. I'm too modern and well trained to make a leap in the dark."

"And how," began her mother mildly, "do you propose to make yourself any surer than I already supposed you were, and may I ask, what does George think of all this?"

"George?" Constance answered her mother's second question first. "Why, George won't know anything about it until it's all over. Then, if he has failed, I'll simply say everything is at an end."

Constance rose with dignity and the impudence of the present young generation. "This is my marriage, mother," she said coldly, "and I'll attend to it!"

Now her daughter's engagement to George Morse had come to Mrs. Peck as a blessing straight from heaven. That her restless, daredevil child should give herself to so splendid and dependable a man.

That evening Mrs. Peck contrived a moment alone with George as he waited for Constance to put a finishing touch or two before coming down to go with him to the annual ladies' night of the one club to which he belonged. And after a few moments' earnest conversation Constance's mother wound up almost tearfully, "Constance would never forgive me, George, if she knew I told you. But I did it for her good!"

"Don't worry, mother," said George, "I'll never give you away. I'm a hundred times obliged and can promise you everything will turn out beautifully!"

At that moment Constance appeared, but, strange to say, she was not dressed for attending ladies' night. Clad in short sport skirt, heavy sweater and woolen toque she seemed ready for an evening out of doors.

"George," she began gently, "I don't want to go a bit tonight. Instead, let's go over on Bennett's pond skating. Will you?"

George had risen and, hands in his pockets, was glowering, actually glowering, at Constance.

"What do you mean by this, Connie? You know I came here to take you. I'll wait exactly half an hour for you. Otherwise I go alone."

Remarkable to say, Constance, assisted by a mother who was inwardly wondering if she had been mistaken in George after all, was ready at the end of the half hour, and head high and chin proudly set marched off with George. The evening was not a particularly happy one.

Nor did Constance's two other carefully planned experiments meet with any more conspicuous success. Surrounding herself with half a dozen youngsters and two dogs just prior to this call the next afternoon, she staged the scene for test No. 2.

George arrived, but instead of falling to and joining in their merry game, he rather peremptorily bade her "get rid of that gang and call off the confounded curs who were yapping at her heels!"

It was almost tearfully that Constance broached test No. 3. She hinted at it to George as they sat out in the couch hammock after the children had been dismissed.

"I couldn't marry anyone but a regular 'man's man'," she said, apropos of nothing at all. "I'm so glad you're that!"

"But am I?" said George easily. "I'm sure that isn't the sort of a reputation I have among the fellows in the office. They consider me a regular lady killer! Look at you, for instance! How easily I captured you. And that reminds me: just when is to be our happy wedding day?"

For a moment Constance regarded him queerly. Then, "I'm not sure we are ever going to be married," she said coldly. "I'm not sure it's not all a mistake that we've found out just in time."

"How come?" asked George pleasantly, and Constance thought he seemed very little upset.

"Well, I—I've been testing you." She burst forth with the whole story, while George listened with a smile that was both tender and appreciative. When she had finished and was twisting her handkerchief into a tight little ball that was wet from sprinklings of tears which had accompanied the tale, George reached out with two strong arms and gathered Constance to him.

"There, dear," he whispered. "Cry on my shoulder. Do you love me?"

"Ye-yes," said Constance.

"Going to marry me?"

"Y-yes," said the girl again.

"Well," said George triumphantly, "just see what that proves! I failed to meet your requirements and yet you love me! That shows I am the one and only man in the world for you. Now, if I'd only known! You see, as a matter of fact, I do like dogs and—but that's another story!"

And George's mother-in-law never told.

Degrees of Intimacy.

"Look here, waiter. You know me, don't you?"

"Oh, yes, sir, I know you quite well, sir. Will you have Scotch or rye?"

"I don't want a drink, waiter. I find that I have left my purse at home, and I thought perhaps—"

"Sorry, sir, but I don't know you as well as I thought I di

EQUIPMENT NEEDED FOR CANNING VARIOUS VEGETABLES AND FRUIT

A Number of Utensils Are Needed for Handling Fruit and Vegetables in Different Stages.

(Prepared by the United States Department of Agriculture.)

The housewife who intends to do canning this season had better see to it that she has all the needed equipment ready, suggests the United States Department of Agriculture. Unless she looks over her equipment beforehand, says the department, she may find at the busiest time that some of the utensils that help to make the work easier and quicker are lacking.

Whether she uses a steam-pressure canner or a wash-boiler for the actual processing, a number of utensils will be needed for different stages in handling fruit and vegetables. Farmer's Bulletin No. 1211, recently issued by the department, says that for grading, sorting and washing shallow trays, pans or bowls are needed. Vegetable brushes are necessary for some of the thick-skinned fruits and vegetables, while for delicate fruit, like berries, a colander or sieve may be preferred.

Provide Means for Keeping Jars Off Bottom of Boiler.

Useful Utensils.

Several squares of cheesecloth, or wire baskets, may be used for holding the fruits or vegetables during the blanching process. Some kind of container, such as a large enameled bucket, galvanized lard can or washboiler, which will hold enough water to cover a convenient quantity of the product to be blanched, should be provided. Several kettles will be needed for blanching, for rinsing after blanching and other purposes. A teakettle should be on hand for boiling water, which is needed from time to time for filling jars and for renewing the blanching water.

Sharp-pointed paring-knives are convenient for peeling and cutting. (It is well to use a silver knife for peeling fruits that are sometimes discolored by steel). Tablespoons, teaspoons, measuring cups and spatulas should be at hand. Some means must be provided for lifting the jars out of the boiling water and for keeping them off the bottom of the boiler during the processing. This may be a tray with tall handles, or a false bottom to the boiler may be used with some sort of utensil to lift the jars. Many kinds of patent holders or lifters may be purchased, or a lifter may be improvised at home. A large buttonhook works well with jars that have a wire spring clamp over the top.

Make Work Progress Rapidly.

When canning in large quantities, such conveniences as strawberry hullers, vegetable slicers, apple corers, cherry pitters, apple parers, food choppers, scales and saccharometer to determine sugar density will make the work progress more rapidly.

If the product to be packed is to be cooked first, spoons, sieves and sauce pans are necessary. Funnels and packing spoons or flexible metal spatulas or wooden paddles will aid in filling the jars and in removing air bubbles.

If the canning is to be done out of doors, tables of convenient height, a covered garbage pail and flytraps are needed. A kerosene stove is convenient for heating water. All jars or tins should be washed, before the work is begun, and new metal lids, rubber rings, or sanitary caps provided.

JAVELLE WATER USED AS BLEACHING AGENT

Excellent for Removing Stains From Linen and Cotton.

Obstinate Blemishes Made by Coffee and Tea, Fruits or Ink Will Yield to Application of This Useful Liquid.

(Prepared by the United States Department of Agriculture.)

Javelle water, which can be made at home, is a good bleaching agent to use in removing stains from white linen and cotton when more simple methods fail. Obstinate stains made by clear coffee and tea, fruits, or ink, for instance, will yield to an application of this useful liquid.

Javelle water should be applied only to uncolored cotton or linen materials, because it bleaches colors and rots silk or wool. In treating stains with javelle water, stretch the stained portion over a bowl filled with water and apply the javelle water to the stain with a medicine dropper. Do not allow the javelle water to remain in contact with the stain for more than one minute. Apply oxalic-acid solution to neutralize the javelle water, and rinse by dipping the stain in the bowl of water.

If allowed to remain too long in contact with the fibers, javelle water rots even linen and cotton materials, and it should, therefore, always be neutralized with oxalic acid and the fabric rinsed thoroughly to remove all traces of the chemical. For very persistent stains the javelle water may have to be applied several times, but should be neutralized with oxalic-acid solution after each application.

Prepare javelle water as follows: Dissolve one pound of washing soda in one quart of cold water. To this solution add one pound of ordinary bleaching powder (calcium hypochlorite) Filter this liquid through a piece of muslin to remove the sediment. Keep the clear liquid in tight stoppered bottles in a dark place.

Cleaning Slimy Sponge.

The way to clean a slimy sponge is to put it into a strong solution of salt and water. Let it stay for some hours, changing the water occasionally, and squeezing the sponge, then finally rinse in clean water.

HOUSE FLY MOST DANGEROUS

Clean Up All Manure Piles, Garbage Accumulations and Other Filthy Spots.

Entomologists say the progeny of a single hibernating fly in a single season would, if unchecked, be sufficient to cover the surface of the earth to a depth of two feet or more. Moral, "swat the early fly."

In Special Bulletin No. 48, Dr. W. A. Riley, chief of the division of entomology, University of Minnesota, divided the methods of combating the house fly into those directed towards extermination by the prevention of breeding and those serving as protection against the insect. As flies are born and reared in filth of all sorts, the obvious thing to do is to clean up all manure piles, garbage accumulations and slop pools.

"However much one's neighbors may continue to breed flies for the community, this does not render useless the keeping of one's own premises free from such nuisances nor does it excuse neglect," says Doctor Riley.

As the entire development from egg to adult fly may be spanned in eight or ten days and a new generation started every 11 to 14 days, it is plain that every fly killed early means heavy mortality among the possible fly population.

OF INTEREST TO THE HOUSEWIFE

Purchase a coarse scrubbing brush for cleaning muddy shoes.

* * *

A stiff vegetable brush will remove the skins of new potatoes.

* * *

The higher the blunt end of an egg rises out of water the older the egg is.

* * *

To complete the guestroom have some good reading matter conveniently placed.

* * *

A large cork is an excellent thing with which to apply polish when cleaning knife blades.

* * *

The best way to clean lamp burners is to boil them for twenty minutes in strong vinegar to which a few yellow onion peelings have been added.

Just a Little Smile

HARMONIOUS CONSISTENCY

"What is the meaning of 'consistency'?"

"Consistency, my son, has to do with the fitness of things."

"I don't know just what you mean."

"I will give you an example."

"Yes, sir—"

"A freckle-faced girl in a polka-dot dress, leading a coach dog."

If She Were Teacher.

Little Girl—If I was a teacher I'd make everybody behave.

Aunty—How would you accomplish that?

Little Girl—Very easily. When girls was bad I'd tell them they didn't look pretty; and when little boys was bad I'd make them sit with the girls; and when big boys was bad I wouldn't let them sit with the girls.

Taking His Time!

He—C-c-can you g-g-get B-B-Brighton for m-me on the telephone, p-please? And how m-much will it b-be?

She—Fifty miles—18 pence for three minutes.

"W-would there b-be a red-d-duction for m-me, d-do you th-think?—London Answers.

Made in U. S. A.

Assistant—Is this a Persian or a Turkish rug?

Storekeeper—Who has been asking about it?

Assistant—A lady who wants a Persian rug.

Shopkeeper—Why, of course, it's a Persian rug—tell her that it's very rare.

A Convenient Affliction.

"I'd do something for that cough if I were you, old man."

"That cough, my dear boy, is indispensable. Whenever a life insurance agent calls to see me I turn it on and he never stays longer than three minutes."—Boston Evening Transcript.

SOME CONSOLATION

"Am I the first man you ever kissed?"

"You're among the first."

About Troubles.

Troubles come,
Right well I know!
But remember
Troubles go.

In the Agrarian Bloc.

"What has been your previous business experience?"

"As field manager."

"For whom?"

"For Farmer Si Corntossel, just out side of town. I managed his field hands for him two summers hand running."—Farm Life.

Hard to Believe.

"The gentlemen of the jury groaned aloud when the fair plaintiff told how she had been pursued day and night by the defendant."

"I noticed that, but an elderly spinster on the jury sniffled."

"Naturally she'd be from Missouri."—Birmingham Age-Herald.

Authenticated.

"I never supposed that the stories of girls' enormous appetites for ice cream were true until the other night."

"Indeed! What convinced you?"

"The arithmetic. It distinctly says that one gal is equal to four quarts."

Keeping Down Expenses.

"I see King George is trying hard to keep within his $15,000,000 allowance."

"I know just what he is up against."

Considerate.

Mistress—Bridget, six people are coming for dinner tonight.

Cook—Will yez be able to cook for that many.—Life.

Negligible Qualities.

"Do you believe that spirits come back to this earth?"

"I don't see why they should do so," replied Senator Sorghum. "They don't need money and they haven't any votes."

That Settles It.

"I have bad news for you, Clarence."

"So?"

"Yes. I visited a fortune teller this afternoon, and she told me that I am going to marry a handsome man."

FARM STOCK

HORSE LIABLE TO SUNSTROKE

When Subjected to Heat or Fast Work Animals Sometimes Lose Consciousness and Fall.

In hot weather and when subjected to heat or fast work in the hot sun, horses sometimes lose consciousness and fall, or as it is commonly expressed, they have sunstroke.

Sunstroke differs from fits in the absence of excitement, the breathing is slow and often of a snoring character, the pulse is slow and indistinct. The harness should be removed and the horse placed in a comfortable position in the shade and propped up on his brisket. Cold water should be dashed on the head, or cracked ice in a bag be applied to the poll and the head elevated. If the horse is conscious enough to drink, small quantities of cool water should be offered frequently. Four ounces of whiskey may be given, diluted in cold water. The horse should be sponged

The Good Type of Covering to Protect Horses From Torture by Stable Fly.

with cool water and rubbed briskly all over till he is dry and rested. Plenty of fresh air should be allowed, without a draught.

The same treatment is to be given horses that have been overdriven in hot weather and are suffering from heat exhaustion.

CLEAN BATH BEST FOR HOGS

Animals Will Show Appreciation by Making Profitable Gains If Given Chance.

Given a chance hogs will keep themselves clean. While we have come to associate these animals and muddy wallows, the fact of the matter is that the hogs are usually compelled to live in places where they cannot avoid the mud. If the premises are so arranged that the swine can keep the bodies washed off and at the same time stay out of the mud they will respond in gains as an expression of their appreciation for the opportunity to have regular clean baths.

SUITABLE FEEDS FOR SWINE

Farmer Who Can Produce Large Crops of Barley, Kafir or Milo Should Raise Hogs.

Many persons living in a section where good corn crops cannot be raised in an average season hesitate to raise hogs even if they can produce large crops of barley, feterita, kafir or milo. For all practical purposes these feeds are just as good as corn for growing or fattening hogs, and anyone who can produce these crops can grow hogs.

PROFIT IN HOME GROWN FEED

Closer Feeder Sticks to His Own Crops Better Showing Will Be Stock Returns.

A good rule for all farmers to follow is to feed what they raise as much as possible. Some purchased feeds will usually be necessary, but the closer the feeder sticks to his own crops, the better showing will he make when he figures up his profits on a bunch of hogs or cattle.

HOW TO MAKE HOG-RAISING PAY

Sanitation Must Be Provided, Together With Suitable Feed and Pure Water.

Filthy, damp or dusty quarters, for hogs are not disease breeders, but are disease builders. You must provide sanitary quarters, good feed, plenty of pure water, and these with pure bred stock and constant care means a profit at almost any price.

Value of Protein.

Protein is the nutrient which makes growing animals grow, repairs an old animal's body and which largely produces the finger nails or hair in human, milk, meat, wool and horns in domesticated animals.

Protecting the Pig Crop.

Give pigs special care after they have received double treatment against cholera. Through lowered resistance at this time they may get sick.

IMPROVED ROADS

GOOD ROAD SAVES MILLIONS

Men With Tools Enabled to Reach Threatened Break in Levee and Stop Rising Waters.

(Prepared by the United States Department of Agriculture.)

A federal-aid road has just been completed in Arkansas which has already saved millions of dollars to the community in which it is built. Recently during high water in the Mississippi word came to Helena, Ark., that the levee at Old Town, 17 miles away, was about to break. The situation was critical. A few hours' delay and thousands of acres of rich farming land would be flooded, and possibly many lives lost. Helena was the only source of aid, and many men with tools and material were needed. Every available motor vehicle was pressed into service and over 600 men, properly equipped for the work, were in a short time speeding over the new road to save the levee. They arrived in the nick of time and by almost superhuman efforts dammed back the rising waters. Residents say that had it been necessary to make the trip over the old road the levee could not have been reached in time and that the workers would have needed boats rather than motor vehicles.

LOWER BIDS FOR ROAD WORK

Indications Are That Prices This Year Will Be Materially Reduced Over Last Season.

(Prepared by the United States Department of Agriculture.)

Early bids for the construction of federal-aid roads indicate that prices during the present season will be materially lower than last season, according to reports received by the bureau of public roads of the United States Department of Agriculture. While bids have not been received on any large volume of work, there is, however, enough to indicate a lower level of prices.

Grading has been bid at 20, 23½ and 30 cents a cubic yard in Missouri, Arkansas, and Minnesota, respectively, as compared with an average of 35 cents for the section in which these states are located in 1921.

Prices of reinforcing steel in place range around 6 cents as compared with

A Street in Kendallville, Ind., Before and After Being Improved.

the 1921 price of 8 or 9 cents and bridge steel at 4¾ cents against 7 to 8 cents.

A few bids, for the best grade of concrete, of about $17 a cubic yard have been received in sections where the 1921 price was about $25.

Prices bid for the construction of concrete roads per square yard are as follows: Ohio $1.52, Colorado $2.27, and Georgia $1.38, as compared with an average for the whole country during the period 1916-1920 of $2.57 a square yard.

CANVAS TO PROTECT ROADS

Seven Million Square Yards Being Distributed to Various State Highway Departments.

Seven million square yards of canvas duck received by the bureau of public roads, United States Department of Agriculture, as surplus war material, is now being distributed to state highway departments for use in road construction. A great quantity of the material will be used to protect concrete roads from the sun while they are being cured and to protect from rain cement piled ready for use on the roads. It will also be used as tents for road construction gangs, roofs for temporary storage houses and garages, and to cover road machinery.

Road Building Workers.

Persons engaged in road building work in the United States number 114,325. There are 80,000 federal, state, town and county highway officials, 7,000 road contractors, 2,000 bridge contractors, 15,000 civil and highway engineers, 10,000 automotive and chemical engineers, and 325 geologists.

Patrolled by Police.

More than 3,000 miles of highways in Connecticut are to be regularly patrolled by the state police.

NEW LIVE STOCK REPORT SERVICE

Plans Being Made to Give Monthly Changes in Situation on Farms of Country.

ALL DETAILS WILL BE GIVEN

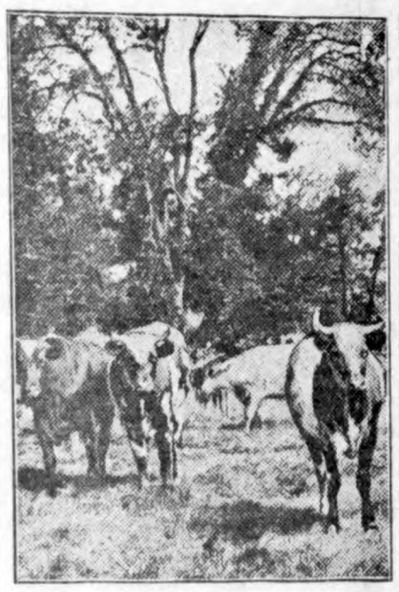
Careful Study Being Made of Possible Methods for Gathering and Distributing Information to Those Interested.

(Prepared by the United States Department of Agriculture.)

Plans for a nation-wide live stock reporting service showing the monthly changes in the live stock situation on farms are now being made by the United States Department of Agriculture, under the $70,000 congressional appropriation recently made for this work. The service will also include the forecasting and reporting of the important live stock movements.

Make-Up of Reports.

At recent conferences of statisticians and crop and live stock estimating ex-



A Man May Feel Independent If He Possesses a Nice Bunch of Cattle.

perts it was felt that the monthly reports of changes on the farm should include reports of births, deaths, losses, marketings, purchases, and animals bred, with periodical classifications of the numbers of animals on farms. This service will be an expansion of experimental work carried on by the division of crop and live stock estimates during the last three or four years. Monthly reports will be obtained from 70,000 to 100,000 farms, and state indexes of changes at least for the corn belt, and eastern and southern states will be developed. The range states on cattle and sheep will be covered by a series of semi-annual reports because of the difficulty of getting monthly reports from those states.

Information to Be Given.

The forecasting and reporting of the important live stock movements will be based upon the movement of feeder cattle and lambs from the range states to the corn belt feed lots, the movement from the feed lots to market, the movement into the eastern feed lots such as Lancaster, Pa., and the movement out, the forecasting and estimating of the yearly lamb and calf crop of the range states, and estimates of the feeder hog movement in the Middle West. A careful study is now being made of possible methods for gathering and reporting this information.

At conferences held to develop a live stock reporting program, representatives of farmers' organizations, co-operative live stock shipping associations, the packing establishments, and other live stock interests were present. Many large live stock producers' associations in the West have also indicated a desire to co-operate.

COUNTY AGENTS AID FARMER

Specialists in Many States Now Devote Full Time to Management Extension Work.

Twenty-four northern and western states now have 30 specialists to devote full time to farm management extension work. County agents in 895 counties report that they distributed 51,083 farm account books in 1921; 519 counties reported 18,448 books kept, and 444 reported that 8,454 farmers were assisted in summarizing their accounts. County agents in 237 counties report that 2,972 farmers made changes in their business as a result of keeping accounts. More than 800 farm-account schools, with an attendance of 20,000, were held in 1921, the United States Department of Agriculture reports.

SKUNKS WORRY BEEKEEPERS

Odoriferous Little Animals Coax Honey Gatherers Out at Night and Eat Them.

A report from Ohio received by the biological survey of the United States Department of Agriculture says that skunks are giving a great deal of trouble to beekeepers in that region. The skunks visit the hives at night and scratch on the outside till the bees come out. As soon as they appear the skunks eat them. The biological survey recommends that under such conditions the hives be fenced in with chicken wire at least three feet high.

PREVENT OUTBREAKS OF INJURIOUS PEST

Control Webworms in Corn by Cultural Methods.

After Crop Is Once Planted and Field Is Found to Be Infested There Is No Practicable Way of Getting Rid of Them.

(Prepared by the United States Department of Agriculture.)

Outbreaks of webworms in corn in the Middle Eastern states can be prevented only by cultural methods, according to the bureau of entomology of the United States Department of Agriculture. Unlike most of our destructive pests, the various species of webworms are all natives of America and have not been introduced from foreign lands.

Summer or very early fall plowing should be practiced. Plowing in late October or November has little effect because the worms are already in their winter webs under the surface of the ground. Land that has been in sod or pasture, or lain fallow and grown up to weeds and grass should be plowed in July or August, if it is intended to plant it to corn the following spring.

Grasslands of all kinds—meadows, pastures, or lawns—furnish the normal food of sod webworms, but they also gnaw young corn plants below the surface and deform them so as to prevent the production of grain. After the corn is once planted and the field is found to be infested there is no practicable method of getting rid of the worms; the only thing that can be done is to produce conditions that will permit the corn to grow in spite of them.

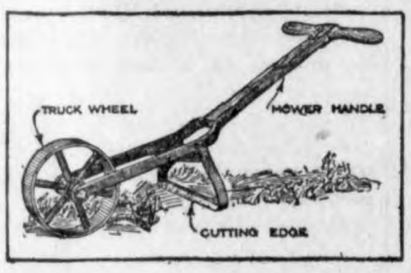
Disking in the spring, the application of fertilizer, and the sowing of sound seed are the chief preventive measures that will have any effect. Neither poisoning nor trapping has met with any success.

KEEP WEEDS OUT OF GARDEN

With Few Pieces of Flat Iron and an Old Wheel an Efficient Tool Can Be Made.

From a few pieces of flat iron, such as old buggy tires, and a wheel that can be taken from an old wheelbarrow or truck, it is possible to make an efficient weeder for keeping the home garden free from weeds.

The device is constructed, as indicated by the drawing, with a blade, parallel with the ground, which is pushed along just underneath the surface, cutting the roots of weeds and other plants outside the rows. Not



A Homemade Garden Weeder That Not Only Keeps Down the Weeds but Serves as a Cultivator to Break Up the Hard Crust Between the Rows.

only will this instrument keep down the weeds, but it also acts as a cultivator by breaking up the hard crust between the rows and conserving the moisture for useful vegetation.—C. L. Meller, Fargo, N. D., in Popular Mechanics Magazine.

GREEN MANURING AIDS SOIL

Really One of Oldest Methods—Crops for This Purpose Were Used by Ancients.

Green manuring—plowing under green crops—as a means of soil improvement, although it has been emphasized in recent years, can hardly be called a new discovery, says the United States Department of Agriculture. It is really one of the oldest methods. Crops for this purpose were used by the ancients, the Romans using lupines, which were sown in September and turned under in May for the benefit of the following crop.

In Germany the use of lupines began in the middle of the Nineteenth century and has proved an important factor in reclaiming the sandy lands of parts of Prussia. In England legumes and other plants are commonly used; in India and Japan the farmers gather green plants of many kinds, sometimes even cutting twigs from the trees and carrying them to the rice fields.

In the United States the use of special green-manure crops is much more general in the South than in the North. Under irrigation they play an important part in orchard culture in the West, but not under dry-farming conditions.

GREAT IMPORTANCE OF GRIT

Lack of Material Will Cause Indigestion and Impaired Health of Poultry Flock.

Many poultry raisers gradually begin to slight the importance of grit. Lack of grit means poor digestion and impaired health. Regular poultry grit should be kept before the fowls in boxes or hoppers at all times. In addition, a load of gravel near the chickens' home would improve the health and increase the egg yield on many a farm.

Horticultural Facts

SAMPLE APPLES BY WEIGHT

Object Is to Speed Up Movement of Fruit and Avoid Expense of Repiling.

(Prepared by the United States Department of Agriculture.)

Within recent years several fruit-shipping organizations have adopted a system of sampling apples by weight in determining grades and sizes of apples packed for each grower. With a view to organizing accounting records so that all unnecessary clerical work may be eliminated, the United States Department of Agriculture has devised new forms of accounting, which are now published in Department Bulletin 1006, Accounting Records for Sampling Apples by Weight.

The aim of sampling apples by weight is to speed up the movement of the fruit through the packing room, and to avoid the expense of repiling and checking which frequently arises in attempting to retain the identity of each grower's lot of loose fruit on the packing-house floor. A sample is selected from each lot of fruit received. This is graded and sized, and a record made of the weight of each grade and size in the sample. The percentage relation of the total weight of the sample to the total weight of the lot is then applied to ascertain the weight of the various grades and sizes that make up the lot, and the grower is given credit for the total weight, classified as to grades and sizes.

The new forms devised by the department reduce the clerical work of the sample-test clerk to minimum, providing computation tables showing at a glance the relation between the various features of the sample and those of the entire lot. Copies of the bulletin may be had free upon application to the department at Washington, D. C.

PICKING WITHOUT BRUISING

Arrangement Shown in Illustration Is Useful in Gathering Fruit to Avoid Injury.

For picking fruit without bruising it, in the home garden, or for exhibition purposes, the fruit-picking pole shown in the sketch is useful. A wire ring is fixed to the top of the pole, and the bag, suspended from it, is fastened to the pole at intervals. The

Fruit-Picking Pole With Gravity Delivery Chute.

fruit is removed by means of the ring and drops to the bottom of the chute, which is held closed by the hand. For picking large quantities of fruit a receptacle is carried by the picker.—Mrs. Ella L. Lamb, Mason, Mich., in Popular Mechanics Magazine.

SPRAYING FOR GOOD APPLES

Absolutely Necessary for Select Fruit—Pruning Means Cutting Out Small Limbs.

Most of the home orchards need pruning and they need spraying, but they need spraying lots the worst. You can raise apples without pruning, but you can't raise good apples without spraying. Unless you spray, you get mincemeat—part apples and part worm—which is all right if one is built for it.

A tree can't bear any more fruit than there is bearing surface and the fellow who gouges out big limbs is the fellow who greatly reduces the apple crop. Good pruning does not always mean a big brush pile; it more frequently means cutting off small limbs here and there that compete for sunlight. Pruning will make more large apples.

PEACHES PRUNED IN SUMMER

To Prevent Crowding, Enough of New Shoots Should Be Rubbed Off—Pinch Back Tops.

It pays to summer prune peaches. Rub off enough new shoots throughout the top of the trees so that they will not become crowded, and pinch back the tops of those shoots that are growing too rapidly.

Time to Apply Nitrates.

Apply nitrates to the orchard just as growth starts and before any pink of blossom can be seen; that's the best time.

Mulch Saves Trees.

To prevent newly-set fruit trees from dying their first summer, place around them a heavy mulch of stable manure, straw or pine needles.

Pays to Plant Trees.

It pays to plant trees provided you plant good ones.

Home Town Helps

GOOD WORK FOR SANITATION

Public-Spirited Nevada Citizens Have Shown What May Be Done Through Concerted Action.

(Prepared by the United States Department of Agriculture.)

Sanitation has an important place on the program of work for 1922 in six communities in Clark and Lincoln counties, Nevada, reports the state leader of home demonstration agents, working co-operatively with the United States Department of Agriculture and the State Agricultural college. Securing and enforcing definite rules in regard to clean yards, lots or houses, spring water, ditches and streets is one of the principal goals.

Four of these communities have no town organization, the county government regulating local affairs. Under the direction of home demonstration workers the women are taking steps to form town organizations in order to have authority to make and enforce ordinances for health, and to make local improvements of various kinds. As there is no sewage system in these communities, the water is very unwholesome and a menace to health. It is brought long distances from springs through unclean, open ditches.

The people of Mesquite community in Clark county held their second clean-up day last spring. As a result three miles of ditch were cleaned, three culverts made, the main channel of the town ditch changed, a new head-gate built, weeds grubbed out, rubbish cleaned up, and mud holes filled and leveled. A number of girls of the community agreed to take turns pouring kerosene on all ponds to kill mosquito eggs and wrigglers, thus helping to rid the community of one nuisance. Each person worked in his own neighborhood and had his dinner at home. More was accomplished than if a community dinner had been served.

WARNS DRIVERS OF AUTOS

Telltale Light on Lamp Post Has Been Found Effective in Prevention of Accidents.

To prevent collisions between fast-moving automobiles and dark lamp-posts on winding roads, C. G. Beckwith of Cleveland has invented a boulevard standard with bull's-eyes of col-

Bull's-eye Lights Flash a Warning.

ored glass about one third of the way up the post.

When the main light is burning the telltale lamp behind the bull's-eye gives only a faint glow, but if the main lamp fails, the telltale lamp is automatically subjected to greater voltage and shines brightly.—Popular Science Monthly.

Plan to Beautify City.

"Kenosha beautiful" is said to be the goal of the new city manager form of government in that Wisconsin city. One of the first acts was to adopt a resolution for the hiring of a city planner to formulate a course of development which will lead to a more beautiful city. The county board has agreed to co-operate, passing a motion that the building of the new court house would be done in conformance with any city plan adopted by the new council.

Source of Invisible Rays Found.

It was Professor Blondlot of the French Academy of Sciences who discovered that invisible rays capable of penetrating solid substances are given off from the incandescent mantles of the Welsbach light, says the Washington Star. Later he announced the discovery of similar radiations from an ordinary Argand burner and from a sheet of incandescent silver. The rays from polished silver are polarized, but when the silver is covered with lampblack the polarization disappears.

MOSQUITO - PESTERED TRAMPS IN CAMP STIR UP EXCITEMENT

Reno, Nev.,— A dozen "Weary Willies and Dusty Rhodes" unwittingly played havoc with city, county and state official life here last night.

Camping near a ditch on the outskirts of Sparks, railray division point five miles from here, the men were attacked by mosiquitoes to such an extent that they tied handkerchiefs over their faces for protection.

Passing autoists saw in the masked group the potentiality of some high misdemeanor against the peace and diginity of the commonwealth of Nevada, and from Governor Boyle down through state, county and city officialdom to the lowly constable there was a rapid charge made by automobile and motorcycle on the camp of mystery.

It is impossible to say whetrer the consternation of the innocent causes of the excitement was greater than the amusement evidenced by the officers when they ascertained the reasons for their sudden summons.

A car is often judged by its rattles, and so are men.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
ss.
Hancock County,

TO ALL WHOM IT MAY CONCERN:

YOU ARE HEREBY NOTIFYED, That an instrument of writing purporting to be the last Will and Testament of JOHN ALBERS, deceased, dated Oct. 19, 1912, having been this day filed, opened and read, Monday the 14th day of August, 1922 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 10:00 o'clock A. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, July 11th, 1922.

B. E. ERWIN,
Clerk of District Court.
(Publish July 13-20-27, 1922.)

A lion in business is often a bear at home.

The tongue is a good weapon with which to commit business suicide.

Why the Farmer Chooses this Western Life Policy

EIGHT out of every nine policy-holders of The Western Life Insurance Company are farmers. They have protected their families, their estates and themselves in old age—with one of our

FARMER'S SPECIAL

Western Life Insurance Company OF DES MOINES, IOWA "Out of the West Comes the Best"

Western Life Policy with special protection to the farmer and his family has made this the popular policy with the farmers of Iowa. Is your family protected? If you were suddenly called, would there be any ready cash for them? The FARMER'S SPECIAL is "old line" life insurance, just as good as money in the bank—and you get these benefits:

Double insurance to your family if you meet with accidental death.

Your annual premiums are paid by this company should you become permanently disabled.

Your premiums grow smaller each year—when you apply the guaranteed cash coupons which we give you every year after the first.

Your policy is fully paid up after twenty years.

After you have made 15 deposits the last five annual premiums are paid by this company when you leave the guaranteed cash coupons with us.

This FARMER'S SPECIAL Policy has other benefits for you such as monthly endowments after you reach the age of 60 years—interest paid you on premiums and other advantages which we will gladly explain to you upon request.

Get a Western Life Policy—it costs you less each succeeding year you carry it—the FARMER'S SPECIAL gives you the extra benefits you would not get in ordinary old line insurance. The longer you wait, the higher the rate. Mail the coupon today for our interestine booklet "One Farmer's Experiencg with Life Insurance."

Miss Viola Rossman left for her home at Dows after spending a few days in Klemme visiting with Mrs. Paul Stille and other friends.

The bowery dance last night was well attended and the music was good. All seemed to have a good time.

Chris Jacobs and Mrs. Jacob's mother. Mrs. Rolf, of Garner, were Klemme visitors last night.

Mr. and Mrs. Gimer left Monday for their home at Abbott, Iowa, after spending a week visiting at the home of their son, A. D. Gimer and family.

From coast to coast Tanlac is known and honored and millions have taken it and pronounced it the greatest medicine of all times. E. S. D. Kahrs. adv

---

Mr. and Mrs. George Merten and daughter, of Garner, were visiting at the Arthur Wellemeyer home this week Tuesday.

Jack Wellemeyer and LuVerne Smith now occupy the high stool behind the grocery counter at Wellemeyer's as Bert Mathews is taking his vacation.

Miss Minnie Lenz, assistant at the local post-office is taking her summer vacation this week. Miss Mable Waterman is taking her place behind the stamp window.

Mrs. Henry Schuldt and Mrs. Dick Bamman and little son returned last Saturday from Fort Dodge where they had been visiting.

Mr. and Mrs. Mark Boyle and Mr. and Mrs. Will Rhimer and daughter Lucille, of Whittemore, Iowa, were visiting at the Rev. Gedye home here yesterday.

Mrs. Clarence Wiles went to Boone, Iowa, last Saturday for a few days visit at the Clint Mann home. Mrs. Wiles is a sister of Mr. Mann.

Al Emerson and "Stub" Lewis left Monday morning for Good Thunder and other Minnesota points to spend a few days fishing. Wonderful will be the tales they will tell about how that biggest one broke the line, etc.

Miss Clella McCullough of Garner came Saturday evening for a visit at the home of her brother, G. P. McCullough. Miss McCullough assists Dr. Morrison in the dental office at Garner.

Ye Editor and wife and Mr. and Mrs. John Jorgenson who were here from Winner. S. D. drove over to Clear Lake last Friday to try out the fishing. Same old luck—left most of them in the lake, although our big brother did bring home a five pound pickerel which tasted mighty good.

Mr. and Mrs. Chris Gram are taking their summer vacation and left Saturday morning in their car for points in South Dakota and Minnesota. They expect to be gone for about a week. Harry Buss is working in the garage during Chris' absence.

Rev. Bergmann and daughter Edna, Miss Geneva Schuldt, Earl Josten and Fred Arnold, left Tuesday morning for Lake Okoboji to attend the Epworth League Convention which is in session there this week.

About ten young married couples of Klemme had a weiner roast out at Lemke's sand pit west of town last Thursday evening. Pickles, "hot dog" sandwiches and hot coffee were on the bill of fare. All had a fine time and decided to have a beef-steak roast at an early date.

R. A. Jorgenson and family accompanied by Mr. and Mrs. J. Jorgenson, of Garner and Mr. and Mrs. J. C. Jorgenson of Winner, S. D., drove up to Pilot Mound last Sunday to see what is claimed to be the highest point in the state of Iowa. Nice long walk up hill for a fat man and never again for us.

Art Wellemeyer evidently thinks that the natives here are a lazy lot of loafers as he has just constructed a half dozen benches for them to set on and swap stories. Besides being useful as a place to rest they also carry his advertisement in bold letters.

J. C. Jorgenson, who has been visiting in this vicinity for the past two weeks left for his home at Winner, South Dakota Monday. He was accompanied by his wife who will visit at Norfolk, Nebr., and Messrs. Chris Shoemaker, of Garner and Sam Rassmussen of Forest City who are going along to see J. C.'s ranch.

Bert Mathews is taking his summer vacation this week and is missed from his usual position behind the grocery counter at the Wellemeyer store. Bert left Monday night for Oklahoma where he has a piece of land adjacent to land with a producing oil well. Bert may yet become a famous oil king. He bought the land a number of years ago, before it was even thought to be in the oil district.

The preacher and the devil have both bought new pants. That is a queer coincident but it is true. Our office devil and Preacher Gedye were both fitted out in new pants the other day and we account for it in the following manner. The preacher got too close to our devil and his pants were scorched, requiring new ones; our office devil must have worn his out loafing on our high stool!

Coal!

So far we have only been able t secure one carload of

Chestnut Hard Coal

Buy your coal from a dealer wh keeps you supplied- We have bee in the business for years and so ca get coal during the crisis now.

RADING ON WIL-SON HIGHWAY IS NOW COMPLETED

OAD CAN NOW BE TRAVELED OVER WITHOUT DETOUR

ork Progressing On New Bridge

Grading on the Wilson Highway uth of Klemme was completed the tter part of last week and quite a mber of cars are now going over e new grade. The detour sign is ll up at this end of the road as rkmen are only about half thro filding the new river bridge.

The new grade will make a very e road, and especially after it has en graveled as the Board intends do in a very hsort time, or as soon bids are received for this work, to let on August 8.

The drainage work along the High y is also progressing rapidly and ould be completed in a few more eeks.

The bridge on the main highway ur miles north of Klemme was all ished the fore part of the week d it is no longer necessary to de-ur north from the church.

The highway between Klemme d Garner will be graded up this ll and the county are asking for ds to be let on August 8. It is mored that this stretch will be rd surfaced next year, as the pre-minary work will be finished this ar.

Hancock County will have some ry fine roads when all this work s been completed.

METHODIST EPISCOPAL CHURCH
Arthur B. Gedye, Pastor

orning Worship at 10:00 a. m.
nday School at 11:00 a. m.
ening Worship at 8:00 p. m.

Sermons were well attended last nday.

Dr. Bushnell Superintendent eached a fine serman on Sunday ght to a appreciative crowd.

The pastor conducted the services the Belmond M. E. church last nday night.

Visitors to our town will always nd a cordial welcome at our urch. It is hoped that residents Klemme and vicinity will make visit and find a church home with . You are invited to each and ery service.

Rev. A. B. Gedye, Pastor

FIRST M. E. CHURCH

rvices are as follows:
orning sermon at 10:00 A. M.
pworth League at 7:30 o'clock
ening sermon at 8:15 o'clock
orus practice Tuesday evening at 00 sharp.

Mid week prayer service at the me of Rev. Haefner on Thursday ening, August 3rd.

Sunday school board meeting on iday evening, Aug. 4th at the par-nage.

Our delegates to the E. L. Instit-te held at the Methodist Camp-ound at Okoboji lake last week re-rned home Monday afternoon. ey surely had a grand time, and w are anxious to "unload" some the valuable and so vital instruct-ns they received. They will give eir reports on Sunday evening very Eprothian should hear these eports and as many others as can me will be amply awarded for eir presence. Come and hear what e young people have to say about e greatest E. L. Institute in Iowa. e enrollment this year was larger an ever before, being 613—the ogram was the best ever and the structors the most capable in their e.

Dr. Zinn had quite a lot of com-ny Sunday when the following rel-tives called on him for a visit. His other William and daughter, Miss rtia, of Hanover, Ontario, Cana-accompanied Dr. Edgar Zinn and fe and daughter of Goldfield here their car. Dr. Edgar is a son of illiam Zinn. Mr. William Zinn re-ained in town for a few days visit th his brother and the balance of e party returned to Goldfield in e evening.

PLAN TO SAVE RARE SPECIMENS OF THE JUNIPER

Charles City, Ia.—There is a patch of creeping juniper. sometimes called "creeping cedar" in Floyd county, near Rockford, that is the only creeping juniper in Iowa and according to members of the faculty of the botanical department of the university of Chicago, who have seen specimens from here.

It is a northern plant found Wisconsin and the other northern states, but none is found within a long distance from this small patch. It is a dwarf variety and of a trailing growth, flat on the ground, and attains a height of less than a foot, which recalls the strangly degenerate evergreens that grow in the intense cold of artic regions.

This strange patch of the rare creeping juniper has aroused the deepest interest among the scientists of this state and during the State Conservation association held here a number of scientists made a special trip to see it and Dr. L. H. Pammel of the botanical department of college at Ames and chairmen of the State Conservation board, expressed a determination to secure the setting aside of this small locality for a state park and have adeqate protection given the so rare plant specimen.

ABOUT COAL

VINTON, July, 22.—As the result of the coal shortage, due to the strike situation, the city of Vinton has curtailed water and light service unil the coal situation loosens up a little. The municipal water and light plant is closed down at 11 P. M. and the fires are banked until 5 A. M. and this makes a saving of from two to three tons of coal.

The city has about a thirty-day supply of coal on hand. The only way to get more is to go to the open market and pay what is asked.. Coal that was costing around $7 a ton before the strike is now quoted at $10 and nothing sure about it at that With the amount of coal used at the city plant, a price of $10 per ton runs into money quite fast. Evening Gazette. July 22nd.

The last coal bill to the Iowa Railway and light Co. from Kentucky non-union fields where all coal is now obained. costs $6.45 with a freight rate of $3.07 making a cost of $9.52 delivered.

Mr. O. C. Ingersall coal purchasing agent for the Iowa Falls Electric Co. is now in the Kentucky fields, and we have just received a telephone call from him that todays bid for coal at the mine is $11 per ton, and we wish to inform the patrons that we have contracted for enough coal to keep us going coal or no coal strike and whether it be $10 a ton or any old price. The only hitch may be that our coal will be stolen by the railroads or that the railway strike may stop transportation.

We started into this coal strike with 5 months supply on hand and will use every effort to give all our partons service all the time no matter what the cost may be.

IOWA FALLS ELECTRIC CO.,
H. F. Kellogg, Mgr.

THE SIGNERS

(2) Stephan Hopkins ..

Stephan Hopkins, signer of the declaration of Independence from Rhode Island, was born at Scituate, in that state, in 1707. After a country school education. he received private instruction in mathematics and surveying. He was a successfarmer until 1742, when he sold his farm and removed to Providence where he built a beautiful mansion, which he occupied until his death. He held office most of his life, besides engaging in farming, shipping, manufacturing and surveying. In 1757 he commanded a volunteer com pony composed of prominent men of his town who offered their services in the French war; was elected to the general assembly in 1732; elected chief justice of the court of common pleas in 1739; elected governor of the state in 1755; acted with the commisioners assembled at Albany in 1754 in devising means to cement and strengthen the union of the colonies; in '65 was chairman of a committee at Providence to draft instructions to the general assembly on the stamp act; was a mem ber of the General Congress at Philadelphia in 1774, 1775, and 1776; was a chancelor of Brown Univercity had a religious inclination toward the society of friends. He died in Providence July 13, 1785.

THRESHING BEGAN IN THIS VICINITY MONDAY MORNING

WHISTLES BLEW EARLY MONDAY ON MANY OUTFITS

Good Yield Of Oats Reported Here

Threshing season in this vicinity officially began Monday morning and many whistles were heard from the various gangs of threshing machines scattered about the country.

We have hkeard of no outfits being hung up on account of the coal shortage, as local dealers were very fortunate in being able to get enough coal to supply the threshers. There are some machines being run with tractors, and of course they do not worry about the coal shortage.

Reports are that the oats is averaging around forty buushels to the acre. Some of course runs much better, while some fields run less, but this vicinity has a good yield of small grain over the territory.

NOTICE TO CONTRACTORS

Sealed bids will be received at the office of the County Auditor, Garner, Iowa, until 1:00 o'clock P. M., on August 8, 1922, for gravel surfacing and incidental work on the primary road from Klemme south to the County line, and the Wilson Highway North of Garner, as shown on the plans for Section A and B. Federal Aid Project No. 139. Bids will be opened at the above office promptly after the time for receiving same has closed.

A certified check, unregistered Liberty Bonds, or bidder's bond, amounting to five (5%) per cent of bid, made payable to the County Auditor, shall be filed with each bid, which in case of bidder receiving the award,, should he fail to execute a contract and file a bond within ten (10) days after the acceptance of his bid, shall be retained by the county as liquidated damages.

The proposed work consists of gravel surfacing 16.219 miles requiring 25,301 cu. yd. of gravel which will be obtained from local pits.

Plans and specifications for the work may be seen and may be secured at the above office or at the office of the county engineer, Garner, Iowa, or at the office of the State Highway Commission, at Ames Iowa. The County reserves the right to waive all technicalities and to reject any or all bids. All contracts awarded for this work usbject to the approval of the State Highway Commission before becoming effective as contracts.

July 27, 1922.
CHRIS JACOBS,
County Auditor.
(SEAL) 2w

NOTICE TO CONTRACTORS

Sealed bids will be received at the office of the County Auditor, Garner, Iowa, until 1:00 o'clock P. M., on August 8, 1922, for grading, and incidental work on the primary road from Garner south to Klemme as shown on the plans for Section A., Fed. Aid Proj. No. 139. Bids will be opened at the above office promptly after the time for receiving same has closed.

A certified check, unregistered Liberty Bonds, or bidder's bond, amounting to five (5%) per cent of bid, made payable to the county auditor, shall be filed with each bid, which in case of bidder receiving the award, should he fail to execute a conrtact and file a bond within ten (10) days after the acceptance of his bid, shall be retained by the county as liquidated damages.

The proposed work consists of building to established grade approximately 6.37 miles requiring 62,449 cu. yd. of earth excavation.

Plans and specifications for the work may be seen and may be secured at the above office or at the office of the county engineer, Garner, Iowa, or at the office of the State Highway Commission, at Ames, Iowa. The County reserves the right to waive all technicalities and to reject any or all bids. All contracts awarded for this work are subject to the approval of the State Highway Commission before becoming effective as contracts.

July 27, 1922.
CHRIS JACOBS,
County Auditor.

PAVING STARTED IN HANCOCK'S WEST END

BRITT, July22.—The Henkel Construction Co. gang working out of Hutchins, completed the mile of paving from the railway transfer east of Britt into town Tuesday and moved their machinery to the west end of the road to the Kossuth county line. Minder & Cain, grading contractors, had the roadbed ready for the subgraders and the form laying gang was at work soon after their material was on the ground. Mr Henkel has been using 14 Ford trucks but hopes to get a half dozen or more as the haul from Hutchins is a long one over dirt road all the way.

Four miles of paving has been completed from Duncan east, making two-thirds of the way from Duncan to Garner. The pavers are moving along well on that end.

Altogether the Henkels have completed about a third of their contract across the country. With favorable conditions, as they have been continuing they will be able to complete the paving across the country well within the time limit set in the contract.

FOREST CITY MAN ELECTROCUTED IN FOREST CITY SHOP

BUFFALO CENTER, July 22—Tom Jurgen was electrocuted while working on an automobile in the Gilbert garage at Forest City. He was alone at the time in the rear of the garage and when the shock came he made a noise that was heard by those in the office. When help reached him he was holding an extension light cord in his hand and standing in a pool of water with 110 volts of electhicity going through his body.

The current was cut off immediatly, but the shock was so great that he died in a few minutes afterwards. He was 25 years old and married having come to Buffalo Center recently from the central part of the state.

A coroners jury held an inquest and returned a verdict that he came to his death from electrocution.

Mrs. F. H. Ridder and daughters, Neota, and Mrs. S. A. Harvey and baby Enid, were Garner visitors Saturday afternoon.

Miss Gertrude Walters returned to her home at Owatonna, Minnesota Tuesday. after a few days visit at the G. P. McCullough home.

Bert Mathews returned Tuesday from Oklahoma where he went about a week ago to spend his vacation.

This vicinity was visited by a nice rain Tuesday which will be a great help to the corn but delayed the threshing for a day.

Mr. and Mrs. Wm. Bachman and daughter, Lela. left the first of the week for Hartley, Iowa, for a few days visit. They are making the trip in their car.

Mr. and Mrs. Chris Gram returned Sunday evening from their trip that took them through a part of Minnesota and South Dakota, visiting relatives and friends. Chris also enjoyed fishing in northern Minnesota. He and his wife drove over a thousand miles and still had Klemme air in all their tires when they arrived here Sunday evening.

WHICH ONE IS A LIAR?

Editors are bound to get the truth tangled once in a while as the two following clippings from the Garner papers will show. Now which is which here and who is the Liar — Ted Tierney or Frank Clark? Read the two items and solve the question:

Signal Says Its An Office

A new office room is being fitted up in the northwest corner of the Court House basement. Whether it will be used by the engineers or the abstract offices will bemoved into it we do not know. It is a nice office and will be a good place for whoever uses it. —Signal.

Leader Says Its A Coal Bin

The court house basement, or part of it lying under the office of the Clerk of the Court, has been remodeled, and will be used for a coal bin. Added room was needed for coal storage. The way it has been when a year's supply of fuel was installed in the fall, it made Lewis Henschen's office quarters a trifle cramped. —Leader

Now after reading those two clippings its as clear as mud, what?

FACTS CONCERNING THE POSTAL SERVICE OF THE U. S.

NEW SPECIAL DELIVERY STAMP STRICTLY UP-TO DATE

A Few Things You May Not Know

WASHINGTON — The design on the special delivery stamp has been brought up-to-date. To be in keeping with the progress of the service, the special delivery boy on the stamp like his fellow workers has a motorcycle to replace his bicycle.

The new issue went on sale at the Philatelic Stamp Agency of the department on July 12 for stamp collectors and at Washington City Postoffice for the public. The new stamp will be printed in blue ink of slightly lighter shade than used in the present stamp. It contains within a simple border, a picture of the front of the colonial house illustrating the actual delivery of a special delivery letter. The bicycle used as a means of transportation in the old stamp is superceded by a motorcycle representing more prompt and efficient service.

Third Assistant Postmaster General Glover under whose supervision postage stamps are designed, manufactured and issued, states that the new model stamps probably will not be issued to postmasters throughout the country for placing on sale for postage purposes until the manufactured stock of the old design is exhausted.

U. S. POSTOFFICE DEPARTMENT IS MAMMOTH BUSINESS CONCERN

WASHINGTON. Advertisements for bids for a year's supplies for the huge postal industry have just been given out by the Postoffice department.

During the next year the Postoffice department estimate it will use approximately 300 tons of stationery and typewriting paper alone. More than 3,500,000 carbon papers totaling 347 square miles will be ordered. For card index requirement the modest number of 8,622.000 cards will be needed.

To write on all this vast amount of stationery and to fill the bottles in postoffice lobbies from New York to San Fransisco, 59,400 quarts of ink are required. Despite this ink reservoir the Department is placing orders for 243,000 rubber stamps.

Other large orders are 46,800,000 tags, 90,000,000 wire clips and 15,1 500 pounds of rubber bands.

Among the interesting items are bees wax, needles and mops. Flags do not last forever but they must fly over the government postoffices, so 2,500 will be purchased to replace those tattered by the wind.

Scout Corner

Monday night the Boy Scouts were entertained to ice cream and cake at the home of John Fuller. We went out in cars furnished by scouts Elder and Gimer. The evening was spent in playing games. We were ably assisted by Mr. Fuller and we hope he may become a canidate for scout honors. We think he enjoyed the games and ice cream as much as we did.

Games and stunts were Pull up, Break Grip, Swat 'em, Frog fight. Tug of war, etc.

We surely had a good time and present our thanks to John and Mr. and Mrs. Fuller for a very happy time.

Next Scout meeting will be a regular at headquarters, on Monday night at 8 P. M. prompt.

Scouts Elder and Wellemeyer have reveived their second class badges.

The Scoutmaster has just been granted by headquarters, his ten years service badge and stripes.

A. B. Gedye, Scoutmaster.

LACKED PROMPTNESS

"The man who wins," she said "is the man who is prompt in embracing an opportunity.

"Well," he whispered after he had slipped his arm around her, "how do I strike you as a winner?"

"Only fair," she answered. "This could have happened a month ago.—Boston Transcript.

UNSUCCESSFUL ATTEMPT TO ROB BANK

Yeggs made an unsuccessful attempt to rob the bank of Holmes early Saturday morning, gaining entrance by prying open a back window. They blew the combination lock on the vault door, and twisted off the handle in an attempt to work the bolts that fasten the door. They were not successful in this as the door was provided with a Dillion lock inside, which completely set the bolts as soon as the combination lock was broken. Nothing else was disturbed in the building, not even a revolver which was in a pigeon hole in the desk. The burglars left some of their tools which evidently had been stolen from the section house All wires leading in town were cut, including the cable which enters the Rock Island depot. No clew as to who the bandits were has been discovered. Kanawha Reporter.

CHARGE GYPIES WITH KIDNAPING

Iowa Police Asked by Illinois to Stop Caravan

Cedar Rapids, Ia., July 24.—Police in towns along the Lincoln highway have been asked to keep watch for a band of gypsies, traveling in an auto truck. who are supposed to have stolen James Stanley, 5 years old from Aurora, Ill., last Friday.

The Aurora chief wired today that the gypsies were bound for Des Moines by the Lincoln Highway.

The gypsie band having a child suiting the description of the missingboy passed through here late yesterday.

NEWS OF EPWROTH LEAGUE

Four members of the local chapter, Geneva Schuldt, Edna Bergman, Fred Arnold and Earl Josten, attended the Fifth Annual Epworth League Institute at Lake Okoboji last week. Rev. W. C. Bergmann furnished the fliver and accompanied them. One wonderful week was spent in God's great out of doors, but wait; rest assured that you will hear all about it soon. Those who did not attend cannot realize what they missed by not being there.

Our new cordial welcome Topic Cards have arrived, and every member of the League will receive one. They're dandies. Come and get yours Sunday evening. The Topic is to be "Choosing the Line or Greatest Resistance." For reference, please read Daniel 1:: 8—21 before the meeting is held.—Earl Josten.

GOODELL NEWS ITEMS

The Ed Hemingway family were visiting relatives at Primgar, Thursday, Friday, and Saturday.

Pearl Engesth is visiting relatives at Rake this week.

Mrs J. J. Cook entertained the ladies of the north Avery Community Club last Wednesday afternoon at her home. The time was spent in making clothing for the Council Bluffs Orphan children. Those who contributed work are as follows: Mrs. H. Marshall, Mrs. Tom Nelson, Miss Wilson, Mrs J. Griggs, Mrs. W. L. Sherwood and Mrs. Marshall.

Nearly everyone is done harvesting now, and is thinking about Threshing.

John Zook and Frank McNutt, of Belmond, were visiting with Marion Elder Sunday.

Mr.and Mrs. Fred Ridder, Neota, Mrs. Sam Harvey and baby Enid, left this morning in their car for Minneapolis, and other Minnesota points where they will visit relatives and friends. They expect to be gone for a couple of weeks.

Small boy—"Say dad, what is a bigamist?".
Dad—"One who makes the same mistake twice."

Don't Fall for Spanish Swindle

Americans Have Quit Going to Spain to Rescue Wealthy Imprisoned Princesses.

GERMANS ARE NOW VICTIMS

Impostors Who Market Adventures to Credulous Investors Give Their Princesses Names of Famous Women Long Dead.

Granada, Spain.—Americans have quit coming to Spain in search of the beautiful and wealthy princesses imprisoned in a dark, damp tower by a greedy uncle who is anxious to annex her fortune.

The historic old Spanish swindle apparently has gone out of fashion in the United States, but it is still in vogue in other parts of the world. Germany has recently supplied quite a crop of kind-hearted gentlemen who advanced money for the release of the dark-eyed Spanish beauty who was suffering in a rat-infested cell and slowly dying on a diet of bread and water while the bats hovered about her head and added to the terrors of her solitary confinement.

Beauties in Granada.

Granada has always been a popular center for the men who have contributed to the relief of imprisoned beauties. Washington Irving and scores of lesser writers have credited Granada with having more beautiful women than any other city in the world.

The legend of the Rose of the Alhambra and the stories of the three beautiful princesses Zayda, Zorayda and Zorahayda, hover about the Alhambra and make it the natural refuge for disappointed investors in distressed beauty.

So it is not strange that searchers for princesses should come to Granada after having sought vainly for mythical castles in mythical mountains. Most of the modern Spanish princesses are being held captives in castles by the sea. Castles by the sea are so much damper, and then it is much more romantic for rescue parties to approach the rock coast in ships and wave to the imprisoned princess, who will promptly tear her clothing to bits and make a rope with which she will lower herself from the gloomy tower.

Many of the impostors who are marketing adventure to credulous investors give their princesses the names of famous women who have been dead for centuries. Moraymah and Aishah, queens of the Moorish regime, who have been dead for over 400 years, and many other celebrities of history and legend have lent their names to princesses supposed to be in distress.

Visitors Are Warned.

Hotel keepers in Granada have become skilled in detecting visitors who are searching for imprisoned beauties. They usually make very guarded inquiries and seldom admit they have been duped. Frequently they inquire for gypsy fortune tellers, or astrologers, who probably charge well for their services.

Letters concerning the distressed princesses are usually marked strictly confidential, and instructions are given that nothing must be said to anyone lest the life of the princess be endangered. Most of the dupes are too much ashamed of their plight to confess openly that they have been gulled.

Hair Saves Woman's Life.

Pottstown, Pa.—Although severely injured when she fell from a second story window while reaching for a screen the other day, Mrs. Clara Keim owes her escape from probable death to her long hair. She landed on her head on a cement walk, but her hair was so arranged as to form a cushion which broke the force of the contact. She was unconscious when found and taken to a hospital.

GIVES AUSTRALIA TIME

Radio's latest is making possible the exchange of time signals between the U. S. Naval observatory, Washington, and Australia, nearly half-way around the world. Paul Sollenberger of the observatory is shown with the radio set and clock used for this purpose. Time for the United States originates in this observatory and is flashed by wireless and railroad telegraph to all portions of the country.

Jean Parmentier, French financial representative. 2—Elks, in convention at Atlantic City, marching to their morning dip. 3—Wounded republican and Father Dominic, a rebel leader, captured by Free State troops in the battle of Dublin.

Volcanoes Our Best Friends

Geologist Says Without Them We Would Have No Oceans or Carbon Dioxide.

KATMAI ERUPTION DESCRIBED

Most Tremendous Volcanic Explosion of History Passed Unnoticed Because It Was So Far From Centers of Civilization.

Washington.—It might be a surprise to many to be told that the fire-spitting, lava-spouting, earth-rocking volcano is one of mankind's best friends rather than his arch enemy, but such is the surprising declaration which was explained to the conference on geography of the National Education association in Boston recently.

The most tremendous volcanic eruption of history, that of Mount Katmai in Alaska in 1912, was described in this connection by Dr. Robert F. Griggs, leader of several parties sent to the scene of the cataclysm by the National Geographic society, and who discovered the valley of Ten Thousand Smokes, Katmai's neighbor wonder of nature.

Mankind's debt to the volcano has been more fully recognized by results of recent researches, says a bulletin of the society describing the unheaval. Without volcanoes, it is now believed, there would be no oceans, and to volcanoes we are indebted for carbon dioxide, without which human life could not exist.

Katmai Explosion Unnoticed.

The explosion of Katmai, the conference was told, was unnoticed because it was so far from the centers of civilization. Had the eruption occurred near New York city, the bulletin declares, the suphurous fumes would have polluted the air everywhere east of the Rocky mountains; the noise would have reverberated like an artillery duel across the central states. The lower Hudson itself would have been turned into a gigantic tomb.

However, due to the lack of population in that far region, there was no loss of life, and the eruption provides scientists and geographers now one of their greatest opportunities to study the phenomenon of volcanic action.

Though generally unaware of the eruption until long after, every inhabitant of the country, and almost of the world, felt its effects, one of which was the cold damp summer of 1912. This was caused by the interception of sunlight by the long-hanging dust cloud in the upper air. Even in cloudless Sahara, it was declared, the sky was overcast.

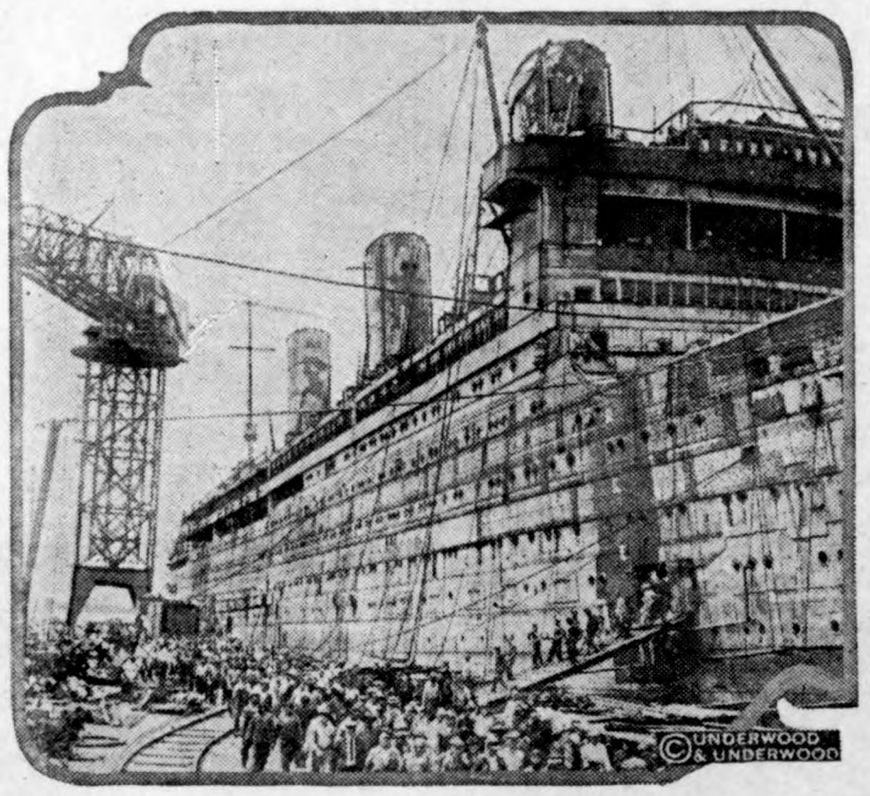
Repeat Ice Age.

A succession of such mighty explosions could plunge the earth into another ice age, it is believed.

An area around Katmai, larger than the state of Delaware, was covered that summer by more than a foot of volcanic ash which was enough to destroy all but the hardiest of vegetation. When the explosion occurred two cubic miles of material were blown off the top of the mountain, and the present whereabouts of the mountain top is still a mystery to scientists.

A Japanese scientist claims he has made synthetic petroleum out of fish oil and clay.

Thousands Working on the Leviathan



The huge Leviathan, lying in the shipyards at Newport News, Va., has 2,200 men hard at work refitting the ship for passenger service. The Leviathan when completed in June, 1923, will be the largest American vessel afloat, being 950 feet long and weighing 54,282 gross tons.

Negotiations to End Railway Strike Run Against Seniority Snag—France Consents to Moratorium for Germany—Conference at The Hague Ends in Failure.

By EDWARD W. PICKARD

PRESIDENT HARDING'S last plan for the peaceful termination of the coal strike failed of acceptance by the miners and by a considerable number of the operators. It was that the mines should be reopened under the old scale and that a commission should arbitrate a national wage scale. A large majority of the operators agreed to the plan, but it could not go through unless the acceptance was unanimous on both sides.

Then the President put forward his proposal for prevention of the fuel famine with which the country is threatened. This is that the mines be reopened at once and with whatever labor can be procured, and that the state governments in the respective states protect these workers and give assurance of the maintenance of order. This Mr. Harding set forth in a long telegram to the governors of the states, and he promised them the "prompt and full support of the federal government whenever and wherever you find your own agencies of law and order inadequate to meet the situation."

Responses by the governors were in the main highly satisfactory. That of Governor Kendall of Iowa, is typical: "As chief executive of the state of Iowa I pledge every resource of the state to the support of the program you have inaugurated for the relief of the fuel situation." From two governors—Morrison of North Carolina and Ritchie of Maryland—came responses expressing outright dissent from the President's program. The former said in part: "Your position is practically to use the power of the government against the strikers, and they will naturally have little confidence in the impartiality or fairness of soldiers or other agencies of force, however good the reason for such a stand may be." Ritchie declined to take immediate action, saying he would not send the Maryland National Guard to the coal fields until all peaceful methods had failed. He did not state what peaceful methods remain to be tried. Governor Allen of Kansas said the industrial court had ordered the resumption of mining and that about 50 per cent of the state's needs was now being produced.

In Illinois there is a situation, previously described, which seems to block the Harding plan in that state. The law provides that no one shall work as a miner without first obtaining a certificate of competency, and no miner can get such a certificate unless he can submit evidence that he has had at least two years' experience as a miner or with a miner. Moreover, the 90,000 miners of the state are 100 per cent organized. There had been some chance that their president, Frank Farrington, would at the proper time push the idea of seperate state agreement, but operators said this hope was dispelled by the springing of the Washington plan.

North Dakota is confronted with a crisis that is causing almost a panic among the residents, and the conditions there are peculiar. The state depends almost wholly on lignite from the mines within its borders. The miners, according to Governor Nestos, quit on the national call and not because of any local grievances. The lignite fields, he says, have no economic bearing on the bituminous or anthracite fields, and he believes if they could be placed in a separate category and the operators permitted to deal directly with the district leaders, "the mines could be reopened peacefully rather than by methods which might result in violence." Nestos asked President Harding to use such means as he deems consistent to persuade the United Mine Workers of America to settle the North Dakota problem in that way.

President Lewis of the mine workers was not disturbed, apparently, by the promulgation of the President's plan. He said that an immediate result of any attempt to operate mines by non-union labor would be the quitting of the maintenance workers, which would mean the speedy flooding of the mines. This would need no strike order.

Lewis added that there were more men out than when the strike started sixteen weeks ago and that they would continue to refrain from work, "in peaceful and orderly fashion." That their methods are not always peaceful was demonstrated at Cliftonville, W. Va., where a large band of marching strikers from Pennsylvania encountered a sheriff's posse and killed the sheriff and four other men.

FOR several days it looked as if the shopmen's strike might be settled amicably through the negotiations instituted by Chairman Hooper of the labor board. Assurance was given, specifically to the maintenance of way men, that the board would grant re-hearings on wage disputes, and it was believed this not only would keep those workers from going out but also would be made applicable to the other disaffected unions. Moreover, President Grable of the maintenance men said Senator Cummins, who is chairman of the interstate commerce committee of the senate, had advised him that "he is going to hold hearings immediately on disputed points of the transportation act, principally to ascertain how the law may be amended so that the living wage principle would be made clear and so that every employee would be guaranteed a living wage."

All this looked very auspicious, and then up jumped the question of seniority and put the negotiations on the blink. The shopmen insisted that if they returned to work their seniority rights must be restored, and the carriers flatly refused to yield to this demand. Both sides set forth their arguments on this point, which have been heard before in many a strike, and as both stood firm, Chairman Hooper issued a statement saying that the negotiations had had no result "and are now at an end." Added to the seniority barrier to peace was Jewell's demand for a national board of adjustment.

Though it was believed the strike of the maintenance of way men would be averted, the numbers of the strikers were increased by several thousands in various parts of the country. There were many disorderly incidents, but none of great moment. The government's determination that the mails shall not be interfered with had its effect and Attorney General Daugherty said they were delayed in only a few localities. He added: "It appears, however, that there is a relationship between the railroad situation and the coal strike. Whether this relationship is conspired or inspired I do not care to say at present. One thing is certain; the fault is not all on one side." This lends strength to the belief, expressed in Washington, that the policy the government will follow in dealing with the railway situation depends largely on the results of its action in relation to the coal strike.

IN CHICAGO the employees of the surface and elevated roads were all ready to quit work and spent much of the week awaiting the permission of their international president, W. D. Mahon, who was in the east. His delay was taken to mean that negotiations might be resumed and the strike averted, but before this reaches the reader it is likely the people of Chicago will be making their way about as best they can without the aid of the street cars and elevated trains.

FRANCE has yielded so far as to consent to a moratorium for Germany on cash payments for from three to six months. In return she has demanded that the allies maintain the strictest supervision over German government finances, being allowed to inspect all financial projects before they are sent to the reichstag and before they are put into execution. The members of the reparations commission are completing the details of the arrangement. Although Germany will not pay much cash until it has accumulated by the sale of German products abroad, she can deliver materials to the allies, and France hopes to get in that way a large part of the 900,000,000 francs she is entitled to this year. The London-Rathenau accord, reached nearly a year ago but held in abeyance, facilitates this delivery of materials which went into effect last week.

THE council of the League of Nations is in session in London mainly for the purpose of settling matters relating to the mandates. The task was made comparatively easy by the reaching of complete agreement between the United States and Great Britain and France concerning certain of the mandated regions. The rights of Americans are said to be fully safeguarded.

FULFILLING predictions, the conference at The Hague has come to an end without results. Russian delegates, after all their stubbornness and after refusal to meet with a committee, at a plenary session went as far as to offer to submit proposals to Moscow under which the bolshevists would agree to recognize debts to foreign nationals as well as to furnish satisfactory compensation for seized property through private negotiations regardless of whether or not credits were received. But they spoiled all this by notifying the British delegates that the soviet government would expect immediate de jure recognition. Immediately thereafter the allies and neutrals adopted a resolution definitely ending the conference.

The allies and neutrals, finding all thoughts of a general agreement with Russia futile, did not see any reason in risking a break among themselves, but each reserved the right to resume separate negotiations with Russia after The Hague conference. Litvinoff, head of the soviet delegation, said: "Russia will attend no more conferences. Genoa and The Hague have been enough for us."

PREMIER LENINE of Russia has been killed again, this time according to a Swedish correspondent in Riga. His story is that Lenine was poisoned on a train when on his way to a Caucasian bathing resort and his body was thrown into the River Volga. An accomplice of the assassin is said to be impersonating Lenine at the capital sort. Soviet officials say the premier is in Moscow and almost well.

IRISH FREE STATE officials announce that their forces are now in control of twelve counties but are strongly opposed in Donegal, Sligo, Galway, Limerick and Tipperary, Waterford, Cork, Kerry and Mayo, they assert, are in "subjection" to the irregulars. Waterford was taken by regulars toward the close of the week, and in Limerick the rebels were cooped up in the barracks and King John castle after some heavy fighting.

The two assassins of Field Marshal Sir Henry Wilson were tried in London, convicted and sentenced to death, the case being handled with a promptness and dispatch that arouses the envy of those who contemplate the outrageous criminal court procedure in the United States.

SCORE yet another victory for the progressives in the Republican party. In the Nebraska primaries Robert B. Howell, former Bull Moose, was nominated for the United States senate, defeating the "regular" candidate, Representative Jeffries, who is classed as a stand-patter. Senator Hitchcock easily won a re-nomination by the Democrats.

AMNESTY for the 87 so-called political prisoners now in federal penitentiaries was asked of President Harding by a delegation of sentimentalists last week. They carried a petition with a million signatures. The President told them he would not pardon any criminal who was guilty of preaching the destruction of the government by force and consequently would not consider general amnesty. His response will meet with the approval of all right-thinking Americans.

DEMAND FOR UNIFORM SIGNALS

Railway Association Recommends Standard Colors.

One of the Suggestions Made in the Interest of Public Safety Is Use of Yellow in Automobile Tail Lights.

Chicago.—In the interest of public safety recommendations for the standardization of colors for traffic signals are being considered. These recommendations were made on behalf of the signal section of the American Railway association at a recent conference requested by the Illuminating Engineering society and the International Traffic Officers' association and held under the auspices of the American engineering standards committee. The recommendations are:

1. The principle of red for stop everywhere, unless qualified by a more favorable indication—that is at highway crossings with railroads if train is approaching, in fixed signals and in the hands of traffic officers, at street intersections, at the ends of streets, and possibly to indicate excavations in streets.

2. Yellow for tail lights of automobiles, possibly excavations in streets and for calling policemen, or for any other purpose where caution is required; possibly at busy street intersections to indicate that the traffic lights will be changed from red to green or from green to red.

3. Green lights for fire escapes, for proceed at street intersections and other purposes to indicate the way is clear.

In presenting these recommendations on behalf of the signal section A. H. Rudd, chief signal engineer of the Pennsylvania system, said:

"The railroads are particularly interested in eliminating the use of the red light for various purposes other than that of indicating danger or stop unless qualified by a more favorable color. They desire that any scheme devised may conflict as little as possible with their own signal systems already established and that uniformity of indications in the protection of highway crossings at grade may be established."

Skunks Lure Bees From Hives, Eat 'Em

Washington.—A report from Ohio received by the biological survey of the United States Department of Agriculture says that skunks are giving a great deal of trouble to beekeepers in that region. The skunks visit the hives at night and scratch on the outside till the bees come out. As soon as they appear the skunks eat them. The biological survey recommends that under such conditions the hives be fenced in with chicken wire at least three feet high.

The American Legion

(Copy for This Department Supplied by the American Legion News Service.)

IN COMMAND OF FLOOD CAMP

Lieut. M. L. Geisenberger, Valuable Aid at Natchez, When Mississippi Went on Rampage.

After the American Red Cross at Natchez, Miss., had obtained from the government several hundred army tents to house flood refugees, it was found that the government had failed to send anybody along who could direct the erection of the canvas shelters. Fortunately members of the Natchez American Legion had had experience with practically every sort of tent from "pup" tents on up. After having rescued hundreds of people from housetops and treetops, the Legionnaires took upon themselves the job of erecting a tent city to house these refugees.

A Legion doctor laid out the camp from the standpoint of sanitation, and M. L. Geisenberger, a former lieutenant, was made commandant of the refugee camp.

More than five hundred people were taken care of during the first few days, and as the flood area widened the number rapidly increased. The Legion's work in the care of flood victims received unstinted praise from every quarter of the country.

NAME IS NOT IN DICTIONARY

"Legionnaire" Not Yet in Official Guide—Promises to Hold for All Time to Come.

The American Legion Weekly comments on a New Zealand Newspaper's use of the word "legionary" to denote a member of the American Legion. "The word 'legionary' has an honored place in the dictionary which 'legionnaire' has not as yet, the Weekly points out. "But all the sentiment, and it is a case where sentiment counts, is on the side of 'legionnaire.' 'Legionary' connotes an embattled Roman, toting a shield and spear for Julius Caesar. 'Legionnaire' calls to mind (from the French point of view) a regiment of foreigners of the French Foreign Legion.

"'Legionnaire' as indicating a member of the American Legion, seems too firmly established to dislodge. We must remember that all Legions—Roman, Foreign and American—had one thing in common: They fought in France."

No Difference Now.

Movie Director—Now here is where you jump off.

Star—I know, but suppose I'm hurt?

Director—That's all right, old man. It's the last scene in the picture.—American Legion Weekly.

Suggestions of a Doughboy.

Being the suggestions of a doughboy on the manner of conducting the next war, together with certain reflections on the conduct of the last one. That all song writers, would-be writers, song leaders and vaudeville singers be marked Class 1-A. That they be drafted in the first contingent and have at least six months' intensive training at K. P., sanitary detail, etc., before being permitted to compose their country's songs.

That any person who shall write, compose or sing, or attempt to write, compose or sing songs expressing doughboy sentiment without such previous training shall be liable to death and shall be sent over the top at midnight with a lantern in each hand.—American Legion Weekly.

"It's a Great Life."

Proving that gay Paree didn't cause them to forget the cows and chickens, 600 of the 3,300 vocational trainees in the Seattle (Wash.) district of the veterans' bureau are taking up agriculture as their new occupation. When asked about their work, these embryo farmers invariably reply, "It's a great life."

WAR WORKER IS OHIO MAYOR

Miss Amy Kaukonen, Guardian of Little Buckeye City, Active in Auxiliary Affairs.

Ohio not only boasts that she has produced many more than her share of the nation's chief executives, but she also points with pride to the fact that her little city of Fairport has one of the most attractive and capable "lady mayors" in the country. Miss Amy Kaukonen, who during the war was a member of the volunter medical service corps of the United States army, has given entire satisfaction as mayor of Fairport.

Mayor Kaukonen finds time from her official duties to take part in the affairs of the American Legion Auxiliary of her city. That she is a stanch supporter of the Legion is evidenced by her statement: "It is distinctly an American organization, in which politics and selfish interest have no place. Its cornerstone is American manhood, its objects liberty, fraternity and service. Its principles are as broad as the continent upon which falls the shadow of our flag."

CARE OF FRENCH WAR ORPHAN

Argonne Association's Plan May Be Used for Unfortunates in United States.

A plan for the care and training of French war orphans, worked out by the Argonne association, an organization formed as a permanent memorial to the Americans who fought in France, is said to be functioning so satisfactorily that a similar organization may be formed for the care of orphans in the United States.

The Argonne association was formed in 1918 by a group of Americans interested in French orphans. It has as its motto: "To provide for the child who has no parents, a home and a family life; to secure him his birthright of health; to educate him and train him to earn a livelihood; to develop his character that he may become a useful and an upright citizen and to do these things so well and so economically that others shall follow this example—is the aim of the Argonne association."

The orphans cared for under the association's plan are placed in private homes in a community where they are really wanted. They are not "farmed out." There is a community school, playground and vocational training center where the children are daily brought together to get their mental and physical development. There are three such centers in France where the orphans are given three distinct stages of training.

HE WELCOMED MARSHAL FOCH

Ernest Hall, Arizona's Secretary of State, Knew France's Idol Under Different Circumstances.

When Marshal Foch visited Arizona on his recent tour of the United States as the guest of the American Legion, he was officially welcomed by Ernest R. Hall, Arizona's secretary of state, who in the absence of the state's chief executive became acting governor.

It had not been many months since Mr. Hall had seen the marshal under entirely different circumstances. On that former occasion, Mr. Hall wore an "issued" uniform. He was known as "Corporal Hall of the Twenty-seventh Engineers."

Although he was over draft age and a member of the state senate when war was declared, he was one of the first men in his community to enlist. Just now he is almost as proud of his position as chaplain of the Frank Luke, Jr., post of the American Legion as he is of the secretaryship.

Carrying On With the American Legion

Tyron, Neb., 26 miles from a railroad, in the midst of the sandhill region, has dedicated a $2,300 American Legion memorial hall.

* * *

The Legion in Massachusetts has raised funds to install a radio receiving set in each of the state's five hospitals where service men are being cared for.

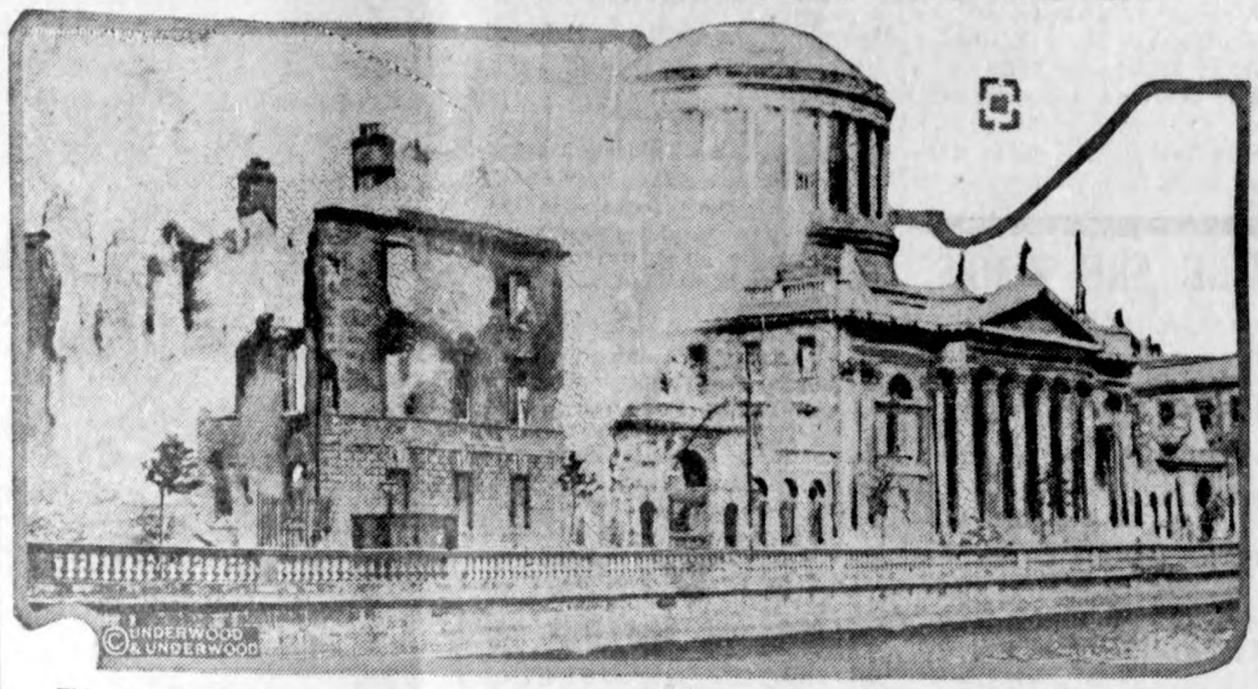
* * *

Free traveling libraries are being furnished Oklahoma posts of the American Legion by the department of education. The post may keep each collection of books two months.

* * *

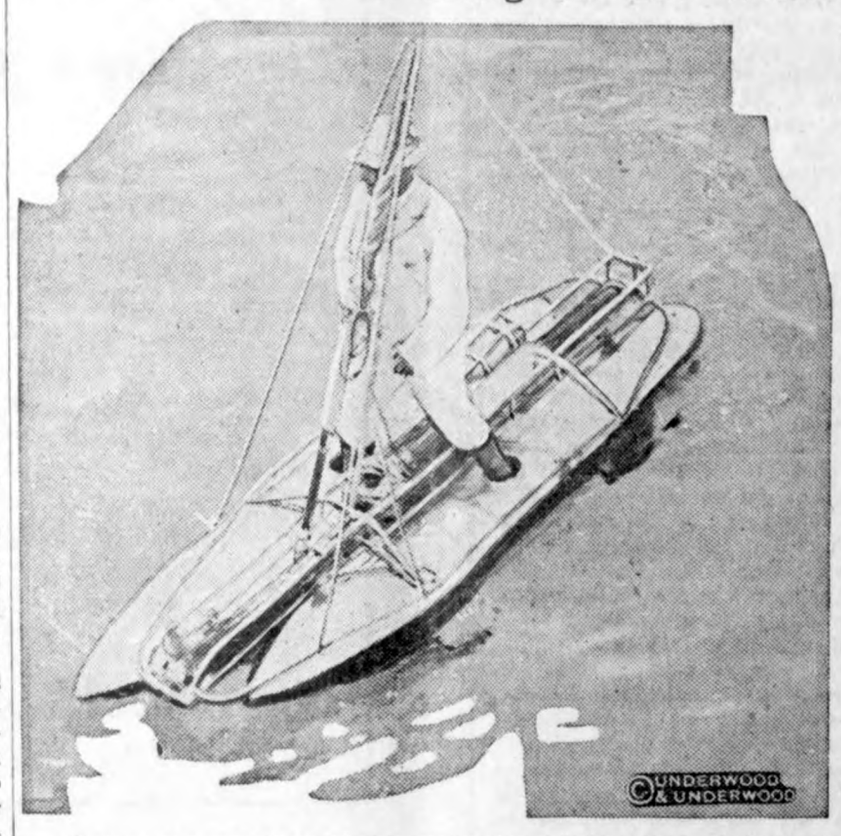
Commander Hanford MacNider of the Legion has announced himself in favor of every Legion post adopting a troop of boy scouts or forming troops in communities where none exist. "Scouting is the best education in America today for developing future citizens and I favor anything that tends toward its promotion," Mr. MacNider says.

Dublin's Four Courts Wrecked in the Civil Warfare



This photograph, just arrived in this country, shows the historic Four Courts in Dublin in ruins and the fierce fire raging after the battle between the Free State troops and the irregulars.

New Device for Walking on the Water



Persons who are victims of shipwrecks may calmly walk to shore in the future, if the invention of A. N. Sheldon of Ventura, Cal., is adopted by steamship companies. Sheldon's device consists of two pontoons which slide back and forth alternately in a rigid frame. The operator places one foot in each pontoon and works them back and forth with a walking movement. Paddles on the bottom aid in the movement. Steering is accomplished by a rudder operated by bicycle handle bars. In windy weather a sail assists the walker.

Atlanta's Memorial to McKinley

Little Miss Charlotte King of Georgia (left) and little Miss Betty Seeds of Ohio, at the unveiling of the McKinley memorial tablet at Piedmont Park, in Atlanta, Ga. The bronze tablet came from the martyred president's native state, while the block of granite came from Stone mountain.

Kentucky Boy Scouts Visit Chicago

Seventeen boy scouts from Louisville, Ky., arrived in Chicago the other day by motor truck and camped in Grant Park, after which they proceeded to the city hall and delivered a message from the mayor of Louisville to the mayor of Chicago. Some of them were photographed while taking their morning wash-up.

JACKASS IS HIS MASCOT

Maj. Claude Davenport, an American army officer stationed in Rumania, has adopted as a mascot a young jackass. He is here seen holding his pet, then five weeks old.

JOHN D. AGED 83 YEARS

Latest photograph of John D. Rockefeller, taken on the grounds of his home estate at Pocantico hills, New York on July 9, his eighty-third birthday.

Clear Explanation.

A stock broker's clerk, visiting a Long Island resort, met a young woman who, for some reason or other, chose to regard him as an authority in matters aquatic. He strove to merit her confidence, but was not always successful in his explanations, though she seemed to think so.

"Why," she asked on one occasion, "did those boats sail from one side of the sound to the other instead of going straight ahead?"

"Well, you see," explained the broker's clerk, "it's like this: When the wind blows crooked like this they have to go crooked, so as to go straight along—"

"How plain you make it!" exclaimed the girl; "I never thought of that before."—Philadelphia Ledger.

Mixed Trade.

A little fellow entered a general store in the suburbs and said: "Please, my mother says will you give her a needle for this egg?"

The storekeeper smiled. "Why," he said, "you can get a whole packet of needles for that nice fresh egg."

"No, sir," said the boy, "my mother don't want a whole packet. She says please give me the change in cheese."—Boston Transcript.

HOME TOWN HELPS

SLOGAN WELL WORTH WHILE

Campaign for the Ownership of Homes a Movement All Good Citizens Should Boost.

It is to be hoped that the campaign the object of which is to have every family in its own home may not languish soon, as it is all too likely to do.

Tenantry in large cities cannot be abolished altogether; perhaps it would be undesirable to do so. However, tens of thousands of people would be better off physically, mentally and morally did they live under their own vine and fig tree. Vastly too many people are still unnecessarily dependent upon the wish and will of others, industrially, politically, socially; a condition tending ever toward slavery, injustice and unhappiness. Ownership of anything spells independence in some measure, though it often means restraint, too; and to own one's home, where none dare intrude or make afraid, is the most satisfying of all.

The owner of a home is logically a better citizen, a more public-spirited person, than he would be otherwise. The condition of a neighborhood, the quality of government, sanitary and social matters, are at their best where most people own their homes. What does the average renter care for the condition of his neighborhood! A bird of passage, he seldom identifies himself with the progress or welfare of the community, as does an owner, and at the merest whim he is on the wing.

To own one's home is not generally an easy accomplishment, but requires resolution, self-restraint and tenacity. Few slogans are more worth while.—Chicago Journal.

CITY PLANNING PAYS WELL

Haphazard Method of Allowing Community to Develop Is Poor Policy and Costly in the End.

The civic leagues and societies that get after the authorities to compel the cleaning up of cities and offer prizes and other inducements for well-kept lawns, attractive flower beds, reformed back yards and the like are advancing culture and civilization.

Many cities have followed Washington's example and have art commissions that pass upon all public work to keep it in harmony with some established plan of artistic development. We should go further than that. Our building departments carefully examine every plan made for private as well as for public buildings and prescribe just how the walls shall be for strength, how high the building may go, what the sanitary details must be. The people have become used to such control and direction. The city art commission should have greater power and should co-operate with the building department and pass on all plans for all buildings, private as well as public.—Washington Star.

Roadside Tree Always Worth While.

The example set by the state of Minnesota, which will plant some 30,000 trees along its highways this year and each succeeding year will add several thousands more, conveys a lesson not only in reforestation in a relatively treeless state but in the esthetic value of arboriculture as well. Undoubtedly the years to come will bring their reward and travelers of the future, if they give the matter a thought at all, will pay tribute to the foresight which furnished them with grateful shade and added beauty of a peculiarly restful kind to the landscape. A ribbon of road stretching across a treeless plain is but a bleak thing, whereas it becomes an "avenue" when graceful trees nod in the breezes on both sides of it and travelers passing through into other states which have neglected their opportunities will not fail to note the difference. The roadside tree on the Pacific coast is a matter worthy of the attention of both the planter and the conservationist.—Portland Oregonian.

Select Location for Plants.

The south side of a structure if fully exposed to the sun and not shaded in any way is likely to prove particularly trying for many plants, especially those which require a cool location. Their foliage is likely to become scorched and burned during hot, bright days in summer, and if the plants themselves are not killed, they commonly fail to grow well and are unsatisfactory. When such trying conditions have to be met, plants which can withstand considerable heat and dryness should be selected. On the other hand, care should be taken that plants which can withstand cold and lack of direct sunlight should be planted upon the north side of the structures.

Oil and Air-Cooled Motors.

As the result of tests made during the war at the aircraft factory at Farnborough, Eng., it was demonstrated that in air-cooled internal combustion engines as much at 40 to 47 per cent of the cooling was, under certain conditions, done by the crankcase. The result has been the design of a so-called oil-cooled engine, in which the crankcase has been greatly enlarged so as to almost completely envelop the cylinders.—Popular Mechanics Magazine.

THINK IN WORDS

Mental Composition Habitual With Most Great Writers.

As a Result Their Thoughts Are Easily Marshaled When They Sit at Their Desks.

At least one great writer, Wordsworth, composed in his head, without pencil or paper.

We are given a whimsical picture of his sister, Dorothy, trailing the gaunt old man over the Cumbrian hills, notebook in hand, jotting down as best she could his inspired dictation.

Of course, few would care to emulate his method. Formal composition, for most scribes, is better done on paper where the elusive phrase is permanently recorded, the fugitive word captured, the form and cadence of the thing made obvious to the eye.

Yet, in another sense mental composition has been habitual with all great writers who have been generous enough to disclose their habits of thought.

They instinctively think in words. Under the elm tree, along the trout stream, even in the thoroughfares and work shops of life, they are coining phrases, silently casting what they think and set into appropriate language, fitting and discarding adjective and verb in the eternal search for perfect expression.

Freckled newsboys, sunsets, traffic jams, symphonies, even the abstract meditations of reverie, pass into their minds as phrases, to sink, apparently forgotten, into the storehouse of the unconscious mind.

When such men sit down to write they have no need to brush the cobwebs from a neglected vocabulary. The joints of expression are not stiff and squeaky from long disuse.

They have spun the glorious skein in wayward hours, and when loom-time comes there remains only the weaving of the pattern.

One November evening, many years ago, three men were crossing a heath on the outskirts of London. On a hill ahead of them stood a church with a tall spire. Suddenly the sun broke through a bank of clouds and illuminated its gold cross.

The autumnal silence around them, the reminiscent savor of the heath, the peculiar moodiness of the season and the hour, the ominous gloom of the sky, the red shaft of sunset lighting the distant cross—all conspired to arouse a peculiar sense of awe in the spectators.

Yet only one word was spoken—a reverent, spontaneous exclamation—"Calvary!"

And the man who said it was Thackeray.

He had merely revealed, half audibly, the impassioned search for inevitable words that ever goes on in the mind of the artist.

Perhaps it's a gift, or an obsession, this thinking eternally in words. Perhaps normal mental processes would be blocked and embarrassed by such a habit.

But it would at least seem lamentable that in conversation, a training ground in which all spend so many hours, there should be so little conscious effort to speak with grace and precision, so habitual a mouthing of stock phrases, banal flippances and current slang.

We should go to school to the Tennessee mountaineers where generic speech, through social isolation, has been able in its humble way to survive.—Milwaukee Journal.

Walter Scott's First Love.

The young woman in Walter Scott's first love affair was Miss Willamena Belches, the daughter of a baronet, and when she and Scott were nineteen years old they met for the first time by accident. Scott at that time was merely the apprentice to his father, who was a solicitor, and no very lordly one at that. After the young persons had been seen much in each other's company, Soott, senior, waited upon Sir John Belches and told him that the affair ought not to be allowed to proceed without his sanction. The young woman, it is presumed, satisfied her father that she had no thought whatever of accepting Walter, although they continued to correspond and to meet frequently. At one time there was an understanding between them that Scott seemed to accept as an engagement, but the young woman did not, and eventually she chose a husband whose prospects were more imposing.

Flying Torpedoes.

Experiments, throwing a new light on the problems of aerial war, are reported as having been taking place with great secrecy near Paris.

Small heavier-than-air machines, really torpedoes with wings, are sent up into the air under their own power, and entirely pilotless, and are then controlled by wireless telegraphy.

Machines are flown for considerable distances and made to carry out maneuvers while under wireless direction from the ground.

A further development contemplated is for a method to be perfected by means of which a pilot in an airplane can control the movements of one of these air torpedoes.

This would mean that after a torpedo had been launched and controlled up to a certain height by the land station, its direction would be taken over by a pilot in a special airplane, who would send it on ahead until he had guided it to its target, he himself remaining at some distance.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,

ss.

Hancock County,

TO ALL WHOM IT MAY CONCERN:

YOU ARE HEREBY NOTIFYED, That an instrument of writing purporting to be the last Will and Testament of JOHN ALBERS deceased, dated Oct. 19, 1912. having been this day filed, opened and read, Monday the 14th day of August, 1922 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 10:00 o'clock A. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, July 11th, 1922.

B. E. ERWIN,

Clerk of District Court.

(Publish July 13-20-27, 1922.)

Reduce Your Production Costs

Farming, like every other business, must cut down the overhead.

Ii is not a question of being able to afford a Fordson but a question of being able to continue farming on the old too-costly basis.

The farmers problem is not all a sales problem; it is also a production problem. He must cut down the cost of production.

The Fordson does more work at a lower cost and in less time than the old hand methods.

Let us give you the proof. Write, phone, or call today

BUILD A PORCH ON YOUR HOUSE!

Most of the houses built during the last 10 years have porches. Before that the average house did not have a porch. People then did not appreciate the healthfulness and the joy of the great out-doors.

If your house does not have a porch you should build one immediately. It will make your home more inviting and more enjoyable.

A porch is no longer considered a useless ornament, but a necessity that all the family will enjoy.

Come in and talk over plans for a porch with us now. eWe can give you some helpful advice for remodeling and for adding a porch to your home at a reasonable price.

The Abduction

By MURIEL BLAIR

(©, 1921, Western Newspaper Union.)

"This is a detective work, pure and simple, Thornton, but I am not even an amateur. Just plain Alex Smith, once a town marshal, now a second-rate lawyer. I am your friend, though, and your wife's friend. And the friend of poor little lost Eddie. Let me show you, out of gratitude for the start you gave me in life years ago, what real, genuine friendship is."

There was nothing heroic in the speech. There was no false note of bombast. Archibald Thornton, sick, disheartened, all at sea, had come up against the dead blank wall of "No clew" in the case where mystery and misery were pretty well commingled, and no visible thoroughfare back to happiness and peace.

Thornton had befriended Smith fifteen years previous, and the loyal fellow had never forgotten it. Thornton had married Winifred Walter. A child was born to them, and when Eddie was five years of age, a baseless disagreement had come about. They had separated, Thornton taking the child in his keeping. The abyss broadened. They did not meet again.

Thornton went West with Eddie and acquired a small fortune in Idaho lands. His wife he seldom heard from. She was heiress to a large estate, he learned. Too proud to meet her half way in a reconciliation, she seemed to have completely shut him and the child out of her memory. She led a hard, lonely life at the secluded country home of a stepbrother. All that kept Thornton in touch with his old life were occasional letters from the loyal Smith. The latter knew that the estranged wife was a sore subject to his friend, and rarely alluded to her. At length, however, a letter came that brought Thornton East post-haste with his son.

"I have learned," Smith wrote, "that you have misjudged your wife, just as she has misjudged you. She pines for you and the child. I find, too, that Herbert, her stepbrother, spread all the lies that separated you. He will do all he can to keep you apart, for by doing so he hopes finally to control the estate to which she is heiress."

Thornton had come to Edgeville at once.

Eddie slept in the room adjoining that of his father at the hotel. In the morning he was missing.

"I am going to find your boy for you," declared Smith.

"I can never go to Winifred unless he is with me," said Thornton.

Four hours later Smith was resting under a tree near the beach of a little lake about ten miles from Edgeville.

"Only one thing I am certain of," he told himself. Herbert is behind this kidnaping."

The speaker just then noticed a little red toy balloon sailing out over the lake. A second followed, a third, and then as many more in succession.

"Shoot—shoot!" he heard a boyish voice call just then, and came upon a noisy group of lads chasing another of the toy balloons.

One of the boys had a bow and arrow. He aimed aloft. The shaft sped from the bow, pierced the balloon, and the deflated globe came to the ground. There was a scramble over it.

"Here, I'll pay you for that," he said, extending a coin to the boy who had rescued the object. Then eagerly he inspected the card. It was one of his own. It had, however, got trampled in the mud. He made out these words: "In a lion's cage—send word —Thornton—hotel—Edgeville."

He remembered that he had given Eddie some of the cards to draw on. The words "lion's cage" in connection with the spangles found in the room at the hotel suggested—a circus!

"And say!" ejaculated the second-rate man, "I recall now that Herbert owns a half interest in a traveling show. Why, find a circus, and I find Eddie!"

Four hours later Smith stood by the side of one of a dozen tents at the outskirts of a county seat town.

Smith had just heard a circus peddler complain of losing his balloons. He also learned that there was a cage wagon inside the tent.

Fifteen minutes after that Smith was leading from the place the recovered boy. He had found him locked in the cage wagon and had opened a way to freedom.

Eddie told of two men kidnaping him. He had overheard them say that a man named Dunbar had ordered them to lose him in some distant part of the country.

A circus peddler had tied his string of toy balloons to the wagon. A bright idea came to Eddie. He reached out, drew the balloons towards the bars, attached what cards he had to them, and let them go up. There was an opening at the top of the tent, and they sailed away.

It was after restoring Eddie to his father and hiring a man to guard against a new abduction, that the lawyer took a train direct for the home of the mother and wife.

He had sure evidence that Herbert was a wicked villain, and of this he convinced the amazed stepsister.

Mrs. Thornton met her husband and son for the first time in ten years. There were explanations, forgiveness, awakened love, and the modest lawyer blushed when the reunited pair tried to tell him how much they owed him.

A Cheap Way Out.

"You've got indigestion; that's what's the matter with you," said the doctor.

"Oh, that's what it is, then?" inquired the patient.

"That's it. You've been eating a lot of meat, I suppose?"

"I have; yes."

"Well, now you're paying for it."

"Would you mind telling my butcher that, doctor?"

Temporary Prominence.

"Every time we have a revival in Chiggersville, Sam Sorghum hits the sawdust trail."

"That's a fact," said Squire Witherbee.

"But just as soon as the evangelist leaves town Sam backslides."

"Don't be too hard on Sam. Confessing his sins is th' only way he's ever found to get into the public eye."

Just Exercising.

"What is Mr. Dorfling's favorite form of exercise."

"Running for office," said Mr. Dubwaite.

"But he never gets elected."

"No, and you frequently see young men sprinting up and down the streets in gymnasium suits who are not going anywhere in particular."

Going Too Far.

"You are charged with disorderly conduct in a restaurant."

"I had some excuse, your honor. I was served a bad egg."

"Well, that was disagreeable, of course. But just because you were served a bad egg you should not have acted like one yourself."

Some Financing.

"You say you can't pay me the $25,000 you owe me. Why don't you marry old Miss Goldie Rocks? She has twice that amount?"

"No. You better take her and then pay me the difference."

Really!

"Your father must have been in an unusually good humor when he gave you a motorcycle."

"Oh, I seized the cycle-logical moment to ask for it."

MERCENARY THING

He: Well, dear, I've got a fine position now as assistant cashier in a bank.

She: Oh my! And I was hoping you were going to say you were learning to be a mechanic, so we could afford to get married.

HARDLY COMPLIMENTARY

"Thank you so much for your song, my dear," said the elderly woman when the daughter of the house where hse was visiting had finished her solo, "It took me back to my childhood days on my father's farm and while I listened to your voice I seemed to hear the old gate creaking in the wind. —Boston Transcript.

TRULY WIZARD WITH PEN

Englishman of Queen Elizabeth's Time Did Work That Probably Never Was Equaled.

England at one time possessed a penman capable of rivaling Nessi Effendi Markarem, an Arab now on a visit to Cairo with specimens of his art, including a grain of rice on which he has written 100 words from the Koran. Peter Bales, as we learn from Hollinshed's Chronicle, put in the compass of a silver penny more things than fill several ordinary pages, and presented Queen Elizabeth with the manuscript set in a gold ring and covered with a crystal, together with a magnifying glass so powerful that the queen could easily decipher the manuscript, which she held on her thumbnail and commended the same to the lords of the council and the ambassadors.

Bales subsequently issued a challenge "to the Englishmen and strangers" to write, for a pen of gold of £20 value, in all kinds of hands, "best, straightest and fastest," and most kinds of ways, "a full, a mean, a small, with line and without line; in a slow set hand, a mean facile hand, and a fast running hand," and further, to write "truest and speediest, most secretary and clearlike, from a man's mouth, reading, or pronouncing, either English or Latin."

Another writing master, David Johnson, accepted the challange, and the contest opened on Michaelmas day, 1595, before five judges and a hundred spectators. Bales was adjudged the winner in all three sections, though the competition in "writing sundry kinds of fair hands" proved a near thing for him. He gained points for the beauty and "most authentic proportion" of his "Roman hand," but Johnson scored more marks in court hand and in "bastard secretary" hand. Bales, being then on his mettle, presented his "Master Piece," composed of "secretary and Roman hand four ways varied," and offered to forego all his previous advantages if Johnson could better it. This proved impossible, so Bales carried off the gold pen and had it painted and set up for his sign.—Manchester Guardian.

Taming the Wild Flowers.

At a flower show held in New York city, one naturally expects to see hothouse plants or at most such pampered exotics as appear in cultivated gardens. At the recent annual show, however, there was an exhibit that was a veritable wild garden, comprising exclusively plants that are native to the New England fields and woodlands. The developer of this garden, Edward Gillett, has made a hobby of bringing the wildings into the dooryard, and teaching them to make themselves at home there. The result is highly gratifying, for not only do a large number of these plants lend themselves to decorative and ornamental effects, but, quite apart from this, there is an inherent interest in the indigenous flora that gives even a very modest plant precedence in the affections of many of us over the most gorgeous visitants from far-off lands.

Now that Mr. Gillett has shown the way, there will be many an amateur who will not be satisfied unless a considerable corner of his garden is given over to wild azaleas and laurel and hepaticas and lady-slippers and trilliums and sundry other modest but winsome native flowers.—Pittsburgh Dispatch.

Something to Think About

By F. A. WALKER

VACANT HOUSES

IN THEIR grave solitude and desolation, vacant houses are pathetic reminders of empty minds, neglected and forgotten by those able to take best care of them.

On old country roads you may often see such habitations, seemingly eager to proffer a smile of welcome, but quite unable to do it.

Rank weeds are about the doors, the walls are weather-worn and stained, presenting altogether a sad picture.

And these vacant houses started gayly in life; warm in friendship and love, full of hope and aspiration.

As the years rolled by they dreamed less and finally sank into a hopeless state of despondency.

You may like vacant houses or not, but there they are, telling in a language of their own of the days that are departed and the joys that are done.

And what happens to vacant houses happens in a far more lamentable way to empty minds, whose owners habitually neglect them, and pay for their disregard the sharpest penalties, at a time when their own reward should be munificent.

If you are wilfully neglecting your mind, allowing the weeds to grow about the doorway, you will find some day that you are living in solitude in a dreary dwelling, from which your friends of old turn away in sadness.

You were so self-reliant in your youth that you did not care to enlarge and beautify your thoughts.

Gradually you neglected this important duty until the weeds grew and crowded out the flowers. Too proud to stand up straight and stretch out your arms to embrace knowledge, you sat down in idleness or shirked your opportunity.

Being now your own witness and your own judge, there is alas! no possible escape from punishment.

The world has moved on and left you behind in a wilderness of mold and darkness, where you have time to reflect and repent.

But, be it known, whatever your age, you may yet improve your vacant house and make it a thing of beauty.

Women, as a rule, can do this more readily than men, yet men at forty and fifty have been known to form studious habits and flood their old vacant houses with light until its brilliancy illuminated up the whole world!

YOUR HAND

How to Read Your Characteristics and Tendencies—the Capabilities or Weaknesses That Make for Success or Failure as Shown in Your Palm

A BUSINESS PERSON'S HAND

IN THE hand of a good man or woman of business the fingers are well opened, when held naturally, this showing versatility and self-confidence. The mount of Mars, which lies below the mount of Mercury (the latter is at the base of the little finger), should be strong and well-marked, because this indicates courage and willingness to take risks when necessary.

An exceptionally favorable sign for a man or woman or business is a tripod, or three-pronged division of the line of fate at its end. The line of fate runs up the center of the hand. This sign shows great success in business. If the finger of Mercury is unusually long, in proportion to the other fingers, it shows acquisitiveness and care of money, and is therefore a good sign for a business person. If there is a short line running upward from the line of life to or toward the finger of Jupiter, which is the index or first finger, it is a sign of ambition that is or will be gratified. Last, look in the center of the palm for a triangle that is well formed. This indicates forethought and intuition, valuable qualities in business.

TO A MAN'S HEART

By ELSIE P. GILPATRICK.

©, 1922, by McClure Newspaper Syndicate.

A vast number of people still hold the opinion that the way to a man's heart is through his stomach, and Ruth Cameron must have believed it, because when she found Paul Hubbard hungry and disgusted with his boarding place, she took him home and cooked for him a roast chicken and escalloped potatoes and everything else to match.

Inevitably, then, followed Paul's neglect of Nancy Barksdale, whom he had been courting for a long time, and who, by her own telling, didn't known what the inside of a kitchen looked like. In her home a number of servants carried on the work behind the scenes, but Ruth had been reared under no such handicap. She could whip mashed potatoes to a fluffiness that made you afraid they might blow away, and beat a cake into a lightness that made it fit for someone who was much more of an angel than was Paul Hubbard. Paul was tremendously human. As his dinner invitations from Ruth multiplied, his evenings with Nancy diminished.

Then the Jimmy Bentons, who were fond of Paul, took a hand in the affair, and asked him to board with them.

"Now we'll see if he goes to call on that Cameron cook so often," chuckled Jimmy to Mrs. Jimmy. "After he eats your cooking three times a day, I'll bet Miss Ruth loses her drawing card."

But it was already too late, or Miss Cameron was too charming a cook, or something, because after that Paul paid her more attention than ever. Mr. and Mrs. Jimmy had a difficult time of it, trying to keep him home even when Nancy happened to be calling there.

"I tell you, a fellow who works hard for a living ought to marry a girl that knows how to cook," he would declaim vehemently, as though someone were disputing him, and it soon became plain to everyone that he was intending to marry Ruth. Though he hadn't asked her, that young lady herself often made verbal speculations upon the style of wedding ring she preferred to her friend Marjorie.

To help matters along, Mrs. Benton sprained her ankle and lost her maid the same day, and Paul Hubbard was obliged to go back to the dark, greasy inn for daily sustenance. After three days of trying to endure lukewarm vegetables and clammy salads, he decided to marry at once, and move into a cozy apartment right next to the Jimmy Bentons.

That evening, on the Camerons' veranda, he talked and talked and talked, until almost every topic in the world was exhausted, except the one he was thinking of, and then, just as he got his chair moved closer, and his throat cleared, and his heart thumping violently, the telephone rang. Mrs. Benton was calling Mr. Hubbard.

"I have found someone to help in the kitchen, so you may come back here for your meals tomorrow," she said.

"Thanks, Mrs. Jimmy, you've saved my life." Paul felt so relieved that he lunged forward quickly to tell Ruth about it, but the hall was dark, and he stumbled headlong over a footstool. Ruth answered his groans by coming at once. She found him nursing a great welt on his shin. Somehow, after he had picked himself up and got back to the veranda and straightened his pompadour, he didn't feel so much like proposing, so he postponed it until Sunday afternoon, in his canoe, under the willows, and took his leave at 10 o'clock.

In spite of her sprained ankle and her untrained kitchen help, Mrs. Benton's Sunday dinner was a great success. When Paul offered to serve the dessert, she gratefully sent him to the kitchen, where he saw a blue apron almost hiding a girl as she stood at the sink washing dishes. For a moment he stared, then he took big strides in her direction.

"Nancy, what are you doing here?"

For answer, Nancy looked frightened, and said nothing.

"Nancy!" Paul's tone was very tender.

"You weren't supposed to know it. I only came because Mrs. Jimmy said you were starving."

Two strong arms kept Nancy from wilting, and a torrent of tender words made tears out of the question.

"I've been starving for something better than food. Nancy, am I going to get it?" She held up her mouth for a kiss.

From the dining room Jimmy Benton was heard calling loudly for his dessert, and so a lot of things which would have been very pleasant just then had to be put off until they went canoeing an hour later.

"You were a darling to do all that for me, Nancy, and you know I never stopped loving you, only I got a crazy notion—Nancy, you're the sweetest girl in the world!"

Presently they heard voices in a canoe which was still out of sight around the bend. To Paul one of them was unmistakable.

"I tell you, I'll never cook for any man."

"Shucks! Ruth Cameron, you don't mean that?"

"I do mean it! I've had to cook and keep house all my life, and I'm sick of it. When I get married I want to live in a hotel."

"Let's paddle back the other way," said Paul. "The river isn't very pretty up around the bend."

PRETTY SUMMER FROCKS; NEW FALL SUITS ARRIVE

SHEER materials hold the center of the stage for midsummer and there is no end to the pretty ways in which they are made up. And making dresses of them has been simplified for the home dressmaker, since so many ready-made trimmings have been manufactured for her benefit. She may buy ready-made flouncings decorated with tucks and ruffles, or narrow trimmings made of the fabrics, or fancy braids and edgings suited to them, and these, with machine hemstitching and picot edges make the way of the seamstress easy.

The first suits for fall are mak their debut, in variations of s eral promising styles that forecast modes for fall. Anyone who must a suit in advance of the season, look them over and select whate appeals to her good judgment, vided her choice is becoming, for the buyers who set the fashions.

One may safely generalize a li as to the styles, after a survey of first arrivals. Skirts remain plain (

TWO PRETTY DRESSES FOR A YOUNG GIRL.

Two pretty dresses designed for the young girl, are shown here and even the amateur dressmaker will undertake them with confidence. That perennial favorite, blue and white dotted swiss, is cut on the simplest lines for one of them, with a straight skirt and plain bodice. But there is nothing commonplace about it. A square neck, large patch pockets, elbow sleeves and scalloped edges, with white organdie trimming, give it a flavor of originality and the design turns out to be very pretty. The collar and tiny chemisette are of eyelet-embroidered organdie.

The white net dress at the right was among those presented for the approval of graduates and the design is suited to any sheer material. It is much like its companion in composition with straight skirt, scalloped at the bottom. Panels made of embroidered net insertion are set in the blouse and in the skirt and they are outlined with little ruffles of the net having picot edges. The round neck is finished with a binding and the sleeves with the embroidered insertion. A sash of moire ribbon, and a little cluster of flowers mounted at the shoulder, add to the dressy character of this dainty frock. It is shown in white net, but would be just as pretty in light colors or made of other materials

very short skirt is dead and burie and they reveal only the ankles their wearers. Coats are at le fingertip length and many of them longer. They are so generally f bearing that one begins to feel easy for fear that it will take all little animals in the world to prov skins for them. But reassuring ne comes from Paris: that fashion cen approves fabric-furs for trimmi suits. They are beautiful, and so of them amazingly accurate imitatio of natural furs. As a rule suit co are considerably decorated; fur ba ings, braids and embroideries contr uting to their adornment.

The conservative and handsome s pictured has a plain skirt reachi within eight inches of the floor a an extremely long coat with high c lar and cuffs of fur. Its long, clo fitting sleeves indicate a return to t regulation coat sleeve in the severe tailored styles—but there are plen

CONSERVATIVE AND HANDSOME SUIT

of exceptions to this idea. The ch acter of this suit is carried out by s pockets at each side, and its plainne serves to emphasize the importance three huge and handsome buttons th look so capable as a front fastenin

KIDDIES SIX

By Will M. Maupin

TODAY

DON'T waste time in sighing
For old days;
Don't waste time in crying
For old ways.
Better days than yesterdays
Leave no time for sorrow;
On them better fix your gaze—
Today and tomorrow.

Don't waste time in fretting
For lost hours;
Don't waste time regretting
The lost flowers.
Better hours are growing
Than memory can borrow;
Sweeter flowers are blowing
Today and tomorrow.

Don't waste time repining
O'er bad days;
Don't waste time declining
The good ways.
Smile and look around you,
And new courage borrow;
Better days surround you—
Today and tomorrow.

(Copyright by Will M. Maupin.)

SCHOOL DAYS

Uncommon Sense . . .

By JOHN BLAKE

HOW THEY DO IT

SPENDING your days addressing to the world at large the question: "How do they do it?" is not going to bring you any information.

You will see in your travels the banker, the railroad president, the painter, the author all respected, all useful, all getting a great deal out of a life that they have, each in their own way, made easier for others.

You will read, perhaps, that this man started on a farm, that the other began as an office boy, that the railroad president once wiped engines on the line which he now rules.

And if you are normal the question "How do they do it?" will occur to you very frequently.

For these men will look much like other men; they will talk like other men. They will have the same interest in baseball scores and the outcome of a big prize fight.

And it will be difficult for you to understand just what it was that placed them in the high positions they occupy, and kept them there.

The answer to your question is fortunately not inacessible. You can find out how they do it, if you try.

Nearly all of them have written, or will write, exactly how they did it or if they do not they will tell others who will put it on paper for you to see.

And you will be very much surprised to discover that in most cases the one thing that did it was application and industry—in other words hard work.

Geniuses are men apart. They don't know how they do it, and they can't tell.

But successful business men and lawyers and doctors are not geniuses, they are merely men with good natural ability, and enough energy to keep working till they get what they are after.

Study and read their biographies wherever you find them. They will answer for you a very important question. And if they can help you just a little toward exerting more energy and cherishing a little higher purpose, the time you spend in reading about them will be paid for at the rate of many thousand dollars an hour.

(Copyright by John Blake.)

Mother's Cook Book

It is well to scrutinize your own shortcomings before calling attention to those of your neighbors. "You have a hole in your tail," said the sieve to the needle.

VARIATIONS OF STANDARD SALAD DRESSINGS.

MAYONNAISE dressing should be thick like whipped cream, and remain so for a long time, if kept in a cool place. Olive oil is by far the most tasty to use in making mayonnaise, but corn oil makes a very good substitute, and as far as appearance is concerned, is equally as good.

To vary mayonnaise add to three-fourths of a cupful two tablespoonfuls of tomato puree; this is tomato cooked down until very thick and put through a sieve.

Piquante mayonnaise—add two tablespoonfuls of chopped olives and pickles.

Cream mayonnaise is prepared by adding three or four tablespoonfuls of whipped cream to three-fourths of a cupful of mayonnaise.

Chutney mayonnaise—add one and one-half tablespoonfuls of chutney.

Connelly mayonnaise- add one-half cupful of cold boiled rice.

Thousand isle dressing—to one cupful of mayonnaise add one-half cupful of salad oil, very slowly; one tablespoonful of tarragon vinegar, one-fourth teaspoonful of paprika, one tablespoonful of chopped chives, one tablespoonful of chopped parsley, one tablespoonful of green peppers, chopped; and one-third of a cupful of chili sauce.

Russian dressing—to one cupful of mayonnaire add three tablespoonfuls of chili sauce, two tablespoonfuls of pimento cut in small pieces, one tablespoonful of tarragon vinegar, one teaspoonful of chopped chives and three-fourths of a tablespoonful of worcestershire sauce.

Lemon Filling.

Boil together five minutes one cupful of sugar, one-half teaspoonful of melted butter, one-half cupful of water and the juice of two lemons. Add two well-beaten eggs. Beat well; cool before using.

Butter Scotch.

Take one cupful of sugar, two tablespoonfuls of butter, one-fourth of a cupful of milk. Boil until it hairs. Use on spice cake.

Fig Filling.

Cook one cupful of chopped figs in one-half cupful of water, the juice of a lemon and when cool stir in powdered sugar until thick. Use on layer cake.

GOOD ROADS

GHT-EDGED ROADS FRIABLE

e Sections of Bates Experimental Road Break Under Traffic of Light Trucks.

pared by the United States Department of Agriculture.)

ome of the lighter sections of the tes experimental road failed under traffic of light trucks driven along edge of the surfaces on the first of the test. The road, which was ecially constructed for the experi- ts now being conducted by the e highway department of Illinois co-operation with the bureau of lic roads, United States Depart- t of Agriculture, is two miles long consists of numerous sections of erent types of construction.

n March 30, the day the road was ed for the tests, 12 trucks with es removed to make a load of 0 pounds on each rear wheel were ted on trips, which will continue increasing loads until the suit- ity of each type is determined. The ks were driven so that the outside els were on the edge of the pav- and almost immediately some of sections began to fall. This was ected, as the sections were of light n and intended to demonstrate futility of such construction.

he road will be subjected to a num- of tests under the destructive nding of the trucks, and it is ex- ed that much valuable informa-

thod of Obtaining Deflection and eformation of Pavement Under oad When Sub-grade Has Been Re- oved.

n will be gained for use in future d construction. In addition to spe- lists assigned to investigate soil nditions, temperature effects, and er factors, five engineers are con- tly observing the effect as the ks continue their daily grind. The periments will continue until all the tions have been thoroughly tested.

OOM IN MATERIAL TESTING

crease in Facilities Has Grown Rapidly in Past Few Years in Different States.

The great boom in highway build- g which has come since the federal- d act of 1916 has led to an increase the facilities for testing highway terials. The bureau of public roads the United States Department of riculture keeps in touch with all boratories which test material for deral-aid roads and reports that the mber has grown from a scattered w in 1916 to at least one in every te with two exceptions. They are stributed as follows: State highway partment laboratories 20, university boratories 27, and commercial labor- ries 21, a total of 68.

Conditions have become such that it practically a necessity for each te to have means of quick testing order not to delay work. In pass- on materials the laboratories are erned by the idea that roads must constructed with materials close at nd wherever possible and give as- rance for the use of such material ere it is suitable.

OAD DESIGNATED BY NUMBER

w Method Officially Adopted by New England States to Replace Color System.

The new method of designating ghways by numbers, officially adopt- d by the New England states to re- ace the color band system, is re- arkable for its simplicity. When lly carried out it will provide a com- lete and comprehensive plan possible extension throughout the country. e numbers have already been as- gned to most of the main trunk utes by the highway commissioners.

Road Mileage of Country.

Road mileage in the United States r square mile area is .739. England s 2.57 miles of road per square mile gium, and France 1.75.

Winnipeg Has Widest Streets.

Winnipeg, Canada, claims to have e widest streets of any city in Amer- a.

LIVE STOCK FACTS

PLAN FOR IMPROVING STOCK

Progressive Firm of Butchers in Ohio Hit on Novel Scheme to Build Up Quality.

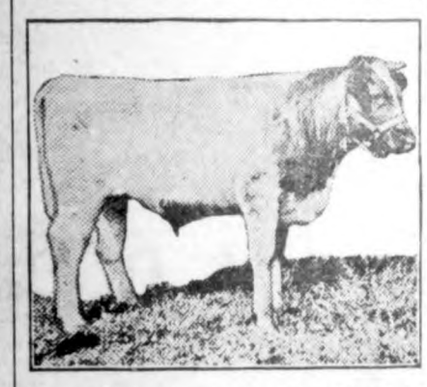
(Prepared by the United States Department of Agriculture.)

Recognizing that live-stock improvement is beneficial to the meat trade as well as to producers of animals, butchers are becoming interested in the better-sires idea. A progressive firm of butchers in a small Ohio city seeks to better the live stock of that locality by a plan described in the following letter to the United States Department of Agriculture:

"While we have never made a business of dealing in purebred live stock," says the writer, "we have always encouraged their use. We try to keep a line on well-bred young bulls in our vicinity, and whenever we buy an animal for slaughter we use our best efforts to have him replaced with something better. We believe this plan will help to build up the quality of cattle in the neighborhood, to the advantage of both ourselves and the farmers.

"When we kill an animal that has an exceptionally good 'dress' we display the carcass in our window, giving on a card the age, live weight, dressed weight and the percentage of dressed meat. In this way we advertise to producers that they get more live weight and we get more dressed weight from well-bred stock than from inferior stock of the same age. We have demonstrated also the superiority of veal calves from well-bred parents, and have shown that they mean more to the farmer in dollars and cents than the other kind."

In commenting on the plan, live-stock specialists in the bureau of animal industry point out that small-town butchers are in a position to help



First Cross Shorthorn Steer Obtained by Using a Purebred Sire With a Common Cow.

in influencing the quality of future generations of cattle and hogs that come to their cutting blocks. The plan as presented by the firm of butchers quoted is in accord with methods of live-stock improvement advised by the department.

ACUTE SHORTAGE OF HORSES

Farmers Experience Difficulty in Obtaining Animals Required for Farm Work.

Difficulty is being experienced by many farmers in obtaining work horses needed. This fact has been made clear to W. H. Peters, chief of the animal husbandry division of the University of Minnesota, by the number of inquiries made by him and members of his staff as to the available supply of farm work horses.

"There isn't any doubt that for the last two years the number of colts raised has been less than the number of horses that have died," said Professor Peters. "Is the inevitable result of this condition already making itself evident? If this condition is maintained an acute shortage of work horses is bound to result.

"Farmers who have good sound mares will find it profitable to breed them. This will be particularly true if the mares can be mated to a good sound stallion of desirable draft type. In communities where such a stallion is not available any farmer with a half dozen or more mares will find it profitable to purchase and keep such a horse."

MARKET HOME GROWN FEEDS

Farmer Should Determine Number of Head of Cattle to Keep by Available Feed.

The number of live stock which a farmer feeds on his farm should be determined by the amount of home grown feeds which he has on hand, and the price which he can get for these feeds if sold on the market. As a general rule live stock will market home grown feeds at a profit if the live stock is given a square deal; but it is out of the question to expect scrub stock to be economical users of feeds.

Immunizing Against Cholera.

When immunizing hogs against cholera do not make injections in the ham or shoulder as this lowers the value of those portions of the carcass. Inject serum in the flank or between the fore legs.

Oats Not Fattening.

Oats make a very poor feed for fattening cattle, as they are so bulky that the cattle cannot eat enough of them to put on the necessary amount of fat.

POROUS TILE IS NOT BEST DRAIN

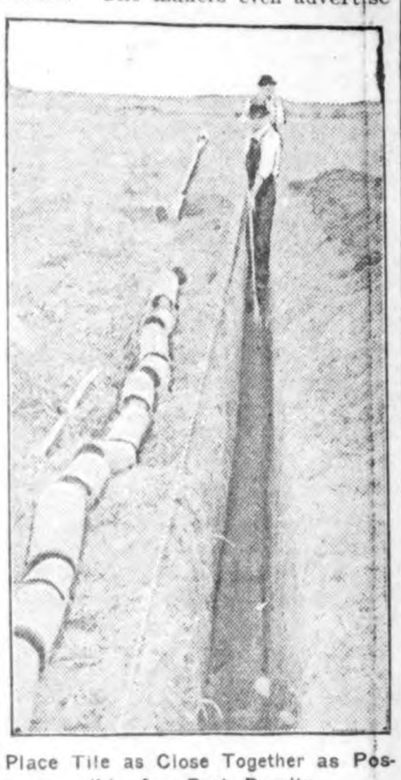
Many Farmers Stick to Old-Fashioned Belief That Water Enters Through Walls.

POROSITY NOT GOOD QUALITY

Little Consideration Should Convince Most Skeptical That Openings Afford Ample Space for Admission of Moisture.

(Prepared by the United States Department of Agriculture.)

Among the old-fashioned beliefs in connection with the action of tile drains is the one that the water enters not through the open spaces in joints but through the walls of the tile. The fact that drains composed of hard burned or even glazed tile are found to operate as well as the most porous ones has not served completely to dispel this delusion, says the bureau of public roads, United States Department of Agriculture. Occasionally this view is set forth by writers. Tile makers even advertise



Place Tile as Close Together as Possible for Best Results.

their ware as "porous" in the mistaken belief that this is a desirable quality, whereas the contrary is true.

Ample Entry for Water.

Only a brief consideration of the matter should be sufficient to convince the most skeptical that the openings between the tiles afford ample entry for the water—and why should the water force an entry through the walls when the open door is there? The processes of manufacture do not permit of a tile with absolutely true and smooth ends. Pick out two of the most perfectly-shaped ones and it will be found that one cannot abut them together without leaving a considerable opening. In the ordinary run of tile-laying an opening of at least one-eighth inch is to be expected. This one-eighth inch around the periphery of, say, six-inch tile, gives an entrance of two and one-half square inches at each joint. Thus in eleven joints—a length of only twelve feet of six-inch drain—there is an entrance area equal to the cross-sectional area of the tile. In a drain of only moderate length there is likely to be available a dozen times more opening than the interior capacity of the tile can make use of.

Porosity Not Wanted.

One need not fear that the water cannot enter the tile. Place them as close together as possible, turning them around to get the closest possible fit. There need be no hesitation in the use of hard-burned tile, or, if available, sewer pipe with "bell" ends. Durability and strength are the qualities wanted—not porosity. In fact, porosity usually means inferiority, and is to be avoided, especially where the tile are laid above the frost line or so close to the surface as to be affected by the wheels of vehicles or heavy farm machinery.

MOTION PICTURE SHOWS BEES

Need for Requeening Colony From Time to Time and Proper Management Is Shown.

Bee keepers will be interested in a new motion picture prepared by the United States Department of Agriculture showing the best practice in handling bees and the control of bee diseases. The film, which is called "Keeping Bees at Work," is intended to supplement a picture entitled "Bees —How They Live and Work," issued some time ago for more popular use.

The new picture shows the need for requeening the colony from time to time, the way to prepare the bees for wintering, the time to unpack the hives, the control of the swarm, and other details of management. The fact that the bureau of entomology will examine samples of combs to identify diseases and advise on their control is brought out.

The film is in one reel, and may be borrowed by extension workers and others entitled to the privilege, or prints may be purchased for approximately the cost of making them, which is about $37.

MOISTURE CAPACITY OF SOIL INCREASED

Organic Matter in Any Form Is of Much Benefit.

Activities of Bacteria Largely Dependent on Supply of Decaying Material—Food and Air of Great Importance.

(Prepared by the United States Department of Agriculture.)

In addition to adding plant food to the soil and improving its texture, organic matter, supplied by green-manure crops, stable manure, or in any other form, adds greatly to the moisture-holding capacity. It has been shown, says the United States Department of Agriculture, that while 100 pounds of sand can hold only 25 pounds of water and 100 pounds of clay 50 pounds, the same weight of humus or decaying organic matter will hold 190 pounds.

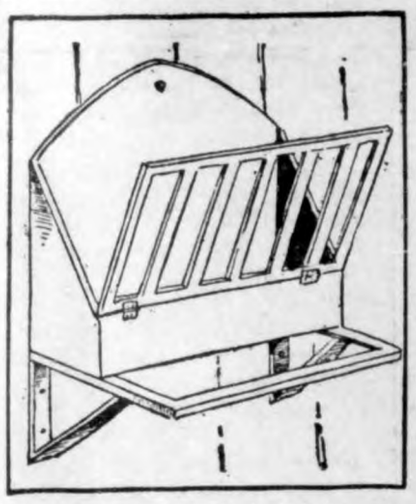
Clay soil containing organic matter is more friable than similar soil without organic matter. When the organic matter is entirely removed the clay remains compact during freezing and thawing. When the organic matter is returned the soil crumbles after freezing, just as the original soil.

Not only do the higher plants grow better in a soil rich in organic matter, but the activities of the soil bacteria are largely dependent on the supply of decaying vegetable matter. These bacteria need food and air. Their food is the dead vegetable matter, which they break down and make available to the higher plants. Most beneficial bacteria use air, and this they find more abundantly in a soil supplied with organic matter than in stiff clays poor in it. In sandy soils there is air enough, but the addition of humus helps to hold moisture and so benefits the bacteria as well as the higher plants.

DRY MASH HOLDER FOR HENS

Device Takes Up No Floor Space, but Is Easily Accessible—Also Holds Water.

Near-perfection in a dry mash holder for poultry is reached in the device shown below. The slats open to receive the mash and the bottom of the frame when closed makes a guard to keep the hens from throwing the feed out of the box. The feeder takes up no floor room, but is perfectly accessible to the fowls because the brackets that hold it up extend for-



Perfect Dry Mash Holder.

ward a few inches to support also an alighting perch, on which the hens can stand while eating. The same arrangement, but with a shorter box, would serve admirably to hold the water pail or fountain.—Farm Journal.

LOOSE HAY HARD TO HANDLE

Use of Press Makes It Comparatively Easy Matter to Store and Transport.

Loose hay is a bulky product and extremely difficult to handle in large quantities. Before the practice of pressing hay into bales became common it was difficult and expensive to transport this feed except to the extent of loading it on wagons and hauling it to a nearby town or city. As a result, the matter of supply and demand was quite largely local, and frequently there was wide variation in prices offered in different localities.

With the coming of the hay press, it was possible to put hay into bales which were easily handled, greatly reducing the space required for a given amount of hay, and making it possible to transport hay for long distances at costs which were not prohibitive.

CAMAS POISONOUS TO STOCK

Heaviest Losses Caused Among Sheep Flocks—Deadly Species Are Now Recognized.

Death camas, of which there are four principal species in the range country of the West, although causing heaviest losses among sheep, are also poisonous to horses and cattle. Under range conditions cattle are seldom poisoned. Horses are frequently made sick, but deaths are rare. A few cases are known where persons have been fatally poisoned by the weed. Children have eaten the bulbs out of curiosity and adults have gathered the plant, mistaking it for the edible sego. The United States Department of Agriculture has not found a remedy for poisoning by death camas, but the deadly species are now recognized, and ranchers may safeguard their flocks.

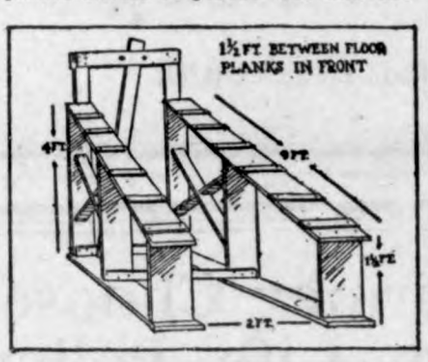
DAIRY FACTS

SERVICEABLE BREEDING RACK

Useful Device When Bull Becomes Heavy Is Not Difficult to Build —Must Be Braced.

A bull that is a good individual and that has excellent breeding back of him should be kept in service at least until his daughters come in milk. If he transmits his breeding to his daughters he should be kept in service until he is no longer useful. To follow this plan it is necessary to exchange bulls with other breeders and in most cases it will be necessary to use a breeding rack after the bull becomes too heavy. It is too often the case that the breeding value of a good bull is not discovered until he is dead.

A very serviceable breeding rack can be made as follows: Take two planks 2 by 12 by 9 feet long and place them on a level foundation for the floor of the breeding rack. These planks should be placed one and one-



Durable Breeding Rack for Bull.

half feet apart in the front part of the rack and two feet in the rear, inside measurements. Each side of the breeding rack has three posts made of the same material as the floor which are four feet high in front and one and one-half feet in the wear. The posts are nailed to the floor and a plank 2 by 12 by 9 feet long is nailed on the top of the posts. Two-inch strips are nailed across the top of the breeding rack at intervals of ten inches to prevent the bull from slipping.

The breeding rack must be well braced with 2 by 4's as indicated in the diagram. Four pieces 1 by 6 are nailed across the front end to prevent it from spreading. A 2 by 4 is nailed across the floor plank just back of the middle posts. A stanchion is placed in the front end of the breeding rack which is so constructed that it can be moved backward or forward.—The Prairie Farmer.

TESTS DETECT REMADE MILK

Necessary That Some Method Be Devised That Natural Product Be Distinguished.

(Prepared by the United States Department of Agriculture.)

The increased use of remade milk and cream—that is, milk and cream made from powdered or condensed milk and sweet-cream butter—has made necessary some method by which they may be distinguished from the natural products. Such a test has been devised by chemists of the United States Department of Agriculture, and it is now possible to detect as little as 10 per cent of remade milk in a mixture with natural pasteurized milk. If milk powder has been used in making the mixture, the amount that can be detected will depend on the degree of heat used in its manufacture.

The test for both milk and cream is based upon the color produced when the washed curd made from them is dissolved in sodium hydroxide. When this curd solution has stood for several hours a characteristic yellow color develops in the samples taken from remade milk and cream or mixtures containing them; samples of the natural products or only slight mixtures do not show it.

Remade milk and cream are wholesome foods if made properly from good, natural milk, but should be sold for what they are, and this test makes it possible for food officials to determine whether or not the consumer is being deceived.

TAKE RIGHT CARE OF CREAM

During Hot Weather It Should Receive More Attention—Cool Soon as Possible.

During hot weather cream must receive better care on the average farm. As soon after separating as possible, cool the cream by setting the can in cold water. Never mix the fresh warm cream with the cream from previous separation until cooled as low as possible. Do not keep cream too long at the farm. Send it to the creamery or take it to the cream station at least twice a week, and three times a week when the weather gets hot. Poor, stale cream will not make good butter. If the creamery cannot make good butter the average price of cream will be lower than if good butter can be made.

Bacteria Furnish Nitrogen.

Sweet clover, like most legumes, depends largely for its nitrogen on the work of bacteria that live in nodules on the roots of the plant. While it is not always necessary to inoculate the seed with this bacteria it is always advisable.

Tomato Wilt Carried.

Tomato wilt is carried in the plants and the disease is very often scattered by this means; therefore care should be taken where plants come from.

POULTRY

MARKET SEASON FOR GUINEAS

Latter Part of Summer and Throughout Fall Is Best Time to Dispose of Fowls.

The marketing season for guinea fowl is during the latter part of summer, and throughout the fall. At this time the demand in the city market is for young birds weighing from one to two pounds each. At about 2½ months old guineas weigh from one to 1½ pounds, and at this size they begin reaching the markets in August. As the season advances the demand is for heavier birds.

The usual practice in marketing game birds is to place them on the market unplucked, and in most markets guineas are sold this way. They appear more attractive with feathers on, and sell more readily. Dressed, the small size and dark color of the skin are likely to prejudice the pros-

Guineas Are Usually Placed on Market Unplucked.

pective customer who may be unfamiliar with the bird's excellent eating qualities. For hotel and restaurant trade, however, guineas should be dressed in the same way as common fowl. Better ask the dealer, before shipping, whether he wants the feathers on or off.

If the feathers are to be left on the birds all that is necessary in preparing for market is to bleed them by severing the principal blood vessels of the neck, allowing them to hang head downward until bleeding is complete.

If the feathers are to be removed it should be done by dry picking. When the brain is pierced after severing the blood vessels in the neck the feathers are loosened by a convulsive movement of the muscles and can be removed easily.

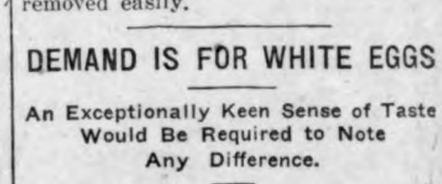
DEMAND IS FOR WHITE EGGS

An Exceptionally Keen Sense of Taste Would Be Required to Note Any Difference.

It would take an exceptionally keen sense of taste to distinguish any difference between white and brown eggs at breakfast, but human beings are such faddists that, in the opinion of some, the difference is there just the same. In New York the demand is for white shells, while in Boston the brown egg is just as popular.

"Some men will have only Dutch Belted cattle or Hampshire hogs," said one of the poultry specialists in the Department of Agriculture. "They are color enthusiasts. The liking for white-shelled eggs may have grown from associating the egg with the white poultry, an agreeable picture suggesting cleanliness. Actually, however, the brown-shell egg is every bit as good as the white until you arrive at the price in New York. The difference there sometimes is considerably in favor of the white."

At present all the general purpose breeds of chickens are layers of brown eggs. Some of the leading markets demand the white egg, however, and as the price favors the white product it is important to supply it if possible and at the same time produce a fowl having weight in meat.



The busy hen is the one that makes the best layer.

* * *

It pays to feed the young fowls liberally until they are full grown.

* * *

Be kind to your fowls; make friends with them and they will repay you. Fright reduces the egg yield.

* * *

Exercise makes the hens lay better, insures fertile eggs and makes the chicks grow strong and healthy.

* * *

Make the nest boxes of ample size, but not too deep. The hens, if large in size, will break the eggs in getting into the nest if it be too deep.

* * *

A hen too closely confined soon becomes restless and uneasy. Restlessness results in discomfort and the development of such vices as egg-eating, feather-pulling and cannibalism.

The Spreader Season is here

Why the Farmer Chooses this Western Life Policy

EIGHT out of every nine policy-holders of The Western Life Insurance Company are farmers. They have protected their families, their estates and themselves in old age---with one of our

FARMER'S SPECIAL

Western Life Insurance Company OF DES MOINES, IOWA "Out of the West Comes the Best"

Western Life Policy with special protection to the farmer and his family has made this the popular policy with the farmers of Iowa. Is your family protected? If you were suddenly called, would there be any ready cash for them? The FARMER'S SPECIAL is "old line" life insurance, just as good as money in the bank---and you get these benefits:

Double insurance to your family if you meet with accidental death.

Your annual premiums are paid by this company should you become permanently disabled.

Your premiums grow smaller each year---when you apply the guaranteed cash coupons which we give you every year after the first.

Your policy is fully paid up after twenty years.

After you have made 15 deposits the last five annual premiums are paid by this company when you leave the guaranteed cash coupons with us.

This FARMER'S SPECIAL Policy has other benefits for you such as monthly endowments after you reach the age of 60 years---interest paid you on premiums and other advantages which we will gladly explain to you upon request.

Get a Western Life Policy---it costs you less each succeeding year you carry it---the FARMER'S SPECIAL gives you the extra benefits you would not get in ordinary old line insurance. The longer you wait, the higher the rate. Mail the coupon today for our interestine booklet "One Farmer's Experiencg with Life Insurance."

Mr. and Mrs. Fred Klinge, Jr. are the proud parents of a baby boy who arrived at their home July 20. Fred, bring us in a smoke next time you are in town.

Mr. and Mrs. Harold Gruetzmacher returned Saturday from Ames, where they had been attending summer school. They will spend the balance of their vacation in Klemme before going to Britt where they will teach this year.

Al Emerosn and "Stub" Lewis returned from their Minnesota fishing trip last Thursday evening. They report only fair luck—and that the biggest one got away.

The Dr. W. F. Missman and J. N. Day families drove to Goldfield last Sunday to hear Dr. A. E. Buriff give his sermon and also for a visit with the former Klemme people. They also enjoyed a picnic dinner in the Goldfield park.

The following Klemme people enjoyed a picnic at the Koerner cottage at Clear Lake last Sunday: A. G. Koerner and family; Mr. and Mrs. C. F. Keraus; William Keraus and family; Elmer Fuller and family; Mr. and Mrs. C. G. Waterman; Mr. and Mrs. J. W. Waterman; Mr. and Mrs Chris Blumer and Walter Lau and family

The Rev. Arthur Gedye was invited to preach at the Methodist Church at Belmond last Sunday evening and accordingly filled the pulpit there that evkening as Dr. Bushnell, the District Superintendent was a Klemme caller Sunday and o fsilled the pulpit here.

Dr. Zinn intends to go to Clear Lake tomorrow for a sort of family re-union and to spend the day on a picnic when the following will be there: William Zinn and daughter of Canada, Dr. Edgar Zinn and famliy of Goldfield and Dr. and Mrs. R. N. Reuber of Sheffield. They have a cottage there and will remain over Sunday, except Dr. Zinn who will return to Klemme in the evening.

Volunteers Wanted

We want the names of a few patrons who will volunteer to take extra good care of their cream for two days prior to the time we will want Cream for the Scoring Contests—The first for the North Iowa Fair at Mason City; the second for the Iowa State Fair at Des Moines; the third at the Dairy Cattle Congress at Waterloo; and the fourth for the National Buttermakers' Association at St. Paul, Minn.

We are very anxious to win out in some of these Scoring Contests. Let's put the Klemme Creamery on the map as a QUALITY CREAMERY! We can do it if you will GIVE US YOUR SUPPORT!

WE have the largest make of any Creamery in North Iowa—let's make butter that will bring the GOLD MEDAL to the Klemme Creamery.

We are willing to divide the honors with those furnishing the Cream and your name will be published together with the score we get.

Thanking you,

A. D. Gimer, Mgr.

FIRST CHURCH EPWORTH LEAGUE

As Reported By Earl Josten, Pres.

We were very glad to see so many present Sunday evening to hear our reports concerning the Institute, for we were anxious to give you some idea of what an Epworth League Institute is like, and pass some of the benefits on to every member of our chapter. We feel like thanking you for remaining to hear "the last of it," despite the threatening weather. It is our greatest desire to keep the Institute spirit alive until next July, when we hope to have a great many more at Okoboji.

Sunday evening (August 6), we will have charge of the meeting at the Liberty church, beginning at seven-thirty, promptly. Please keep this in mind, Liberty Epworth Leaguers, and the four of us will entertain you for a while.

In the town church, Mr. Erick Josten will lead the devotional meeting. Please be there and try to take an active part in it.

Every member of the League is entitled to one of the new Topic Cards. If you have paid your dues for this year (25c) and have not received one of these attractive cards, just let us know, and you shall have yours at once. We are on the trail after new members, too. Why not join us?

As soon as we can arrange for it, we want to have a real, live social. Have you any plans to offer? If so, let us know; they will be welcome.

100,000 BUSHLS IN UNIONS ON MITCHELL COUNTY FARM

St. Ansgar Truck Garden Biggest .....In State.....

OSAGE, July 29. Mitchell county lays claim to the largest truck farm in the state, and possibly in the world as far as anyone has been able to state to the contary. It comprises 700 acres and is owned and operated by one man, Frank J. Sedlacek of St. Ansgar. Six hundred twenty acres lie on one farm, and on it are 90 acres of unions, 80 acres of cabbage, 60 acres of soy beans and 150 acres of potatoes, in addition to corn and grain. which are neccessary in the rotation process.

In addition to the above, Mr. Sedlacek has 50 acres of onions on ground for which he paid $40,000 two years ago. The price was for the land alone, as at the time it was purchased there was not a building or fence on it. It is probably the best onion producing land to be found anywhere, and it's owner says it has paid him 25 per cent on his inestment each year he has owned it, in spite of the general hard times.

..This year's crop is a beautiful sight and promises to yield 1,000 buschels to the acre. So clean is the land that the cost of extensie farming has been reduced to a minimum. This years crop, including cost of planting, cost of seed, cost of ground preparation, and cost of cultivation to date, stands the owner $11.40 per acre.

From his entire farm Sedlacek expects to market 100,000 bushels of onions this year. and he says that his other truck crops will pay the entire expense of running the whole farm for a year, leaving he 100,000 bushels of onions as profit.

Mr. Sedlcek is 39 years old, and started out in life 21 years ago as a hired man. He is worth easily a quarter million today, and all of it is the product of his own efforts He is a pioneer in truck farming in this part of the state, and worked out his success through experimenting in a small way during his early twenties. His land was acquired a piece at a time as his success grew. He is a "second growth" Bohemian and began life with very limited advantages.

A JOB FOR THE FATHERS

There is, in our opinion, too much auto- spooning, too much one-hand-on-the-wheel driving, too many unprincipled young men, and too many careless fathers and mothers. It should be corrected. And we are inclined to think the fathers are the ones who should correct it.—Farm Journal.

"The man who whispers in a well,
About the things he has to sell,
Will never make as many dollars
As he who climbs the tree and hollers

LUDEKE REBUILDS SORGHUM PLANT INCREASE OUTPUT

WILL BE ABLE TO HANDLE 200 GALLONS DAILY

Plant Is Valued At $4,500.00 Now

Henry Ludeke is building a new sorghum plant on his farm just west of town and is putting in new and heavier machinery so that he will be able to handle a much larger output of the sugar cane this year.

He has put up a new building that is 20x28 feet in size and is divided into two parts. The boiler room is 9x20 feet and the cooking room will be 19x20 feet.

He has purchased a new steam boiler of 45 horse power capacity; his old boiler was only 8 h. p. The cooking vats and other equipment has been increased in size accordingly to the increased boiler size so that he will now be able to easily take care of a 200 gallon a day output of finished sorghum.

The entire plant will be screened and will be sanitary in every way. A sloping concrete floor will be put in to drainage purposes.

Mr. Ludeke has six acres of his own cane which he will turn into sorghum and will also manufacture for other parties five acres. He says he could easily handle twenty-five acres with the outfit he now has.

The quality of sorghum that Mr. Ludeke puts out is very good and in fact is a great deal better flavored than most sorghum due to the fact that he is very careful in making it. The leaves are all stripped from the cane by hand and also the seed is removed by hand so that none of it goes through the crushher, as he says the leaves and seed make the sorghum bitter tasteing. Likewise the cooking of the juice must be very carefully watched so that it can be skimmed at the right moment. All this goes to making a very fine grade of sorghum.

Recently he traveled some eight hundred miles visiting prominent sorghum mills in Iowa and Minnesota to gain as much useful knowledge as possible regarding the industry.

When the sorghum season opens we hope to be able to tell our readers more regarding this interesting phase of agriculture in Hancock County.

COUNCIL PROCEEDINGS

Klemme, Iowa,
June 26, 1922.

Meeting of the Town Council held at Mayor Wenck's office.

Meeting of the Town Council of Klemme, Iowa, called to order by Mayor F. J. Wenck.

Members present: Joe Johnson, Wm. Smith, Wm. Bachman and A. D. Gimer Absent, C. W. Wiles.

Moved and seconded that the following bills be allowed:

W. E. Buell, Engineer Contract	$292.85
Ramsay & Blackstone, Legal Advice	50.00
John N. Day. Clerk Salary	60.00
Klemme Times, locals and Programs	5.45
Rev. Calkins, speaker for Decoration Day ffi	10.00
Electric Light Co., street Lights	151.20
Wallace Pavey, Repair Work	6.85
C. M. Bredbenner, Drag streets and haul sand	92.50
C. C. Mayne, Mowing Park	36.00
Gus Baack, Pumping for May, 1922. ffi ffi	15.00
Standard Oil Company, Gass	40.95

Moved to adjourn.

F. J. WENCK, Mayor.
J. N. DAY, Clerk.

A lot of women seem to have taken as something personal the injunction, "Be ye also fishers of men."

There are such things as bad luck and good luck but if you keep right on working and paying attention to your business exclusively. you won't have to worry about the former and you'll have share of the latter.

Clothes don't make a man, but a lack of them makes the flapper.

BELMOND TO CELEBRATE CREAMERY DAY AUG. 23.

Plan To Have A Big Time There

Belmond is planning to celebrate a creamery day Wednesday, August 23. The movement is backed by the creamery, their patrons and the business men. The Herald-Press of that place has the following to say:

"While plans in detail have yet to be thoroughly worked out a few of the expectations are known. A good band will be secured, possibly the Idora Industrial School Band. A good ball game will be arranged for between well matched teams. A worth while program with an interesting speaker will be provided.Some special free entertainments will be provided and the whole day be given up to enjoyment and relaxation from the every day work. The program will probably be given in the city park and the sports and other enterteinments on the streets or suitable grounds. It is to be a big day without mistake."

NOTICE TO CONTRACTORS

Sealed bids will be received at the office of the County Auditor, Garner, Iowa, until 1:00 o'clock P. M., on August 8, 1922, for gravel surfacing and incidental work on the primary road from Klemme south to the County line, and the Wilson Highway North of Garner, as shown on the plans for Section A and B. Federal Aid Project No. 139. Bids will be opened at the above office promptly after the time for receiving same has closed.

A certified check, unregistered Liberty Bonds, or bidder's bond, amounting to five (5%) per cent of bid, made payable to the County Auditor, shall be filed with each bid, which in case of bidder receiving the award,, should he fail to execute a contract and file a bond within ten (10) days after the acceptance of his bid, shall be retained by the county as liquidated damages.

The proposed work consists of gravel surfacing 16.219 miles requiring 25,301 cu. yd. of gravel which will be obtained from local pits.

Plans and specifications for the work may be seen and may be secured at the above office or at the office of the county engineer, Garner, Iowa, or at the office of the State Highway Commission, at Ames Iowa. The County reserves the right to waive all technicalities and to reject any or all bids. All contracts awarded for this work subject to the approval of the State Highway Commission before becoming effective as contracts.

July 27, 1922.

CHRIS JACOBS,
County Auditor.

(SEAL) 2w

NOTICE TO CONTRACTORS

Sealed bids will be received at the office of the County Auditor, Garner, Iowa, until 1:00 o'clock P. M., on August 8, 1922, for grading, and incidental work on the primary road from Garner south to Klemme as shown on the plans for Section A., Fed. Aid Proj. No. 139. Bids will be opened at the above office promptly after the time for receiving same has closed.

A certified check, unregistered Liberty Bonds, or bidder's bond, amounting to five (5%) per cent of bid, made payable to the county auditor, shall be filed with each bid, which in case of bidder receiving the award, should he fail to execute a contract and file a bond within ten (10) days after the acceptance of his bid, shall be retained by the county as liquidated damages.

The proposed work consists of building to established grade approximately 6.37 miles requiring 62,449 cu. yd. of earth excavation.

Plans and specifications for the work may be seen and may be secured at the above office or at the office of the county engineer, Garner, Iowa, or at the office of the State Highway Commission, at Ames, Iowa. The County reserves the right to waive all technicalities and to reject any or all bids. All contracts awarded for this work are subject to the approval of the State Highway Commission before becoming effective as contracts.

July 27, 1922.

CHRIS JACOBS,
County Auditor.

(SEAL) 2w

WILSON HIGHWAY WILL BE IMPORTANT STATE ROAD

MORE ROAD IMPROVEMENT WORK TO BE LET TUESDAY

Wilson Highway To Be Further Improved Across County

Next Tuesday the Board of Supervisors will ask for bids for grading the Wilson Highway between Garner and Klemme; and at the same time will ask for bids for graveling the Highway between Klemme and the County line south and from Garner north to Forest City.

When this work has been done the Wilson Highway will be a very fine road across the county.

The Wilson Highway in a couple of more years will be one of the impotant highways across Iowa and a great deal of work is being done on this road in the state this year.

Now then, it would be a fine thing for the city council here to make a good connecting link with the highway into Klemme. The road leading from Klemme has been in a fightful condition the whole summer, and the same is true of our streets. They should be graded up and then given a good course gravel surface and then we would have something. A couple men, a team and a small grader can't accomplish much and it appears like wasted money. Why not get one of the grading crews now idle who have the machinery right handy and know who to build roads to do the work? They could make our streets look like a paved jog at a small cost and we would have good streets that would last a long time.

THE KNOCKER

After God had finished making the rattle snake, the toad and the vampire, He had some awful substance left of which he made the knocker. A knocker is a two-legged animal with a corkscrew soul and a water soaked brain and a combination back bone of jelly and glue. Where other men have their heart he carries a tumor of decayed principles. When the knocker comes down the street, honest men turn their backs, angles weep in Heaven and the devil shuts the door of hell to keep him out. There fore don't be a knocker. You can't saw wood with a hammer. —Exchange.

THE COST OF DISARMAMENT

It is said the government will be lucky if it realizes a cent on the dollar of the cost of the 450,000 tons of warships that are to be scapped under the terms of the naval armaments treaty. The total cost of the construction has been about $330-000.000, which will be practically all lost. But the economy of the scapping program is seen when realized it would have cost about $200,000,-000 a year to keep the vessels in commission after they had been completedat an additional expenditure of millions. In practical terms, the treaty will have more than paid for itself in two years.

STREETS TO BE MARKED

The city Dads are going to work the Main street of Britt for Auto parkings. Paint has been ordered and a set of blue prints to guide the commissioner and his men in the work.

It is the intention to have all cars park on the right side of the street and drive up to the curb at an angle designated by white lines painted on the pavement.

The turns at corners will be marked and the distance from the corners at which cars can park. The state laws and town ordinance will be followed in marking the streets and those who drive cars will have something to guide them so that violations of the law may be eliminated. —Britt News- Tribune.

There was a fair maid named O'Neal
Who w at up in a great ferris Wheel
On the very first round
She looked at the ground,
And it cost her and 80-cent meal.

Trutful lover(confiding to friend) "I may learn to love her. I had the same trouble with olives.
Advice like castor oil— is easy to give but hard to take.

A FAMOUS AMERICAN TREE STILL STANDING

The Tree of the Scythes

..One of the strangest monuments to a soldier of the civil war that exists anywhere in the United States may be seen on the beautiful farm belonging to C. L. Schaffer, two miles west of Waterloo, N. Y., and four mileseast of Geneva. This unique monument is in the form of a large Balm of Gilead tree. In Oct., 1861—61 years ago—Wyman J. Johnson, then a sturdy young man, came in from the field where he had been working and meeting his mother in the yard, announced that he was going to enlist in the Union army and help Abraham Lincoln save the country. As he finished his proud announcement he hung his scythe, which he had been using all day, in the crotch of the little Balm of Gilead tree, which was then not more than six or eight inches in diameter, and said to his mother: "Let it hang there until I return." It is there today. Wyman J. Johnson never returned from the battlefields. His beloved mother never saw him after that day. He enlisted in Company G, 85th New York regiment, at Elmira, October 29, 1861. and after serving in 15 engagements was wounded at New Berne, N. C., and died in a hospital at Raleigh, May 22 1864, having been promoted to fourth sergant.

Years ago the wooden handle of the scythe disappeared through the ravages of time. The tree has grown in size until not more than six inches of the blade is observable. By a strange act of fate, this blade points toward his faraway Southern grave.

Upon the breaking out of the World War, the two Schaffer boys, who lived on the old farm, hung their scythes on this historic old tree and became members of General Pershings army. The tree, which is now 100 feet high, and 15 feet in circumference, is the pride of the people throughout that particular locality. The women of Tyler J Snyder Relief Corps, No. 78, Waterloo, patriotically keep the Stars and Stripes continually floating above the scythes. Never does a decoration day pass that the members of the G. A. R. do not assemble beneath this tree and hold appropriate services.

—National Republican.

IOWA STATE FAIR

With the opening date of the Iowa State fair only a month distant, authorities here are beginning to look toward this great barometer for signs of Iowa's returning prosperity.

Indications today were that they would not look in vain. State fair officials said today that the bettering of conditions of farmers of the state was being reflected materially in the great increases in enteries in almost all of the agricultural and live stock departments of the exposition. Final entries do not close for live stock until August 1, but they now bid fair to go over the marks set last year in almost all departments.

Grain and farm produce exhibits also show marked gains, promising for the state fair visitors this season one of the greatest showings of Iowa's former wealth that has been seen in recent years.

Throughout their plans, fair officers are making preparations for larger crowds than they have entertained in a long time. Admission to the fair has been reduced to 5o cents, as compared with 75 cents for the last several years. Railroads have given additional inducements to state fair visitors by reducing rates to fair and one third for round trip instead of fare and one half.

"If the state fair is any indication, this is going to be a great year for Iowa", Secretary Corey said today.

"BOOST"

Boost and the world boosts with you
Knock and your on the shelf,
For the boosters get sick of the man who knocks,
And he wishes he'd kick himself.

Boost when the sun is shining,
Boost when it starts to rain.
If you happen to fall, don't lie there and bawl,
But get up and boost again.

Boost for the town's advancement,
Boost for the things sublime,
For the chap that's found on the top-most round,
Is a booster every time.

Annoymous.

Foreign Pupils Roil Germany

"Outsiders" May Be Restricted Because of Crowded Condition of Schools.

POLITICAL ECONOMY IN LEAD

Law Also Attracts Greater Numbers Than Before, While Medicine and the "Kultur" Studies Suffer Declining Attraction.

Berlin, Germany.—Accommodations at most of Germany's universities and technical high schools have been so severely cramped since the war by increasing enrollments that steps are being suggested for stemming the rising percentage of foreigners. Students from abroad are estimated to constitute 25 per cent of the registration.

A leading professor in the movement to restrict the foreign influx states that in his lecture room he has noted from 50 to 100 non-Germans. He declares the preparatory training as well as the conduct of these "outsiders" frequently leaves much to be desired. While emphasizing the need of curtailment of foreigners he observes that caution should be exercised to avoid political or diplomatic embarrassment.

Technical High Schools Double.

Enrollment in German universities as a whole has shown an increase of 30 per cent since the war, and that of the technical high schools has more than doubled. Just before the war there were 60,000 university students in Germany. At the armistice the aggregate jumped to 90,000. There has since been a slight falling off. Technical high schools were handling 12,000 before the war. In the autumn of 1920 their students numbered 22,976, and last winter 25,556.

While the knowledge that the war resulted in a greater eagerness for learning in the younger generation has proved gratifying to the Germans, there is a disturbing factor in that "kultur" studies have suffered declining fascination. Compared with 1914 the present statistics for the universities show decreases in the enrollment for theology, philosophy and philology. Medicine, the most popular in 1914, also has proved less attractive, although dentistry students have more than doubled and there has been a slight increase in chemistry. The would-be physicians now number 15,110, whereas in 1914 there were 16,048.

Big Increase in Law Students.

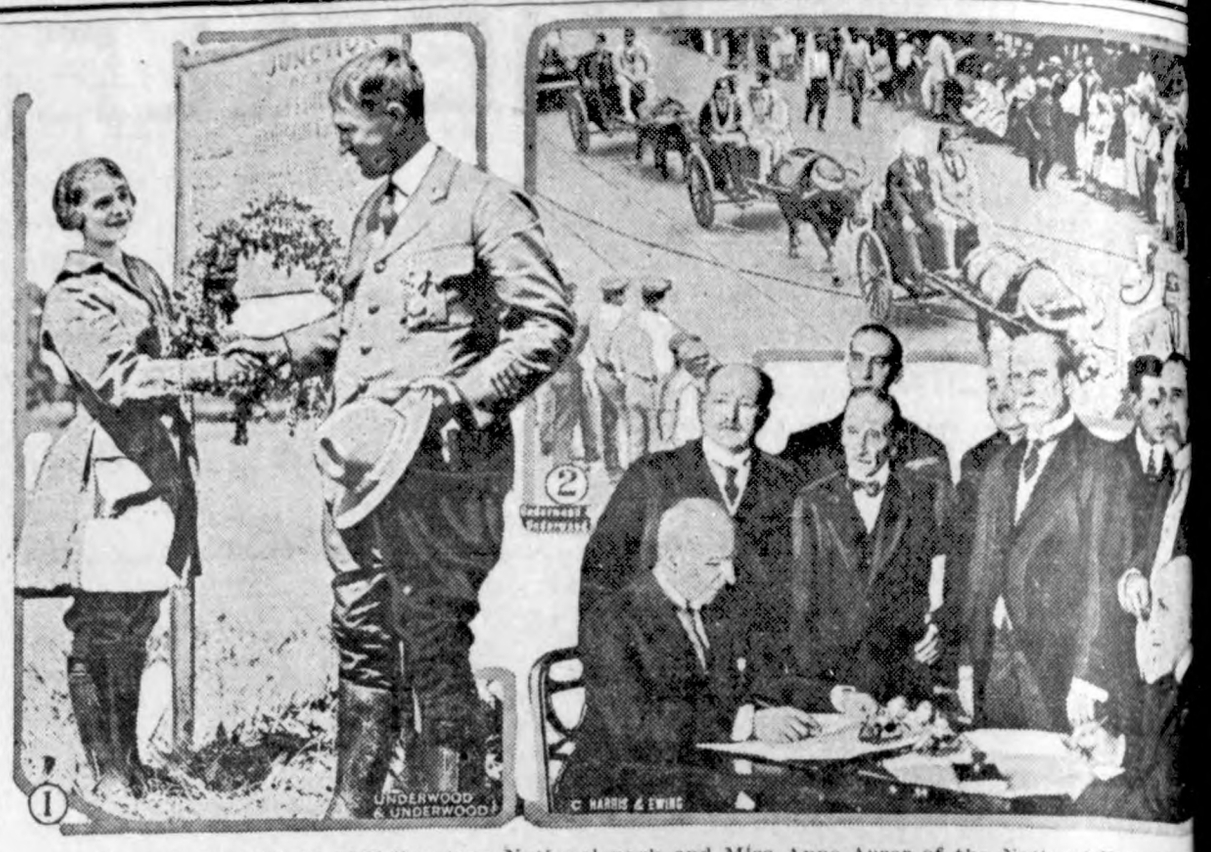
Political economy heads the list in the numbers of university students enrolled, and in percentage of gain over 1914. This branch has 17,714 at work, as compared with 3,836 in the last prewar year. The study of law comes next, with a registration of 16,834, as compared with 9,840. Mathematics and physical science have attracted 9,257, an increase of 1,125.

In the technical schools the greatest number have flocked to mechanical engineering, which 8,306 now are studying, as compared with 3,118 in 1914. Electrical science has 5,129 enrolled, against 1,307 before the war. Mining and smelting have registered a gain. Architecture, alone in the technical schools, has shown a decline.

Of 23 universities only four have shown a smaller enrollment than in 1914. The list includes Frankfurt, founded in 1914, now having 4,367 students, and the Universities of Cologne and Hamburg, both founded in 1919, which have enrollments of 4,107 and 3,660, respectively. The largest registration is in the University of Berlin, with 12,724, as compared with 8,538 in 1914.

CHAMPION TENT-PEGGER

No military tournament in England is complete without a tent-pegging contest. Here is Lieut. R. B. Mosely of Cambridge winning the event in the Oxford versus Cambridge tourney.



1—Supt. H. M. Albright of Yellowstone National park and Miss Anne Anzer of the National Editorial association decorating the commemorative tablet at the golden anniversary of the park. 2—Shriners of United States drawn by water buffalo parading the streets of Honolulu. 3—Dr. Porras for Peru and Senor Aldunate for signing the treaty to arbitrate the Tacna-Arica dispute.

Americans Eager to Go to Levees

Bombard Ambassador George Harvey for Cards of Admission to Royal Receptions.

OFFER ALL KINDS OF PLEAS

Wife of Washington Diplomat Gives Interesting Picture of One of These Court Functions—Finds Queen Beautiful.

London.—There has been keen rivalry among Americans in London to gain entrance to King George and Queen Mary's court levees, which have been revived for the first time in eight years. Colonel Harvey, the American ambassador, has been inundated with requests, pleas and prayers from Americans of all ranks "to see what the king and queen look like."

Every sort of argument has been advanced by the petitioners, and the ambassador has found it difficult to choose between those legitimately entitled to a bowing acquaintance with the king and queen, and mere tourists or "social climbers" who want something to write home about or to put in their diaries.

Described by American Woman.

Among the favored American women who were permitted to bend their knee before George and Mary was the wife of a Washington diplomat, who has given the following description of the function:

"The dominating and most lasting impression was the appearance of the queen. I had been led to expect from photographs and published descriptions that she was of a severely matronly type. Instead, she seemed to be perfectly beautiful; in fact, superb in her regalness, and wearing her magnificent jewels like flowers. Her face had nothing of the pictured severity, but radiated the kindliest of smiles as I passed and courtesied.

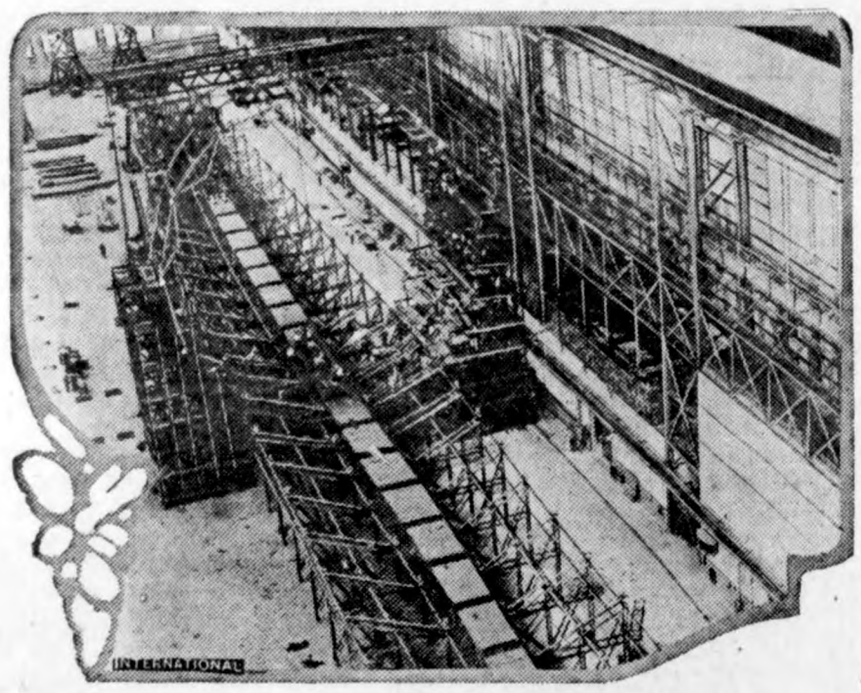
"The court was everything I had imagined it would be in pomp and grandeur, but throughout it all there was a wonderful human note. The king and queen seemed delighted to welcome us. Of hauteur there was none; in fact, the manner in which the queen and Princess Mary kept chatting and laughing during the intervals seemed to indicate that the members of the royal family were enjoying themselves as much as we were.

"Machinery Is Wonderful."

"The machinery of the ceremonial was so wonderful, so perfect in its apparent effortlessness, that there really was no reason to be nervous. White-gloved hands were always ready to arrange our trains, to point the route we were to go, to hold us for a moment, or indicate that we should proceed. It was impossible to do the wrong thing. The curtsy before the king, then a few steps and another curtsy before the queen, and the presentation was over before I realized it.

"The difference between the court and a presidential reception at Washington is essentially one of background and size. We lack the brilliance of uniforms and decorations, but we excel, I think, in the beauty of our women and the elegant simplicity and quiet dignity of the dress of our men."

Building Our Own Giant Dirigible



Preparations are well under way at Lakehurst, N. J., for the actual commencement of work on the New ZR-1 rigid airship, to be built by American engineers. The new airship will be modeled after the German Zeppelin L-49 that was brought down in France during the war. It will be 675 feet long and 78½ feet in diameter. It will have six engines, with a speed of about seventy miles an hour. The photograph shows a view of the immense cradle which forms a base for the construction of the ship.

LONDON LEADS AS SMOKY

Forty-Seven Tons of Waste Dumped on Residents' Heads in Month, Say Health Officers.

London.—London leads the world in fog, smoke and soot. During a single month, according to the department of health, 47 tons of dirt were dumped from the air upon the unsuspecting heads of the populace. Of this mass approximately 27½ tons were soluble and 19½ tons were insoluble, and consisted of tar, carbon and grit.

London is no place for white collars, straw hats, Palm Beach suits or light-colored gowns. These soon assume a black hue which even the laundries find it difficult to remove. Hat makers are overcoming the dirt by making this summer's straw hats a deep black.

$237,000,000 HAS BEEN CUT IN LOANS

War Finance Corporation Gives Summary of Operations.

$53,000,000 Used to Finance Exports and $310,000,000 for Agricultural and Live Stock Purposes Since January, 1921.

Washington.—Books of the war finance corporation showed a total of $237,000,000 in loans outstanding at the close of the fiscal year June 30, according to a summary of operations issued by Managing Director Eugene Meyer.

When the corporation resumed operations in January, 1921, he stated, the loans outstanding totaled $111,000,000, and since that time the corporation has authorized loans aggregating $363,000,000, of which $53,000,000 was to assist in financing exports and $310,000,000 for agricultural and live stock purposes. Of the total amount, he added, $284,000,000 has been actually advanced on June 30, of which $39,000,000 was for export purposes and $246,000,000 for agricultural and live stock purposes.

Of the loans approved, he continued, $289,000,000 represented advances authorized to banking and financial institutions, including live stock loan companies, $64,000,000 to co-operative marketing associations and $9,000,000 to exporters. Of the sums actually advanced, he reported, $204,000,000 represented loans to banking and financial institutions, $54,000,000 to live stock companies, $18,000,000 to co-operative associations, and $7,000,000 to exporters.

Repayments of all loans since January, 1911, he declared, amounted to $158,956,291, distributed as follows: $42,531,559 on loans made under the war powers, $35,635,543 on export loans approved prior to resumption of operations, $33,133,580 on loans approved subsequently to the resumption of operations and $47,655,609 on agricultural and live stock loans.

Prisoner Slipped From Court to Get a Drink

John Banks, waiting in a court in Brooklyn, N. Y., to be tried on a charge of disorderly conduct, became nervous and slipped out in quest of something to sustain him through the ordeal. When the bailiff called his name, Mrs. Banks informed the court that he had just stepped out to get a drink.

Police officers who went to hunt Banks found he had gotten the drink. Judge Martin dismissed the disorderly conduct charge, preferred by a neighbor, but sent Banks to jail for 30 days for intoxication.

Russian women have the reputation of being born politicians and diplomats.

NEWS REVIEW OF CURRENT EVENTS

President Harding Still Tries to Bring the Railway Strike to an End.

CONFERS WITH THE LEADERS

Government's Plan for Fair Distribution of Fuel and Food and to Curb Profiteering Put Into Operation—Bavaria in Revolt Against Control by Berlin.

By EDWARD W. PICKARD

PRESIDENT HARDING and his administration forces devoted themselves last week almost exclusively to the problems arising from the railway and coal strikes. That their efforts might result in the ending of the former was the renewed hope at the close of the week, for Mr. Harding held a most important conference in Washington with Chairman T. De Witt Cuyler of the American Association of Railway Executives, and President Jewell of the railway shopmen. His aim presumably was to induce the rail executives to modify their firm attitude concerning the seniority rule and to persuade the shopmen to recognize the decision of the railway labor board and return to work pending a rehearing of their grievances.

After leaving the White House Mr. Cuyler announced that the executives of 148 of the largest railroads in the country would meet in New York on August 1 to talk over a tentative plan for settling the shopmen's strike. He would not tell what Mr. Harding had suggested, but denied that he had asked the executives to recede from their position on the seniority rule. The presidents of western roads insisted the strikers would not be taken back with full seniority rights restored.

Having abandoned for the time being any hope of ending the coal miners' strike, the President and his aids turned their attention to the question of averting the threatened fuel famine and followed up the call on the various state executives to facilitate and protect the resumption of mining with measures designed to insure a fair distribution of such coal as may be produced and to curb profiteering. Secretary of Commerce Hoover devised a plan which was promptly adopted and put into effect with the legal approval of Attorney General Daugherty. It rests upon the powers of the interstate commerce commission, which body, declaring the existence of a national emergency, took charge of the routing of cars and the distribution of fuel and food. The plan provided for a committee of general supervision in Washington, to be named by the President and which will establish in every coal producing district a representative and a committee of operators. Also, there is an administrative committee comprising representatives of the presidential committee together with representatives of operators, representatives of the railways, and where necessary, representatives of the larger consuming groups.

The basis of prices agreed upon between the operators and the secretary of commerce on June 1 is to be maintained, except where varied by the presidential committee, and this same basis of price determination shall be applied to all districts which are so far not co-operating.

President Harding announced the appointment of Attorney General Daugherty. Secretary of the Interior Fall, Secretary of Commerce Hoover, and Commissioner Aitchison of the interstate commerce commission as members of the general committee. Mr. Hoover is chairman. A fifth member was to be added to undertake the administrative direction.

Mr. Hoover called on the governors of the states to set up state organizations to co-operate in the distribution of the available coal supplies to the points of greatest need. Distribution for railway use will be directed from Washington. It was stated there that states which have large bituminous deposits will be expected to mine their own coal instead of obtaining it from other fields under the emergency order.

IN ILLINOIS the prospects for ending the mine strike were slightly brighter. President Farrington of the Illinois miners, always an advocate of separate state agreements, came to the conclusion that the time for putting that policy into action had come and called a convention of delegates of every local union in the state to meet in Peoria August 3 to consider peace proposals of the operators. Next day he rescinded the call because of "premature" publicity. Acting Governor Sterling asked Farrington to consider the proposal that the miners of Illinois return to work at once at the wage scale and under the working conditions existing when operations ceased April 1 last, pending a readjustment of the same by an agreed tribunal, and that representatives of the miners and operators of Illinois should meet and endeavor to arrive at a settlement. Farrington replied that this plan was impracticable.

Orders for immense quantities of coal have been placed in England by Americans but not all of them are being accepted because of market conditions there. Prices of coal and shipping and freight rates have advanced sharply in Great Britain. The British miners may refuse to mine coal for America, and American dock workers may refuse to handle it if it comes.

ONE J. Cleve Dean, chairman of the railway employees' publicity association, sent to President Harding a telegram bitterly attacking the supposed attitude of the administration toward the two great strikes. He said: "For you or any governor to attempt to operate the mines or railroads by military forces or to attempt to draft men into mining or railroad service would be an attempt to establish involuntary servitude," and he predicted such an attempt would bring on the "long predicted war between capital and labor." He asserted, also, that the Republican party was hostile to the American farmer and labor and that "the hard times that now exist is a premeditated plan to bring the farmer and labor down to their knees."

Mr. Harding's reply to this outburst, while dignified, was a scathing rebuke of Dean's "political partisan references" and of his false assumptions. The President explained at length the attitude of the government and asserted its intention to speak and act, not for any one class alone, but for "the American people as a whole and the common good of all its citizenship." He made it clear that while the right to strike was recognized, the government would fully protect those who desired to work. The latter, he said, in responding to the call of the country, are exercising their rights "and at the same time making their contribution to our common American welfare."

CHICAGO'S street car strike was still in the making last week. Hope and despair alternated, the former fostered by the optimism of International President Mahon who told the men they must take a referendum vote on a new proposal made by the companies, and the latter due to the pessimism of local President Quinlan, who said the employees would accept no offer the employers were likely to make. The workers were called to hold a mass meeting Monday evening of this week, and Quinlan told the Chicago public to prepare to find a strike in effect the following morning.

DEBATE on the tariff in the senate was enlivened last week by Senator McCumber's assertion that in 1912 spokesmen for the newspaper publishers told the senate finance committee that if newsprint paper were not placed on the free list they would defeat the Republican party at the polls, and that, the committee refusing to yield, the publishers therefor did defeat Taft for re-election. Other senators calling for names, Mr. Smoot said that the late John I. Norris, representing the publishers' association, told a finance subcommittee that if a duty were imposed on newsprint "the Republican party would be driven from power." MADE WORLD WAR PICTURES

Capt. E. N. Jackson of Signal Corps Photographed Important Events During Conflict.

The history of America's part in the World war as told in pictures, from scenes of death and destruction in France to the gay pictures of returning soldiers landing at Hoboken, was photographed by or under the direction of Capt. E. N. Jackson of the Signal corps.

His work did not end with the cessation of hostilities. Perhaps his was the most interesting role played by any member of the A. E. F. after the armistice. When President Wilson went to France the story of his activities was photographed by Captain Jackson. Whether the president shook hands with a European soldier, signed an important paper or had dinner with a king, Captain Jackson was there with his camera.

Today, the official photographs taken by Captain Jackson and his staff are to be found in galleries, libraries, public buildings and private homes in every part of the United States. Mr. Jackson, no longer a captain, is now clicking the shutter as one of the staff photographers of the New York Daily News. He spends his spare time at the clubrooms of the American Legion, Signal post No. 343, in New York city.

GREETINGS TO THE TOMMIES

Vice Commander Jackson Carried Commander MacNider's Message to the British Legion.

The first man to cross the American continent in an automobile was the first man to cross the Atlantic ocean with a message from American World war service men exclusively to British Tommies. That man is H. Nelson Jackson of Burlington, Vt., one of the national vice commanders of the American Legion, who recently represented the Legion at an annual meeting of the British Legion, made up of World war service men of the British Isles.

During the war Mr. Jackson served in the Medical corps and for gallantry in action was decorated with the D. S. C., Croix de Guerre and the Legion of Honor of France. He was promoted through the various ranks from first lieutenant to lieutenant colonel.

The greetings which Mr. Jackson presented to the British Legion in behalf of Commander Hanford MacNider declared that: "No generation of our nations have been so closely bound together. Through the coming years it must be our mutual duty to so strengthen and cement these ties that from this great undertaking may come peace to all the world."

SPENT MONTHS IN AN ASYLUM

New Zealand Government Is Probing Case of Subject Imprisoned at Elgin, Ill.

The New Zealand government is investigating the case of Robert M. Thompson of Christchurch, World war veteran, who has just returned to his home in New Zealand, after having spent several months in the asylum for the insane at Elgin, Ill.

Thompson came to the United States after having his health shattered in the war. Acting on the advice of the Canadian government, which looks after New Zealand military pensioners in America, he called at the office of the veterans' bureau in Chicago. A week after Thompson first called at the office of the bureau, he says that he found himself a regular inmate in the asylum at Elgin, receiving very poor food and indifferent treatment.

He finally succeeded in smuggling letters out to a former college friend who took the matter up with the asylum authorities. His release was arranged on the condition that he leave the United States immediately.

Carrying On With the American Legion

Jesup, Ia., with fewer than 800 population has 130 American Legion members.

* * *

Strangers seeking help in Correctionville, Ia., must be passed on by a committee of leading citizens, the business men and American Legion posts of the city have decided.

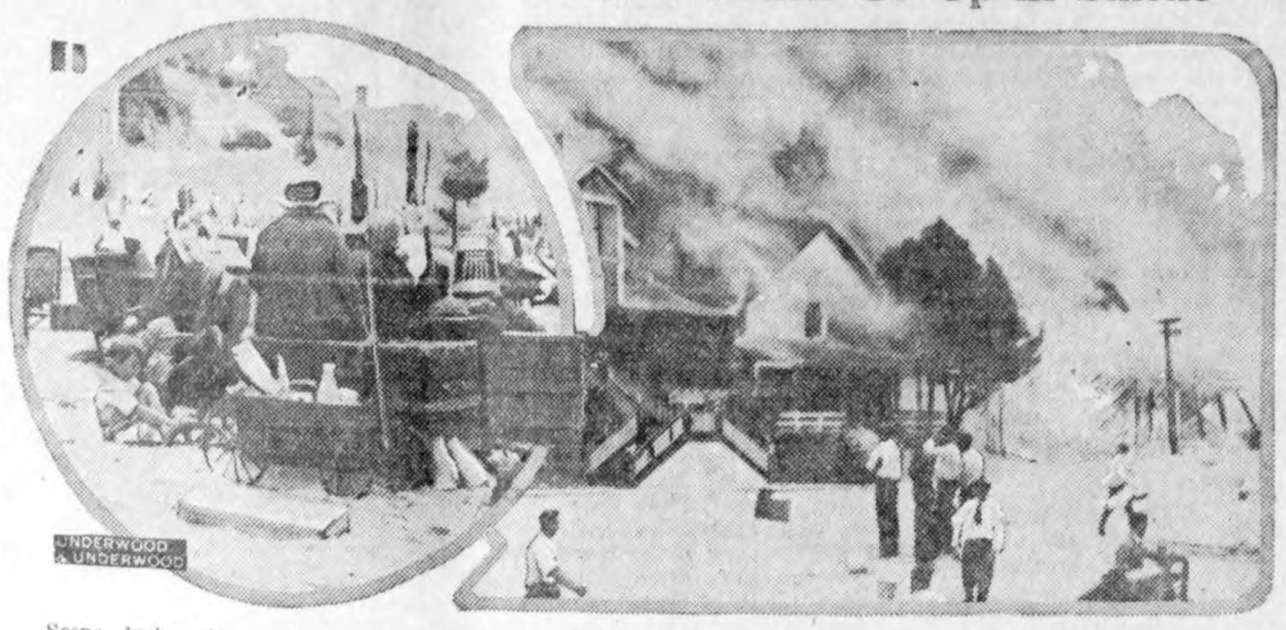
* * *

Out of 550 men 276 were found to have some kind of physical disability in a canvass of former service men in Clay county, Iowa, conducted by the American Red Cross and the American Legion.

* * *

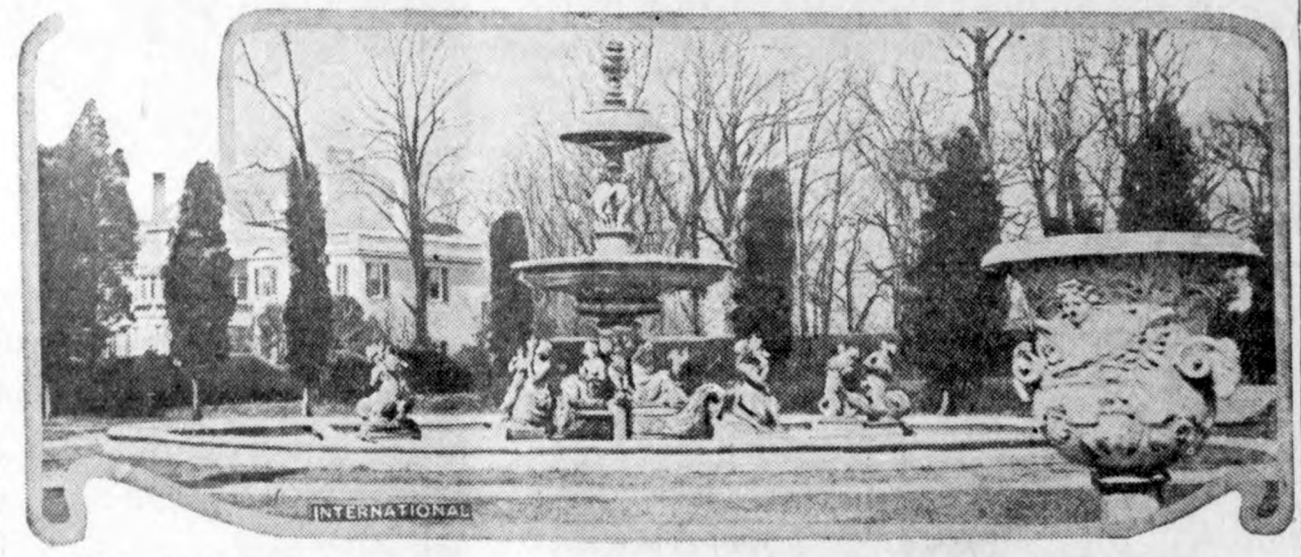
A delegate at the state American Legion auxiliary convention at Cedar Rapids, Ia., was enthusiastically applauded when she stated on the convention floor that she was "German in birth but wholly American in spirit." She had two sons in service.

Summer Homes at Macatawa Beach Go Up in Smoke



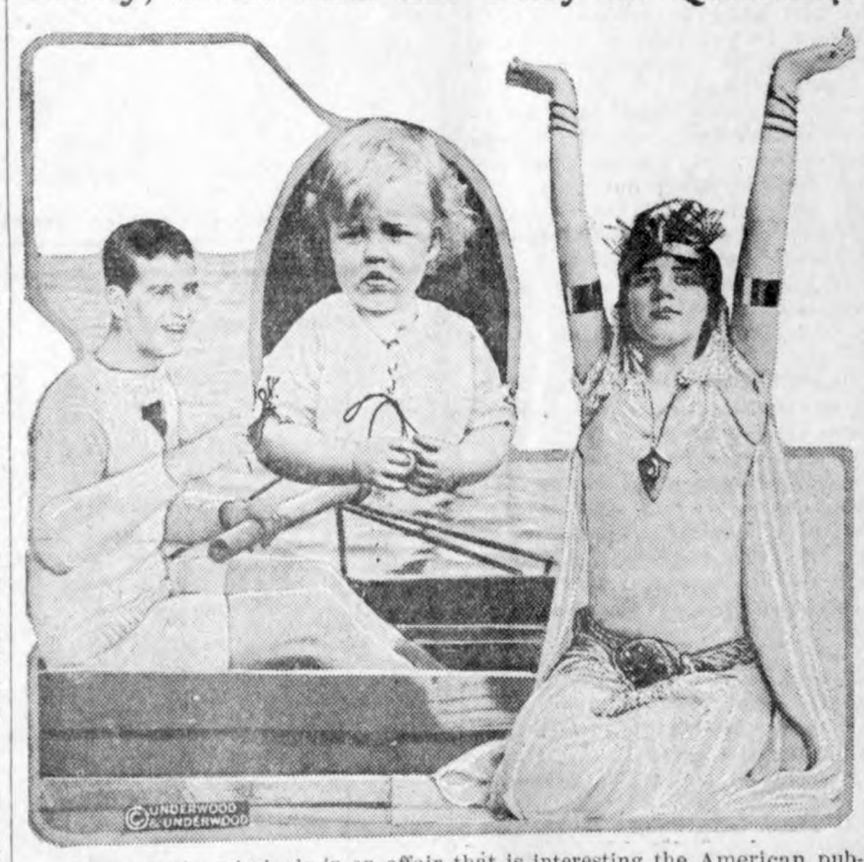
Scene during the conflagration which recently destroyed thirty cottages at Macatawa Beach, a well-known Michigan resort where many Chicago families spend the summer. At the left are some of the "refugees" encamped on the sand.

McClean Place to Be Summer White House



View of the country home and surrounding grounds of Edward McLean, Washington publisher, which will be used as a summer White House by the President. The place is but a short distance from the capital and has a small but excellent golf course.

Sonny, Evan and the Baby in Question



Here are the principals in an affair that is interesting the American public. At the left is Cornelius Vanderbilt ("Sonny") Whitney, son of Harry Payne Whitney, in position as a member of a Yale crew; at the right is Evan Burrows Fontaine, interpretative dancer, formerly of the Ziegfeld Follies; and in the center is Miss Fontaine's little boy, who, according to her hitherto uncontradicted story, is the son of young Whitney. She has begun suit against the youth.

Is This One of Stuart's Washingtons?

Considerable discussion has been aroused among art critics over this painting, which shows George Washington with Marquis Lafayette in the background, as to the possibilities of its being the work of Gilbert C. Stuart. The picture, which is supposed to have been painted for Lafayette, is now in the possession of W. D. Bristol of Lisbon, O. It was purchased from a French family in 1840. There are many Stuart characteristics in the picture and art critics are waiting to see the results of the cleaning process before passing final judgment.

FLOWERS IN THE SNOW

It isn't every one who can pick flowers from the snow in July, but Miss Alice Jackson of Canyon Camp in Yellowstone is doing it high on the slopes of Mount Washburn. The novelty is but one of the many that the great national park is springing on visitors to its golden anniversary celebration.

GIFT FROM ITALY'S KING

Chalice presented by the king of Italy to the Holy Name church in Washington. It is of solid silver, Roman design, 12 inches high, with chiseled reliefs of the apostles on the base and delicately engraved handle symbolizing faith, hope and charity.

Automatic Pistol With Flashlight.

As a device to discourage burglars, a newly invented flashlight pistol should prove quite effective. The pistol barrel is placed along a tubular flashlight, and six shots of .22 caliber can be fired. The pistol is automatic, and the trigger is conveniently placed on the side of the tube opposite the barrel.—Popular Mechanics Magazine.

Home Town Helps

FEATURES OF FUTURE CITY

Chances for the Better That Are Assured Simply by the Ordinary March of Events.

Tomorrow you may not know your own city. They have probably begun altering it already, or are planning to do so. If not, it doesn't greatly matter, because certain forces at work will compel far-reaching changes automatically. Tomorrow your city will have wide boulevards cut through its narrow streets. These will accommodate four, six and eight lines of traffic. They will start at the center and run miles out into the country. Thousands of buildings will be torn down. Sharp street corners will be rounded off and the circle and crescent take the place of the checkerboard.

Did your city fathers, years ago, lay out a downtown boulevard or town with a strip of parkway in the center?

That beauty spot will be needed for traffic. But better beauty spots will appear miles from the downtown section. Slums and tenements will disappear, too. There will be a general grading up of living standards, and an equalization of real estate values.

When you drive a car the traffic cop will no longer be able to bawl you out, for he will disappear from street crossings; guiding traffic by electric signals from a point where he can see everything but say nothing—that is, if he doesn't disappear altogether, says a Saturday Evening Post writer. For there will be doubledecked street crossings at congested points. And traffic at ordinary street crossings will be speeded up by diffused lighting which kills the shadows that now make them dangerous.

TREES IN BUSINESS STREET

Writer Combats the More or Less Accepted Idea That They Are Somehow Out of Place.

One of the characters in an early-day American romance of the time when the Stamp act was causing all kinds of trouble, is recorded as declaring that New York never would be a real business city because Broadway and Maiden lane were lined with trees, remarks the Indianapolis Star. The VanVrooms, the Stuyvesants, the Artavelts, and other early settlers of the country saved fine trees about their homes, on the village greens, along the country roads, and in the fields. But one will see no trees nowadays on Broadway, and Maiden lane has been transformed from the pleasant, tree-bordered region of Dutch homes with flower gardens into the busiest wholesale jewelry district in America, if not in the world.

Beauty and comfort gave way to the inroads of commerce, not only in New York, but in most of America's great cities, so that today trees in a business street are a rare sight. There are elm-shaded villages in New England, maple-shaded towns in New York and the Ohio valley, and there are oak-tree streets to be seen in the southeastern states, but for the most part this refers only to small towns or cities—never to the congested centers of population where they should have been preserved.

City Streets Need Shade.

A Department of Agriculture bulletin insists that providing shade on city streets is as much a municipal function as providing lights or sidewalks and should be cared for by public officials. Probably the most efficient way of arranging for proper supervision, it says, is through an unpaid commission of three or five members which in turn employs an executive officer. Methods of organization are described, and numerous illustrations show how trees should be planted. There are chapters also describing pruning, spraying, transplanting, and other subjects of importance to every town or city, whether it has trees or wishes to have them. The bulletin may be had free upon application to the division of publications, United States Department of Agriculture, Washington.

Danger in Inflammable Roofs.

The value of property destroyed by fires communicated through the roof, is reported as $223,000,000.

Fire-prevention campaigns are being launched in a number of cities as the result of these figures.

Indianapolis, Ind., began such a campaign early last year, with the result of a reduction in 1921 of $550,000 in fire losses and 350 in the number of fires. During one period, out of 1,199 fires in Indianapolis, 850 were directly chargeable to inflammable roofs.

Affected by World War.

As a result of a physical examination of regular army officers recently army surgeons have found clear evidence by physical deterioration caused by strain incident to the prosecution of the World war. A large percentage of the officers show either excessive high or abnormal low blood pressure.

RADIO TO OTHER PLANETS?

High Scientific Authority Declares This to Be a Possibility of the Future.

Venus is possibly inhabited by human beings, and communication with planetary neighbors by wireless "may be possible, although the cost would be immense," in the opinion of C. G. Abbot, assistant secretary of the Smithsonian institution, who discusses various scientific phases of the "habitability of other worlds" in the annual report of the institution.

Mr. Abbot says Venus reflects light as if it were surrounded with clouds, and so probably "it contains plenty of moisture."

"Its temperature is about the same as that of the earth," he added, "and all other conditions are apparently compatible with the existence of intelligent life." Many popular writers have claimed great things for Mars as an abode of life. Mr. Abbot says, "but I cannot accept this view."

Commenting on suggestions that "we are already receiving wireless signals from intelligent beings outside of the earth," Mr. Abbot declares the best information seems to be that the "wireless indications referred to are merely disturbances introduced by solar or terrestrial causes as yet imperfectly understood."

The moon, our nearest neighbor, is a waterless, airless, mountainous desert, and there is no probability of intelligent beings there; the probability is even less on the sun, whose intense heat would not allow any living being to exist there. This leaves as possible abodes of life in our solar system the seven great planets, Mars, Venus, Jupiter, Saturn, Uranus, Neptune and Mercury. The outer four of these planets, Jupiter, Saturn, Uranus and Neptune, are, as shown by their low density, mainly in a gaseous state. Mercury, like the moon, is an airless, waterless, waste, besides being baked with terrific heat, so this planet also is out of the running. The probable average temperature of Mars is 60 degrees below zero, and its climate is drier than the Sahara desert.

His Idea of Wealth.

The late E. H. Harriman of railroad fame personally interested himself in an East side boys' club in New York. George Kennan, author of the recently published biography of Mr. Harriman, interviewed some of the younger boys who had come in contact with the financier to get their impressions of him. One twelve-year-old youngster had this to say: "Mr. Harriman's a great man. He's president of a railroad and he's worth a couple of thousand anyhow. He's a quiet man and never tells anybody down here anything about his business. He isn't what I would call a good-looking man, but I'll bet he could put up a good fight. He lives 'way up town somewhere in a house all to himself." Being "worth a couple of thousand anyhow" and living in "a house all to himself" seemed to the tenement-house boy of the East side the acme of wealth and luxury.

Why Farming Should Pay.

The National City bank, of New York, after analyzing the census figures for 1920, declares that for the first time in the history of our country there are more people working in factories than on farms. Fifty years ago there were more than twice as many country workers as city workers. This not only means that the farmer has a bigger market for his product, but that he is a greater buyer of manfactured goods, because an increasingly large proportion of the factory hands are making things for the comfort and convenience of people in the country. If we forget the year or two of hard times, now happily passing, we can see that farming is not a crowded business, and we can be sure that it will be generally prosperous in the future. The man who gets discouraged now and leaves the farm because he thinks farming "doesn't pay" is making a mistake.—Farm Life.

"Safety First."

She was a bright little girl about three, taking her first trip west to visit her grandfather. There was not much that failed to interest the baby mind and questions and answers kept her parents pretty busy. When they arrived in one of the Middle West cities it was decided to break the trip there and stay over until the next day. The usual rivalry was evident between the taxi and hotel bus drivers, and Betty was an interested and curious spectator until two of the men started some friendly sparring that seemed pretty serious to Betty. Her mother felt a tug at her skirt and looked down to see the cause—a loud whisper followed from Betty: "Muver—get daddy—let's wun, that man over there hits ev-we one who duthn't go to his house."—Exchange.

Their Choice.

"Where will poor Mrs. Gabbins go now that both her daughters are married and living in different cities?"

"Well, one son-in-law would like to have her go to Springfield and the other to Brooklyn."

"What dutiful sons-in-law!"

"Not at all. You see, it's the one in Brooklyn who wishes she'd go to Springfield and the one in Springfield who wishes she'd go to Brooklyn."—Boston Evening Transcript.

CORN BORER NOT IN IOWA

Reports That European Borer Is In State Unfound, Says Entomoligist

Reports from many parts of the state that the European corn borer has put in an appearance are entirely unfounded, according to Dr. C. J. Drake, chief of the entomology section of the Iowa Agricultural Experiment station who has examined many specimens sent in by farmers who thought they had discovered he borer.

The Eurpean borer is a medium-sized whitish or pinkish worm with small black spots on its head and a dark brown or black colored head. It is about one inch in length when full grown. It is found boring in the pith of corn,sorghum and related plants. The borer affects all parts of the plant except the roots. It cuts down the tassel and thus interfers wih proper pollinaion. It bores up and down the stalk, weakening it until the plant breaks down. It bores into the cob and feeds on the kernals.

Both the federal government and Iowa have instituted quarantines against parts of the country where the borer has been found. That Iowa farmer are alert to the danger of the pest is shown by the large number of specimens that have been sent to the entomology section of the Iowa State College. Dr. Drake urges farmers and others to send in at once any insects which they suspect of being the borer together with the plants which have been attacked.

COUNCIL PROCEEDINGS

Klemme, Iowa,
5-29-'22.

Meeting of the Town Council was held at Mayor Wenck's office.

Meeting called to order by Mayor F. J. Wenck.

Members present: Joe Johnson, Wm. Bachman, Wm. Smith, C. W. Wiles and A. D. Gimer. Absent none.

Motion made and seconded that we hire Fred Henschen to act as Marshall, Street Commissioner, Water, Sewer and Park Superintendent and any other work necessary for the general welfare of the town of Klemme, Iowa, at a salary of $75.00 per month beginning June 1st, 1922 to November 1st, 1922, and $40.00 per month from Nov. 1, 1922 to April 1st, 1923.

Motion carried.

Moved to adjourn.

BUILD A PORCH ON YOUR HOUSE!

Most of the houses built during the last 10 years have porches. Before that the average house did not have a porch. People then did not appreciate the healthfulness and the joy of the great out-doors.

If your house does not have a porch you should build one immediately. It will make your home more inviting and more enjoyable.

A porch is no longer considered a useless ornament, but a necessity that all the family will enjoy.

Come in and talk over plans for a porch with us now. eWe can give you some helpful advice for remodeling and for adding a porch to your home at a reasonable price.

Northern Lbr. Co.

HAS RARE VOLUME

American Proud Possessor of One of Oldest Books.

Believed to Have Been Printed in China Before Western Hemisphere Knew of Movable Type.

William Richard, former vice president of the American Numismatic society, who acquired two rare books during a trip to China several years ago, has announced after thorough investigation, his conviction that he has one of the rare books called the "Tanjur," or the Book of the Doctrine of the Tibetans.

For some time after he came into possession of the book, Mr. Richard looked upon it as only a curiosity without any particular worth, until he showed it to a friend, who urged him to investigate its origin. After more than a year studying the literature of Tibet and China, he found that the book was printed more than 1,000 years ago with movable type, at that time unknown in the western hemisphere. Mr. Richard says he has proved conclusively that the "Tanjur" was printed 700 years before the famous Gutenberg Bible, the first European book printed with movable type.

From an office boy for John D. Rockefeller Mr. Richard has come to travel in recent years in many foreign countries as representative of the Standard Oil company and other American firms. Before he left for the Orient, about eight years ago, he had one of the best stamp collections in this country, which he sold for $16,000.

"About five years ago I came into possession of the manuscript in Sanskrit, or, rather, in Devanagari, which in Tibetan is called the 'Tanjur,' the Sacred Book of Doctrine of the Tibetans," said Mr. Richard. "I came across it in a monastery at the same time that I found the 'Kanjur' at the border of Tibet. As no one there appeared to realize the value of the documents, I had no difficulty in obtaining them at a very low price. The only other 'Tanjur' in this country that I have positive knowledge of is in the American Museum of Natural History.

"The value of this rare book is said to differ according to the ink used. For instance, a copy in red is worth 108 times more than a copy in black; one in silver is more valuable than one in red, and one in yellow or gold is more highly prized than one in silver. The Manchu emperor of China, Kienlung, who flourished in 1796, had a copy of the 'Tanjur' which was said to have then been valued at $6,500."—Philadelphia Inquirer.

Straws and Painted Lips.

"Somebody 'r other said something 'r other about straws showing which way the wind blows," remarked a soda fountain boy who served cool drinks to matinee girls and afternoon crowds; "but I know something that these soda-water straws point to."

"What do you know?" asked the girl assistant.

"I know that it's the girls with the pretty painted lips that use them. When a girl has just dolled herself all up in a carmine Cupid's bow effect she can't afford to have it all washed off with a glass of soda water and a paper napkin—no sir! So she always uses a straw. Maybe that's how the poem, 'Prettiest girl I ever saw was drinking soda through a straw' started. Ask me about the girls who come here. I know."—Chicago Journal.

German Woman Lawyer.

A woman appeared as an attorney for the first time in the history of German criminal courts a few days ago, when Fraulein Dr. Munk of Berlin acted as defendant counsel for a man accused of a street robbery.

The incident was the subject of considerable comment, and it has been suggested that this may lead to the appearance of tailors specializing in the attire of feminine lawyers. In some quarters the view is held that the presence of woman attorneys may exert a moderating influence in courts such as tempering retorts from opposing counsel, although others point out that such repartee may be intensified if both opposing attorneys are women.

Fraulein Munk's cleverness and assurance in court created a distinctly favorable impression.

Weaving Industry of Peru.

A considerable increase in industrial activity is to be noticed in Peru. On the whole the textile industries have been the most successful, since cotton and wool are produced locally in quantities and qualities sufficient to ensure profitable results. The only other industries that have attained much importance include the manufacture of cottonseed oil, soap and cocaine. The cotton mills in Peru manufacture principally sail-cloth, filterpress cloth, towels and some other heavy goods. The total number of looms in operation is one thousand and fifteen, and the annual production is about fifteen million yards. The development of this industry will create a fairly good opening for cotton mill machinery. The woolen industry is also expected to expand.

Progress.

"Some day Crimson Gulch will be a great metropolis."

"Maybe," replied Cactus Joe. "We've got signs of improvement already. Hoss thieves have disappeared and taxicab robbers have took their place."

REFORMED CHURCH MISSION FESTIVAL

The Reformed Church will celebrate it's Annual Mission Festival, Sunday, August 6. Five ministers have been invited to take part in the three services that will be held.

PROGRAM FOR THE DAY

The morning services will begin at 9:45 with a German sermon by Rev. Wm. Diehm, of Wabasha, Minn., Rev C. A. Schmidt, of the Ell Town Reformed Church will lead the services. The afternoon services will be open at 2:15 and will be lead by Rev. Walter Hegenga, of Alexander, Ia. These services will be held in both languages. German sermon by Rev. A. Waalkes, of Belmond, Ia. English sermon by Rev. H. Pankuk, of Meservey, Ia.

Evening services will be lead by Rev. C. A. Schmidt and will begin at 7:30. Rev. Walter Hegenga will preach German and Rev. William Diehm will preach English.

The local pastor will not be in the harness Sunday, but will avail himself of the rare opportunity of being a silent listener in the pew.

Music will be furnished by the Male Octette and the Church Chorus.

A festival of this kind is of rather infrequent occurrance and should be met with the greatest appreciation by all who profess Christianity.

Many are the beasts of the world in which the people show great interest and are so eager to take part in, but none of them can be compared to the festivities of the church where we deal with the great truths of God and where the chief food is the bread of life.

A cordial invitation to these services is extended to all. But let us remember that the Lord does not only invite but that He also commands.

It must also be said, that one of the main purposes of this festival is the mission collection. Paul said, "I am a debtor both to the Greeks, and to the Barbarians; both to the wise, and to the unwise." How about you? Are you ready to ays as he did, "So as much as in me is, I am ready to preach the Gospel to you that are at Rome also."

Please leave your warring Indians in a safe place and bring the "peace dollars."

SCHOOL LUNCHES SUCCESS..

Many Schools Report Benifits Derived From Hot Dishes

Almost universal testimony as to the value of serving hot lunches in rural schools has come to the home economics specialists in the extension service of the Iowa State College from schools where hot lunches have been tried, according to Miss Margaret M. Baker, of the extension service.

"The hot lunch project succeeds best as a community enterprise," says Miss Baker. "So simple a thing as serving a cup of cocoa or a bowl of soup to each child in the noon hour has often formed a community interest which has brought together the teacher, children, parents and directors of the rural school."

Only simple equipment is necessary for the preparing and serving of the lunch, which is usually planned to consist of only one hot dish to supplement the cold lunches brought from home by the pupils. Miss Baker suggests the following equipment: oil stove, oil can, cupboard, table, oilcloth for table, garbage pail with cover, water pail, pitcher, two dish pans, two paring knives, kitchen spoon, steel fork, ladle, two granite kettles, double boiler, glass measuring cup, two tablespoons, case knife, two teaspoons six or more dish towels, two dish cloths and containers with lids for supplies kept on hand.

The are several ways, Miss Baker points out, by which schools can secure funds to start the hot lunch. Some of these are by appropriation from the school board, money raised by entertainments or suppers, supplies donated by families or canning clubs, mothers may take turns in sending a hot dish to the school, funds may be raised by the parent-teachers association or by some other club, each child may be assessed his share in money or supplies.

"The success of the school lunch," says Miss Baker, "depends upon a well worked out plan. The teacher and the children should work out the plan together. The wise teacher will make the school lunch a family affair where all of the pupils share in the duties, privileges and good times that go with it."

STRIKE MAY COST BROOKHART VOTES: FARMERS PEEVED..

DS MOINES, July 29—The course of human events in recent weeks may alernate considerable farmer support from Col. Smith Brookhart, according to some of Brookharts' opponents. Farmers who are experiencing difficulty in getting coal for threshing or in securing cars for shipping are much aggrieved and are not in sympathy with any proposed coalition with farm and labor unions. Brookhart has been the recipient of both farmer support and labor union support up to this time.

Democrats are preparing to take advantage of this condition and it is probable that Clyde L. Herring in his campaign for the senatorship which he will launch following the holding of the two state conventions, will endeavor to profit by the situation.

RACE OF WORLD CONQUERORS

Saracens Came Within a Short Space of Controlling the Then Entire Known Earth.

The Saracens, who rose to such power during the Middle ages, were originally only a tribe of wandering Arabs who came from the Syro Arabian desert and harassed the Roman empire's frontiers. They were called Saraceni by the Romans and Greeks. Later on the name of Saracens was given to all Moors, Arabs and Turks—in fact, to all Mohammedans, or "infidels" as they were called. Dr. John William Draper, in his book, "The Conflict Between Religion and Science"—where he gave a long account of the Saracens—said, in describing the conquests they made after the death of Mahomet: "Never in the history of the world had there been so rapid and extensive a propagation of any religion as Mohammedanism. It was now dominating from the center of Asia to the western verge of Africa." At one time or another the Saracens conquered Egypt, Persia, Syria, North Africa and Palestine. They pushed their conquests into Spain under Tarik in 711, and after announcing their intention of conquering Italy, advanced into France as far as the banks of the Loire. Charles Martel (about 688-741), the Frankish or French ruler, in a great battle which took place near Tours, defeated the invaders, and 300,000 Saracens are said to have been killed, while the remainder retreated to Spain. In saving his own country Charles Martel saved the rest of Europe from being overrun by the Moslem hordes. Gibbon, in speaking of these historical events, made the following statement: "A victorious line of march had been prolonged above a thousand miles from the rock of Gibraltar to the banks of the Loire—a repetition of an equal space would have carried the Saracens to the confines of Poland and the Highlands of Scotland."

Her Point of View.

Maud—Can anything be worse than a man who will get sentimental in spite of all you can do?

Edith—Yes, a man who won't.

Something to Think About

By F. A. WALKER

NO MEDIUM ROAD

FROM the lives of great men, whose deeds are recorded in printed words, if we set ourselves seriously to the task we can glean the veriest flowers of wisdom.

Their stories are told in friendliness for the encouragement of others.

Their noblest sufferings and steadfast faith stand up like guide-posts to direct tired, disheartened travelers to a pleasant destination.

Their experiences were the common experience of mortals, filled with hardships, chafing and galling when accepted, and when overcome as soothing to the burning flesh as oil.

If you will read carefully you will not be long in finding that these men pursued no medium road.

From the bottom to the top of their career they proceeded straight ahead, never feigning or falsifying their emotions, never deceiving themselves or others, which made confidence sure and success certain.

They accepted life as a prose ideal and went gladly about making it a glorious bit of poetry, radiant with sentiment and love, leaving their achievements behind so that another generation might gather courage and inspiration.

And this they did by doing their full duty, never turning back or faltering.

They developed the habit of looking up, thinking above the heads of others and holding all the while to their purpose.

Conscious of human frailties they were ever humble, patient with others and severe with themselves, always exacting from their own brains and bodies every ounce of energy available and doing their utmost whether tongues wagged praise or condemnation.

They prized self-respect above the empty laudations of the "crowd."

And when the shadows came, the "crowd" stood dumb and the world wept.

In their brief span they rose from obscurity to eminence, setting an example for the humble youths of today and tomorrow—the boys and girls, some of whom are wondering how they too can climb to the heights and become a light to the generations not yet born.

The answer is: By avoiding the medium road, by walking strong in faith, by keeping faith with Truth and Mercy and Love with God!

KIDDIES SIX

By Will M. Maupin

ALL'S WELL!

I'LL face the music, come what may—
Great music or bitter sorrow;
The sun may hide it's face today,
But it will shine tomorrow.
And if the road seems rough and long
I'll make it smoother, brighter,
By trudging on with smile and song
To make my burden lighter.

I'll face the music, come what may—
My heart with hope is throbbing.
The work that faces me each day
Cannot be done by sobbing.
Each daily stunt I'll do my best,
My efforts best recording;
Content that God will do the rest
And care for the rewarding.

(© by Will M. Maupin.)

SCHOOL DAYS

YOUR HAND

How to Read Your Characteristics and Tendencies—the Capabilities or Weaknesses That Make for Success or Failure as Shown in Your Palm.

A BUSINESS PERSON'S HAND

WOULD you succeed in business? Study your hand carefully, and note whether the palm, the fingers, the mounts, the lines, etc., bear the indications which have been found, through study, to make the hand of the successful man or woman of business.

In the first place, the hand should be of good size, and inclined toward squareness, as indicating practicality of mind. Next, the consistency of the hand should be firm, as showing energy.

The top phalanx or division of the thumb should be large and well-shaped, for this indicates good will-power, which is so necessary if one is to win success in the world of affairs. Reason and logic, also necessary qualities in business, show themselves in a well-shaped second phalanx of the thumb. Then turn to the finger of Apollo, the third or ring finger, and note whether the middle phalanx is long and well-shaped. If so, it indicates a love of work, which leads, of course, to success.

Uncommon Sense . . .

By JOHN BLAKE

EDUCATION

COMFORTABLE houses, good food, automobiles, all cost a great deal of money. Education, which enables a man to come by these things, costs very little.

The man who complains that he has never had any education deserves little sympathy.

Education today is one of the cheapest of commodities.

It costs money, of course, to take a four-year's course in college, although there are thousands of students who work their way through colleges all the year.

As a matter of fact, about all a college can do is to teach a man how to get an education. The real education he gains by applying the rules that he learns in the class room and the lecture room.

Some of the most brilliant men in America and in England have been self-educated.

Such a man was Mark Twain. Such another was Charles Dickens.

Mark Twain had little schooling. Dickens had little. Both, however, read all the books they could lay their hands on. Both asked multitudes of questions of everybody they thought could answer them.

Both became very great men, very great writers, and of vast use in the world.

Your education will cost you practically nothing if you really want it. Go to a library. Talk to the librarian about what you ought to read. Then read it, and keep on reading, and thinking about what you read.

The only price you will have to pay is the time you spend, and the education you will receive will be worth many thousand times the price.

(© by John Blake.)

Mother's Cook Book

There is no age limit. Many people do not learn how to live until they have passed fifty. Gladstone, at eighty-six, was brilliant; Goethe, at eighty-four, found life full of interest. You are never old until you think you are.

SUMMER SALAD DRESSINGS

DURING the warm weather salads appeal to the appetite and furnish the right kind of warm weather food. One may vary the three standard salad dressings even beyond the fifty-seven varieties.

French dressing, which is the simplest of all dressings, is prepared with oil, vinegar or lemon juice with seasonings. The proportion of oil varies with the taste, for the average taste four tablespoonfuls of oil to one of sharp vinegar is considered about right. Season with salt, cayenne, a pinch of powdered sugar; beat well with a Dover egg beater and serve chilled.

Mayonnaise is prepared with the above ingredients in different measures with the addition of the yolk of an egg. Beat the egg yolk, add oil, a few drops at a time, beating until thick then add to a cupful of oil four to five tablespoonfuls of vinegar, adding the vinegar a few drops at a time until the mixture is very thick, then oil and vinegar may be added a teaspoonful or more at a time. Seasonings of mustard, powdered sugar, salt and cayenne are added to taste. The well-known boiled dressing may be varied by adding oil or cream or simply cook the beaten eggs with vinegar diluted to make it less acid. Beat well while cooking and then when wanted the seasoning may be added with whipped cream or other ingredients.

There are uncooked dressings galore which may be prepared from sour cream and are especially appetizing. Beat one-half cupful of cream until thick, add one-fourth teaspoonful of salt, and three tablespoonfuls of vinegar very slowly, beating constantly. Add cayenne and mustard if desired.

THE ROMANCE OF WORDS

"TUMBLER."

MOST of us are familiar with the Chinese dolls or toys which, having a weight in their rounded base, stand upright no matter how often they may be knocked over, and it is from these same toys, very popular in Italy and other parts of Europe during the Fifteenth and Sixteenth centuries, that the word "tumbler" as a synonym for "drinking-glass" has come down to us—the toys being known as "tomboli."

The earliest tumblers of which there is any authentic record were made of wood or metal, rounded on the bottom and so weighted that when empty and placed upon their side they immediately sprang upward, as if asking to be filled. The weight of liquid in them, however, altered the center of gravity so that they remained bolt upright.

Tumblers of this nature are still to be found in many parts of Germany, worn and blackened from use and with the ancient inscription carved deep in their sides:

"Lay me down when empty,
I'll stand again when full."

TUB FROCKS AND OTHERS; SMART CROCHETED HATS

THE streets of the cities bear evidence that women have decided to wear clothes that look comfortable and are comfortable in the hottest days of summer. All those cool and colorful fabrics that are a joy in the country, and at summer resorts, have come to town and are making themselves very much at home on the streets and everywhere else. Crepe de chine, that seems to catch and multiply every little breeze, other crepes printed silks

Utility Dresses for Late Summer.

and chiffons and the sheer cottons, make a kaleidoscope of color in the shopping districts and tea rooms, set off by transparent black, pale gray, beige and a generous proportion of white touched with color.

In dresses of silk, for all-day wear, crepes are by far the most popular of materials. These utility dresses are simply designed. White skirts with colored topcoats or tuxedo sweaters, or the reverse order, colored skirts with white coats or sweaters, prove themselves a boon for the street, and the combination of black and white is as well considered as ever for warm summer days. The afternoon finds promenaders in more elaborately made frocks which just now are gracefully draped affairs, ankle length and often of printed materials in lovely colors.

In cotton materials, tub frocks for the street indicate that combinations of the stronger colors and white, made up with white organdie, have come to stay. Dotted swiss in the darker blues, brown, black or beige, with white dots, has few rivals in its refreshing crispness and coolness, and two pretty frocks made of it are shown above. Next in popularity stand checked and crossbar ginghams, with a few quiet plaids in their company, also honoring the daintiness of organdie in their trimmings and accessories.

A new arrival among these cool cotton frocks is made of white batiste with trimming of gay cretonne and the combination is cheerful and promising. Usually the last of August finds these mid-summer frocks making their exit, but it is only "good-by till we meet again."

"There is nothing new under the sun," but there are plenty of things that are relatively new and among them are those smart crocheted hats that are making their appearance in displays of headwear for sports and outdooring. One wonders that they were not thought out long ago, since caps for infants and children have been crocheted for years. But it remained for some one to figure out a way to support the crocheted hat and keep it in shape, and now this has been accomplished, and it is here. It is a beautiful and distinctly American creation, and aristocratic affair, with all the class and informality combined, that belong to the aristocrat.

These hats are made of several materials and supported by very fine, invisible silk wires. Wool yarns, chenille, silk fiber braids and specially made fabrics, are used for them and very often their decoration is crocheted in the body of the hat, or separately and sewed on. In the simple models pictured of wool yarns, the braided collars, balls and pompons are made separately. On two of these hats French knots of heavy yarn decorate the crowns.

Crocheted Hats Now the Thing.

Very beautiful flowers and fruits crocheted or made in other ways of yarn, chenille, heavy silk floss, or hand-made and hand-colored blossoms and fruits of velvet or silk, appear on the dressier crocheted hats of chenille and silk. All colors are unusually rich in these materials. The crocheted hat is not an inexpensive item since it is made by hand and eats up time and fine stuffs.

These hats in white yarn, chenille or silk fiber, and in white with a color, as white and emerald green, white and red, make lovely additions to late summer millinery.

Horticultural Hints

NITROGEN OF MUCH BENEFIT

Any Light Color on Foliage Is Indication of Need of Fertilizer for Trees.

Increased prices and increased crops are in store for the fruit growers who apply nitrogen to weak trees with light green or yellowish foliage. If the trees in orchards bearing heavy crops are not making a strong growth this year, they may not be able to size up the fruit and set strong buds for next year unless a little additional stimulation is given, advises the New Jersey agricultural experiment station.

As lack of nitrogen is generally the limiting factor in orchard soils, the influence of this fertilizer is felt almost immediately by fruit trees. On healthy peach and apple trees the foliage should be dark green, and any general light color on the foliage is usually the first indication of the need of this fertilizer. It may be applied at any time that the trees show need of it.

The usual recommendation on average apple soils is for the application of from 150 to 200 pounds of nitrate of soda and 400 to 500 pounds of acid phosphate, and on light soils 100 pounds of nitrate of soda in the early summer if the tree has a large crop and the foliage shows need of it. This supplementary application should be made now where needed. A part or all of the nitrate requirement may be furnished by manure at the rate of 8 to 12 tons per acre in the early spring, or by the use of sulphate of ammonia in quantities 25 per cent less than nitrate of soda.

In peach orchards the same amounts of fertilizer are used. If the trees are very vigorous, a part or all of the nitrate is often withheld until after the fruit is set. In the case of weak trees it is well to apply it as the buds swell, when it will cause a larger percentage of the fruit to set, and force the trees into early, vigorous, healthy growth.

Heavy applications of nitrogen have their drawbacks. They frequently lower brightness of color somewhat and delay ripening a few days. Some growers use it for this latter purpose, especially on Elberta, in order to prolong the season.

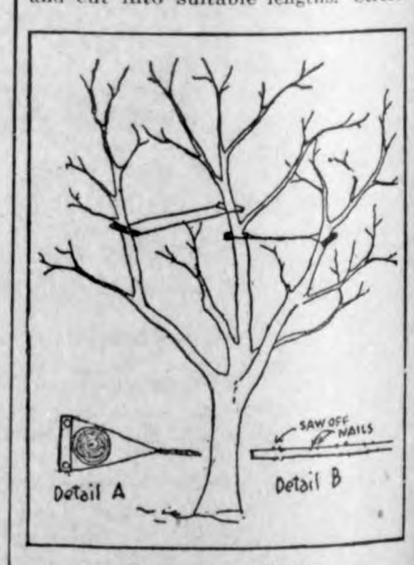
Nitrate of soda in proper quantities is also beneficial to young trees. Enough should be given to force them into a vigorous growth, and early enough so that the wood will ripen well in the fall.

When nitrate is applied, it may be broadcasted in orchards in which the trees cover the ground well, but if the trees are far apart it may be applied to the tree, being scattered well out under the spread of the branches. Growers are advised by the experiment station to examine their orchards and make immediate applications if necessary.

STRONG FRUIT TREE BRACES

By Binding Limbs Together Breakage of Limbs Can Be Avoided—Easy to Make.

The breakage of overloaded limbs can be eliminated if the limbs are bound together, writes J. B. Byberg in Orchard and Farm. Effective braces may be quickly made from sticks of wood, reinforced by nails (Detail B), and cut into suitable lengths. Stretch



Fruit Tree Braces.

wire between and tighten by twisting with iron rod. Detail "A" shows that only a small portion of the limb comes in contact with the brace, thereby permitting good circulation. The braces need not be removed after once put on. They save the work and time of handling props twice a year and do not hinder cultivation as do the props.

Eternal Vigilance Pays Well.

The market is never glutted with fruit that's carefully grown, packed, graded, and marketed. Eternal vigilance is the price of orchard profits, which in turn depend on the percentage of perfect fruit.

Must Control Pests.

There is no use in expecting the orchard to yield good fruit unless insect pests and fungous diseases are controlled by spraying.

Standard Lime-Sulphur.

Standard lime-sulphur spray is made of a mixture of one pound to five gallons of water.

Returns From Strawberries.

Surprising returns are received from strawberries where they are properly

LIVE STOCK

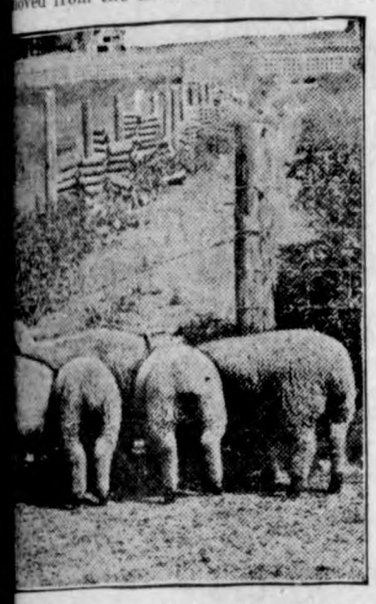
LAMBING-OFF IS PROFITABLE

Demonstration in Indiana County So Successful Last Year That Another Is Planned.

(Prepared by the United States Department of Agriculture.)

A lambing-off demonstration in La Porte County, Ind., proved so successful last year that plans have been made for a similar one this year, says a report received by the United States Department of Agriculture. Last year a 30-acre field was planted to corn and to San soy beans. The bean seed for all but 6 acres was inoculated. The beans were planted with a soy-bean attachment on the corn planter at the rate of 6 pounds an acre.

When the corn and beans matured, 700 lambs, purchased for $6.65 a hundred pounds, were turned in to harvest them. The lambs were sold for $10.25 a hundred pounds, with a total profit of $866. After the lambs were removed from the field about 30 bushels



An Even Bunch of Lambs, Showing Uniformity.

of corn were picked up and some hogs and other live stock turned in to clean up the remainder.

The growth of beans on the 6 acres planted with uninoculated seed was decidedly inferior to the remainder of the field. The demonstration this year will be the third one of this kind on the one farm. The first year only 50 lambs were fed on the demonstration plat, but a profit satisfactory to the owner was made on them.

MAKING TEST WITH PEANUTS

Government Farm at Beltsville Experimenting With Goobers as Feed for Hogs.

Is a soft, oily fat on a hog, produced by feeding peanuts, a characteristic that can be inherited and that will persist regardless of the nature of the ration fed the offspring? That is one of the interesting questions to be investigated by the United States Department of Agriculture at the experiment farm at Beltsville, Md. Both the bacon and lard types will be used, the former to be represented at the start by 4 Tamworth gilts and the latter by 4 Poland-China gilts.

From weaning time until their first litters are weaned these eight gilts will be grown and fed on a peanut ration. From the time of weaning their pigs will be fed on some hardening ration, such as corn and tankage, and will be compared with a check lot of pigs whose dams were fed on hardening feeds instead of peanuts during their development and gestation periods. When the pigs have been grown out and finished, some of each lot will be slaughtered to determine whether there is any difference in the carcasses; that is, if the peanut ration fed to the mothers has made it more difficult to put a hard flesh on the offspring with corn.

CLEAN WATER IS NECESSARY

Nothing Discourages "Growth Impulse" Quicker Than Hog Hankering for a Drink.

Pure clean water at all times—at all times, remember—is one of the necessities for all kinds of swine. Nothing so discourages the "growth impulse" in a hog as wandering around looking for a drink of water when it is thirsty.

FEED USED WHERE PRODUCED

When Hauled About on Trucks and on Railroads the More Expensive It Becomes.

The purpose of feed is to feed livestock, and the more the feed is hauled about in trucks and on railroads the more expensive it becomes. For this reason feed should usually be fed where it is produced.

Cattle for Market.

Success in growing cattle for the market depends in large degree on the kind of calves that are produced. No amount of proper feeding will overcome mistakes in breeding and conformation.

Self-Feeding Sows.

Some breeders are very successful in self-feeding sows during the suckling period. Experimentally, this practice has given better results than hand feeding.

HESSIAN FLY IS INJURIOUS PEST

Farmers Are Urged to Wait for Local Fly-Free Date Before Sowing Any Wheat.

HEAVY INFESTATION IN PAST

Great Deal of Crop Needlessly Lost Last Spring by Those Unwilling to Wait Until Danger Line Had Been Passed.

(Prepared by the United States Department of Agriculture.)

Wheat growers are urged by the United States Department of Agriculture to observe their local fly-free date for sowing. In every state where there has been heavy infestation by the Hessian fly in the past the state experiment station and the county agents have taken steps to work out a safe date, after which sowing might be started. It was found last spring that a great deal of wheat was needlessly lost by those who were unwilling to wait until fly emergence was over, or who were not converted to the idea of late sowing.

Harvesting Grain With Self-Binder.

To combat the Hessian fly pest where it was prevalent last year the county agents used every possible channel for advertising the fly-free date and for urging that it be strictly observed. In no state was the date earlier than September 24, and in many counties planting was not considered safe till after October 1. The department suggests that similar methods for informing farmers of the safe time to plant may be followed this month.

Active Fly Campaign.

Ohio had an active Hessian fly campaign last fall in 33 counties. Studies were made with emergence cages at the state experimental farm and reports from these were compared with results in local migration boxes. County committees of farmers determined the safe dates for each particular section. Circulars and letters on the subject were distributed as widely as possible. Many county fair exhibits were arranged. In Auglaize county one box represented the wheat up, and was labeled "Sown too early," and the other showed no wheat because it was "sown after safe date." An accompanying label ran, "Hessian fly will leave for new fields in September; which field will it choose?"

Hatched Hessian flies were frequently shown as exhibits, also posters giving the life history of the fly. School teachers received copies of Hessian fly literature to use for the agricultural lesson in September.

Advertised "Wild Bjnox."

The Hancock county agent had a display that drew the attention of hundreds of persons to the fly menace. He advertised the "Wild Bjnox, the most expensive animal in the state of Ohio," and led the crowds to see a Hessian fly under a watch crystal. Nearby signs described its control.

Paid advertising was frequently resorted to. Individual cards were mailed to every farmer in Auglaize county whose name appeared on the tax list. In Marion county a rubber stamp was made for the county agent's office giving the fly-free date. It was used on every piece of mail that went out. As a result of these various methods of campaigning in Ohio a very small percentage, from two to ten farmers in a county, ignored the fly-free date last fall, so that the outlook this season is improved.

Similar activities were carried on in Kansas, Missouri, Indiana, Illinois, New York and Pennsylvania. In Labette county, Kansas, all infested wheat was plowed under in the spring and farmers were particularly urged to destroy volunteer wheat that had cropped up during the summer. By far the most satisfactory control of the Hessian fly pest, however, has been achieved by complete co-operation of all farmers in each section, in observing the local fly-free date for sowing wheat.

EVERY WEED IS BIG ROBBER

Take Up Moisture and Plant Food Needed by Different Vegetables in the Garden.

Every weed in the garden robs the plants of moisture and of plant-food, as well as crowds the vegetables. Anything said of garden weeds is just as applicable to those which grow in crops, so sharpen the hoe and go after them.

CONTROL LEAFHOPPER BY USE OF BORDEAUX

Mixture Is Best Remedy, Says Department of Agriculture.

Combined With Nicotine Sulphate It Acts Little More Quickly but Is Expensive—Spraying Must Be Thorough.

(Prepared by the United States Department of Agriculture.)

Results of two years' work have shown that bordeaux mixture will repel the leafhopper, control "hopperburn," and is the best remedy, declares the United States Department of Agriculture in Farmers' Bulletin 1225, "The Potato Leafhopper and Its Control," now published for the benefit of growers whose crops are menaced by this serious insect pest. Bordeaux mixture made according to the 4-4-50 formula, containing 4 pounds of copper sulphate and 4 pounds unslaked lime to 50 gallons of water was used.

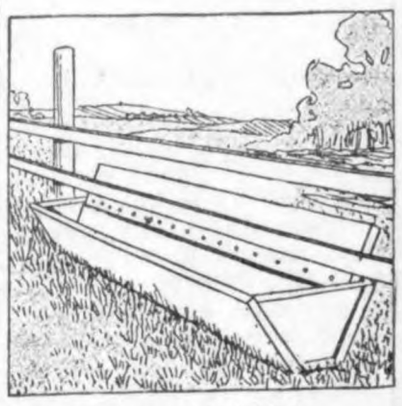
Bordeaux combined with nicotine sulphate acts a little more quickly in ridding vines of leafhoppers than does bordeaux alone, but the results obtained do not appear to justify the added time and expense of using the added ingredient, it is said. Nicotine sulphate and soap combined were found very effective in killing nymphs and a few adults present when the spray was applied. There was no lasting effect, however, because leafhoppers reappeared in a few days. "Hopperburn" was not controlled.

The spray should be applied to the underside of the leaves thoroughly, at least 150 pounds pressure being used so that a fine mist-like spray is produced. At least three applications are recommended, with a fourth if necessary to keep down "hopperburn" until the crop is matured. Both sides of each row should be sprayed to make the application thorough. Additional details are contained in the bulletin, which may be had free upon application to the department at Washington, D. C.

HANDY TROUGH TO FEED HOGS

Board Nailed on One Side Prevents Animal From Getting More Than His Share.

Feeding hogs in the usual manner often results in spilled feed and many times one hog will get more than its share. A person can, of course, get into the pen and pour the slop directly into the trough, but usually the hogs try to get into the pail and make a mess of things, writes Paul Gorton, in Power Farming. One farmer solved the problem by nailing a wide board to one side of the trough, allowing it to extend through the side of the pen. He can now feed them easily and with the board extending the entire length of the trough he can spread the feed the whole length of the trough and so give them all an equal share.



Handy to Feed Hogs.

PICTURE SHOWS BEE-KEEPING

Film Outlines Best Practices in Handling Honey Gatherers and Control of Disease.

Bee keepers will be interested in a new motion picture prepared by the United States Department of Agriculture showing the best practice in handling bees and the control of bee diseases. The film, which is called "Keeping Bees at Work," is intended to supplement a picture, entitled "Bees —How They Live and Work," issued some time ago for more popular use.

The new picture shows the need for re-queening the colony from time to time, the way to prepare the bees for wintering, the time to unpack the hives, the control of the swarm, and other details of management. The fact that the bureau of entomology will examine samples of combs to identify diseases and advises on their control is brought out.

The film is in one reel, and may be borrowed by extension workers and others entitled to the privilege, or prints may be purchased for approximately the cost of making them, which is about $37.

USE MILLET FOR LATE FEED

Small Area of Land May Be Prepared and Sown at Little Cost—Stock Thrive on It.

Many farmers find a late patch of millet helps out in feeding. A small area of land, provided it has not been left and lost to weeds, may be prepared and sown at a small cost in seed and labor, and considerable feed produced in ordinary seasons. German millet makes good feed when properly cured. Horses, mules and cattle like it, and thrive on it.

POULTRY

CULLING FOWLS FOR MARKET

To Make Best Possible Returns Every Hen in Flock Should Be Layer—Weed Out Culls.

(Prepared by the United States Department of Agriculture.)

Every boy or girl having poultry naturally wishes to earn as much money as possible. To do this every hen should be a good layer. All cockerels, except those kept for breeding purposes, as well as pullets that lack vigor and vitality, should be eaten, canned for home use, or sold as soon as they are large enough, says the United States Department of Agriculture. Selecting or "weeding out" the hens that are poor layers and picking out for market the cockerels least likely to develop into good breeders is commonly called "culling" or culling for eggs and for market.

The best time to cull the hens is during August and September, usually from August 15 to September 15, for at that season it is easier to determine which are the good layers and which are boarders. At that time of year hens which show signs of laying or are laying and have not molted usually are the ones that have been the better layers during the entire season, and the hen that lays best during her first year usually will lay best during her second and third years. She is, therefore, the one to keep. It is not often advisable, however, to keep hens of the heavier breeds, such as Plymouth Rocks, Rhode Island Reds and Brahmas beyond their second year, or the smaller breeds, such as the Leghorns and Anconas beyond the third

Club Member and His Flock of Rhode Island Reds.

year, as they seldom prove profitable. You can learn all about the various tests necessary to pick out the good and the poor layers by reading Farmers' Bulletin 1112, which can be obtained by writing to the Division of Publications, United States Department of Agriculture, Washington, D. C.

PORTABLE HOUSES ARE BEST

Make It Possible to Keep Young Growing Fowls on Fresh, Uncontaminated Land.

On a recent visit to a large practical poultry farm, it was observed that good use was being made of a number of portable poultry houses. These were of good size and were on runners made of heavy joists. The runners were braced against each other, so that a horse could be hitched to the front and the house hauled anywhere. This made it possible to keep the young growing birds on fresh, uncontaminated sod, which was always sending up a good lot of fresh grass.

When the movable houses were pulled away from each place where they had been for a few weeks, the rains soon washed the droppings into the soil. This nourished the grass and improved the land. In no case was the sod eaten down till the ground was bare.

For small chicks the same plant used small coops on two wheels that could easily be pushed from place to place by hand. In this way they never were troubled with gapes or contaminated soil.

POULTRY NOTES

Look out for lice when your chickens look droopy and sleepy.

* * *

Eat or sell off all your surplus cockerels before commencing on the pullets.

* * *

The very early pullet is apt to molt in the fall and be no more profitable for laying purposes than the hen.

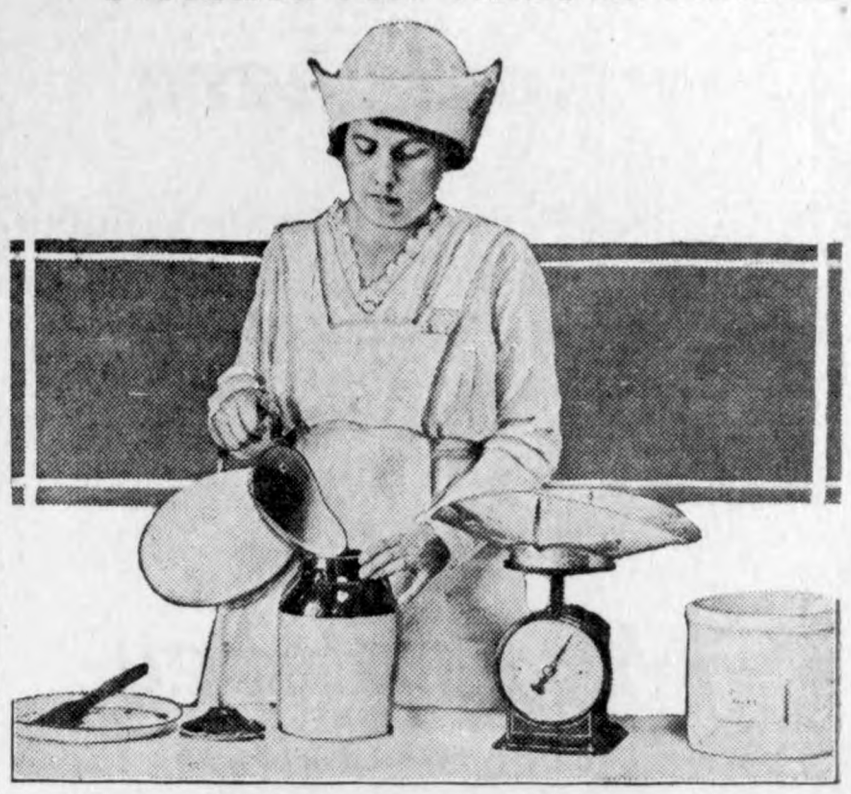
* * *

Put the coops for your little chickens as high in the yard as possible. A knoll covered with grass is preferable; then a sudden shower will not drown them.

* * *

Where healthy fowls are used for breeding purposes, and they are housed in properly ventilated and arranged houses, and are fed a proper ration for the purpose in mind, disease is practically a total stranger.

SURPLUS CUCUMBERS BRINED ARE SUPERIOR FOR VARIOUS PICKLES



Pouring the Brine on the Pickles.

(Prepared by the United States Department of Agriculture.)

"Salt pickles" should be the basis of other kinds of pickled cucumbers except dills. Whatever the final disposition—as sour, sweet or mixed—the cucumbers should first receive a perfect curing in brine. Attempts to use short cuts or to make pickles "over night" are based on an erroneous conception as to what really constitutes a pickle.

Directions for Salt Pickles.

The United States Department of Agriculture gives the following directions for making salt pickles:

Pack washed cucumbers in a clean stone jar. For this purpose use only the straight-sided, open-topped jars. A narrow-neck jar is not satisfactory for this purpose. The four-gallon size holds about 12 pounds of cucumbers. Cover with six quarts of a 10 per cent or 40 degrees brine (one pound of salt to nine pints of water.) At the time of making up the brine, or not later than the following day, add more salt at the rate of one pound for every ten pounds of cucumbers used. For 12 pounds of cucumbers add one pound three ounces of salt to maintain the strength of the brine. Cover with a round board or plate and on top of this place a weight heavy enough to keep the cucumbers well below the surface. At the end of one week and of each succeeding week for five weeks add for this amount of cucumbers one-fourth pound of salt. In adding salt always place it on the cover. If the salt is added directly to the brine it may sink to the bottom, as a result of which the salt solution at the bottom would be very strong, while near the surface it might be so weak that the pickles would spoil. A scum, made up usually of wild yeasts and molds, will form on the surface. This should be skimmed off.

If pickles prepared in this way are well covered by the brine and if the surface remains clean they should keep indefinitely. After a partial soaking in water to remove excess of salt, these cucumbers may be eaten as salt pickles. Many prefer them in this form. Most people, however, like them better after they have been given an additional treatment in vinegar, or in vinegar combined with sugar and spices.

If the salt pickles are to be made into sour, sweet or mixed pickles, the salt should be to a great extent, though not completely, removed by processing. This is done by heating them slowly, covered with water, to 120 degrees F., and holding them at that temperature 10 or 12 hours, stirring frequently. It may be necessary to repeat this process several times until the product tastes right. After processing, they should be drained well and covered at once with good clear vinegar of 40 to 60-grain strength (4 to 6 per cent of acetic acid). Fruit vinegars may be used if they are well filtered. If very sour pickles are preferred it would be well to use a 40-grain vinegar at first, and after a week or ten days transfer the pickles to a vinegar of the strength desired.

Sweet Pickles.

To make sweet pickles the cucumbers are covered after processing with vinegar in which sugar is dissolved and usually spices. The amount of sugar may vary from four to ten pounds to the gallon of vinegar. Too much sugar shrivels and toughens the cucumbers. If a liquor containing more than four pounds of sugar to the gallon is desired it would be best not to exceed that amount at first but gradually to add sugar until the desired concentration is obtained.

Spices are practically always added in making sweet pickles. These should not, however, be used in too large a quantity. One ounce of whole mixed spices to four gallons of pickles is a good proportion. Add the required amount of spice to the vinegar and hold it at the boiling point for not longer than one-half hour. Heating too long darkens the vinegar. Filter out the spices by pouring through cheesecloth. Sugar may be added at this time.

Mixed Pickles.

Various combinations of vegetables are used for making mixed pickles: Onions, cauliflower, green peppers, tomatoes and beans may be added to cucumbers. All the vegetables used should first be properly cured in brine in the same way as cucumbers. Very small vegetables or cut pieces are preferable.

In no case should a hot brine be used to start a fermentation. It would probably kill the organisms present and prevent fermentation.

RAISINS ARE IDEAL WARM WEATHER FOOD

Should Be Most Popular Throughout Summer Season.

Ice Cream When Flavored With the Fruit Is Not Only a Cooling Confection, but Helps to Take Away Listlessness.

The ability of raisins to revitalize the system with almost instant energy, through their sugar-content, makes them an ideal warm-weather food. For that reason, raisin food of all kinds should be most popular throughout the summer. Many every-day meals are composed of plain foods that can be made doubly attractive and healthful by the addition of this luscious California fruit.

The most popular dish of the summer—ice cream—when flavored with raisins, is not only a cooling confection, but one that helps to take away the listlessness caused by warm weather. The cooling qualities of ice cream are but a temporary relief, it is pointed out. Combined with the delicious flavor of raisins, it is truly a delightful, healthful dish.

The sugar in raisins is in practically predigested form, and is turned into energy almost immediately. This revitalizing quality of the raisin makes this fruit-food a boon to warm-weather fatigue and listlessness.

Other foods than ice cream gain in taste and health benefit when flavored with raisins. The ordinary loaf of white bread is changed to a delightful favorite in almost every household by the simple addition of raisins. The luscious sugar-sauce flows from the raisins into the dough during the baking, giving the whole loaf a most delicious flavor.

The iron content of raisins, long admitted to exceed that of other fruits, is a blood-builder, needed in summer and winter alike. In easily assimilable form it is readily absorbed by the blood to replenish the small amount lost by the body daily.

A raisin product at least once a day, and preferably at noon when the sun is hottest, will work wonders in restoring sapped energy during the summer months.

OF INTEREST TO THE HOUSEWIFE

Use one egg to one cupful of milk for soft custard.

* * *

Use one-half level teaspoonful of soda for each cupful of sour milk.

* * *

Use one tablespoonful granulated gelatin for one pint liquid if cooled on ice.

* * *

When packing away white goods, wrap them in blue paper or in a cloth that has been colored in bluing and they will not turn yellow.

* * *

To prevent salt from lumping mix it with cornstarch in the proper proportions of three tablespoonfuls of cornstarch to one cupful of salt.

* * *

Never place dishes or utensils which have contained custard, gelatin, egg or starchy food directly into water; scrape thoroughly first and rinse in cold water.

* * *

A great convenience is a shelf at the head of the cellar stairs where the things belonging to the cellar and in constant use can be kept, saving many steps in the day's work.

* * *

When buying a house dress choose one with pockets. The pockets are handy when the dress is new and make excellent patches when needed. The more pockets the more patches.

The Spreader Season is here

Why the Farmer Chooses this Western Life Policy

EIGHT out of every nine policy-holders of The Western Life Insurance Company are farmers. They have protected their families, their estates and themselves in old age---with one of our

FARMER'S SPECIAL

Western Life Insurance Company OF DES MOINES, IOWA "Out of the West Comes the Best"

Western Life Policy with special protection to the farmer and his family has made this the popular policy with the farmers of Iowa. Is your family protected? If you were suddenly called, would there be any ready cash for them? The FARMER'S SPECIAL is "old line" life insurance, just as good as money in the bank---and you get these benefits:

Double insurance to your family if you meet with accidental death.

Your annual premiums are paid by this company should you become permanently disabled.

Your premiums grow smaller each year---when you apply the guaranteed cash coupons which we give you every year after the first.

Your policy is fully paid up after twenty years.

After you have made 15 deposits the last five annual premiums are paid by this company when you leave the guaranteed cash coupons with us.

This FARMER'S SPECIAL Policy has other benefits for you such as monthly endowments after you reach the age of 60 years---interest paid you on premiums and other advantages which we will gladly explain to you upon request.

Get a Western Life Policy---it costs you less each succeeding year you carry it---the FARMER'S SPECIAL gives you the extra benefits you would not get in ordinary old line insurance. The longer you wait, the higher the rate. Mail the coupon today for our interestine booklet "One Farmer's Experiencg with Life Insurance."

"UNIVERSALS" SOLD HERE THE PAST WEEK

Henry Can't Make 'em Fast nough

More of Henry Ford's product is in evidence here, the same being sold by the Erickson Motor Co. the past few days. Those who have joined the happy ranks of fliver owners are W. L. Haberkamp, who is stirring up the dust with a Ford Touring car; H. E. Opland (evidently a Swede) of Miller, who will show the Copenhagen chewers the arts of driving a Ford Touring car; and Severt Haigen (we beleive he is a good Norsker) is now rambling around in a gas wagon of his own.

The only trouble seems to be that Henry can't make 'em fast enough to keep up with the demand here. There will be more victims to report next week.

METHODIST EPISCOPAL CHURCH
Arthur B. Gedye, Pastor

Sunday service were well attended and inspirational.

Our Sunday School teachers are measuring up to their task finely and are to be congratulated upon their constancy.

Some of our congregation are missing a blessing by continually absenting themselves from the services of the church. We hope they will not allow themselves to be too much taken up with worldly things.

"Remember now thy creator in the days of thy youth"' is a true and wise exhortation.

A word to parents: Are you giving your children a square deal by not giving them an opportunity of going to Suunday School? Our Sunday School is being run for your children. Come yourself and bring them.

"Be not overcome with evil but overcome evil with good."

You are planning your summer vacation. Have a good time and God bless you.

Rev. A. B. Gedye, Pastor

CORWITH .BANKER .GOES .TO CASHIER JOB AT JEFFERSON

CORWITH, July29.—J. L. Reynolds of this place has gone to Jefferson, where he will assume the position of cashier of the Farmers' and Merchants' National bank, which will reopen its doors today after haing been closed by the bank examiners a month or so ago. Mr. Reynolds has been cashier of the Peoples' State Bank here and has the experience of 15 years in the banking business, having served as cashier in the Shelby County State bank of Tenant, the Shelby County Savings bank, Farmers' Savings Bank of Irwin and cashier of the First National bank at Altao.

The Jefferson bank has raised the $100.000 required. Joseph Mehan will be president, and Frank Forbes vice president.

ONTRACT LET FOR NEW GRADE AND GRAVEL HIGHWAY

ILL BE A FINE ROAD ACROSS HANCOCK COUNTY

isely & Son Again Land Contract

More good roads for Hancock ounty is the result of the Board eeting of the Hancock County Supisors Tuesday, when they let the ds for grading the Wilson Highway tween Klemme and Garner.. The ading contract was let to Wisely Son, who have recently completthe grading between Klemme and odell. They took the contract for 1-2 cents per yard and are now the job and say they will have e work all completed by October The county can feel fortunate getting them to do the work as ey work fast and do most excellt work as well.

Contracts were also let at the same e for graveling the Wilson Highy from Klemme south to the coun line just south of Goodell; and o from the North Iowa Pike west Garner north to the Rock Island cks just at the south edge of For City.

The contract for graeling the Wilon Highway north of Garner was to Geo. E. Sargent, of Hampton 43 cents a yard. Work is to be not later than September 20 and ust be completed by Novemeber th.

The contract for the graveling to e south of Klemme was let to Hill Boyle of Everely at 39 cents a rd, and work must not begin later an August 15th and to be finishd by October 15th.

The gravel contracts call for 1700 rds of gravel to the mile, and is to e dumped at the side of the road d spread over the same with a rader, over a smooth road bed and be kept smooth by the contractor d if not smooth when finished he ust harrow it down and drag it til it is level all over. These road ds are 28 feet wide on the primary stem.

One will realize what a fine road is will make when you stop to ink that the good graveled roads ere covered with 900 yards of the avel surface to the mile, and the w roads to have nearly double the mount. Such a road should last r years if properly taken care of ter being completed.

With the North Iowa Pike paed ross the north part of the county d the Wilson Highway graded and aveled across the east part of the unty, Hancock will have as good road system as any county in the ate.

SOME BALL GAME

The game opened with molasses at e stick and Small Pox catching. gar was in the box with plenty of moke. Horn played first base, with iddle on second and backed by Corn d Cabbage in the field, they made hot for the umpire Apple who was tten. Axe came to bat and chopped. ar let Brick walk. Shoe lace left for a pair and Sawdust filled e bags. Cigar went out and Balon started to pitch, but went raight up. Then Cherry tried it, t was wild. Ice kept cool in the me. Cabbage had a good head and pt quiet and Grass covered lots of round in the field. The crowd eered when Spider caught a fly. g made a hit and Wheel beat out slow roller to first and Drum beat to third while Twenty scored.

In the fifth Wind began to blow hat he could do and Hammer began knock and Trees began to leave d the way they roasted the Peanut r frightful. Ship hit a liner to ft and Adding Machine scored on rank's short punch. When Whiskey t a pass and the bases were full, hicken fouled out to Roost and knife was out cutting first. Ten Pins p, but went out by the strike oute.

In the ninth Apple told Fiddle to ke first base, then Song made a econd hit. Trombone made a slide r third and Meat was put out on e plate. Lightening finished pitchg and struck out one man. There re lots of betting on the game but oap cleaned up. The score was 23 0 and Door said if he had pitched e would have shut them out.—Swea ity Herald.

WE ENJOY TRIP TO LINCOLN IN OUR "SHEENY SHOW CASE"

After getting the paper out last week Ye Editor and family piled into our "Universal" and head the gas wagon south west and landed right side up at Lincoln, Nebraska, for a few day's visit with Mrs. Jorgenson's folks.

Coming back we claim we broke all the records ever established by Henry's "Universal" as we left the city at four-thirty a. m. and got to Klemme the same day at 6:45 p. m. and killed a couple of hours o rmore along the way for meals, gas, oil and water, and rubber-necking at the scenery. We followed the Lincoln Highway most of the way and the roads were fine all of the 330 miles of the way. We road all the way on Klemme air and bought sixteen gallons of gas and one quart of oil each way.

There were only a couple of small detours on the entire route and one was a detour over about ten miles of paving so we didn't put up any hollar on that kind of a detour.

It may be of interest to the farmers here if we state that Crops from here to Fort Dodge looked the best of any on the way, especially is the small grain much better here than further down the line.

WILL "FLIVER" TO COLORADO

Farmers Also Entitled To Vacation

Tomorrow (Friday) morning before the rest of us are up, Mr. and Mrs. A. R. White and son Albert, will be well on the road leading toward Pike's Peak.

Al decided that being a farmer should no longer keep him from enjoying a vacation and so the family decided a trip in the "fliver" to Colorado for a visit with relatives would be jus tabout right.

Al was in the office today to ask us about the road to Lincoln and he will take the road we followed as far as the Nebraska capital and will then strike out on the O. L. D. for Denver.

They expect to be gone from four to six weeks and will take in all the sights of Colorado and nearby states of scenic beauty.

TEACHING STAFF THIS YEAR

Only One Change In Teaching Staff

The teaching staff for the Klemme school this year will be the same as last year with the exception of the superintendent. Mr. Neese, who taught in the Ventura schools will be at the head of school affairs here this year.

The other teachers were re-elcted to their old positions for this year and are: Miss Mckahan, high chool; Miss Smith. Grammar room; Mrs. Gibbs, Intermediate room; and Miss Everest. Primary room.

THEY MAKE GOOD BUTTER IN THIS BERG

Art And Bill Eat Ice Cream At Forest Pow Wow

A. D. Gimer, chief butter-maker, and Wm. Anderson, churnman of the local creamery went to Forest City last Thursday afternoon to attend a district meeting of Unit No. 5 of the Iowa Butter Makers Association. The time was spent discussing present day problems. After the meeting had adjourned all the visitors were invited to Ballentine's Ice Cream Factory where all were given a generous helping of Ballentine's product.

Butter from the Klemme Creamery tied for first place with the Lake Mills Creamery.

The Klemme men thoroughly enjoyed the meeting.

That an automobile thief ring, operating in four states, has had its headquarters in Sioux City, Iowa for the last two or three years is evidenc ed by the work of the police, state operatives and 2 government agents in the last three weeks. Thier officers have recovered more than 30 cars and several men are under arrest, charged with having stolen or sold the cars after they had been stolen and remodeled. Many of the cars, most of them new or almost new, have been idenfied and returned to their owners, but 19 remain unclaimed. Most of the cars were stolen in Sioux City or Northwest Iowa, remodeled as to number plates. etc., in Sioux City and shipped into South Dakota or Northwest Nebraska, where they are sold.

FACTS REGARDING POSTAL SERVICE IN THE UNITED STATES

WE LEAD THE WORLD IN CHEAP POSTAGE

It is a well known fact that Uncle Sam will carry a letter from New York to San Franscico for two cents —but that is only half the story. The United States Postoffice now car ries letters to many foreign countries at the regular domestic rate. This country leads the world in the realm of cheap postage.

Announcement is made from Wash ington that Spain and Argentina have recently been added to our two-cent stamp zone.. This is just one step in the extension of the low letter rate. For two cents Uncle Sam will carry a letter to Shangai, China or New Zieland. All parts of the British empire can be reached for the same price, with the excepion of Australia, India and Egyptk.

Nearly all the countries of South America and Central American are now in the two-cent zone. So also are the islands in our vicinity in the Atlantic and Pacific.

No other country can even come close to the postal record attained by the United States.

Most of us take mail service for granted. We fail to appreciate how much of a blessing it is and how much service we get at slight cost. Who would be willing to carry a letter to England or Spain for two cents and pay all the expenses of the trip?.

Scout Corner

The hike planned for last Friday being postponed the troop went Monday. Startt was made at 8:30 prompt. Afetr reaching our destination at Ventura Heibhts Camp was pitched and the first thing done was swimming. Say boy. it was a little airy that morning, but once in the water it was fine. Just so deep! After swimming it was nearly time to eat so our fires were lighted, several of the troop taking the second and first class cooking tests. While thus engaged Scout Executive Thomas of Cerro Gordo County B. S. A. came along with a squad of boys to fell poles for a signal tower at their camp. Maosn City troops have been in camp at the heights for a week and have another week yet to go. Ye scoutmaster had some conservation with Mr. Thomas who gave our troop the once over, and was kind enough to observe that the boys looked very neat in their uniforms, and were execptionaly clean and efficient in their camp cookery. He also invited us to come over and have a game of ball with the Mason City troops and were urged to participate in the pow-wow and council fire at night. After dinner Patrol Leader Elder and Scribe Wellemeyer laid a trail for scout tests, several boys tried to follow it, but it was useless as the woods have been used as Scout camps so much this summer that there were several trails running together. Next we wenkt wsimming after which we went up to the scout camp, and played ball, of the soft kind, Dr. Skedmore umpiring. Our agregation not having played soft base ball before were losing out, so the Doc mired us together. Our boys got the hang of it and say didn't we have some fun.

After the game the Mason City scouts went to their tents for instruc ions and we had an early supper. After supper, in due time, we had to see if the water was wet. Scribe Wellemeyer practicing for his merit badge on swimming. He's some scribe and some swimmer, we should say!

About 7:00 o'clock we made our way to the Scout Camp for the big pow-wow and council fire.

The Klemme troop were given a seat on a large log. Ye Scoutmaster being invited to sit with the nobles from Mason and the Scout Executive on another log. Then the big time began with all the scouts standing and giving the sign and repeating the oath together, that was very inspiring. The song leader led us wih several songs and the yell leader led in yells. The scout executive introduced the notables present, and called on the Klemme Scoutmaster to speak which he did very briefly, just a few words. This was no sermon mark you! Then Dr Skedmore told a few stories. The council fire which had been lighted was now glowing grand and say boy it was fine. After the stories Mr Stevens of Mason City, engineer and surveyor was introduced, and he told of his camping trip through the Yellowstone park, which was fine, tho it made us rather late in getting home so we came to the end of a perfect day.

We hope to have a pow-wow and Council fire ourselves some time. Will you come and have a good time with us.

Scout Meetting

Next meeingMonday nigh a headquarters.

MAN'S BEGINNING

The forthcoming twelfth edition of the Encyclopedia Britannica will contradict previous editions in regard to the origan of man, according to news dispatches from London. ..The article on anthropology, prepared by Prof. Grafton Elliot Smith of the unviersity of London, claims that the missing link between man and animal has been found, and the beginnings of man were in the Siwalik foothills of the Himalayas. The link is the famous fossil Piltdon skull found about ten years ago in Sussex. This, according to Proffessor Smith, has a simean jaw but indubitable traits of an extremely early phase of the attainment of human character.

All men Proffessor Smith believes, were originally black. One branch of the human family however acquired bleached skins, and of this branch there are four divisions—one living near Yellow river and becoming the forebearers of the Mongolians, another going into northeast Africa where they become they became the brown skinned people, the Alpine or Armenoid stock confined to Turkestan and the Nordic stock from which he thinks we descended, living northeast of Turkestan.

Impassible ice barriers in the glacial period kept races and branches separated for thousands of years. When the ice melted the races met and mingled again.

Whatever may become of further investigation. Professor Smith has set going a good many interesting suggestions. He confirms for example, the belief often expressed that the origonal man was black and therefor, contradicts the reverse belief that he was white and became brown, or black, or red or yellow under tropical suns of varying intensity.

His suggestion that the Nordic stock from which we are supposed to have come lived somewhere northeast of Turkestan, may, in time be connected up with the belief announced some time ago that Lithuania was the original seat af the language from which those spoken of in Europe, American and India are derived.

Proffessor Smith puts the "cradle of the race" much farther east than many have placed and that suggests an answer to the puzzle of China's ancient civilization. Possibly the branch which became Mongolian escaped some of the hard conditions met by the others when glacial barriers were interposed and got thereby, an earlier start on the road of human progress. Nobody knows how much of our own civilization came directly or indirectly out of China. Certainly had there been no melting of the glaciers, we would now be without a good many of the things which modern civilization claims as its own.

It would be rather a remarkable coincidence if the place of man's beginnings should be found to be in the Himalayas which have just now turned, baffled, modern men men equiped with modern science could provide to help them. That will mean that men, after after thousands, perhaps millions of years, stands defeated near the place where he first became man. From the beginning until now he has contended, with only partial success, against elements more powerful than himself. —Des Moines Register.

Promises of the French grape crop are so fine that it is expected the price of wine this fall will be lower than at any time since the war. It is predicted that some wine will retail at less than 18 centimes per litre which is about 9 cents a quart.

The railroad strike is losing some of its terrors. If the trains stop, there can be no cheap excursions.

THINGS IN GENERAL; WHAT OTHERS SAY; FROM ALL OVER

ROCKEFELLERS GREATNESS

With the echos of the storm raised by the attempt to decide who are the ten greatest American women the ten greatest living American still ringing in his ears, a New York newspaper is now asking who are men. The inclusion in most of the lists of the name of John D. Rockefeller is significant as indicating that the age of muck-raking, as Theodore Roosevelt called it, if not passed, is decidely on the decline.

Mr. Rockefeller's claims to "greatness" rest on two chief counts; his tremendous part in the developement of our national resources the affording of employment to a huge army of workers and the cheapening of commodities in general use, and his widespead practical philanthropies. At the time when professional muckrakers were at the height of their activities these philanthropies were no so well known as they are today. Within the last few years, and especially during and since the World war, the Rockefeller Foundation has extended its field to include almost every corner of the globe.

.."The world is my parish," said John Wesley, and this organization founded by Mr. Rockefeller has distributed its benefits without regard to race or religion. In this counry it has conducted a winning fight against tuberculosis, yellow fever & the hookworm. In Europe, Asia and Africa it is supporting medical schools and various movements for conserving the public health. When the emergency calls it sends its well equipped experts to combat epidemics in foreign lands, but its greatest work is in teaching backward peoples in the lesson of health and right living so that they can help themselves. It is impossible to estimate he amount of human suffering this single organization has prevented or alleviated.

..Definitions of "greatness" necessarily vary, but the tributs now being paid Mr. Rockefeller in contrast to the critisms of which he was formerly the subject is most noticeable.

—Mason City Globe-Gazette.

AMANA RULES FORBID PARTY

How would you like to be 100 years old and not be allowed to hold a birthday banquet nor have your picture taken for the papers? Such is situation of "Grandma" Joanna Geiger of Amana colony who was born in Batavia July 23 1822.

Photographs are vain conceits and feasts are wordly indulgence, according to the Amana religions belief. Therefore newspaper men are not welcome, even on this great occasion, Likewise, there is no celebration at the Amana settlement, and not even presents from admiring relatives or neighbors.

Mrs. Geiger is hail and energetic although her alloted work in the colony has been excused long ago During the years she has been a devout member of this pecular community she has worked in the fields in the factory and in the kitchens. Her life has been glad and happy, though secluded.

The Amana colony was established in Iowa in 1856, coming here after persecutions in Germany and elsewhere. Joanna Geiger was intimately accquainted with most of the great Amana leaders, who exist only as historical figures for other colonies.

Now, having joined the short list of centurians, she must be content with respect and veneration of her people minus all frills and festivities. WINNEGAGO REPUBLICAN.

What is human life worth?. Albert Gray an electrical engineer who had spent most of his life in South Africa, made the voyage to England and back several times with out accident lost his for a penny. He dropped the coin while crossing Oxford circus, one of the busiest spots in London He stopped to look for it and was knocked down by a motor. Four hours later he died in the hospital.

The woman who wants a model husband ought to buy a statute of a man. That's a model.

ALL EUROPE WORKING TO CUT DOWN IMPORTS OF FOODSTUFFS

WASHINGTON D. C. The Asso - iated Press carried a news article out of Paris to the effect that the French Government has issued a decree to compel millers to use a larger percentage of substitutes for wheat in making flour and avoid the import tion of wheat from the United States and other countries.

In this connection, Nat C. Murry, Crop Statistician of the United States Department of agriculture, who has just returned from an investigation of European crop conditions, reports that all Europe is bending every energy to raise as much food as possible in order to cut down on importations of food product. Murray reports that agriculture in western Europe, which includes Russia, is rapidly resuming a normal basis.

These facts are interesting in view of the propaganda being put out by importers, international bankers, free traders, Democratic politicians, etc., to the effect that the American farmer may expect an increase in the European demand on his products in event the present Underwod free trade law means on the books, permitting this country to be flooded with the manufactured products of Europe.

IMPORTERS AND DEMOCRATS

A new York importing concern. in an effort to induce others to invest capital in the business, cites the fact that tapestries are brought to this country without the payment of duty. and are sold at ten times their cost. The concern has the hearty cooperation of the free traders in the senate, who are fighting every effort to revise the tariff on the Republican protective lines. If the concern has failed to contribute liberly to the free state campaign fund, it is certainly guilty of ingratitude. Springfield (Mo.) Republican.

SCRAPPING OUR LAND NAVY

Congress has moved to check the growth of the navy on land. It has appointed a joint committee to investigate the "pork" in some three hundred naval stations ashore.

The investigation is well worth while. It has the backing of the administration. Already the Charleston, S. C. navy yard has been closed, and indications are that some two hundred stations elsewhere will be similarly treated.

All steps will be to the advantage of the navy. The need for the flock of naval ammunition depots, proving grounds, torpedo stations and the like which dot our coast from Kittery to Key West and from Key West to Puget Sound was never pressing.

The Washington Conference having agreed to scrapping the superflous warships at sea, Senator Medill McCormick, of Illnois,now proposes that the superfluous navy on land be likewise cut down. The reduction should be greeted with approval not only by tax payers but by the real sea going navy. More than a hundred million dollars can be saved by the pkrocess annually.—Minneapolis Journal.

WHAT THE FARMER GETS

Threshing commenced in this community last week, and oats are turning out a bumper crop at most places. The quality is said to be extra good, and the yield is running forty-five to fifty bushels to the acre.

The price, however, is rediculous, and the farmers ought to get out on a strike, commit murder, destroy the railroad property and raise the levil in general. The price, twenty-five cents—and less a bushel!

If the farmers would only quit farming, attempt to starve other workers already on strike, and shoot or murder every other man who attempts to fam wouldn't they have just as much moral and legal right to do this as others who are now striking against salaries as high as seventy two cents an hour for an eight hour day, and time and a half for all overtime. The farmer puts in twelve to fifteen hours of hard work every day, and he is, under present conditions, absolutely working for nothing and paying for the priveledge besides.—The Hampton Chronicle

Income taxes have heir good points. Men nowadays don't lie as they used to about how much money they make.

Hooch Free in Kentucky Hills

Correspondents Find Quiet Sort of Men Make "Mountain Dew With Kick."

SUSPICIOUS OF STRANGERS

Continually on the Alert for Deputy Sheriffs, Revenue Agents and Prohibition Officers—Read World Magazines.

Catlettsburg, Ky.—Typical mountain moonshiners of Kentucky are not always of the gun-toting and trouble-making kind, it is proven to news correspondents by visits into the mountain region in this area of the state. The mountaineer type of moonshiner, however, is continually on the alert for deputy sheriffs, prohibition officers and revenue agents.

After a trip of thirty or forty miles into the mountains the correspondent was escorted to a moonshiner's log shack, made from the rough timber of the hillside and carefully arranged on a foundation of stone.

"Bill" greeted his visitors with a keen eye, a bit of suspicion, but with a friendly note in his shout of "welcome stranger." Proper inquiries whether any squirrels inhabited an adjacent mountain side, where a newly beaten path had been noticed, brought the answer that squirrels were scarce and none were found in the woods.

Mountain Dew Kicks.

When a friendly spirit developed some "mountain dew," or, in the language of the cities, "white mule," was produced from a small hand-made cupboard within the single room of the cabin, over which hung a religious picture and other articles of a religious nature. On the opposite side of the room over the bed of the mountaineer was a rifle of heavy caliber, an automatic pistol and a small-caliber revolver. The contrast was unique.

A small drink of the "mountain dew" almost brought slumberland a la Dempsey. Inquiries as to the age of the liquor brought the answer, "Thet's today's stuff."

Hospitality of typical southern quality will be found among the mountaineer residents if you are a "friend"; if an enemy—beware, or, as "Bill" explained it, "snakes in the mountain are killed." "Bill" makes his farm a payable proposition for his wife and children, who were attending church at the time of the correspondent's visit, by occasionally cutting some timber.

His interest in world affairs is not limited and weekly trips to the nearest postoffice furnishes him with newspapers from the "outside." These are read by one member of the family, by lamp and candle light, to the others and often last throughout the week.

The moonshiner's home from the outside has an uninviting appearance, but once within the home, while some inconveniences are found, the impression of cleanliness is produced. The low ceiling forces a man of ordinary height to stoop. The board floor may creak, but it is solid and high and dry. In winter cold winds are shut out by the mud-plaster between the cracks of logs and by the board and paper lining of the inner walls. Heat is furnished by an oil burner and cooking is done on a coal range.

Oxen teams haul coal to the home during the fall months. A yoke of oxen pulling a load of timber along the narrow mountain road explains the manner which enabled the mountaineer to obtain all the sizable logs used in constructing his home.

Goat Locked Eight Days in Car Without Water

Poplar Bluff, Mo.—And now comes the "harmless" billy goat displaying some of his unique qualifications.

When a carload of lime was loaded at Cape Girardeau, Mr. Goat, unnoticed, made his way into the car and was locked therein. Eight days after, when the seals of the car were broken at the destination, Doniphan, Mo., and when the door was opened, out jumped Mr. Goat, spry, but apparently thirsty.

He was quickly treated to a drink of "Mountain Dew," which bubbles from a spring near Doniphan, and was happy. He seemed none the worse for his "Volstead feat."

Wife Hurt in Jump From Auto.

Waterford, Conn.—Mrs. John Phillips of Hartford is a determined woman. While motoring with her husband, she told him he would have to let her drive or she would jump out. He refused, and she jumped. Her skull was broken.

1—American school boys, touring Europe, laying wreath on the Cenotaph in London. 2—Congressman Mondell of Wyoming speaking at ceremonies of opening of the Hoback Canyon highway, at Jackson's Hole. 3—Pennsylvania state troops maintaining order at Cokeburg in the heart of the mining region.

U. S. Explains $108 Wardrobe

This Sum Will Provide for Evening Gowns and Business Frocks, Says Bureau.

TELLS HOW EASY IT ALL IS

Series of Pamphlets Issued by Department of Agriculture Calculated to Reduce High Cost of Clothing.

Washington.—Uncle Sam, besides occupying himself with strikes, law enforcement and international agreements, has interested himself in woman's clothes.

How to have a wardrobe for $108 that includes dinner and evening gowns, a smart business dress, frocks of voile and tissue, gingham for summer wear and a broadcloth coat for winter winds, is explained in a series of pamphlets issued by the Department of Agriculture, as an aid in reducing the high cost of clothing. One of these pamphlets declares that the business girl with a reasonable amount of zeal and talent, can use part of her spare time to such effect that her clothing bill is cut in half.

First she must send to the Department of Agriculture for the circulars issued by the department. One of these pamphlets explains how to make a dress form by pasting layers of gummed bundle wrapping paper over a tightly fitting vest on herself, as a model. When the paper casing is cut off and fastened together she has a "light, stiff and perfect reproduction of her form." This eliminated the purchase of a store figure.

Employee Used Form.

The girl with the $108 wardrobe, a government employee, used such a form.

She made for $24.61 a coat of tan broadcloth with a good lining, such as she saw priced at $50 in shops. A blue voile dress with a slip, cost, including trimming, $11.09. A tissue gingham dress, with organdie and hemstitching for trimming, cost $6.33; with scraps and a remnant she made another gingham dress for exactly 45 cents.

For $16 she bought materials to make a pussy willow taffeta and georgette crepe dress for social occasions, which she said, she could not duplicate at a store for less than $35. Her business dress of serge and crepe de chine would have been priced at $40 or more if she had purchased a dress of the same quality of material already made. Her evening dress of taffeta and silver lace cost $21, although it was modeled after one seen in a shop priced several times higher.

Attended Many Affairs.

This wardrobe, supplemented by two dresses for which materials were purchased, brought the total up to $108.34.

"This wardrobe, while not elaborate, enabled me to attend many affairs which, had I not sewed myself, I would have been unable to attend because of lack of a proper gown. Without the dress form I could not have done it in the time at my disposal. I made ten such forms for my friends, too."

Mrs. Harriman With 'No More War' Banner

Mrs. J. Borden Harriman, member of the executive board of the National Council for Reduction of Armaments, holding the "No More War" banner with the unbroken circle of the flags of all nations, which will be raised over the council headquarters as part of the international "No More War" demonstration to be carried out in fourteen nations July 29 and 30, the week-end preceding the anniversary of the outbreak of the World war.

YOUNG JAPAN TAKES TO JAZZ

Less Modernized Nipponese, However, Frown on Western Dancing.

Tokyo, Japan.—The question whether western dances are immoral is the subject of a lively debate in the Japanese newspapers at present. In the last few years western dancing has grown popular among Japanese women, especially those who have lived abroad, although it is by no means general as yet. They dance very gracefully in their native costumes and heelless slippers, but the older and less modernized Japanese frown on the growing custom.

LEGEND QUIETS HAWAIIANS' FEAR

Volcanic Activities Fail to Disturb Older Hawaiians.

Remember Ancient Legendary Agreement in Which Pele, Goddess of the Volcano, Promised to Withhold the Lava.

Hilo, Island of Hawaii, T. H.—Recent volcanic activity in the ancient pits of Makopuhi, Hanau and Napau, which have been "dead" since 1840, drained much of the lava that had made Halemaumau, the vast inner crater of the Kilauea volcano, so spectacular, and caused much fear that the lava would flow toward the sea and inundate the little villages of Kalapana, Panau and Puaa.

The older generation of Hawaiians, however, entertained no such fear, for they remembered an ancient legendary agreement that had been made by Pele, goddess of the volcano, with Kama Puaa, the Hawaiian pig god, by which Pele promised her lava would never flow through Hilo or Puna to the sea.

Pele and Kana Puaa had an argument and Kama Puaa went to Halemaumau, Pele's home, to fight it out. The god and goddess fought until Pele was overcome, and she pleaded for peace, according to the legend.

"We shall have peace if you promise never to allow your lava to flow through Puna or Hilo to the sea," Kama Puaa said. Pele assented, and she has never broken the promise, fearing a return of the hated Kama Puaa, the legend said.

In 1880, when a lava flow was proceeding toward Hilo and threatened to destroy the city, the Princess Ruth came from Honolulu here and, standing near the flow, reminded Pele of her promise and her danger from Kama Puaa if she broke the agreement. The flow stopped immediately, according to the older Hawaiians.

On several other occasions Pele has sent her red-hot rivers in the direction of Puna and Hilo, but they have never reached the two places.

The last activity, resulting from an underground flow from Halemaumau that broke out at Makaopuhi, 11 miles down the great southeast rift that leads from Kilauea, has changed he appearance of Kilauea.

It is now possible during favorable wind shifts to approach close to the pit-rim in what was known as Pele's oven.

Although the pit of Kilauea shows no activity, volcano observers say that "she is not dead, only sleeping."

Cobbler Finds $100 in a Shoe.

Warsaw, Ind.—Thomas Ross, Winona Lake, placed $100 in bills and several checks inside one of his shoes for safekeeping. Then he went to Florida and forgot all about the bills and checks.

While repairing a pair of shoes for Ross, a Warsaw cobbler discovered the greenbacks and checks and turned them over to the owner.

NEWS REVIEW OF CURRENT EVENTS

Railway Executives Refuse to Accept President's Plan as to Seniority.

STRIKE SETTLEMENT FAILS

Federal and State Control of Coal Distribution Gets Under Way—Chicago Traction Workers Quit—Results of Some Interesting Primaries—France Warns Germany.

By EDWARD W. PICKARD

NEGOTIATIONS for the ending of the railroad strike were at least temporarily halted again last week when the plan of President Harding failed of complete acceptance. Optimistic prophets of immediate peace were confounded.

As expressed by himself, the President's plan comprised these stipulations:

First—Railway managers and workmen are to agree to recognize the validity of all decisions of the railroad labor board and to faithfully carry out such decisions as contemplated by the law.

Second—The carriers will withdraw all lawsuits growing out of the strike and railroad labor board decisions which have been involved in the strike may be taken, in the exercise of recognized rights, by either party to a railroad labor board for rehearing.

Third—All employees now on strike to be returned to work and to their former positions with seniority and other rights unimpaired. The representatives of the carriers and the representatives of the organizations especially agree that there will be no discrimination by either party against the employees who did or did not strike.

The railway executives were the first to act on these proposals. They accepted the first; agreed to the second with the understanding that the strike be first called off and that the representatives of the strikers pledge themselves and the strikers against violence in any form against the men now at work and the property of the carriers; declared it was impossible for them to agree to the first sentence of the third proposal.

Having placed themselves in a strategic position by awaiting action by the executives, the representatives of the striking shopmen met in Chicago and voted, though with expressed reluctance, to accept the President's proposals. This was conditioned upon recognition of the union interpretation of the plan, which, among other things, would require the Pennsylvania railroad to abandon its fight for the open shop. The shop crafts also insist on the establishment of a national board of adjustment which would relieve the labor board of all disputes except those involving wages. Some roads have agreed to regional boards, but probably all of them are opposed to one national board which would prescribe uniform conditions regardless of needs of various localities.

Seemingly the rail executives are in dead earnest in their refusal to abandon their stand on seniority rights. They notified their local employees and other workers that they would be protected and guaranteed permanent employment, and went ahead with the task of filling the places of the strikers. In New York it was said their decisive stand resulted in a rush of applicants for jobs. Public opinion is widely divided concerning this attitude of the railway executives. Many persons feel that it is only justice to the men who have remained at work and those who have responded to the call for workers to take up the tools the strikers laid down. Those who sympathize strongly with the demands of organized labor take the position that the action of the railway heads is a part of a campaign to destroy the unions.

It was predicted in Washington that President Harding would do nothing more in the matter at present, giving the railroads an opportunity to prove that they could operate effectively without the services of the striking shopmen. Roads unable to do so, particularly carriers reaching into the producing bituminous fields, may be taken over and operated by the federal government.

PRESIDENT LEWIS of the mine workers made a definite move for settlement of the coal strike by calling a joint wage conference of operators and miners of the central competitive bituminous field, to be held in Cleveland August 7. Unfortunately, the operators, or most of them, refused to attend.

Meanwhile Henry B. Spencer, who was appointed federal fuel distributor, and his committee and subcommittees began functioning actively. According to Mr. Spencer's plan, the federal organization will cover the distribution of available supplies among the railways, federal institutions and states, and the governors of the states will handle local supplies. State fuel committees were called on to report at once the consumption of coal in their territories by utilities, industries and households and to submit a list of those who should receive priorities. These state committees are also made entirely responsible for the prevention of profiteering and extortion in the sale and distribution of coal within their respective states.

Governor McCray of Indiana took the most vigorous action yet reported in the matter of getting out coal. The miners of the state refused to issue permits to sufficient men to operate the mines for emergency purposes, so the governor opened two strip mines in Clay county under the protection of 800 state troops as a preliminary measure and declared a state of martial law to exist in that part of the county. These mines are in the hands of a receiver appointed by the federal court, and the governor called attention to the fact that this places the United States government behind them. Mr. McCray also called a conference of the governors of Pennsylvania, Ohio, Michigan, Illinois, Kentucky and Wisconsin. Governor Preus of Minnesota says the coal situation in the Northwest is more threatening than ever, and he has asked the governors of Iowa, Wisconsin and North and South Dakota to meet with him in St. Paul August 10. In Wisconsin the bottom of the coal bin is in sight and, at the request of the state fuel commission, all ornamental and display electric lighting has been discontinued.

CHICAGO'S street car strike came along according to schedule. Some 20,000 employees of the surface and elevated lines quit early Tuesday morning and no attempt was made to take the cars out of the yards. Motor vehicles of all descriptions were called into service and on the first day there was a terrific congestion of traffic. By Wednesday the police, motor clubs and individual motorists had worked out a system that brought the situation almost to normal, and many a Chicagoan began to wonder if the city couldn't get along without the noisy street and elevated cars. Also they learned the worth of one-way street regulations in the business center.

Toward the end of the week peace negotiations were resumed, but the local president of the employees said he saw no prospect for an early settlement. The men are fighting not only a proposed wage reduction, but a nine-hour day. Chances of an order by the state public utilities board reducing fares and politics enter into the Chicago situation, and it was frequently and openly asserted that the strike was a "put up job" to prevent the fare reduction and to deal a blow to Mayor Thompson and his organization. The mayor has long promised a 5-cent fare and last week tried to take steps toward the establishing of a municipal bus line to supplant the street cars.

AT THIS writing it appears probable that United States Senator James A. Reed has been renominated by the Democrats of Missouri, defeating Breckinridge Long in a fight that was hot and even bitter. Mr. Long had the support of former President Wilson, during whose administration he was assistant secretary of state. The dislike that Mr. Wilson and many others have for Reed dates from the years of the World war. The Republicans of Missouri nominated R. R. Brewster of Kansas City for the senate.

In Kansas, W. Y. Morgan, [illegible] son editor, was leading form[illegible] W. R. Stubbs for the Republi[illegible] ernatorial nomination when a[illegible] per cent of the returns were i[illegible] Campbell, veteran member [illegible] gress from the Third district[illegible] of renomination. Senator [illegible] Sutherland was renominated [illegible] Republicans of West Virginia.

Republicans of Iowa, in st[illegible] vention at Des Moines, war[illegible] dorsed the record of Senator C[illegible] and pointedly neglected to [illegible] Smith W. Brookheart, the par[illegible] inee to succeed Cummins. T[illegible] pleasing to the Democrats, also[illegible] vention, and their candidate. C[illegible] Herring, predicted he would w[illegible] out any Republican opposition.

GERMANY has been trying [illegible] pone the payment of d[illegible] French citizens contracted by G[illegible] before the war, and last week [illegible] grew tired of this and brusque[illegible] fied Berlin that unless assur[illegible] the payment of $10,000,000 by [illegible] 15 were received within fou[illegible] France would impose penalties[illegible] economic and financial charac[illegible] was stated in Paris that these [illegible] ties would include the seizure [illegible] German industrial enterprises [illegible] still tolerated in Alsace-Lorra[illegible] may be some industries in o[illegible] Germany will be seized. A sti[illegible] elaborate scheme was propos[illegible] members of the French parlian[illegible] Premier Poincare. This is noth[illegible] than the separation of the Rh[illegible] from Germany, giving it a par[illegible] and government and a financial [illegible] supervised by the allies. All P[illegible] officials would be ousted.

Great Britain sent a note to [illegible] allies explaining that America[illegible] tude concerning war debts made[illegible] essary for Britain to collect fr[illegible] debtors unless all the inter-all[illegible] debtedness is canceled. The [illegible] European nations interpreted t[illegible] directed solely to America, a[illegible] Washington it was stated officia[illegible] note would cause no change in t[illegible] icy of the United States towa[illegible] foreign debts.

Premier Poincare and membe[illegible] his cabinet are in London this [illegible] the date of the conference with [illegible] George having been advanced. [illegible] mier Theunis and others of Be[illegible] also are there. The general s[illegible] of reparations and war debts w[illegible] considered.

DOINGS of the Greeks in T[illegible] greatly disturbed the allies. [illegible] King Constantine formally aske[illegible] mission to occupy Constanti[illegible] This was probably "for home [illegible] sumption," but the allies, much [illegible] ed, refused the request and sent [illegible] of troops into Thrace, forcing [illegible] Greeks to withdraw to six miles [illegible] the Chatalja lines. Then Co[illegible] tine suddenly proclaimed Smyrn[illegible] its hinterland an autonomous sta[illegible] der protection of the Greek arm[illegible] claring the occupied regions in[illegible] Minor should not be returned to[illegible] key. He thus upset the plans o[illegible] allies for a peace settlement be[illegible] Greece and Turkey, possibly bel[illegible] that in this way only can he kee[illegible] Greek people from again drivin[illegible] from the throne.

ONE after another the strong[illegible] of the Irish rebels in the [illegible] are being taken by the nationalis[illegible] the irregulars so far have not m[illegible] determined stand, despite the rep[illegible] pleas of De Valera. Harry Bo[illegible] one of De Valera's closest friends[illegible] who was with him in America, di[illegible] a bullet wound. Liam Mellowes, [illegible] O'Malley, Rory O'Connor, Ge[illegible] Quinn and other Sinn leaders are[illegible] oners. The final triumph of the[illegible] visional government seems near.

FOR one minute last Friday [illegible] telephone and telegraph in[illegible] ment in America was silent. This[illegible] the impressive tribute to the me[illegible] of Dr. Alexander Graham Bell, inv[illegible] of the telephone, who died in Bad[illegible] Nova Scotia, at the age of sev[illegible] five years. The great scientist per[illegible] ed many other notable inventions. [illegible] also was untiring in his efforts to[illegible] the deaf.

United States Senator William[illegible] Crowe of Pennsylvania, who succ[illegible] ed Senator Knox, died at his h[illegible] after an illness that began last [illegible] cember. He appeared in the se[illegible] only twice before that time.

BOXER WHO SINGS AND READS

W. H. Littleton, an Ex-Gob, One of Many Legion Sluggers to Carry Away Honors.

A boxer who sings baritone and reads classical literature is about as rare as gin rickey at a church social. William Harrison, better known as "Happy" Littleton, southern middleweight champion boxer, has an unusually good baritone voice which he uses when the boys get together to have a little harmony. A boxer who peruses the classics might be expected to be a "tea hound," and it is rumored that Littleton has been known to balance the china cup on his knee.

But the fact that Littleton can sing, read and drink tea doesn't keep him from being a good boxer. He recently wrecked the knuckles on both his hands on Billy Shade's head when the two met in New Orleans. He won the decision in that match just as he had in others with Joe Chip, Battling Ortega, Joe Borrell and Jack Bloomfield.

Littleton, an ex-gob, is one of the many American Legion boxers who have carried away the laurels in bouts in every section of the country.

INTERESTED IN LEGION WORK

Maj. Gen. John Lejeune Accepts Invitation to Attend Annual Convention in New Orleans.

In accepting the invitation of the American Legion to attend the fourth annual convention of the legion in New Orleans, La., in October, Maj. Gen. John A. Lejeune, commandant of the United States marine corps, expressed his appreciation of the legion and his interest in its activities.

"Louisiana is my native state, and for that reason, as well as on account of my interest in the American Legion, it will be a privilege for me to be with you at the convention," General Lejeune said.

The military career of the marine corps leader embraces service in the Spanish-American and World wars. He came into greatest prominence when he commanded the Fourth brigade of marines of the Second division, which saw service at St. Mihiel, Mont Blanc ridge, the Meuse-Argonne and in the Rhine country.

Governor Signs Bonus Bill.

Governor Cox of Massachusetts has signed a bill which makes more than 400 additional World war veterans eligible for the $100 state bonus. The bill provides that any man who was a resident of the state within the year preceding his enlistment is eligible for the bonus, or if the man's parents were in the state a year prior to his enlistment, although he may have been in another state, he can collect.

About to Arrest Mme. Joffre.

While Marshal Joffre of France was being received at the Pennsylvania station in New York city by a group of American Legion officials and members of the mayor's reception committee, Mme. Joffre went upstairs to wait for the hero of the French people. While Mme. Joffre waited, one of New York's "finest" told her to "move on." He was about to take action because his order was ignored when a rescue party headed by General Bullard arrived and escorted Mme. Joffre to her waiting automobile.

Aids Are Needed.

There is urgent need at hospitals of the veterans' bureau for reconstruction aides in physiotherapy and occupational therapy in connection with the rehabilitation of disabled veterans of the World war, according to an announcement made by the United States civil service commission. Applicants for these positions are not required to report for written examinations, but are rated upon the subjects of education, training experience and physical ability. Information may be obtained from the U. S. civil service commission, Washington, D. C.

Carrying On With the American Legion

Rumors that state prison labor is being used to compete with private industrial concerns has caused an investigation by the Seattle (Wash.) American Legion.

* * *

A Philadelphia concern is organizing an expedition to salvage the $5,000,000 known to have been on board the Lusitania when the vessel was sunk by a German torpedo.

* * *

Leonard T. Paulu, of Grinnell college, Ia., with a leg scarred by shrapnel wounds, recently broke 100 and 220-yard dash records in an intercollegiate track meet held in Chicago.

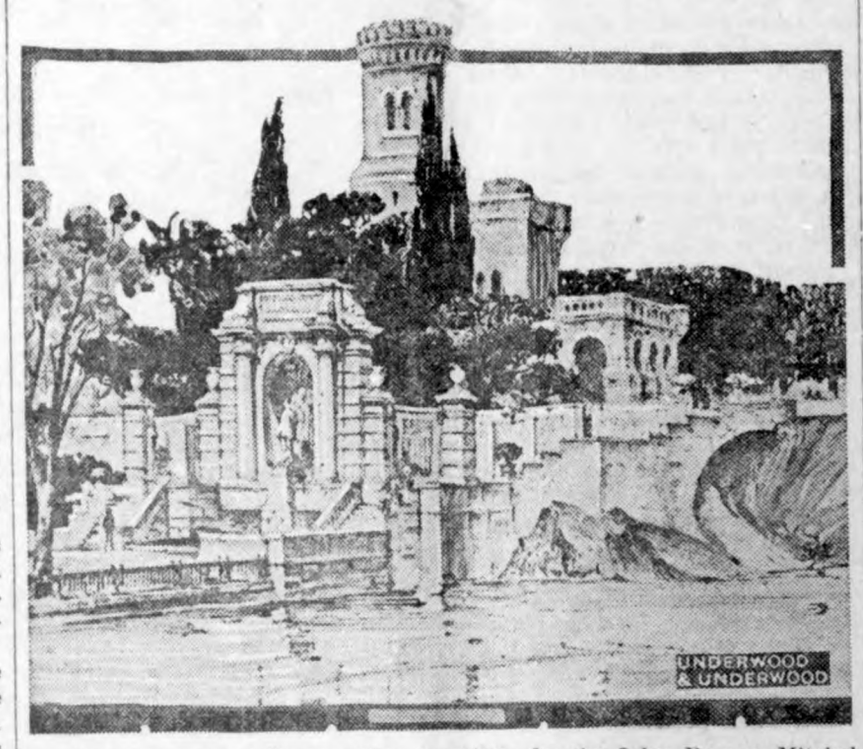
* * *

A memorial highway extending east and west across Virginia has been suggested by the Virginia American Legion as a memorial to the state's World war heroes.

Chicago's Queens in City's First Street Car

To rule over its Pageant of Progress, Chicago selected a number of queens—one for each section of the city. Here are those young ladies packed into Chicago's first street car, which also is on exhibition.

Proposed Memorial to John P. Mitchel



The chairman of the executive committee for the John Purroy Mitchel memorial, Robert Adamson, has given out through the architect, Donn Barber, this preliminary study of the tentative design for the monument to the late mayor of New York city. The plan for the entire memorial contemplates the lowering of the southern embankment of the old Croton reservoir in Central park and constructing thereon, near the level of the water, a tree-bordered mall or promenade which will extend from the eastern drive over to and including Vista Rock, on which stands the Belvidere.

He Didn't Know Where He Was Going

"Going but know not where" is the unusual inscription ordered placed on his tombstone by Phineas G. Wright, a Putnam (Conn.) carpenter, dead four years, whose grave is visited by hundreds of passing automobilists who have been told of the inscription. Wright was noted among his friends for his disbelief in a life hereafter.

Mrs. Harding Visits Disabled Veterans

Mrs. Harding, wife of the President, takes an active interest in the welfare of the maimed and sick service men. She is here shown visiting the veterans who are in the Walter Reed hospital in Washington.

SHE IS A REAL RULER

Her majesty, Queen Hamanyah, ruler by right of wit and sword over a large territory in the vicinity of Sierra Leone, Africa. Her warriors have conquered many a neighboring hostile tribe, and her wit is sufficient to have gained her a large fortune through trading with the whites. Note the huge ivory tusk ornamented with gold, worn by the faithful retainer behind her.

ATLANTIC CITY TROPHY

This mermaid, a graceful figure, wrought in solid gold, reclining on a boulder of granite, mounted on bronze realistically carved to represent waves, is to be the trophy presented to America's most beautiful bathing girl at the Atlantic City pageant festivities.

Advice by an Expert.

My most embarrassing moment happened in my college days. We had a new Scottish professor who stuttered a great deal.

It delighted my chums to have me imitate him, so at dinner I repeated some announcements, almost word for word, which he had given in class that afternoon.

Imagine my embarrassment when the professor walked up behind our table, looking directly at me, saying: "You can stutter fine, Mary, but I would suggest a few lessons in Scottish dialect for a perfect imitation."—Exchange.

A New Name.

Bobby and his little sister were traveling by train with their mother.

"Oh, see the lake!" said the little sister.

Presently they passed a river.

"Another lake!" proclaimed the sister.

Bobby knew it wasn't a lake, but he couldn't think what it was called.

"'Tain't a lake," he contradicted. "It's a—a keep-on-going!"

Home Town Helps

LOOK TO COMMUNITY'S NEEDS

What Has Been Accomplished at Fort Scott, Kansas, May Be Cited as Case in Point.

Half a dozen years ago there were two years when the wheat around Fort Scott did not come to harvest and, as wheat was the only product of the community the town was left flat. Even the merchants closed their stores and moved away.

The chamber of commerce decided that the community needed more diversity of production. It studied the situation and decided that the dairy industry would fit logically into its scheme. The farmers owned only scrub cattle, but despite this the chamber went down to Kansas City and induced the big milk users to establish three shipping stations in the Fort territory. The farmers were much surprised to find that they could get money for milk which formerly had been used only as swill for hogs.

Then the chamber of commerce took its second step. It organized an excursion and took forty of its most progressive farmers to that part of Wisconsin where the dairy industry is most highly developed. It showed them just what first-class dairy farms and first-class dairy cattle were and how such an enterprise is properly operated.

But the chamber did not stop here. It raised enough money to buy a trainload of the best milk cows it could find in the United States, had them shipped to Fort Scott and sold to the farmers at cost, which was less than the price they would have had to pay if they had bought individually. Last year this community sold half a million dollars' worth of milk alone. That wealth would not have come to Fort Scott but for the sale of milk. It will be spent among the business people who make up its chamber of commerce. The country roundabout has just completed the laying of 225 miles of improved roads, a thing that the farmers had formerly refused to finance. The whole community is transforming itself. All of which comes of taking thought of community needs and proceeding to supply them.

KEEP THE CITY BEAUTIFUL

Annual Clean-Ups All Right in Their Way, but There Is a Very Much Better Method.

The annual spring clean-up in Kansas City has become a well known event. But why should it be an event? Why not a continuous process?

Recently an excellent method of keeping the streets always in repair has been put into operation. Why can't something of this kind be made to apply to the cleaning not only of streets but of yards, lots and other places that demand attention? There is provision for street cleaning, of course. But the street-cleaning forces do not receive the encouragement and help they ought to have. Their work often is nullified or made difficult by the carelessness of individuals who throw papers and various kinds of refuse where they will be most unsightly and generally objectionable.

Keeping a city beautiful and clean all the year around does not stop with the operation of any city department. It becomes a part of the civic duty of every individual; it must be checked up to every home as well as to a health or street cleaning department. It may become a matter of habit with the people. It should be prompted by pride; a regard for the rights of neighbors; for what visitors may think of the city; for the best things in respect to appearance and public health.—Kansas City Star.

Stimulating Home Ownership.

One of the chief ways in which home ownership can be stimulated is through the education of the general public. Of late years it has become apparent to the leaders in the real estate profession that many people have not purchased their homes, not through inability or unwillingness, but simply because of their lack of knowledge. They fear that perhaps they might find themselves engaged in a venture about which they know nothing, and hence it does not appeal to their conservatism. The one best method of educating the public is by visualizing the processes involved in the acquisition of a home and home site. This is best done by having representative men in the industries allied to home construction brought together at an exposition to show people at first hand what has been done and what may be accomplished in the future and to give them authoritative information and definite costs.

Culture.

"Don't talk to me about colleges!" scoffed the self-made man. "Look at me! Do you suppose I would have been any more successful than I am if I'd had a college education?"

"No," admitted the professor, "but you might have been less inclined to brag about it."—Judge.

We Shall Double Our Efforts.

LOWER BROADWAY AT NIGHT

Young Folk Stroll Through World-Famous Street and It Becomes a Lover's Lane.

Summer nights have turned lower Broadway, from Trinity churchyard to the Battery, into a sort of lover's lane, the New York Sun states. Breeze-blown and dusky and half deserted, strollers find it a pleasant place. They saunter past the windows that are occasionally lighted, showing somebody working late at a high desk over a big book, or hammering the keyboard of a typewriter.

They pass up and down, going by twos and by fours as nonchalantly as though they moved through a country lane. Their faces are thrown into a high light as they pass the street arcs.

For them all Trinity churchyard has an endless fascination. Fenced out with the dark they walk along the wall; they seem to watch the gravestones. The stones shine white at night, the high cross in the center of the plot directly in front of the new Curb market building, is somehow more prominent than any of the high stone structures that surround the arches of the church.

The only thing that shows up as white is the front wall of the Curb market. It seems to rise directly at the back of the grass plot. The tracks of the elevated trains are visible. The five curved windows that light the second story look as if they were five entrances on the ground floor.

Through the crowd of strollers through the cool streets come occasional people who are anxious to get home.

About 10 o'clock a great many children come up through the street, some running and chattering, others so sleepy that they have to be dragged along by the mothers who are getting them home after an evening down at the park. Half of the children want a drink of water when they come to the Trinity church wall. So the women stop at the fountain built as a memorial to Ann Maria Cotheal Swords. The children want to play in the water, the mothers want to get them home.

So for a few hours after dark downtown Broadway seems to belong to the past, to young lovers and to romping children. They come that way every warm day and the men, who sit silently on watch in corners of buildings and in doorways are generally glad to see them come.

Electric Flypaper.

The struggles of a fly caught on a sheet of tanglefoot paper are painful to witness. Perhaps, however, the insect undergoes no worse sufferings than when poisoned.

Why not kill the flies by electricity? John H. Turpin, of Bremerton, Wash., has invented a simple little machine for the purpose. You hang it on the wall and it does the rest. Bait, of any kind suitable, attracts the insects to a slot through which it is exposed to view and smell. The slot is a narrow elongated opening between two metal plates. When a fly crawls across from one of the plates to the other, it is instantly killed and falls into a little trough beneath. This happens because the plates are attached by binding posts to a couple of copper wires which pass through an electric cord connected to an ordinary plug, which is inserted in an electric socket. —Milwaukee Sentinel.

Standards of Youth.

Bobby's father was an organist of repute, a calling for which Bobby, at ten years old, felt a little apologetic when having occasion to explain it to his friends. A policeman, now, or a fireman, those are professions a fellow can boast about! One day he was overheard in conversation with a neighbor's son, who asked:

"Bob, does your father play?"

"Yes," admitted Bobby, without much enthusiasm.

"Well, what does he play, the cornet?"

"No," answered Bobby, half-heartedly. "He plays the organ."

"And does he sing?" persisted the small friend.

"Goodness, no!" indignantly exclaimed the musician's son. "We wouldn't stand for that!"—Harper's Magazine.

"Bad" Indian Gone.

Tse-ne-gat has passed on to the happy hunting grounds. This leader of the Piutes on their reservation was known to the government officials as the "Bolshevik Redskin" because of his tendency to precipitate uprisings. In 1915 he was accused of killing a Mexican sheep herder, and in resisting arrest he gathered about him nearly every lawless Indian within 500 miles of Bluff, Utah, where he maintained an inaccessible stronghold, from which he successfully defied the United States marshal's posse. Tse-ne-gat is said to have cost the government about $25,000 a year. He was one of the wealthiest Indians of the reservation.

Enough to Make a Saint Swear.

They were stalled steen miles from nowhere and John was using language that made the air blue, but which had no effect on his second-hand bus.

"Oh, John, do hush that awful language," exclaimed his wife—and John only said a few more things not printable. And was enjoying (not) the spin with them, explaining: "In all the 25 years of our married life before John bought this fool, second-hand car, I never heard him utter an oath, and now his language would make the most hardened pirate blush for shame."—Brooklyn Eagle.

CREDIT TO WHOM?

Memory Test Concerning Popular Quotation.

Who Will Come Forward With Proof as to Authorship of Words Ascribed to Many?

Who said: "There, but for the grace of God, go I. * * *" Having asked practically every one we know and also some we did not know we have discovered ourselves to be as wise as when we started.

Eminent theologians, quite naturally it seemed to us, should have been the authorities from whose decision there could be no appeal on this question. Several of them, questioned, knew, but had for the moment forgotten. They were to let us know, says a Hartford Courant writer. We have not heard from them. Others, not having forgotten, told us. If we had stopped with one all might have been well, but seeking corroborative testimony — a fellow worker having put the matter on a sporting basis, as it were, by betting $1 that John Bunyan said it—we went further and asked several of the eminent clergymen. Those who told us had so many favorites that we were more bewildered and amazed than when we began. John Milton, John Bunyan, John Wesley, Sir Isaac Newton, Francis Bacon, Samuel Johnson, Dr. John Donne, Bishop Hall, Dean Swift—we could not believe that Dean Swift would have said that—Isaac Watts and Bishop Berkeley, those are some that we recall.

Eminent literary men, appealed to, were equally certain they knew and did not in all cases disguise an amused contempt that we should ask a question when the answer was of a nature that should spring spontaneously to the lips of the educated, but their choices were as varied as those of their eminent brothers in another field of endeavor. About the only addenda to the lists given by the clergymen that we recall were Alexander Pope, Ben Jonson—we know he did not say it—William Pitt, Earl of Chatham, Sydney Smith and Thomas a'Kempis; but they, when pressed, produced no documentary evidence.

A pebble cast into the Pacific at California will start in motion a wave that finally breaks upon the distant Asian shore, we have heard—we do not know who said that either, nor do we believe it—and in a somewhat similar fashion our query began to involve others. A young woman hearing of the quest kindly called up to inform us that Francis Bacon had said it. We asked her how she knew. She had attended a lecture shortly before and the lecturer had quoted the phrase and ascribed it to the man who once remarked that God Almighty planted the first garden. Somewhat to her surprise we asked if she could possibly get in touch with the lecturer and ascertain where the quotation with its credit might be found. The lecturer, it later developed, was certain of the fact, but could produce no authority for it. That started the young woman on a search among all the books of quotations that were ever written and are still extant in Hartford.

One person insisted somewhat heatedly and with no reservations that Milton said it. Perhaps he did, but aside from discovering that the blind poet once remarked that

For contemplation he and valor formed
For softness she and sweet attractive grace.

and also

Grace was in all her steps, Heaven in her eyes.

not to mention

And grace that won who say to wish her stay.

we were unable to find that he was ever guilty of the bombastic and conceited remark under discussion.

And so it went, and so it goes. Perhaps some day we will know, but we have nearly given up hope.

A Little Different.

John, a senior in high school, has recently "acquired a girl," whom his father finds an added expense. The other evening he remonstrated with his son for spending so much money on the girl. "You didn't have to do that way in my day," he said. "I went to see my girl, she set me up a good dinner, and then I fed her a little taffy, and she counted the evening a lot of fun."

"Well, times have changed since then," John returned. "I go out to see my girl now, she feeds me a little taffy, and I set her up a good dinner. And I'm not sure whether she counts that evening a lot of fun."—Indianapolis News.

Link With Famous Writer.

A link with Sir Walter Scott is the recent completion of the one hundred and twenty-fifth year of its existence of the Kelso (Scotland) Mail. The first printer, publisher and editor of the Mail was James Ballantyne, founder of the Ballantyne Press, Edinburgh, and the paper was founded on the advice and with the assistance of Scott, who was a school-fellow of Ballantyne at Kelso Grammar school. The first of Scott's works, including the first two volumes of "The Minstrelsy of the Scottish Border," were printed in the office of the Kelso Mail.

"The Mercury Went Down."

Little Girl (rushing into doctor's office).—Please, doctor, come at once to father. Mother's taken 'is temperature an' it's gone down.

Doctor—That's all right, my dear—that's splendid.

"Tain't all right; it's gone right down. He's swallowed it."—Punch.

Darkness and Dawn

By HAZEL SMITH

(©, 1921, Western Newspaper Union.)

It was merely a business coincidence that James A. Holton, lawyer, had offices in the same skyscraper where James B. Holton, also lawyer, had an office. The comparison, however, was grotesque. "Judge" Holton occupied a suite on the second floor, about as elaborate as the upholsterer's art could make it. "Jim" Holton, as his friends familiarly called him, had a little ten-by-twelve room at the top story. It contained a worn rug, a small desk, two chairs and a bookcase holding only the most necessary law books required in the profession.

At these, his sole possessions, Jim was staring gloomily. It was the darkest hour in his life, and the late afternoon shadows formed a fitting frame for his environment. The agent for the building surveyed Jim rather pityingly.

"Sorry, Mr. Holton," he said, "but it's the rule. There's two months' rent overdue. I'll just have the stuff here stored with good care. Soon as you get on your feet again you can pay up and get it back."

"No," said Jim defiantly; "sell it. I'm through."

"Don't say that," spoke the agent. "Don't give up the ship—always darkest before the dawn, you know."

"I'll be on hand when you call on me," he added as he left.

Holton pulled open a drawer. As if a devil had stung him, his hand shot out eagerly at the little silver-mounted weapon it contained.

"The quick way," he said hoarsely. There was a click. Then with a shudder he flung the weapon back into the drawer, crashed it shut, and his face fell across his arms. Some power drove his lips to the low sobbing utterance of a prayer, learned at his mother's knee.

"Is this Mr. Holton?" asked a timid, almost frightened voice.

"I—that is—" the girl was pale and her hand was trembling as she tendered a large envelope. There was no doubt that she had seen the weapon and heard the prayer. She was confused in delivering a message. "My aunt, Mrs. Helen Hurley, asked me to give you this. It is—something about—about another lawyer, and—you are to write aunt or see her."

Then she was gone. Jim sank to a chair. His heart had leaped up at such loveliness. But—not for him! He, penniless, a failure! He opened the envelope, supposing it to be some papers in one of the few law cases he had assisted in. Around a file of documents two fifty-dollar bills were folded. Next to them was a note. It read:

"I am the attorney at Sackville of Mrs. Hurley. She will come to you to assist her in getting possession of some important papers, will give you a retainer fee, and if we win the case at this end there will be a contingent fee for you."

"Why," exclaimed Jim glancing at the envelope, "this is for the Holton downstairs. All that money!"

An hour later Jim was ushered into a suite of rooms in an apartment house three miles away. An old lady and a young one arose to greet him.

"Mr. Holton—you are prompt," said the elder lady, holding his card in her hand. The younger one, his office visitor, looked at him with interest, but strangely.

"Mr. Holton, yes," said Jim with a forced smile, "but not the Mr. Holton for whom these documents were intended." And then Jim told of the other Holton, of his absence, and handed the lady the envelope.

"Aunty," almost whispered the young lady, "may I speak to you for a moment?"

Jim sat fidgeting in his seat. It was the young lady who finally returned, alone. She brought back the packet.

"You will trust me, a stranger—" began Jim, choking up.

"Yes," she replied, "because—because I know you need a client, and because that dreadful temptation, your mother's prayer, have told me to be—be your friend. Have I said too much?"

It was a simple case. A miserly old fellow in the city had some papers.

Here again the star of hope and fortune arose for Jim. The old fellow happened to be a client of a friend of Jim, a struggling young lawyer like himself. One week later, at no expense whatever, Jim brought the coveted documents to Mrs. Hurley.

In the meantime, through the Hurleys, he was introduced to some influential people. Two new clients came to him, and things began to look up for loyal, patient Jim.

The day he got back into his old office he called on Helen. He told her the whole history of that dismal afternoon when they had first met.

"And, oh, how sorry I felt for you," confessed Helen, "for I guessed that you were in deep trouble. That dreadful moment when—but that will always be our secret. The sweet mother's prayer drove all the fear and temptation away."

"And you appeared, an angel on the threshold," said Jim. "Yes, that will be our secret, but there is another one. If I only dared to tell it—"

Helen swayed nearer to him. Her eyes told him he might speak, her lips invited the lover's kiss, and Jim knew that the full glorious dawn had come at last!

HIKING DOWN THE LONG BROWN PATH

Vacationists With Shelter Tents and Tin Cow Learning to Walk All Over Again.

Oh! It's not the pack that you carry on your back
Nor the rifle on your shoulder,
Nor the five inch crust of khaki-colored dust
That makes you feel your limbs are growing older;
And it's not the hike on the hard turnpike
That drives away your smile,
Nor the socks of sisters that raise the blooming blisters—
It's the last long mile.
—Plattsburgh Marching Song.

Stringing out from the suburban transit terminals of New York every Sunday and holiday goes the army of khaki-clad hikers. There may be an automobile for every twenty of the country's population, but a host of city folks disprove the theory of a future leg-enfeebled citizenry and are learning to walk all over again.

To the more casual minded, the hike is just exercise, but to those who catch its real significance the hike means a great deal more. It is the cheapest form of recreation and therefore appeals to those living in crowded districts and unable to avail themselves of the more expensive amusements. And these people, be it noted, are just those the country is so anxious to have spread out and settled in the farming sections. The hike, indeed, has possibilities as a real starter for the "back to the farm" movement.

Doughboy and Boy Scout Lead Way

Just a brief survey of the rollicking groups which move off from the outlying terminals on holidays establishes a few general types. There is the ex-service man and his friends who will hear from him the story of more serious excursions on the muddy roads of France. He tightens a strap here and another there on the blanket roll adjustment or the "shelter half," in which the commissary is packed for the mid-day feast by the roadside. Expert directions come from him on the method of slinging the pack so it will not feel so heavy or interfere with the free body movement. He will pass along the information, gained in his army days, of how that same pack was evolved after numerous experiments to find the easiest way of carrying the heaviest load. With results he now compliments, but which he characterized when a doughboy as a "blankety blank total failure."

Then there are the boy scout parties, adept at everything pertaining to "shanks mare" traveling and woodcraft. The ex-service man and the boy scout are pioneers in the hiking game. Listen to one of them right off the train and making ready for a twelve mile jaunt: "Get that canteen over the side, Jimmie, and it won't keep bouncing off your leg every step. Is it filled? Well, then, we drink. How about the eats? Let's check 'em off. You got the spuds, Bill; the bacon Jimmie. Who has the coffee and the Borden tin cow?"

"Right here," announces a freckled comrade of the road, patting his knapsack. "Snitched the mocha and the can of milk when Sis wasn't looking."

"Well, then, let's go!" snaps the commander of the expedition.

This party is traveling light for real distance. Another must expect to make a shorter hitch or else be counting greatly on its power of endurance. Perhaps the camp is not far off because the group is equipped for an over-night stay with heavy blanket rolls, hatchets, lanterns, canvas waterpails, rubber ponchos, kettles, pots, new fangled firestand, etc., etc. The blankets are laid out for a better packing of the bags and cans of food. When the party commences to load up the members bristle all over with camp tools and equipment.

Back to the Farm

The veteran from the crowded city tenements has found a new territory to roam and one almost unknown to his associates. He is introducing them to this newly discovered land and teaching them how to be independent of any transportation but their own good legs and of any subsistence but what they can carry and prepare. "Walk and cook your own," is his motto.

Who will say the leaven thus fermenting in the city crowds will not bear fruit in a keener appreciation of country delights, especially as these are added to by increased comforts on the farm. With his radio hitched up, the farmer listens in on the best entertainment the country has to offer. Modern home devices wipe out many hardships formerly imposed upon isolated dwellers. There is, in short, a rapid cutting down of the differential between farm and city life.

In the meantime, knowledge must precede a true appreciation of what the country holds, and this is what the hike supplies. There is more appeal in one apple tree in blossom than in reams of printed matter put out to induce the citizen of the city to change his abode to the country. The hikers constitute a growing army, equipped with bacon, spuds, coffee and tin cow for merely a day's outing but nevertheless seeing sights that make them yearn to be among them all the time. It is not too much to assume that the army may one day recruit the open places.

RID IOWA OF HER ALIENS TO BANISH BOOZE, MAN URGES

DES MOINES, AUG. 2-"Rid Iowa of her aliens, her residents who have not sought naturalization papers and never intend to seek them, and the bootlegging problem will be largely solved," says E. E. Hunt of St. Paul, federal probition director for this zone, who is in Iowa this week making a tour of inspection.

Hunt visited Des Moines yesterday for a short conference with R. N. Holstaple, superintendent of the Ia. Anti-saloon league. He pronounced probition conditions in this state better than they had been for some time.

"The records of arrests show us that 87 per cent of the bootlegging in this country at the present time is being done by Aliens, Hunt declared yesterday "These aliens are mostly men who have no intention of ever becoming citizens of this country. They are here to break our laws and to make money out of those who are willing to have their laws broken."

Probition is gaining a firmer hold on the country every day that people see its benifits, Mr. Hunt said. He asserted that the continuous decreases in drunkenness and the slackening in crime is ample testimony to the effectiveness of probition.

The federal director expressed his approval of the work of the Anti-Saloon league.—Mason City Globe Gazette.

PIGG AND HIS PIGGIE

Senator Richard Prestlow Ernest, of Kentucky says the following amusing grand jury indictment may be found in the ancient records of Lawrence County, in that state: "Did unlawfully willfully and maliciously kill and destroy one pig, the personal property of George Pigg, without the consent of said Pigg, the said pig being of value to the aforesaid George Pigg. The pig thus killed weigh about 15 pounds and was a mate to some other pigs that were owned by said George Pigg, , which left said George Pigg a pig less that he (said George Pigg) had of pigs, and thus ruthlessly tore said pig from the socitey of George Pigg's other pigs, against the peace and diginity of the commonwealth of Kentucky.

HURRYING ON..

Time is skipping with a haste I can't explain; soon we'll do our Christmas shopping in the winter sleet and rain. Precious months are slipping by us, and the never will come back, and we use some language pious when we view the almanic Half the year is now departed, half the year is spent and run, and I'm feeling broken hearted when I view the work undone. Vain and useless was my planning and I now take in my sign; Father Time is always canning noble hopes and dreams of mine. I have scarcely done a quarter of the things I planned, I see; for the days and week are shorter than the blame thing ought to be. All the months are bob-tailed speeders, each the worst you ever saw; and I feel, oh, gentle readers, that there ought to be a law. For we can't get nothing finished, we can wind up nothing here and our store of life's deminished every time we flap an ear; and the moments, never stopping, whipser that we're nearly thru, and the time for Christmas shopping will be with us P. D. Q. —Walt Mason.

If you say you "lead a dogs life," you ought to specify the dog. Most dogs probably have an easier time than most humans.

BOY SCOUTS OF ROCKFORD SAVE "OLD SWIMMING HOLE"

Boy Scouts of Rockford, in Floyd County, saved their "old swimming hole" when they trooped down upon the contractor in a body recently and petitioned him to make provision for a sixteen foot spring board when he poured the new Rockford concrete bridge.

Recently a bridge inspector in paying a visit to the bridge site to see what progress the contractor was making noticed two bolts placed in the pier midway between the pilasters, and was at a loss to know what their use was. Consulting the plans, he failed to find the bolts indicated. Hunting Foreman Taylor of the Miller-Fifield Company, he learned that the bolts had been placed there at the request of the local Boy Scout organization members which came down in a body the day the concrete was poured and requested that he make provision for a spring board. The boys will not be denied the joy of their "old swimin' hole" even tho a brand new concrete arch bridge takes the place of the familiar old structure.

MISTAKEN IDEA

Some people have a mistaken idea as to the duties of a newspaper when it comes to publishing a matter of news. News is all right to some unless it touches on some particular matter affecting their own immediate families, but when it comes to a matter of keeping it out of the papers. Some people have little use for local newspapers only to read the doings, good or otherwise of their neighbors and enjoying reading of misfortunes of others, but when it comes to matters that strike closer to home the newspaper editor is a ghoul and a fiend if he will not take dictation in the matter of suppres real news stories. When the editor of a newspaper accepts a subscription price for this he enters a moral contract to supply his readers with news that should be printed. It would be pleasant indeed for any editor to have only good news. that is news that is pleasant and elevating with only the matter of praise to those mentioned without any adverse comment. However that in an utter impossibility that any one who gives the matter an instant's thought will realize. Yet every editor is approached weekly by parties who have something they want to keep out of the paper. News of a legitimate nature should be published. It is no pleasure to the editor of any newspaper to publish the misfortunes of others, yet it is neccessary and serves in a way to place an example of before others who might be adversely inclined. —Waukon Republican and Standard.

Something to Think About

By F. A. WALKER

ARE YOU WORTHY?

A COMMON and frequent complaint nowadays among self-esteemed young men and women is that they are not making satisfactory progress.

With more or less petulance they declare that their incomes are not sufficient to keep them in the style in which they want to live.

Instead of being compelled to depend on popular shops for their clothes, they yearn to be in position to patronize high-priced tailors and dressmakers, and thus in their false estimation keep step with the rich by making repeated shows of fine feathers.

The plebian atmosphere in which these hapless mortals are surrounded is most displeasing.

Any real effort to improve their mental qualifications is apart from the question, and contrary to their inmost wishes.

Though apostles of laxity, devotees of empty pleasures and devout disciples at the shrine of prodigality, these disgruntled young men and women openly blame the world for their imagined plight, often condemning their employers for holding them down, when as a matter of fact their employers have nothing whatever to do with it.

The man or woman who is really desirous of rising to the surface where he or she can swim with head above water must pull a hard, continuous stroke, quite regardless of what others are doing.

It is the only way to keep at the top and keep moving ahead.

Drifting is perilous to everybody who indulges in it, certain in the end to lead to disaster by wrecking the fondest hopes and highest aspirations.

In spite of our vaunted pride of progress, drifting is becoming a national habit, particularly among the puny-minded who bend their knee to the god of gold rather than to the god of wisdom.

Every good thing in life is measured by such persons with the tape bearing the dollar mark and its decimals, even morality, friendship and love.

Yet alas! these handlers of this iniquitous tape line perversely lament their position in life and condemn the irresponsible for faults and failures that are their own.

To make yourself worthy in any calling it is necessary to prove your worthiness.

And this cannot be done except by honest endeavor, long hours of hard work and a manifest willingness always to put personal industry above personal indulgence.

Uncommon Sense

By JOHN BLAKE

BE A GOOO LOSER

IF WE all liked to lose, this would be a shiftless and an ambitionless life.

It is natural to want to win in any competition, business or athletic.

Any self-respecting man would like to feel that he can outstrip the other fellow in any race he enters.

He feels chagrined when he loses. But if he amounts to anything he does not show it.

To whine, to lose your temper, to invent excuses, to show jealousy if you lose, is poor sportsmanship and poor judgment.

You may feel badly because you have lost, and you ought to, but remember that you, and no one else, are responsible. For if the competition was one in which you had no chance of winning you shouldn't have entered it. If you did have a chance, it was your fault that you did not improve it.

Be a good loser, therefore, and generous to your opponent. But don't lose too often.

Don't be so little concerned about losing that you never try to win.

Don't feel that it makes no difference how the race goes. When it is over have a quiet little conversation with yourself, and give general instructions not to let the same thing happen again.

There is such a thing as being so good a loser that you like to lose. And there are no competitions run off in this world which you can afford to enter merely for the pleasure of letting some other man win.

You are perfectly justified in feeling bad when you have lost. You are justified in taking yourself into a corner for a lecture on the folly of losing. The continual loser will in the end have to part with his self-respect and his courage, and become a mere cumberer of the earth.

Try to win as hard as you can. If you lose next time make up your mind that you will win the next. Determine that you will win oftener than you lose and that you will win as nearly 100 per cent as possible.

Then when you do lose, you can bear it with a better grace, for you will know that such a thing is not going to happen very frequently.

Mother's Cook Book

This world's need is men and women great enough to be small enough to be used.

REFRESHMENTS

DURING the mid-summer sultry days a cool drink, ice, or frozen cream is always acceptable.

Date Sandwich Cookies.

Take one package of dates, stone and chop; mix with one cupful of orange marmalade, one cupful of chopped nuts. Prepare a white cookie mixture, roll out very thin, place a spoonful of the mixture in the center and cover with another cookie; sprinkle with sugar and bake in a moderate oven. These cookies may be cut in fancy shapes, baked and then be put together with the filling, if one so desires.

Green Peas Francaise.

Wash the peas as before shelling, then shell the peas and put the pods on to cook for fifteen minutes or longer in enough cold water to just keep from scorching. Use this water, hot, to put the freshly shelled peas on to cook, add two green onions, a sprig of parsley, and a head of lettuce well washed and dry; there should be added two tablespoonfuls of butter and cover the kettle closely. Cook slowly one hour. This is a delicious dish which will be often served.

Pineapple Nectar.

To one pint of pineapple juice add one-half cupful of orange juice, four tablespoonfuls of lemon juice, sugar to taste and a slice of orange and a cherry for each glass. Combine the juices, add the sugar and stir until dissolved. Fill the glasses with finely chipped ice, pour over the fruit juice and top with a slice of orange into which a cherry has been pressed.

Lemon Cake.

Take three-fourths of a cupful of butter, cream it, adding two cupfuls of sugar gradually. Beat the whites of seven eggs and add to the creamed butter and sugar a spoonful at a time. Beat well, add three cupfuls of sifted flour, four teaspoonfuls of baking powder, the grated peel of one lemon alternately with one cupful of milk. Fold in the whites at the last. Bake in three layer pans.

KIDDIES SIX

By Will M. Maupin

AFTERWHILE

WE ARE going to "cut the mustard,"
Afterwhile.
Likewise be "all to the custard,"
Afterwhile.
But today we're in poor fettle,
So we'll let our feelings settle;
But we're going to show our mettle
Afterwhile.

We will wipe out all injustice
Afterwhile.
We'll do lots of big things—trust us—
Afterwhile.
But today is full of pleasure
And its golden hours we'll treasure;
But we'll start on some great measure
Afterwhile.

It's the greatest country ever—
Afterwhile.
And to reach it's our endeavor,
Afterwhile.
But today we'll spend in dreaming,
Wasting hours of golden gleaming;
And await a glad dawn's beaming
Afterwhile.

(Copyright by Will M. Maupin.)

PROMISING.

I introduced a grass widow to a grass widower today.

Will anything come of it?

Can't tell. They exchanged references.

SCHOOL DAYS

WHY?

DOES SALT MAKE US THIRSTY

ANYONE who has suffered from nose-bleed or who has tasted human blood knows that it contains a considerable proportion of salt—approximately the same amount as is present in sea water. This is only natural, because salt is one of the essentials of the body and is carried through it by means of the veins and arteries which feed the different parts of this intricate mechanism.

When an unusual amount of salt is taken into the stomach, it reacts in two ways. In the first place, the blood, being already supplied with all the salt that it cares to handle, declines to take on any more and the saline solution remains in the stomach—"uncalled for," as it were. Then, too, salt rapidly absorbs water and its presence in the stomach causes that organ to send out a hurry call for some means of flushing out the excess which cannot be utilized by the body. The sensation of being "thirsty" is, therefore, merely the manifestation that the stomach needs something with which to dilute the unusual amount of salt—just as when we feel thirsty from other causes it is a sign that the body needs some kind of a liquid to assist it in its usual functions.

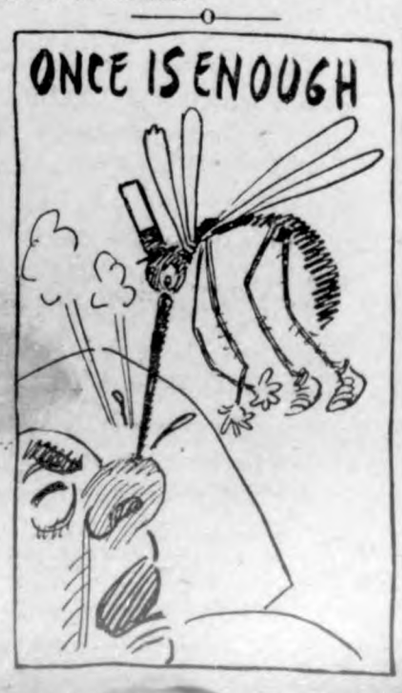
Hickory First in Fuel Value.

Shell bark hickory ranks first in fuel value, with chestnut, white oak, white ash and red ash following in the order named.



Wit and Humor

BROTHER'S HOME

The fact that his supposedly adored big brother was returning home from college that day had been carefully concealed from ten-year-old Tommy until he came back from school.

"Tommy," said his mother, after her younger son had gone upstairs to wash his face and the elder had been concealed in the pantry, "I have a big surprise for you."

"I know what it is," replied Tommy unconcernedly. "Brother's back."

"Why, how did you guess that?"

"'Cause my money-box won't rattle any more."

Had to Walk Back.

"You are an hour late this morning, Sam," said an employer to his negro servant.

"Yes, sah, I was kicked by a mule on my way, sah."

"That ought not to have detained you an hour, Sam."

"Well, you see, boss, it wouldn't if he'd only kicked me in this direction; but he kicked me de other way."

JUST REVERSED.

Doctor: Did he take the medicine I prescribed for him religiously?

Nurse: No, sir, he swore every time.

Gloom.

The camper huddled in his tent,
Was gloomy as could be,
He sang this song of discontent,
"It's raining rain on me."

Something in a Name.

"Now here's a neat bungalow," said the real estate agent. "Just the thing for you, and only $5,000."

"Let's enter into an amiable conspiracy," said the prospective customer.

"Eh?"

"Call it a cottage and cut the price."

The Cashier.

A young woman went to call on a lady who had entertained her. The latter's five-year-old daughter, who was playing on the lawn, said: "Mamma isn't at home."

"I am sorry," replied the young woman, "for I have come to pay my party call."

"Oh, I'll take the money," said the child promptly.

That Was All.

Roberts—Jiggs did not stay long when he called on you at the office.

Robinson—No; he wanted to borrow £5, and went away as soon as he got it.

"I see; just a case of touch and go."—London Tit-Bits.

The Right Instinct.

"Come, Dorothy," said her father impatiently, "throw your doll on the bed and hurry or we shall be late."

"Daddy, how can you?" reproved the child. "I isn't that kind of a muver."

ON THE WING

"That new cook is a bird."

"Yes, a bird of passage. She's going to leave tomorrow."

Back Numbers.

Concerning college football teams,
Too oft it comes to pass
The man who's halfback in the field
Is 'way back in his class.

Figuring.

Madge—What are you thinking about, dear?

Marjorie—I hope bobbed hair won't go out of style before mine grows again.

No Long Distance Appeals.

"Wife going to the seashore this summer?"

"No, decided to stay at home where the money supply is close at hand."

The Poor Lover.

He had exhausted the weather as a subject of conversation. He eyed his frayed hat as he turned it self-consciously on his knee.

"It's about wore out," he apologized.

"Why don't you wear it out?" she asked pointedly.

Hint on Dancing.

She—You should change your style of dancing a little.

He—In what way?

She—You might occasionally step on my left foot.—Irish Independent.

NOVELTIES IN BLOUSES; HATS FOR LATE SUMMER

ALTHOUGH crepe de chine leads the lovely procession of materials used for making new fall blouses, it has some ambitious and attractive rivals in other exquisite fabrics. Its nearest of kin is crepe-back satin and wherever one goes it serves to introduce the other. But printed velette and duvetyn, in gay patterns, combined with crepe de chine, or occasionally with georgette, bring something new to fall blouses, and these ideas are sure to be amplified.

One of the new style-points in blouses appears in the waistcoat effect, in which a vest in a contrasting color, or in a heavier weight material, is introduced in a blouse of crepe de chine or georgette. An example of this idea appears in the illustration. Duvetyn and georgette are also used in insets on plain materials and are combined with embroideries that serve to join them to the blouse gracefully. Braid embroidery, in bands, and other embroideries are lavished on the new blouses, but none of them is so highly regarded as bead embroidery, which is generously used everywhere. Tassels of silk, bead ornaments finished with bead fringe, chenille and narrow ribbon embroidery, applique figures, cross-stitching, couching and chain-stitch braid embroidery, serve to elaborate plain materials in designs for fall blouses.

Many sleeves are three-quarter length, but the long sleeve gathered into a cuff and the ample wing sleeve, hanging to the waist, are well represented. Many necks are collarless and finished with a border design in embroidery, especially in those blouses that open at one side. Others have collars turning back from V-shaped neck openings or falling only across the back. There are many advocates for all of these neck treatments.

Hats for late summer are mainly lovely white ghosts of their colorful forebears that blossomed in the spring. Being constantly reminded by other hats in their company, that autumn is near, they say "hail and farewell" to summer, for their stay careers are apt to be brief. Among these white hats appear black ones usually of satin and often trimmed with white ornaments. They have a summer mind but are equal to facing the cool winds of September.

There are combinations of black and white that have more sturdy qualities than the exquisite all-white hat, and they are also popular for late summer.

One of the Novel New Blouses.

One of them appears in the group pictured here. It is made of white duvetyn with upturned brim faced with black satin and embroidered with white angora yarn. It is smartly finished with a cord and pompon trimming of the yarn. A hat of the same character is shown in the white felt turban draped in three ties and decorated with an applique design made of black felt strips, woven in and out.

A dignified hat for late summer made of a fabric will wear long into the fall. It has a cut-out trimming of duvetyn edged with soutache braid and a facing decorated in the same way.

The pretty flower-trimmed hat at the top of the group is a lovely example of mid-summer millinery in mauve hair braid, with curtain edge about the brim, made of mauve georgette.

Group of Late Summer Hats.

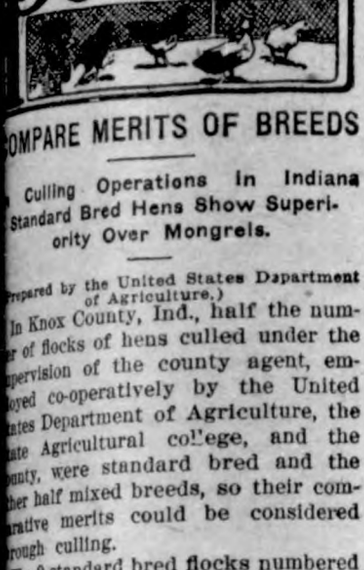
POULTRY



COMPARE MERITS OF BREEDS

Culling Operations In Indiana Standard Bred Hens Show Superiority Over Mongrels.

(Prepared by the United States Department of Agriculture.)

In Knox County, Ind., half the number of flocks of hens culled under the supervision of the county agent, employed co-operatively by the United States Department of Agriculture, the State Agricultural college, and the county, were standard bred and the other half mixed breeds, so their comparative merits could be considered through culling.

The 9 standard bred flocks numbered 987, while the 9 of mixed flocks numbered 1,103, or 16 more hens. The week before culling, the standard bred hens laid 2,906 eggs and the mixed breeds 2,547, or 352 less. In culling, 314 standard bred and 355 mongrel hens were removed from the flocks, leaving 773 standard bred and 738 mongrels, or 35 more standard breds. Two owners of the standard bred flocks, being breed-

Mixed Flock of Hens.

ers, culled much closer than the owners of the mixed flocks. The week after culling the standard bred hens laid 2,724 and the mongrels 2,433 eggs. The figures show that among the 787 standard bred hens there were 77 less culls than among the 1,103 of the mixed flocks, and that they laid 39 more eggs the week before culling and 291 more the week after.

CONTROL OF CHICKEN PESTS

Application of Blue Ointment Will Prove Efficacious, as Will Sodium Fluorid.

A study of the life of chicken lice shows that there are a dozen different kinds infesting the same bird. Most of them, however, frequent the rear part of the body at least once in every twenty-four hours where they obtain the necessary moisture for their life and growth. This moisture is obtained from around the vent. As this habit of lice would answer one method of treatment, the use of blue ointment.

Blue ointment applied around the vent and under the wing of each fowl affected seems to get rid of the lice in a very short time. A piece the size of a good sized pea is plenty for one bird. If the blue ointment is thick and heavy it should be melted so that it can be applied in a very thin layer. It is well to make a second application two weeks after the first, especially if the birds are badly affected.

Many of the advertised lice powders and many of the home-made powders seem to work very well. Good dust blows handy to the poultry house will aid considerably in controlling the pest.

Sodium florid can also be used to control lice. This is a common preparation which can be obtained at any drug store. It is applied by what is known as the pinch method. A pinch should be worked into the fluff of the fowl, a pinch under each wing, a pinch under the back, and a pinch worked into the neck feathers.

POULTRY NOTES

Regularity in feeding is one of the secrets of success with fowls.

* * *

The tamer the flocks the more valuable and profitable they usually are.

* * *

Separate the sexes at eight weeks old or as soon as sex can be determined.

* * *

Move colony house or brooder coop to fresh ground before chicks are crowded out.

* * *

The incubator is not only a necessity but an economy where early chicks are wanted.

* * *

The hen and the caretaker are partners in the poultry business. If either is lazy the profits are less.

* * *

Do not expect to hatch more than 50 per cent of the total eggs incubated, either in machines or under hens.

* * *

The incubator often gets lots of blame that should be attached to the operator. When a machine is operated the hatches will go wrong.

FARM LIVE STOCK

BABY BEEF MOST PROFITABLE

Young Animals Give Greater Return Than Older Ones—Can Be More Economically Fattened.

The phrase "baby beef" has been in existence for many years. At first it was to some extent a term of reproach, but any stigma attached to it has worn off, and it is now part and parcel of modern farming.

Baby beef is early maturity in concentrated form. An animal that loses its calf flesh may yet be finished at a fairly early age, but it will never make baby beef. The latter, in addition to early maturity, must combine quality, finish and thickness of flesh. There are many cattle that cannot be fattened early; breeding will play its part in this as in other things.

Experiments carefully planned and carried out have demonstrated that young animals will give a greater return in beef for food, and can, therefore, be more economically fattened than older ones.

The advantage is from 25 to 50 per cent in favor of the younger animal. This is quite sufficient margin to induce many who have not yet essayed baby beef to try it. It has another advantage in being ready for the market at any time, and can be sent off if trade is good or held back if prices are low. There is a quicker turn-over, a greater profit, and a bet-

"Pierrepont Golden Prince"—Winner of the First Prize and a Championship Shorthorn, at the Royal Counties Agricultural Society Cattle Show at Guildford, England.

ter choice for markets. The main factors are better breeding and better feeding, both good in themselves apart from baby beef.—English Livestock Journal.

WOOL AND MEAT FROM SHEEP

Animals Require Very Little Grain and Are Valuable in Destroying Noxious Plants.

An average high grade sheep can produce a fleece weighing from five to eight pounds, and raise a lamb weighing 80 pounds in a year. If necessary it can live without a single mouthful of grain, since forage crops and permanent pastures will carry the sheep the year round. Sheep have two important advantages over other classes of live stock. They require practically no grain and they destroy brush and bushes.

MINERAL MIXTURES FOR HOGS

Wood Ashes, Salt and Lime Increases Appetite for Feed and Improves Health.

Hogs crave something in addition to the feeds given to them. When fed mineral mixtures containing ingredients such as wood ashes, salt and lime, they not only seem better satisfied, but have a greater appetite for their feed and the general health is improved.

MIGHTY GOOD FEED FOR HOGS

Oats Are Recommended Where Scattered on Clean Floor—Barley Also Is Favored.

Oats is a common crop on most farms, and oats is a mighty good feed for hogs. It is better not to feed it in a self-feeder for brood sows, but to scatter on a clean floor all the sows will eat up quickly. Barley is also good for swine and may be soaked and fed whole.

Scours and Thumps.

Scours and thumps are among the dangers which are apt to beset the young pig during the first few days of its life.

Purebreds Bring More Money.

Pure bred live stock costs no more to feed than common stock and brings more money.

Horse Easily Poisoned.

A horse is very easily poisoned and many deaths have resulted from feeding moldy silage.

BEST VARIETIES OF BROOM CORN

Success With Crop Depends Largely on Proper Care During Harvesting Period.

FIRST PICK MATURED HEADS

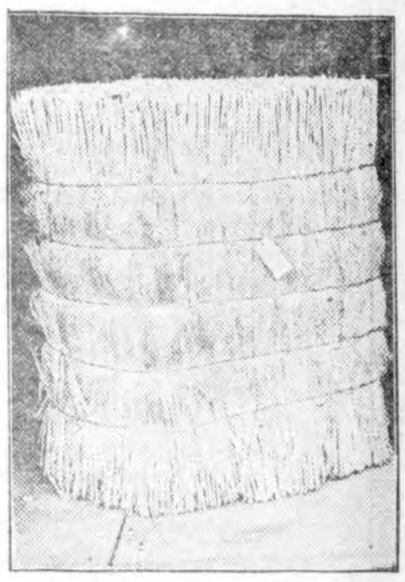
Proper Time for Harvesting Is When Fiber Is Deep Green From Tip to Knuckle—Avoid Immature and Overripe Brush.

(Prepared by the United States Department of Agriculture.)

Success in handling either of the two varieties of broom corn produced in the United States—Standard and Dwarf—depends to a large extent on proper care during the harvesting period. Even with the most efficient systems of distribution it is impossible to overcome the handicap of an inferior product, says the United States Department of Agriculture in a new publication, Department Bulletin 1019, Marketing Broom Corn, prepared by G. B. Alguire, assistant in marketing hay and broom corn.

Selection of Heads.

The selection of properly matured heads is a matter for first attention. Broom corn is in the proper stage for harvest when the fiber is deep green



Broom Corn Must Be Well Baled to Bring Best Price.

from tip to knuckle, a stage that may be reached when the head is in bloom or not until the seed is in the dough stage. Immature fiber lacks elasticity, shrivels perceptibly on curing, and presents an uninviting appearance when baled. Overripe brush is equally undesirable.

Preventable waste among manufacturers can be traced in many instances to the first steps in harvesting. In general, anything unfit for use in the manufacture of brooms should, so far as practicable, be left in the fields. To command the best price, broom corn must be free from seed and well baled.

Methods of Handling.

The bulletin discusses the various methods of handling broom corn on the farm and in the process of distribution, including marketing, practices employed by various classes of dealers, methods of sampling, storage facilities, and co-operative marketing. Copies of it may be had free upon application to the United States Department of Agriculture, Washington, D. C.

GRASS GROWN WITHOUT SEED

Best Strains Have Been Developed by Cutting Up Runners From Thrifty-Looking Spots.

Many good turf grasses that reproduce by runners have lost the habit of producing seed, and for this reason the United States Department of Agriculture has been experimenting with the vegetative propagation of some of the most satisfactory strains of bent grasses. Better strains have been developed by finding spots in lawns and on golf courses where the turf was particularly good, cutting up the runners and planting these cuttings in increase plots. Most of this work has been done in northern states, although some good strains of Bermuda grass have been selected which give promise of value in the South.

A number of commercial growers have been working on these improved grasses and now have cuttings for sale. However, it is possible for a person to improve his own lawn or for a golf club to improve the turf on the course by selecting spots where the grass is particularly good and growing the cut runners in rows in a garden or field. When the good strain has been increased sufficiently in this way the old lawn or turf may be plowed up and the new strain established.

POULTRY LITTER HELPS SOIL

Straw Filled With Droppings Is One of Most Valuable Fertilizers for Gardens.

Poultry litter, particularly straw filled with droppings, is one of the most valuable fertilizers for gardens and small fruits. It is particularly worth while where clay soils are to be worked, because in a few seasons the addition of this litter will completely change the character of the soil and give one a rich, friable and easily worked soil capable of producing almost any garden crop, whether vegetables or flowers.

ASSESSOR'S FIGURES AID EXTENSION WORK

Useful to Determine County's Big Farm Problems.

In One Instance It Was Discovered That 51 Per Cent of Land Was Farmed by Tenants—Federal Farm Loan Unknown.

(Prepared by the United States Department of Agriculture.)

In making county and community programs of demonstrations and other extension activities for the year, extension agents in Oklahoma report to the United States Department of Agriculture that the use of county census and assessor's figures as a basis for determining the county's major agricultural problems is proving very successful. A meeting of the men and women from each community is called each year by the county agricultural agent for the purpose of making a program for the year's extension work.

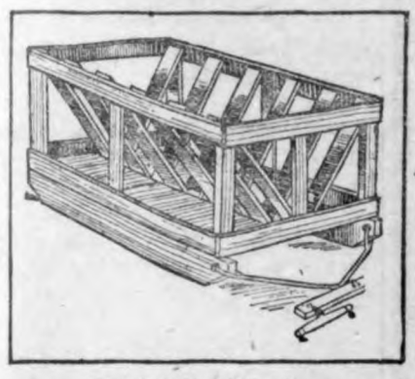
In these meetings it has been found that these figures are of great service in showing agricultural conditions of the county in a concise and comprehensive way. In one instance it was found that about 51 per cent of the county's agricultural land was farmed by tenants. Discussion brought out the fact that the federal farm loan was practically unknown in the county and plans were made to conduct a campaign to bring the benefits of the loan to the attention of the communities as a possible means of securing a greater percentage of farm ownership.

Figures showing that more acres in the county were being planted to wheat than any other crop started a discussion which indicated there was difference of opinion as to the best variety for the locality; it was therefore decided that demonstration plats of the best-liked varieties of this crop be grown in eight sections of the county. In a similar way all the figures covering the agricultural activities of the county are studied in these program-making meetings, and as a result a program is made which is based on what statistics have shown to be the most urgent needs of the communities and in which general interest throughout the county is felt.

HANDY PORTABLE FEED RACK

Sixteen-Foot Runners, Rounded at Each End, Make It Easy to Haul to Any Desired Spot.

A portable feed rack for hogs is a mighty convenient device for any farm. It can easily be moved from one spot to another. The 2x12—16 foot runners



Portable Feed Rack.

are rounded at each end. Three 2x6—12's nailed between the runners make a solid foundation. The uprights are 2x4's and the slats are 1x6's. The space between the runners and the bottom of the "V" shaped rack is floored and a 1x12 board running all around the rack just above the runners completes the manger.

STABLE FLIES ARE ANNOYING

Pests Are Cause of Much Discomfort to Live Stock and Financial Loss to Owner.

Stable flies are the cause of much discomfort and annoyance to live stock and of financial loss to the owner. Keep the stables, poultry houses, pig pens, etc., clean and avoid the accumulation of manure or filth. Provide screens for doors and windows. Spray the animals lightly each morning with a mixture of the following proportion: Five gallons kerosene, one pint either oil of mirbane, oil of tar or cresylic acid.

HARVEST CLOVER SEED CROP

If a Little Overripe Loss of Heads May Be Reduced by Cutting Early in the Morning.

Under normal conditions clover should be cut when the heads have turned a dark brown. If the clover is a little overripe, the loss of the heads may be materially reduced by cutting early in the morning or in the evening when there is dew. The clover should be cut as high as possible; this enables threshing to be speeded up, as there will be less straw to handle.

CLEAN AND SPRAY HEN HOUSE

Important That Work Be Done During Warm Months to Keep Out Insect Pests.

Thoroughly clean and spray chicken house, especially nests and roosting quarters, with coal oil, fuel oil, crude oil thinned with coal oil, or the oil drained from an auto. Repeat this spray monthly during warm months to keep free from red mites.

DAIRY HINTS

CONTESTS IMPROVE QUALITY

Demonstrations in South Carolina Have Done Much to Promote Dairy Industry.

(Prepared by the United States Department of Agriculture.)

County and state butter contests, a feature of South Carolina extension work for women last year, accomplished much in the way of improving the dairy industry there. South Carolina is not a dairy state. It uses annually about $14,000,000 worth of dairy products shipped in from other states. Some of this importation is due to the fact that while there is a large amount of farm butter produced within the state, no steady demand for it has been developed. For the purpose of creating an interest in this farm-made butter, and to teach the women to make a better product, contests which were open to home-demonstration club members were started during 1921 in 11 counties.

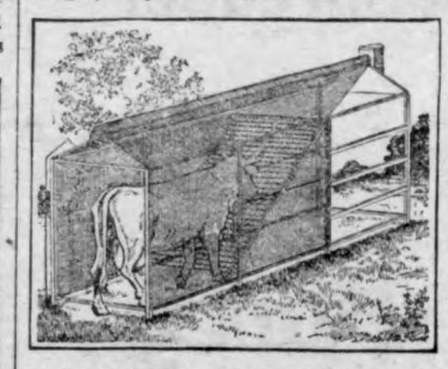
Butter demonstrations were given in all the women's clubs, and all interested persons were invited to a demonstration by the state specialist at the county seat. Three hundred and sixty women and girls enrolled for the contests, and of these 120 sent butter for every judging. Without exception there was a great improvement in the packages brought to market and the quality of the butter sold, as the women learned to what extent the butter is affected by the temperature used for ripening and churning, the care and cleanliness in handling, and the feeds for the cow.

"Contest butter" sold very readily at the various club markets, and those who did not enter the contest were obliged to make improvement in the quality of what they offered for sale or lose the market for their butter. Extension workers report to the United States Department of Agriculture that the butter produced in all parts of the state has been perceptibly improved as a result of these contests.

TRAP KEEPS COW CONTENTED

Kansas Farmer Designs Odd Contraption to Keep Flies From Milk Producers.

Along with keeping his hired help contented the farmer must also keep his cows "contented," if they are to give their maximum production of milk. A Kansas farmer, who believes that bovine contentment depends largely upon keeping the animals



A Special Flytrap, the Invention of a Kansas Farmer, Brushes Flies From Cows and Imprisons Them in a Trap at the Top of the Contrivance.

free of flies, has invented an odd flytrap for that particular purpose. The cow enters and walks through the cage, and the flies are brushed off by brushes that protrude from each side. The flies, or most of them, in their attempt to escape, are caught in a specially designed trap on the top of the inclosure.—Popular Mechanics Magazine.

DESTROYING LARVAE OF FLY

Caution Must Be Used in Applying Chemicals to Manure Piles to Conserve Value.

There are many ways of combating the fly nuisance. On farms, the manure piles are probably the chief sources of fly infection. The use of chemicals in destroying the larvae of the fly in manure piles is one of the important ways of keeping this insect under subjection. However, one must be cautious inasmuch as a too liberal use of some of the chemicals will destroy the fertilizing value of the manure.

FACTORS IN DAIRY FARMING

Of Great Importance That Barns and Utensils Be Clean to Add to Creamery Check.

Good clean barns, clean milking practices, and clean dairy utensils are three essential factors in dairy farming, whether for the man who is making it his sole business, or the farmer who uses five to ten cows to add the creamery check to his income for the month, along with other farming work.

Silo Increases Profits.

Business farmers and experiment stations have found that a silo not only increases the yearly profits of the farm, but eliminates many uncertainties of live stock raising.

Feed Calves Separately.

Tie the calves up so they can be fed separately.

Cows Standing Highest.

The cows that stand highest in testing association records are fed grain regularly to supplement pastures.

ROAD BUILDING

PLAN FOR FOREST HIGHWAYS

Secretary Wallace Approves Program Involving Outlay of Approximately $10,000,000.

(Prepared by the United States Department of Agriculture.)

A program of national forest highway construction involving an outlay of approximately $10,000,000 for 1,170 miles of road in 23 states has been approved by Secretary of Agriculture Wallace. This program will be financed largely from the forest highway fund provided by the federal highway act. About $6,500,000 will come from this source, $1,000,000 from other national forest road appropriations, and the balance of $2,500,000 will be contributed by states and counties.

The work provided for is as follows:

States	Proposed Expenditure	Miles
Alabama	$ 3,963	15
Alaska	896,850	55
Arizona	1,011,500	133
Arkansas	142,796	23
California	1,246,197	50
Colorado	627,000	105
Florida	91,175	14
Idaho	1,269,600	137
Montana	566,421	75
Nebraska	9,968	22
Nevada	166,000	24
New Hampshire	29,288	5
New Mexico	452,000	54
Oklahoma	4,572	3
Oregon	2,270,000	210
South Carolina	2,173	5
South Dakota	61,000	7
Tennessee	15,000	3
Utah	292,100	56
Virginia	20,000	4
Washington	780,000	50
West Virginia	4,901	20
Wyoming	260,150	90
	$10,222,634	1,170

The funds and mileage are for forest roads of primary importance to states, counties, and communities. The program was recommended to the secretary by the forest service and the bureau of public roads, jointly, after conference with state officials. The bu-

An Improved Road in Bear Creek Canyon in Colorado.

reau of public roads will supervise the construction work, and it is expected that a large number of the projects will be completed this season.

Practically all the roads to be built are parts of the state or county highway systems and will therefore in most cases connect with and extend the system of federal aid highways covering the whole country. In some cases the new construction will provide roads through mountainous regions of the national forests hitherto penetrated only by pack trails.

In addition to the major road projects, about $5,000,000 will be expended by the forest service on minor roads and trails required primarily for the protection and administration of the national forests.

NIGHT TRAVEL WEARS ROADS

More Destructive to Highways Than in Daylight, According to Recent Experiments.

The experiments being conducted on the Bates experimental road, show that night travel is more wearing on highways than is day travel, according to Clifford Older, chief highway engineer.

The road expands in the day, according to Mr. Older, and the center becomes convex. The heat is absent at night, and the road assumes a concave shape, the edges curling up and forming a slight hollow in the centers. From these discoveries it is deduced that heavily loaded vehicles traveling along on the edge of a roadway have a tendency to cause it to crumble.

The testing of the Bates road was begun late in March and is still under way. It was delayed for a time by the floods.

Boom for Good Roads.

A road program that will place Kansas among the leading road building states of the nation was urged by E. J. Heckle of Topeka, manager of the Kansas Automobile Owners' association, in an address to the state conference of officials of chambers of commerce.

Tennessee Road Work.

Tennessee has inaugurated a federal aid road-building program involving the expenditure of $8,000,000 for 281 miles of roads in 20 counties.

GOODELL NEWS ITEMS

Mrs W. L. Sherwood was a Mason City caller Wednesday.

Margaret Kearney spent Sunday with her friend, Louie Mason.

Jay Griggs was a Garner caller Monday.

OBEDIENCE TO LAW

We need law inforcement but much more do we need obedience to law.

Faith in our form of government and loyalty should prompt whole hearted obedience.

No matter what any man's personal opinions, he owes an unqualified duty to the will of the people as expressed by means of machinery created for securing such expressions of opinion.

The effort to make it appear that the Volstead law is in a different class from other laws is in every essential disloyal to our form of government. Enemies of prohibition law are telling those people whom they hope to deceive that the probition law was put over and therefore is not deserving of the same loyalty as other laws. If, in fact, the Volstead Act was put over then the opponents of the law should put over its repeal. Failing in this, continued reiteration of the statement that he law was put over is only but backbiting and gossip, for the purpose of injuring the authority of a law which cannot be repealed because the votes are lacking.

We owe obedience to the law, to our country and no less to ourselves. Nothing else in honorable. Northwood Anchor.

ADING ON WILSON HIGHWAY PROGRESSING RAPIDLY

iesely & Son Are Real Road Builder

One of the main items of special erest these days are roads—eith- good or bad. Luckily, we are in county that has awakened to the t that good roads are a necessity d not a luxury.

Speaking of good roads, we will ve them in this vicinity when the iesely & Son gang finish the high- y from here to Garner which they e now working on. At this writ- they have quite a long stretch of preliminary grading in.

The road is being graveled from re to Goodell. It is rumored the ghway will be paved from here to rner next year.

Ray Nelson, of Garner, was a lemme caller last night.

Rev. A. E. Buriff and wife, of oldfield are planning to drive to is place tomorrow for a visit with eir many Klemme friends.

Miss Mable Waterman, of this city d Miss Edith Katter, of Garner, art joying a week's outing at the Ker- s cottage at Clear Lake.

Al Emerson is taking a week's va- tion from his duties at the harness op, and left Monday for the south- n part of the state for a visit with latives and old friends.

Dr. Zinn was a professional visitor Mason City Tuesday and while in e city availed himself of the op- rtunity to attend the fair. We agine that "Doc" could be found ere at the stock exhibit, admiring e fine cattle, hogs and horses.

Fred Shipley, former Klemme boy, isn town yesterday on business. ed has purchased the Case Hotel Belmond and takes possession of e business Saturday. Fred and wife are experienced hotel people d will give the people of Belmond good hotel.

Gunnar Arvidson returned to this y Tuesday after an absence of a- ut eight months. Gunnar has en visiting at his old home at Nott- Sweden where his mother, five others and two sisters reside. He orts that the family are all well. e says he stayed longer than he in- ded but that he had such a good me and time flew so fast that he ided to stay longer. He finally homesick for the U. S. and the town of Klemme. He says he en wished that he had shipped his rd over as he could have made od use of it and sold it for a fair ofit. However, he says he got to ve a few Fords while there.

The Chautauqua closed here on esday night. The talent for the ire course was very good and each tertainment was very interesting. a financial success the Chautau- a was a failure and money was t on the project. We understand at the company have agreed to nd half of the loss. Five of the n who signed the chautauqua a- eement last year moved away and s added a burden to the remain- signers here. Chautauquas had ght to take their own chances in town the same as any other theat- al company and take what they get, make or lose. Why should hautauqua be guaranteed a cer- n sum and they themselves take chances whatever. Does anybody arantee our picture show (that is ying a town and state license) or y other business concern in Klem- e that if they lose money, you will k over for it? If the business- n loses—he pays.

ALL GOOD TIME FOR ALFALFA n Be Planted Until Middle of August.

The abundant rain that has been neral in Iowa this summer makes e fall planting of alfalfa unusually vantageous this year, in the opin- n of F. S. Wilkins, of the farm ps department of Iowa State Col- ge.

Alfalfa can be seeded as late as r 15 to 20, says Wilkins. Land ich has been in sweet corn or pota s is especially good for alfalfa. e seed bed should be smooth.

Experiments at the college have wn that generally the best results secured when the seed is broad- ed and harrowed in, rather than ed. The land must be inoculated fore seeding.

"THE BOTTOM OF THE BIN IS IN SIGHT"

Mr. Kellogg, Mgr. of the Iowa Falls Electric Co. nforms us that the company has just purchased 200 tons of Western Kentuckyscreenings that will cost the company $12.50 Per ton F. O. B. the plant., while they have three or four weeks supply of of coal on hand they are buying as a safty first measure and are using every effort to make their supply last a few days longer.

Most Iowa Companies would save money if they suspended service al- together and waited for prices to come down as many manufactures are doing "But this is a thing that simply is not done.. but the public should get this firmly fixed in mind. **THE BOTTOM OF THE COAL BIN IS IN SIGHT** and that's all there is because there AIN'T no more.

Some companies have enough coal to last them into September, but with a large number it is now a quest ion of days not weeks before they will be obliged to usspend operations.

The Utilities of the. State have done their share and will continue to do so a slong as possigle., but the puglic should remember that it takes coal to make electricity, and the coal is about gone and that they face not only the inconvenience but the suf- fering which must follow the cessa- tion of electric service.

STEAL 1,000 CHICKENS

Poultry Thives are Busy Up Near Sibley

Sibley, Ia., Aug. 3.—From seven different farm homes in this vicinity over 1,000 chickens have been stolen during the past week, the thieves nearly cleaning up the neigh- borhood.

The Oscar Johnson and John Stienke homes were the heavest los- ers, both losing over 200 each. Mr. Recher, arriving home after mid- night recently run onto the thieves at his place and securing, his gun, took up a position overlooking his hen house, and while the tnieves passed in front of his coops he fired several shots at them.

METHODIST EPISCOPAL CHURCH
Arthur B. Gedye, Pastor

Morning Worship.....10 A. M.
Sunday School.....11 A. M.
Evening Worship.....8 P. M.

The services on Sunday were fair- ly well attended. The Sunday school was especially encouraging.

Our invitation still stands good for each and all services.

We are drawing near to the end of our conference year, our fourth Quarterly is scheduled for Septem- ber 25, and the annual conference books will be closed about that time, so we should seek to have all our church business finished in good shape by that time. The end of the year is always a busy time for the pastor getting reports and statistics ready. Your help and co-operation will be appreciated.

A meeting of the members of the official board is called for Friday evening at the church at 7:45 P. M. prompt. Please be there if you are a member of the board.

Arthur B. Gedye, Pastor.

Scout Corner

Theregular meeting of the troop will be held on Thursday night at headquarters; let there be a good number of Scouts.

Scout Albert White has gone on a tour with his parents for a trip in the west. We hope Albert will use his eyes as a good Scout and have something worth hearing to tell to us, he certainly will get a vision of the greatness of his native land; Good Luck to you Albert.

One of the objects of the B. S. A. organization is to make good citizens Wherever one goes these days he will meet up with the brotherhood of Scouts.

Be Prepared!

James F. Elder and bride of Madi- son, Wisconsin, arrived in Klemme yesterday for a short visit at the R. W. Elder home here and also for a visit with Marion Elder and wife who are visiting at the Elder home. The newly-weds have been visiting at Mason City for a few days and will go to Nebraska from here for a visit before returning home. They are making their trip in a car.

ERICKSON MOTOR CO. SELL ANOTHER BATCH OF FORDS

They Sell 'Em In Bunches Like Bananas Now Days

Joe Gronsdal, salesman for the Erickson Motor Co. here reports his sales for the past week include one coupe, a sedan,, a roadster. two touring cars, a truck and a tractor.

Conrad Quandt is disturbing the peace perambulating about in a new Ford Coupe; Einar Salling and Wal- ter Anderson are cluttering up the avenues with a touring car each; and Joe even slipped one past the "boss" when he sold him a new Sedan. Al- bert Schmidt took the whole pie— top, bottom and insides, when he purchased a whole Ford outfit, in- cluding a roadster, a truck and a Fordson tractor.

And still Henry can't make them fast enough to suit the needs of the Erickson Motor Co.

ANNUAL INDIAN POW-WOW

Three annaul Indian pow-wow will be held at Tama August 16th to 21st Indians from four states will parti- cipate in the various stunts. Civil- ized habits will be discarded for the time, and war dances, dog feasts, and all of the allurements of the wild and romantic days of the long ago will befeatured. The Indians who are back of the movement have tak en on the ways of the white man to the extent of commercializing the event and there will be ample op- portunity to part with the coin of the realm. These annual pow-wows draw large crowds and there are thrills enough to keep up the interest for the five day period.

The bowery dance floor, which has been on the vacant Wellemeyer lot on Main street since the Fourth, was taken over to Britt Saturday to be used on the fair grounds during the Hancock County fair week.

"OUTSIDE THE LAW," NEW PRIS- CILLA DEAN FILM

Said To Have Cost Quarter of a Million . .

Priscilla Dean's first feature since "The VViVrgin of Stamboul," is to be shown at the Idle Hour Theatre next week Wednesday and Thursday. It is called "Outside the Law" and is the work of Tod Browning, who has directed Miss Dean in all her big screen successes, and who wrote her latest story as well as supervised its production. From all advance re- ports it is the crowning achievement of the popular Universal star and her director.

More than $250,000 was expended in the production of "Outside the Law,' and the cast is a roster of Who's Who in cinema circles. Be- sides Miss Dean there is Lon Chaney as a Frisco gangster. Wheeler Oak- man plays a dapper gentleman crook, E. A. Warren, a rare Chinese char- acterization, and Ralph Lewis as master-gambler; while Melbourne McDowell, Wilton Taylor and Stan- ley Gbethals, a clever child actor, are other principals in the cast.

Lon Chaney will be seen in two of the strangest characterizations of his career in this photodrama. One of the roles played by this king of all character actors, is that of Black Mike Silva, evil genius of the under- world. The identity of the other role is kept a secret by Tod Browning and Universal, as a challenge to the screen goers, as Chaney's make-up in the part is unbelievable and im- penetrable even by his personal friends.

Mrs. Mary Wellemeyer, of Charles City, and Mr. and Mrs. Ernest Welle- meyer, of Chicago, Ill., came Monday for a visit at the Arthur Wellemey- er home here. Ernest is a brother of our popular townsman and Mrs. Mary Wellemeyer is the mother of the men.

EMPLOYMENT FOR MILLIONS FROM PULVERIZED MOUNTAINS

Building Stimulates Local Prosperity — Materials Plentiful and Prices Down

(Copyright, 1922, by Real Estate News, Chicago.)

Next to farming, local prosperity depends upon building activity. The reason is plain. Building is the coun- try's second largest industry. It em- ploys millions of workers directly, mil- lions to make the materials for build- ing, and hundreds of thousands in lum- bering, quarrying and mining.

Everyone knows that a building shortage exists. One way to restore prosperity then, is by a lively resump- tion of building. Materials and labor now are plentiful. Costs are lower. Cement will serve as a good example because it goes into nearly all build- ing.

For every ton of cement, 1¾ tons of raw materials and coal must be mined, shipped, assembled, dried, ground, weighed, mixed and then fused at about 3,000 degrees to a hard "clinker." This "clinker" must then be ground again, this time to a powder so fine that 78% will pass through a sieve having 40,000 holes per square inch. To make cement, one literally must "tear down a mountain and put it through a sieve." And yet, cement sells at the mill for about $8.00 per ton! These facts caused the United States Geological Survey a few years ago to say that "one could not scrape the free sand from the gutter for much less cost per barrel."

Cement Competition Keen.

That competition has been active is noted in government reports. Ac- cording to the United States Geological Survey, the production of cement has steadily increased and the price de- clined. It shows that in 1880, cement sold at $3.00 a barrel average at the mill; in 1920 at $2.02; in 1921, at $1.87. Now it is selling at many large plants as low as $1.50 a barrel, only half the average price in 1880, and less than the average for the 40-year period covered in the government report.
